For Lacan, there are three "orders" or "dimensions" in the psyche: the "Symbolic," the "Imaginary," and the "Real." They are all equally important to the formation of subjectivity. The Real is the easiest to define and the hardest to talk about. In fact, it *can't* be talked about; any such discussion is "impossible." The moment it becomes an object of discourse, it ceases to be the "Real" because it becomes real *for someone* and becomes the "truth." "We are used to the real. The truth we repress," writes Lacan late in his essay "The Agency of the Letter in the Unconscious." "The truth is always disturbing." The "Real" is also defined by Lacan as "that to which the fact that I'm thinking about it doesn't matter." But what is disturbing can be disturbing only *for someone*. The Real can thus only be studied in its effects on the other two dimensions, the Imaginary and the Symbolic.

The Imaginary originates in the human being's fascination with form. The fundamental role of form for the human being is described in Lacan's essay "The Mirror Stage as Formative of the Function of the I" (1949; the concept was introduced in a 1936 lecture), our first selection. The essay describes the founding moment of the Imaginary: the infant's recognition of its image in the mirror. The baby forgets how weak it is and identifies jubilantly with the wholeness of a reflected form. The human self thus comes into being through a fundamentally *aesthetic* recognition. The self-image that causes identification and recognition is a *fiction* "over there," dictating the efforts of the subject ("I") toward a totality and autonomy it can never attain. Through an external medium (a mirror), the child's fragmented body is made whole: the newly fashioned specular "I" precedes the social "I." SLAVOJ ŽIŽEK extends Lacan's concepts of the Imaginary, Real, and Symbolic, especially in his analyses of popular culture.

The relation between the self and its image constitutes the "Imaginary" dimension—so named not because it is unreal, but because it involves an image. The Symbolic, in contrast, is the dimension of symbolization into which the human being's body, to the extent that he or she begins to *speak*, must translate itself. The Symbolic is the dimension of articulation, not equivalent to pointing or naming. Like algebra, the "Symbolic" is a structure of *relations* rather than *things*. (These terms can be confusing; for example, so-called phallic symbols would belong in the Imaginary, not the Symbolic, dimension.)

"The Agency of the Letter in the Unconscious" (1957), from which our second selection is drawn, develops some aspects of the "symbolic" structure of the psyche. It is one of Lacan's most explicit structuralist attempts to bring Freud and Saussure together. The unconscious, for Lacan, is not a hidden reservoir of repressed desires but rather a form of rhetorical energy designed both to disguise and to express those desires, which exist for psychoanalysis only in their effects. "The unconscious is structured like a language," he famously claims. This means not that the unconscious is language, but that the unconscious is *like* a language—a foreign language. In other words, the unconscious is *structured*, not amorphous, and it *speaks* rhetorically through the dreams, mistakes, and symptoms of the subject. In the case of psychoanalytic symptoms, it is the body itself that provides the raw material that the unconscious uses to express itself and that the analyst, like a literary critic, must "read."

Saussure's influential model of the linguistic sign has two parts: the sign is composed of a *signifier* and a *signified*. In his example, a drawing of a tree functions as the signified (concept-image), while the spoken word "tree" functions as the signifier (sound-image). By playing with the notion of the tree in Western theory and poetry, Lacan makes it clear that even this representative of "nature" is really a form of "culture." Saussure's model of the sign has three implications that Lacan wants to challenge: that a sign is the representation of a thing, that signs function individually, and that the line that separates signifier from signified is only an abstract function of the diagram (see chapter 1 of Saussure's *Course in General Linguistics*, above). Lacan's countermodel of the sign—or rather, of the signifying chain—consists of two doors; one is labeled "ladies" and the other "gentlemen." The sign can no longer be considered a picture of a thing (since the doors are identical, except for their labels, and resemble neither men nor women). Rather, the sign is a structure into which the reader has to fit his or her body. The signs tell the reader where to "go": they instate the law of sexual difference but do not explain it. They also create a difference where none existed before; the doors are the same, but "ladies" and "gentlemen" are henceforth different. The line in the diagram plays the role of censor merely by dividing one sex from the other. Lacan rewrites Saussure's model of the sign as S/s. The "signifier" (S) marks the spot where the "signified" (s) has been struck by the bar of repression, which is indistinguishable from the structuring function of civilization. Signs thus systematically and unconsciously constitute all social codes, conventions, and prohibitions. We are constituted and acculturated by signs. Even before we begin to speak, we are already being spoken.

Language, in Lacan's analysis, operates on us as much as we operate on it. We follow the signs. Language speaks us. But in the process, we become split between a conscious self and an unconscious self that we repress, deny, and repeat. Given the power of the unconscious, Lacan rewrites the celebrated self-identity of Descartes's "I think, therefore I am" as enigmatic self-estrangement: "I think where I am not, therefore I am where I do not think." In attempting to describe the rhetoric of this self-estrangement, Lacan aligns Roman Jakobson's linguistic studies of metaphor and metonymy with Freud's distinction (in *The Interpretation of Dreams*, 1900) between condensation and displacement in the dream-work of the unconscious. Because an unconscious wish is, in Freud's model, unacceptable or forbidden, it must get around the censorship of consciousness if it is to express itself. It does so either by choosing a stand-in ("one word for another" = metaphor) or by sliding along and selecting adjacent signifiers ("word-to-word" = metonymy). In "The Agency of the Letter," Lacan thus extends the theories of Saussure and Jakobson in the direction of Freud's implicit rhetoric of unconscious processes, while at the same time drawing on modern linguistics to precisely formulate that which, in Freud, remains largely intuitive.

"The Signification of the Phallus" (1958), our final selection, is one of the most condensed, contested, suggestive, and misunderstood of Lacan's essays. It is about castration—a concept that never fails to be considered scandalous. Why, he asks, did Freud

need the concept of castration at all? Women are not castrated men, are they? Little boys don't really believe their fathers will castrate them, do they? It's ridiculous to think that Mommy once had a penis and lost it, isn't it? How could a theory so manifestly absurd and disprovable have been taken seriously? The outrageousness of these infantile sexual theories is of course the point. The human being comes into sexuality epistemologically unprepared. But why did Freud imagine that *these* were the theories that came most readily to mind to stanch the wound created by the discovery that not everyone resembles me, and that *that* has something to do with sexuality?

Lacan tackles these questions in several ways. His originality lies in the connections he makes between the functioning of language and the functioning of desire. As soon as man begins to speak (there is no getting away from the masculine universal in Lacan), he must launder everything important or even routine about his bodily life through linguistic structures that don't exactly correspond to biological requirements. Lacan defines desire as what is left of absolute demand when all possible satisfaction of needs has been subtracted from it. In other words, desire is what by definition remains unsatisfiable.

Linguistic structures preexist the subject and are not created by him. Lacan calls "the Other" "the very locus evoked by the recourse to speech." (The *other* designates a mirror image, a counterpart or competitor, another person; the *Other*, capitalized, designates the Symbolic dimension itself insofar as the subject has to relate to it.) The very fact of speaking routes everything through the Other. The intuition that somehow one has lost direct connection with the body—that something about the body is missing—is itself a first definition of the concept of castration. This lost object that is defined retrospectively is also called, in Lacan's terms, *objet petit a* (a phrase that should be translated "object little o," since the *a* is from *autre*, "other"). The lost object is one that the subject never had, the loss brought into being by symbolization itself.

But if that were all, then everyone would be in exactly the same position with respect to the unattainability of naturalness. There would be no sexual asymmetry. Sexual difference would disappear. Thus, what Lacan has to add to this "universal" castration is a *specific* castration caused by the encounter with sexual difference. The castration that counts is the symbolic castration of the mother—the mother as not-all (not all there is for the child, not a total body form, not entirely focused on the child without other relationships). At this point, in other writings, Lacan describes the function of the father as both the instatement of language ("le nom du père"—the name of the father) and the prohibition of incest ("le non du père"—the "no" of the father).

The phallus that is determining in the phallic stage of human development is thus the one that has never existed. The "something missing" cannot be anything real: it can be generated only by the fact of structure itself. It is missing without ever having been there. It is an interpretation, a theory, a comparison, not a thing. The linguistic counterpart of the missing thing is an extra signifier whose only function is to be the name of the missing thing. There is no signified, but the signifier names the fact of signification—the fact that sexual difference is an interpretation—as such. For Lacan, the phallus is the name for that signifier.

In his seminar *Feminine Sexuality* (1972–73), Lacan goes so far as to claim that "there is no sexual relation." If there were a sexual relation, that would imply that the sexes are complementary, that they fit together to make a whole. But (according to Lacan and, he claims, all of literature), they don't. Women's pleasure is supplementary, not complementary, to a sexual universe that revolves around the position of the one, the phallus, the center. The wholeness and completion that is desired in the sexual relation is precisely what would make it impossible, deadly. When Lacan says that woman does not exist, he is referring to "woman" as a fantasy of complementarity. If "woman" existed, women could not. To account for the existence of women as something that does not merely confirm the preeminence of the phallic signifier,

Lacan adds “God” to the couple. God is the third who keeps “two” from collapsing into “one.” The point is not that Lacan “believes” in God, but that the position God occupies in the structure (that of the Other) cannot disappear. For that reason, Lacan focuses on the writings of mystics: Saint John of the Cross, Hadewijch d’Anvers, Saint Teresa—and Jacques Lacan.

It is easy to see why Lacan has been both useful for and anathema to feminists. On the one hand, his theory is useful because it is not in any simple way essentialist: “men” and “women” are not essences or biological givens but rather positions in a structure. On the other hand, his theory is “phallogentric” in the very terms he uses to displace phallogentrism. He writes as if the *ménage à trois* implied in every relationship consisted of the phallus, the not-all, and God. Like Freud’s theory, Lacan’s theory takes patriarchy as a given. Whether his writing constitutes a defense or simply an analysis of that given is open to interpretation. The writings of the French feminists Luce Irigaray and Hélène Cixous, in particular, are attempts to give voice, figure, and flesh to alternative versions of sexuality starting from the feminine, not the phallic, perspective without falling into essentialist thinking themselves.

Any analysis, whether clinical or scholarly, implies what Lacan memorably calls “the subject presumed to know.” The knowledge sought is presumed to exist somewhere. That fantasy of a knower “out there” is what we have to be cured of. But it is therefore ironic that no one performs the role of that knower better than Lacan. One can only conclude that the demystifier of the “subject presumed to know” is the most powerful of its incarnations. This is an observation with which PLATO’s Socrates, who “knew nothing but the fact that he was ignorant,” would agree.

“The Mirror Stage as Formative of the Function of the I as Revealed in Psychoanalytic Experience” Keywords: The Body, Identity, Psychoanalysis, Representation, Subjectivity

“The Agency of the Letter in the Unconscious” Keywords: Language, Literary History, Psychoanalysis, Representation, Rhetoric, Structuralism, Subjectivity

“The Signification of the Phallus” Keywords: The Body, Gender, Identity, Language, Psychoanalysis, Queer Theory, Sexuality, Subjectivity

The Mirror Stage as Formative of the Function of the I as Revealed in Psychoanalytic Experience¹

The conception of the mirror stage that I introduced at our last congress, thirteen years ago, has since become more or less established in the practice of the French group.² However, I think it worthwhile to bring it again to your attention, especially today, for the light it sheds on the formation of the *I* as we experience it in psychoanalysis. It is an experience that leads us to oppose any philosophy directly issuing from the *Cogito*.³

Some of you may recall that this conception originated in a feature of human behaviour illuminated by a fact of comparative psychology. The child, at an age when he is for a time, however short, outdone by the chim-

1. Translated by Alan Sheridan, who occasionally includes the original French in parentheses.

2. That is, the Psychoanalytical Society of Paris, the official French branch of the International Psychoanalytical Association.

3. I think (Latin), a reference to the philosophy of

René Descartes (1596–1650), which was founded on the statement “I think, therefore I am” (*cogito ergo sum*)—that is, the occurrence of thought guarantees the existence of the thinker. Here, it implies that thinking can perfectly coincide with being and is the basis for human reality.

panzee in instrumental intelligence, can nevertheless already recognize as such his own image in a mirror. This recognition is indicated in the illuminative mimicry of the *Aha-Erlebnis*, which Köhler⁴ sees as the expression of situational apperception, an essential stage of the act of intelligence.

This act, far from exhausting itself, as in the case of the monkey, once the image has been mastered and found empty, immediately rebounds in the case of the child in a series of gestures in which he experiences in play the relation between the movements assumed in the image and the reflected environment, and between this virtual complex and the reality it reduplicates—the child's own body, and the persons and things, around him.

This event can take place, as we have known since Baldwin,⁵ from the age of six months, and its repetition has often made me reflect upon the startling spectacle of the infant in front of the mirror. Unable as yet to walk, or even to stand up, and held tightly as he is by some support, human or artificial (what, in France, we call a '*trotte-bébé*'⁶), he nevertheless overcomes, in a flutter of jubilant activity, the obstructions of his support and, fixing his attitude in a slightly leaning-forward position, in order to hold it in his gaze, brings back an instantaneous aspect of the image.

For me, this activity retains the meaning I have given it up to the age of eighteen months. This meaning discloses a libidinal dynamism, which has hitherto remained problematic, as well as an ontological structure of the human world that accords with my reflections on paranoiac knowledge.⁷

We have only to understand the mirror stage *as an identification*, in the full sense that analysis gives to the term: namely, the transformation that takes place in the subject when he assumes an image—whose predestination to this phase-effect is sufficiently indicated by the use, in analytic theory, of the ancient term *imago*.⁸

This jubilant assumption of his specular image by the child at the *infans*⁹ stage, still sunk in his motor incapacity and nursing dependence, would seem to exhibit in an exemplary situation the symbolic matrix in which the *I* is precipitated in a primordial form, before it is objectified in the dialectic of identification with the other, and before language restores to it, in the universal, its function as subject.

This form would have to be called the Ideal-I,¹ if we wished to incorporate it into our usual register, in the sense that it will also be the source of secondary identifications, under which term I would place the functions of libidinal normalization. But the important point is that this form situates the agency of the ego, before its social determination, in a fictional direction, which will always remain irreducible for the individual alone, or rather, which will only rejoin the coming-into-being (*le devenir*) of the subject asymptotically,² whatever the success of the dialectical syntheses by which he must resolve as *I* his discordance with his own reality.

4. Wolfgang Köhler (1887–1967), German co-founder of Gestalt psychology. *Aha-Erlebnis*: aha experience (German).

5. James Baldwin (1861–1934), American developmental psychologist.

6. Baby trotter (French); that is, a walker.

7. According to Lacan, knowledge itself is structured like paranoia, in that it projects a coherence onto the world that may not be there.

8. Likeness, statue (Latin).

9. Incapable of speech (Latin).

1. Throughout this article I leave in its peculiarity the translation I have adopted for Freud's *Ideal-Ich* [i.e., "je-idéal"] without further comment, other than to say that I have not maintained it since [Lacan's note].

2. Coming ever closer but never reaching.

The fact is that the total form of the body by which the subject anticipates in a mirage the maturation of his power is given to him only as *Gestalt*,³ that is to say, in an exteriority in which this form is certainly more constituent than constituted, but in which it appears to him above all in a contrasting size (*un relief de stature*) that fixes it and in a symmetry that inverts it, in contrast with the turbulent movements that the subject feels are animating him. Thus, this *Gestalt*—whose pregnancy should be regarded as bound up with the species, though its motor style remains scarcely recognizable—by these two aspects of its appearance, symbolizes the mental permanence of the *I*, at the same time as it prefigures its alienating destination; it is still pregnant with the correspondences that unite the *I* with the statue in which man projects himself, with the phantoms that dominate him, or with the automaton in which, in an ambiguous relation, the world of his own making tends to find completion.

Indeed, for the *imago*s—whose veiled faces it is our privilege to see in outline in our daily experience and in the penumbra of symbolic efficacy⁴—the mirror-image would seem to be the threshold of the visible world, if we go by the mirror disposition that the *imago of one's own body* presents in hallucinations or dreams, whether it concerns its individual features, or even its infirmities, or its object-projections; or if we observe the role of the mirror apparatus in the appearances of the *double*, in which psychical realities, however heterogeneous, are manifested.

That a *Gestalt* should be capable of formative effects in the organism is attested by a piece of biological experimentation that is itself so alien to the idea of psychical causality that it cannot bring itself to formulate its results in these terms. It nevertheless recognizes that it is a necessary condition for the maturation of the gonad of the female pigeon that it should see another member of its species, of either sex; so sufficient in itself is this condition that the desired effect may be obtained merely by placing the individual within reach of the field of reflection of a mirror. Similarly, in the case of the migratory locust, the transition within a generation from the solitary to the gregarious form can be obtained by exposing the individual, at a certain stage, to the exclusively visual action of a similar image, provided it is animated by movements of a style sufficiently close to that characteristic of the species. Such facts are inscribed in an order of homeomorphic identification that would itself fall within the larger question of the meaning of beauty as both formative and erogenic.⁵

But the facts of mimicry are no less instructive when conceived as cases of heteromorphic identification, in as much as they raise the problem of the signification of space for the living organism—psychological concepts hardly seem less appropriate for shedding light on these matters than ridiculous attempts to reduce them to the supposedly supreme law of adaptation. We have only to recall how Roger Caillois⁶ (who was then very young, and still fresh from his breach with the sociological school in which he was trained) illuminated the subject by using the term '*legendary psychasthenia*'⁷ to

3. Form, pattern, whole (German).

4. Cf. CLAUDE LÉVI-STRAUSS [1908–2009], *Structural Anthropology* [1958], chapter 10 [Lacan's note].

5. Giving rise to sexual desire. "Homeomorphic":

having the same form (as opposed to "heteromorphic," differing from the usual form).

6. French philosopher and critic (1913–1978), who when young was a surrealist.

7. A term once used for general neuroses.

classify morphological mimicry as an obsession with space in its derealizing effect.

I have myself shown in the social dialectic that structures human knowledge as paranoiac⁸ why human knowledge has greater autonomy than animal knowledge in relation to the field of force of desire, but also why human knowledge is determined in that 'little reality' (*ce peu de réalité*), which the Surrealists,⁹ in their restless way, saw as its limitation. These reflections lead me to recognize in the spatial captation manifested in the mirror-stage, even before the social dialectic, the effect in man of an organic insufficiency in his natural reality—in so far as any meaning can be given to the word 'nature'.

I am led, therefore, to regard the function of the mirror-stage as a particular case of the function of the *imago*, which is to establish a relation between the organism and its reality—or, as they say, between the *Innenwelt* and the *Umwelt*.¹

In man, however, this relation to nature is altered by a certain dehiscence at the heart of the organism, a primordial Discord betrayed by the signs of uneasiness and motor unco-ordination of the neo-natal months. The objective notion of the anatomical incompleteness of the pyramidal system² and likewise the presence of certain humoral residues of the maternal organism confirm the view I have formulated as the fact of a real *specific prematurity of birth* in man.

It is worth noting, incidentally, that this is a fact recognized as such by embryologists, by the term *foetalization*, which determines the prevalence of the so-called superior apparatus of the neurax,³ and especially of the cortex, which psycho-surgical operations lead us to regard as the intra-organic mirror.

This development is experienced as a temporal dialectic that decisively projects the formation of the individual into history. The *mirror stage* is a drama whose internal thrust is precipitated from insufficiency to anticipation—and which manufactures for the subject, caught up in the lure of spatial identification, the succession of phantasies that extends from a fragmented body-image to a form of its totality that I shall call orthopaedic⁴—and, lastly, to the assumption of the armour of an alienating identity, which will mark with its rigid structure the subject's entire mental development. Thus, to break out of the circle of the *Innenwelt* into the *Umwelt* generates the inexhaustible quadrature⁵ of the ego's verifications.

This fragmented body—which term I have also introduced into our system of theoretical references—usually manifests itself in dreams when the movement of the analysis encounters a certain level of aggressive disintegration in the individual. It then appears in the form of disjointed limbs, or of those organs represented in exoscopy, growing wings and taking up arms

8. Cf. "Aggressivity in Psychoanalysis," in *Écrits* [Lacan's note]. "The social dialectic": human interactions.

9. Members of an experimental literary and artistic movement founded in France in 1924; inspired in part by SIGMUND FREUD, surrealists sought to express subconscious thought and feeling.

1. The inner world and the outer world (German).

2. Part of the central nervous system that links the brain and spinal cord and controls voluntary movement.

3. Neuraxis, or central nervous system.

4. Relating to correct child rearing (Lacan is drawing on the core meanings of the word's Greek roots).

5. An allusion to "squaring the circle," or constructing a square whose area is equal to that of a given circle (an impossible task if, following the dictates of classical geometry, one uses only a straightedge and a compass).

for intestinal persecutions—the very same that the visionary Hieronymus Bosch⁶ has fixed, for all time, in painting, in their ascent from the fifteenth century to the imaginary zenith of modern man. But this form is even tangibly revealed at the organic level, in the lines of ‘fragilization’ that define the anatomy of phantasy, as exhibited in the schizoid and spasmodic symptoms of hysteria.

Correlatively, the formation of the *I* is symbolized in dreams by a fortress, or a stadium—its inner arena and enclosure, surrounded by marshes and rubbish-tips,⁷ dividing it into two opposed fields of contest where the subject flounders in quest of the lofty, remote inner castle whose form (sometimes juxtaposed in the same scenario) symbolizes the id in a quite startling way. Similarly, on the mental plane, we find realized the structures of fortified works, the metaphor of which arises spontaneously, as if issuing from the symptoms themselves, to designate the mechanisms of obsessional neurosis—inversion, isolation, reduplication, cancellation and displacement.

But if we were to build on these subjective givens alone—however little we free them from the condition of experience that makes us see them as partaking of the nature of a linguistic technique—our theoretical attempts would remain exposed to the charge of projecting themselves into the unthinkable of an absolute subject. This is why I have sought in the present hypothesis, grounded in a conjunction of objective data, the guiding grid for a *method of symbolic reduction*.⁸

It establishes in the *defences of the ego* a genetic order, in accordance with the wish formulated by Miss Anna Freud,⁹ in the first part of her great work, and situates (as against a frequently expressed prejudice) hysterical repression and its returns at a more archaic stage than obsessional inversion and its isolating processes, and the latter in turn as preliminary to paranoid alienation, which dates from the deflection of the specular *I* into the social *I*.

This moment in which the mirror-stage comes to an end inaugurates, by the identification with the *imago* of the counterpart and the drama of primordial jealousy (so well brought out by the school of Charlotte Bühler in the phenomenon of infantile *transitivism*¹), the dialectic that will henceforth link the *I* to socially elaborated situations.

It is this moment that decisively tips the whole of human knowledge into mediatization through the desire of the other, constitutes its objects in an abstract equivalence by the co-operation of others, and turns the *I* into that apparatus for which every instinctual thrust constitutes a danger, even though it should correspond to a natural maturation—the very normalization of this maturation being henceforth dependent, in man, on a cultural mediation as exemplified, in the case of the sexual object, by the Oedipus complex.²

6. Dutch painter (ca. 1450–1516), best known for his detailed depictions of grotesque, fantastic creatures. “Exoscopy”: a view from outside.

7. Garbage dumps.

8. A method derived from the phenomenologists’ practice of “bracketing” or isolating the experience being described.

9. Austrian-born English psychoanalyst (1895–1982), Freud’s daughter; her “great work” is *The*

Ego and the Mechanisms of Defense (1936).

1. Aggressive mimicry. Bühler (1893–1974), German child psychologist.

2. The universal internalization of the prohibited desire for one’s mother and the love-hate relation to one’s father posited by Freud. Lacan’s point is that human desire is not natural: it is shaped by fictions and prohibitions.

In the light of this conception, the term primary narcissism,³ by which analytic doctrine designates the libidinal investment characteristic of that moment, reveals in those who invented it the most profound awareness of semantic latencies. But it also throws light on the dynamic opposition between this libido⁴ and the sexual libido, which the first analysts tried to define when they invoked destructive and, indeed, death instincts, in order to explain the evident connection between the narcissistic libido and the alienating function of the *I*, the aggressivity it releases in any relation to the other, even in a relation involving the most Samaritan of aid.⁵

In fact, they were encountering that *existential negativity* whose reality is so vigorously proclaimed by the contemporary philosophy of being and nothingness.⁶

But unfortunately that philosophy grasps negativity only within the limits of a self-sufficiency of consciousness, which, as one of its premises links to the *méconnaissances*⁷ that constitute the ego, the illusion of autonomy to which it entrusts itself. This flight of fancy, for all that it draws, to an unusual extent, on borrowings from psychoanalytic experience culminates in the pretention of providing an existential psychoanalysis.

At the culmination of the historical effort of a society to refuse to recognize that it has any function other than the utilitarian one, and in the anxiety of the individual confronting the 'concentrational'⁸ form of the social bond that seems to arise to crown this effort, existentialism must be judged by the explanations it gives of the subjective impasses that have indeed resulted from it; a freedom that is never more authentic than when it is within the walls of a prison; a demand for commitment, expressing the impotence of a pure consciousness to master any situation; a voyeuristic-sadistic idealization of the sexual relation; a personality that realizes itself only in suicide; a consciousness of the other than can be satisfied only by Hegelian murder.⁹

These propositions are opposed by all our experience, in so far as it teaches us not to regard the ego as centred on the *perception-consciousness system*, or as organized by the 'reality principle'—a principle that is the expression of a scientific prejudice most hostile to the dialectic of knowledge. Our experience shows that we should start instead from the *function of méconnaissance* that characterizes the ego in all its structures, so markedly articulated by Miss Anna Freud. For, if the *Verneinung*¹ represents the patent form of that function, its effects will, for the most part, remain latent, so long as they are not illuminated by some light reflected on to the level of fatality, which is where the id manifests itself.

We can thus understand the inertia characteristic of the formations of the *I*, and find there the most extensive definition of neurosis—just as the captation² of the subject by the situation gives us the most general formula

3. Self-preservation.

4. Desire (Latin), a Freudian term.

5. That is, generous and altruistic help; for the parable of the good Samaritan, see Luke 10.30–37.

6. That is, by Jean-Paul Sartre (1905–1980), author of *Being and Nothingness* (1943); the French philosopher argued that humans have no essence before they act and thus shape themselves through their autonomous choices.

7. Misrecognitions (French).

8. "Concentrationnaire," an adjective coined

after World War II (this article was written in 1949) to describe the life of the concentration camp. In the hands of certain writers it became, by extension, applicable to many aspects of "modern" life [translator's note].

9. An allusion to the Master-Slave dialectic (see above) described by GEORG WILHELM FRIEDRICH HEGEL (1770–1831), German idealist philosopher.

1. Denial (German).

2. Seizure.

for madness, not only the madness that lies behind the walls of asylums, but also the madness that deafens the world with its sound and fury.

The sufferings of neurosis and psychosis are for us a schooling in the passions of the soul, just as the beam of the psychoanalytic scales, when we calculate the tilt of its threat to entire communities, provides us with an indication of the deadening of the passions in society.

At this junction of nature and culture, so persistently examined by modern anthropology, psychoanalysis alone recognizes this knot of imaginary servitude that love must always undo again, or sever.

For such a task, we place no trust in altruistic feeling, we who lay bare the aggressivity that underlies the activity of the philanthropist, the idealist, the pedagogue, and even the reformer.

In the recourse of subject to subject that we preserve, psychoanalysis may accompany the patient to the ecstatic limit of the *'Thou art that,'* in which is revealed to him the cipher of his mortal destiny, but it is not in our mere power as practitioners to bring him to that point where the real journey begins.

1949

*From The Agency of the Letter in the Unconscious*¹

* * *

As my title suggests, beyond this 'speech', what the psychoanalytic experience discovers in the unconscious is the whole structure of language. Thus from the outset I have alerted informed minds to the extent to which the notion that the unconscious is merely the seat of the instincts will have to be rethought.

But how are we to take this 'letter' here? Quite simply, literally.²

By 'letter' I designate that material support that concrete discourse borrows from language.

This simple definition assumes that language is not to be confused with the various psychical and somatic functions that serve it in the speaking subject—primarily because language and its structure exist prior to the moment at which each subject at a certain point in his mental development makes his entry into it.

Let us note, then, that aphasias,³ although caused by purely anatomical lesions in the cerebral apparatus that supplies the mental centre for these functions, prove, on the whole, to distribute their deficits between the two sides of the signifying effect of what we call here 'the letter' in the creation of signification.⁴ A point that will be clarified later.

1. Translated by Alan Sheridan, who occasionally includes the original French in parentheses.

2. "À la lettre" [translator's note].

3. Speech losses.

4. This aspect of aphasia, so useful in overthrowing the concept of "psychological function," which only obscures every aspect of the question, becomes quite clear in the purely linguistic analy-

sis of the two major forms of aphasia worked out by one of the leaders of modern linguistics, Roman Jakobson. See the most accessible of his works, the *Fundamentals of Language* (with Morris Halle, Gravenhage: Mouton, 1956), part II, chapters 1 to 4 [Lacan's note]. JAKOBSON (1896–1982), Russian-born American linguist.

Thus the subject, too, if he can appear to be the slave of language is all the more so of a discourse in the universal movement in which his place is already inscribed at birth, if only by virtue of his proper name.

Reference to the experience of the community, or to the substance of this discourse, settles nothing. For this experience assumes its essential dimension in the tradition that this discourse itself establishes. This tradition, long before the drama of history is inscribed in it, lays down the elementary structures of culture. And these very structures reveal an ordering of possible exchanges which, even if unconscious, is inconceivable outside the permutations authorized by language.

With the result that the ethnographic duality of nature and culture is giving way to a ternary conception of the human condition—nature, society, and culture—the last term of which could well be reduced to language, or that which essentially distinguishes human society from natural societies.

But I shall not make of this distinction either a point or a point of departure, leaving to its own obscurity the question of the original relations between the signifier and labour. I shall be content, for my little jab at the general function of *praxis* in the genesis of history, to point out that the very society that wished to restore, along with the privileges of the producer, the causal hierarchy of the relations between production and the ideological superstructure to their full political rights, has none the less failed to give birth to an esperanto in which the relations of language to socialist realities would have rendered any literary formalism radically impossible.⁵

For my part, I shall trust only those assumptions that have already proven their value by virtue of the fact that language through them has attained the status of an object of scientific investigation.

For it is by virtue of this fact that linguistics⁶ is seen to occupy the key position in this domain, and the reclassification of the sciences and a regrouping of them around it signals, as is usually the case, a revolution in knowledge; only the necessities of communication made me inscribe it at the head of this volume under the title ‘the sciences of man’⁷—despite the confusion that is thereby covered over.

To pinpoint the emergence of linguistic science we may say that, as in the case of all sciences in the modern sense, it is contained in the constitutive moment of an algorithm that is its foundation. This algorithm is the following:

$$\frac{S}{s}$$

which is read as: the signifier over the signified, ‘over’ corresponding to the bar separating the two stages.

5. We may recall that the discussion of the need for a new language in communist society did in fact take place, and Stalin, much to the relief of those who adhered to his philosophy, put an end to it with the following formulation: language is not a superstructure [Lacan’s note]. “Superstructure”: the term used by KARL MARX (1818–1883) to designate the political, legal, social, and cultural forms of a society, which are based on its economic structure. Joseph Stalin (1879–1953), leader of the U.S.S.R. (1924–53). “Esperanto”: artificial universal language.

6. By “linguistics” I mean the study of existing lan-

guages (*langues*) in their structure and in the laws revealed therein; this excludes any theory of abstract codes sometimes included under the heading of communication theory, as well as the theory, originating in the physical sciences, called information theory, or any semiology more or less hypothetically generalized [Lacan’s note]. *Langue*, language in its totality, is distinct from *parole*, language as actually spoken by an individual.

7. *Psychanalyse et sciences de l’homme* [Lacan’s note]. Lacan is stressing the changes that the scientific study of language has brought about in the very notion of a “human science.”

This sign should be attributed to Ferdinand de Saussure,⁸ although it is not found in exactly this form in any of the numerous schemas, which none the less express it, to be found in the printed version of his lectures of the years 1906–7, 1908–9, and 1910–11, which the piety of a group of his disciples caused to be published under the title, *Cours de linguistique générale*, a work of prime importance for the transmission of a teaching worthy of the name, that is, that one can come to terms with only in its own terms.

That is why it is legitimate for us to give him credit for the formulation S/s by which, in spite of the differences among schools, the beginning of modern linguistics can be recognized.

The thematics of this science is henceforth suspended, in effect, at the primordial position of the signifier and the signified as being distinct orders separated initially by a barrier resisting signification. And that is what was to make possible an exact study of the connections proper to the signifier, and of the extent of their function in the genesis of the signified.

For this primordial distinction goes well beyond the discussion concerning the arbitrariness of the sign, as it has been elaborated since the earliest reflections of the ancients, and even beyond the impasse which, through the same period, has been encountered in every discussion of the bi-univocal correspondence between the word and the thing, if only in the mere act of naming. All this, of course, is quite contrary to the appearances suggested by the importance often imputed to the role of the index finger pointing to an object in the learning process of the *infans*⁹ subject learning his mother tongue, or the use in foreign language teaching of so-called 'concrete' methods.

One cannot go further along this line of thought than to demonstrate that no signification can be sustained other than by reference to another signification:¹ in its extreme form this amounts to the proposition that there is no language (*langue*) in existence for which there is any question of its inability to cover the whole field of the signified, it being an effect of its existence as a language (*langue*) that it necessarily answers all needs. If we try to grasp in language the constitution of the object, we cannot fail to notice that this constitution is to be found only at the level of concept, a very different thing from a simple nominative, and that the thing, when reduced to the noun, breaks up into the double, divergent beam of the 'cause' (*causa*)² in which it has taken shelter in the French word *chose*, and the nothing (*rien*) to which it has abandoned its Latin dress (*rem*).

These considerations, important as their existence is for the philosopher, turn us away from the locus in which language questions us as to its very nature. And we will fail to pursue the question further as long as we cling to the illusion that the signifier answers to the function of representing the signified, or better, that the signifier has to answer for its existence in the name of any signification whatever.

For even reduced to this latter formulation, the heresy is the same—the heresy that leads logical positivism in search of the 'meaning of

8. Swiss linguist (1857–1913; see above); he described and named the two parts of a linguistic sign, the *signified* (the concept or meaning) and the *signifier* (the sound that conveys the concept or meaning). His *Course in General Linguistics* was published in 1916.

9. Incapable of speech (Latin).

1. Cf. the *De Magistro* of St. Augustine, especially the chapter "De significatione locutionis" which I analyzed in my seminar of June 23, 1954 [Lacan's note]. AUGUSTINE (354–430), early Christian philosopher and theologian.

2. Latin, as is *rem* (thing), below.

meaning',³ as its objective is called in the language of its devotees. As a result, we can observe that even a text highly charged with meaning can be reduced, through this sort of analysis, to insignificant bagatelles, all that survives being mathematical algorithms that are, of course, without any meaning.⁴

To return to our formula S/s: if we could infer nothing from it but the notion of the parallelism of its upper and lower terms, each one taken in its globality, it would remain the enigmatic sign of a total mystery. Which of course is not the case.

In order to grasp its function I shall begin by reproducing the classic, yet faulty illustration (see below) by which its usage is normally introduced, and one can see how it opens the way to the kind of error referred to above.

In my lecture, I replaced this illustration with another, which has no greater claim to correctness than that it has been transplanted into that incongruous dimension that the psychoanalyst has not yet altogether renounced because of his quite justified feeling that his conformism takes its value entirely from it. Here is the other diagram:

where we see that, without greatly extending the scope of the signifier concerned in the experiment, that is, by doubling a noun through the mere juxtaposition of two terms whose complementary meanings ought appar-

3. English in the original [translator's note]. *The Meaning of Meaning* was a 1923 work by Charles K. Ogden and I. A. Richards, English linguists who viewed the study of literature as an objective, scientific discipline.

4. So Mr. I. A. Richards, author of a work precisely in accord with such an objective, has in another work shown us its application. He took for his purposes a page from Mong-tse (Mencius, to the Jesuits) and called the piece, *Mencius on the Mind* [1932]. The guarantees of the purity of the experiment are nothing to the luxury of the approaches. And our expert on the traditional Canon that contains the text is found right on the

spot in Peking where our demonstration-model mangle has been transported regardless of cost.

But we shall be no less transported, if less expensively, to see a bronze that gives out bell-tones at the slightest contact with thought, transformed into a rag to wipe the blackboard of the most dismaying British psychologism. And not without eventually being identified with the meninx of the author himself—all that remains of him or his object after having exhausted the meaning of the latter and the good sense of the former [Lacan's note]. "Meninx": a membrane around the brain.

ently to reinforce each other, a surprise is produced by an unexpected precipitation of an unexpected meaning: the image of twin doors symbolizing, through the solitary confinement offered Western Man for the satisfaction of his natural needs away from home, the imperative that he seems to share with the great majority of primitive communities by which his public life is subjected to the laws of urinary segregation.⁵

It is not only with the idea of silencing the nominalist debate⁶ with a low blow that I use this example, but rather to show how in fact the signifier enters the signified, namely, in a form which, not being immaterial, raises the question of its place in reality. For the blinking gaze of a short sighted person might be justified in wondering whether this was indeed the signifier as he peered closely at the little enamel signs that bore it, a signifier whose signified would in this call receive its final honours from the double and solemn procession from the upper nave.

But no contrived example can be as telling as the actual experience of truth. So I am happy to have invented the above, since it awoke in the person whose word I most trust a memory of childhood, which having thus happily come to my attention is best placed here.

A train arrives at a station. A little boy and a little girl, brother and sister, are seated in a compartment face to face next to the window through which the buildings along the station platform can be seen passing as the train pulls to a stop. 'Look', says the brother, 'we're at Ladies!'; 'Idiot!' replies his sister, 'Can't you see we're at Gentlemen'.

Besides the fact that the rails in this story materialize the bar in the Saussurian algorithm (and in a form designed to suggest that its resistance may be other than dialectical), we should add that only someone who didn't have his eyes in front of the holes (it's the appropriate image here) could possibly confuse the place of the signifier and the signified in this story, or not see from what radiating centre the signifier sends forth its light into the shadow of incomplete significations.

For this signifier will now carry a purely animal Dissension, destined for the usual oblivion of natural mists, to the unbridled power of ideological warfare, relentless for families, a torment to the Gods. For these children, Ladies and Gentlemen will be henceforth two countries towards which each of their souls will strive on divergent wings, and between which a truce will be the more impossible since they are actually the same country and neither can compromise on its own superiority without detracting from the glory of the other.

But enough. It is beginning to sound like the history of France. Which it is more human, as it ought to be, to evoke here than that of England, destined to tumble from the Large to the Small End of Dean Swift's egg.⁷

5. Lacan has transformed Saussure's model of the sign (in which the signified can still be understood to be a representation of a tree; see *Course in General Linguistics*, above) into a structure in which the representative function of the sign is less important than its law-giving function. In Saussure, the reader's body is not implicated; in Lacan, the sign exists to tell the reader where to "go." The two doors are identical, but the subject confronting them must con-

form to the law of "urinary segregation" (i.e., sexual difference) if he or she wishes to find bodily relief.

6. The debate that tries to determine which came first, words or things.

7. In *Gulliver's Travels* (1726), by the Irish-born English satirist and clergyman Jonathan Swift (1667–1745), the narrator visits an empire convulsed by civil war over the question of which end of an egg to eat from.

It remains to be conceived what steps, what corridor, the S of the signifier, visible here in the plurals⁸ in which it focuses its welcome beyond the window, must take in order to rest its elbows on the ventilators through which, like warm and cold air, indignation and scorn come hissing out below.

One thing is certain: if the algorithm S/s with its bar is appropriate, access from one to the other cannot in any case have a signification. For in so far as it is itself only pure function of the signifier, the algorithm can reveal only the structure of a signifier in this transfer.

Now the structure of the signifier is, as it is commonly said of language itself, that it should be articulated.

This means that no matter where one starts to designate their reciprocal encroachments and increasing inclusions, these units are subjected to the double condition of being reducible to ultimate differential elements and of combining them according to the laws of a closed order.⁹

These elements, one of the decisive discoveries of linguistics, are *phonemes*; but we must not expect to find any *phonetic* constancy in the modulatory variability to which this term applies, but rather the synchronic¹ system of differential couplings necessary for the discernment of sounds in a given language. Through this, one sees that an essential element of the spoken word itself was predestined to flow into the mobile characters which, in a jumble of lower-case Didots or Garamonds,² render validly present what we call the 'letter', namely, the essentially localized structure of the signifier.

With the second property of the signifier, that of combining according to the laws of a closed order, is affirmed the necessity of the topological substratum of which the term I ordinarily use, namely, the signifying chain, gives an approximate idea: rings of a necklace that is a ring in another necklace made of rings.

Such are the structural conditions that define grammar as the order of constitutive encroachments of the signifier up to the level of the unit immediately superior to the sentence, and lexicology as the order of constitutive inclusions of the signifier to the level of the verbal locution.

In examining the limits by which these two exercises in the understanding of linguistic usage are determined, it is easy to see that only the correlations between signifier and signifier provide the standard for all research into signification, as is indicated by the notion of 'usage' of a taxeme or semanteme,³ which in fact refers to the context just above that of the units concerned.

But it is not because the undertakings of grammar and lexicology are exhausted within certain limits that we must think that beyond those limits signification reigns supreme. That would be an error.

For the signifier, by its very nature, always anticipates meaning by unfolding its dimension before it. As is seen at the level of the sentence when it is interrupted before the significant term: 'I shall never . . .', 'All the same it

8. Not, unfortunately, the case in the English here—the plural of "gentleman" being indicated other than by the addition of an "s" [translator's note].

9. In structural linguistics these conditions are often termed the paradigmatic relationship, which obtains between items that can be substituted for one another in a given context (e.g., two adverbs) and the syntagmatic relationship, which obtains between linguistic items that

combine to form a meaningful whole (e.g., the words in a given sentence).

1. At a single point in time (as opposed to the *diachronic*, which pertains to the development of a phenomenon over time).

2. Names of different type-faces [translator's note].

3. An irreducible unit of meaning. "Taxeme": a minimal linguistic feature (pitch, order, etc.) that differentiates two otherwise identical utterances.

is . . .', 'And yet there may be . . .'. Such sentences are not without meaning, a meaning all the more oppressive in that it is content to make us wait for it.⁴

But the phenomenon is no different which by the mere recoil of a 'but' brings to the light, comely as the Shulamite, honest as the dew, the negress adorned for the wedding and the poor woman ready for the auction-block.⁵

From which we can say that it is in the chain of the signifier that the meaning 'insists'⁶ but that none of its elements 'consists' in the signification of which it is at the moment capable.

We are forced, then, to accept the notion of an incessant sliding of the signified under the signifier—which Ferdinand de Saussure illustrates with an image resembling the wavy lines of the upper and lower Waters in miniatures from manuscripts of *Genesis*; a double flux marked by fine streaks of rain, vertical dotted lines supposedly confining segments of correspondence.

All our experience runs counter to this linearity, which made me speak once, in one of my seminars on psychosis, of something more like 'anchoring points' (*points de capiton*)⁷ as a schema for taking into account the dominance of the letter in the dramatic transformation that dialogue can effect in the subject.

The linearity that Saussure holds to be constitutive of the chain of discourse, in conformity with its emission by a single voice and with its horizontal position in our writing—if this linearity is necessary, in fact, it is not sufficient. It applies to the chain of discourse only in the direction in which it is orientated in time, being taken as a signifying factor in all languages in which 'Peter hits Paul' reverses its time when the terms are inverted.

But one has only to listen to poetry, which Saussure was no doubt in the habit of doing,⁸ for a polyphony to be heard, for it to become clear that all discourse is aligned along the several staves of a score.

There is in effect no signifying chain that does not have, as if attached to the punctuation of each of its units, a whole articulation of relevant contexts suspended 'vertically', as it were, from that point.

Let us take our word 'tree' again, this time not as an isolated noun, but at the point of one of these punctuations, and see how it crosses the bar of the Saussurian algorithm. (The anagram of '*arbre*' and '*barre*'⁹ should be noted.)

For even broken down into the double spectre of its vowels and consonants, it can still call up with the robur¹ and the plane tree the significations it takes on, in the context of our flora, of strength and majesty. Drawing on all the symbolic contexts suggested in the Hebrew of the Bible, it erects on a barren hill the shadow of the cross. Then reduces to the capital Y, the sign of

4. To which verbal hallucination, when it takes this form, opens a communicating door with the Freudian structure of psychosis—a door until now unnoticed (cf. "On a Question Preliminary to Any Possible Treatment of Psychosis," *Écrits*) [Lacan's note].

5. The allusions are to the "I am black, but comely . . ." of the *Song of Solomon* [1.5], and to the 19th-century cliché of the "poor, but honest" woman [translator's note].

6. The word "insists"—like the French word *instance* (translated as "agency") in the title of the essay—emphasizes location ("in-") and law ("legal instance") rather than content, stressing the links in articulation rather than the meaning

of any one term.

7. The image is that of an upholster's button.

8. The publication by Jean Starobinski, in *Le Mercure de France* (February 1964) of Saussure's notes on anagrams and their hypogrammatical use, from the Saturnine verses to the writings of Cicero, provides the corroboration that I then lacked [Lacan's note, added 1966]. "Saturnine verses": poetry in the Saturnian meter used by some early Latin writers (3d c. B.C.E.). Cicero (106–43 B.C.E.), Roman orator, philosopher, and undistinguished poet.

9. Tree and bar (French). Lacan goes on to explore the ways in which the "tree" has been fundamental to Western thought.

1. Oak (Latin).

dichotomy which, except for the illustration used by heraldry, would owe nothing to the tree however genealogical we may think it. Circulatory tree, tree of life of the cerebellum, tree of Saturn, tree of Diana,² crystals formed in a tree struck by lightning, is it your figure that traces our destiny for us in the tortoise-shell cracked by the fire, or your lightning that causes that slow shift in the axis of being to surge up from an unnamable night into the *Ενπάντα*³ of language:

*No! says the Tree, it says No! in the shower of sparks
Of its superb head*

lines that require the harmonics of the tree just as much as their continuation:

*Which the storm treats as universally
As it does a blade of grass.*⁴

For this modern verse is ordered according to the same law of the parallelism of the signifier that creates the harmony governing the primitive Slavic epic or the most refined Chinese poetry.

As is seen in the fact that the tree and the blade of grass are chosen from the same mode of the existent in order for the signs of contradiction—saying ‘No!’ and ‘treat as’—to affect them, and also so as to bring about, through the categorical contrast of the particularity of ‘superb’ with the ‘universally’ that reduces it, in the condensation of the ‘head’ (*tête*) and the ‘storm’ (*tempête*), the indiscernible shower of sparks of the eternal instant.

But this whole signifier can only operate, it may be said, if it is present in the subject. It is this objection that I answer by supposing that it has passed over to the level of the signified.

For what is important is not that the subject know anything whatsoever. (If LADIES and GENTLEMEN were written in a language unknown to the little boy and girl, their quarrel would simply be the more exclusively a quarrel over words, but no less ready to take on signification.)

What this structure of the signifying chain discloses is the possibility I have, precisely in so far as I have this language in common with other subjects, that is to say, in so far as it exists as a language, to use it in order to signify *something quite other* than what it says. This function of speech is more worth pointing out than that of ‘disguising the thought’ (more often than not indefinable) of the subject; it is no less than the function of indicating the place of this subject in the search for the true.

I have only to plant my tree in a locution; climb the tree, even project on to it the cunning illumination a descriptive context gives to a word; raise it (*arborer*) so as not to let myself be imprisoned in some sort of *communiqué* of the facts, however official, and if I know the truth, make it heard, in spite of all the *between-the-lines* censures by the only signifier my acrobatics through the branches of the tree can constitute, provocative to the point of

2. Diana, Roman goddess of the hunt, and Saturn, the Roman god of agriculture, both had tree cults associated with them. In addition, the “tree” shape of a stag’s antlers might also be associated with Diana.

3. All one (Greek).

4. *Non! dit l’Arbre, il dit: Non! dans l’étincellement / De sa tête superbe / Que la tempête traite universellement / Comme elle fait une herbe.* (Paul Valéry, “Au Platane,” *Les Charmes* [1922]) [Lacan’s note].

burlesque, or perceptible only to the practised eye, according to whether I wish to be heard by the mob or by the few.

The properly signifying function thus depicted in language has a name. We learned this name in some grammar of our childhood, on the last page, where the shade of Quintilian,⁵ relegated to some phantom chapter concerning 'final considerations on style', seemed suddenly to speed up his voice in an attempt to get in all he had to say before the end.

It is among the figures of style, or tropes—from which the verb 'to find' (*trouver*) comes to us—that this name is found. This name is *metonymy*.⁶

I shall refer only to the example given there: 'thirty sails'. For the disquietude I felt over the fact that the word 'ship', concealed in this expression, seemed, by taking on its figurative sense, through the endless repetition of the same old example, only to increase its presence, obscured (*voilait*) not so much those illustrious sails (*voiles*)⁷ as the definition they were supposed to illustrate.

The part taken for the whole, we said to ourselves, and if the thing is to be taken seriously, we are left with very little idea of the importance of this fleet, which 'thirty sails' is precisely supposed to give us: for each ship to have just one sail is in fact the least likely possibility.

By which we see that the connexion between ship and sail is nowhere but in the signifier, and that it is in the *word-to-word* connexion that metonymy is based.⁸

I shall designate as metonymy, then, the one side (*versant*) of the effective field constituted by the signifier, so that meaning can emerge there.

The other side is *metaphor*.⁹ Let us immediately find an illustration; Quillet's¹ dictionary seemed an appropriate place to find a sample that would not seem to be chosen for my own purposes, and I didn't have to go any further than the well known line of Victor Hugo:

*His sheaf was neither miserly nor spiteful . . .*²

under which aspect I presented metaphor in my seminar on the psychoses.

It should be said that modern poetry and especially the Surrealist school³ have taken us a long way in this direction by showing that any conjunction of two signifiers would be equally sufficient to constitute a metaphor, except for the additional requirement of the greatest possible disparity of the images

5. Roman rhetorician (ca. 30/35—ca. 100 C.E.).

6. The substitution of one word for another dissociated with it in any way *except* resemblance (i.e., except as metaphor): part for whole ("thirty sails"), material for thing made ("a glass"), author's name for text ("Lacan"), and so on.

7. The French word *voile* has two meanings and two genders: *la voile* is a veil, while *le voile* is a sail. Playing on this ambiguity, Lacan shows that if "thirty sails" is a metonym for "thirty ships," that connection exists by linguistic convention rather than in reality.

8. I pay homage here to the works of Roman Jakobson—to which I owe much of this formulation; works to which a psychoanalyst can constantly refer in order to structure his own experience, and which render superfluous the "personal communications" of which I could boast as much as the next fellow [Lacan's note].

9. The substitution of one word for another associated by resemblance ("my love is a rose"). In "Two Aspects of Language and Two Types of Aphasic Disturbances" (1956; see above), Jakobson contrasts the two figures.

1. Aristide Quillet (1880–1955), publisher of a French dictionary.

2. "Sa gerbe n'était pas avare ni haineuse," a line from "Booz endormi" [translator's note], by Hugo (1802–1885), French Romantic poet, playwright, and novelist. "Booz endormi," from Hugo's *La Légende des siècles* (1859), is a retelling of the book of Ruth.

3. An experimental literary and artistic movement founded in France in 1924; surrealists sought to express subconscious thought and feeling, and believed that the incongruous juxtapositions created by automatic writing and painting revealed inner truths.

signified, needed for the production of the poetic spark, or in other words for metaphoric creation to take place.

* * *

For in the analysis of dreams, Freud intends only to give us the laws of the unconscious in their most general extension.⁴ One of the reasons why dreams were most propitious for this demonstration is exactly, Freud tells us, that they reveal the same laws whether in the normal person or in the neurotic.

But in either case, the efficacy of the unconscious does not cease in the waking state. The psychoanalytic experience does nothing other than establish that the unconscious leaves none of our actions outside its field. The presence of the unconscious in the psychological order, in other words in the relation-functions of the individual, should, however, be more precisely defined: it is not coextensive with that order, for we know that if unconscious motivation is manifest in conscious psychical effects, as well as in unconscious ones, conversely it is only elementary to recall to mind that a large number of psychical effects that are quite legitimately designated as unconscious, in the sense of excluding the characteristic of consciousness, are nonetheless without any relation whatever to the unconscious in the Freudian sense. So it is only by an abuse of the term that unconscious in that sense is confused with psychical, and that one may thus designate as psychical what is in fact an effect of the unconscious, as on the somatic for instance.

It is a matter, therefore, of defining the topography of this unconscious. I say that it is the very topography defined by the algorithm:

$$\frac{S}{s}$$

What we have been able to develop concerning the effects of the signifier on the signified suggests its transformation into:⁵

$$f(S)\frac{I}{s}$$

We have shown the effects not only of the elements of the horizontal signifying chain, but also of its vertical dependencies in the signified, divided into two fundamental structures called metonymy and metaphor. We can symbolize them by, first:⁶

$$f(S \dots S')S \cong S(-)s$$

that is to say, the metonymic structure, indicating that it is the connexion between signifier and signifier that permits the elision in which the signifier installs the lack-of-being in the object relation, using the value of 'reference back' possessed by signification in order to invest it with the desire aimed at the very lack it supports. The sign – placed between () represents here the maintenance of the bar – which, in the original algorithm, marked

4. On SIGMUND FREUD (1856–1939), the Austrian founder of psychoanalysis, see above; *The Interpretation of Dreams* (1900) was his seminal work.

5. According to the equation, the function of the signifier is in inverse relation to (depends on the

repression of) the signified.

6. According to the equation, the metonymic connection ("signifying chain") among signifiers depends on maintaining the bar of repression.

the irreducibility in which, in the relations between signifier and signified, the resistance of signification is constituted.⁷

Secondly,⁸

$$f\left(\frac{S'}{S}\right)S \cong S(+)s$$

the metaphoric structure indicating that it is in the substitution of signifier for signifier that an effect of signification is produced that is creative or poetic, in other words, which is the advent of the signification in question.⁹ The sign + between () represents here the crossing of the bar – and the constitutive value of this crossing for the emergence of signification.

This crossing expresses the condition of passage of the signifier into the signified that I pointed out above, although provisionally confusing it with the place of the subject.

It is the function of the subject, thus introduced, that we must now turn to since it lies at the crucial point of our problem.

'I think, therefore I am' (*cogito ergo sum*)¹ is not merely the formula in which is constituted, with the historical high point of reflection on the conditions of science, the link between the transparency of the transcendental subject and his existential affirmation.

Perhaps I am only object and mechanism (and so nothing more than phenomenon), but assuredly in so far as I think so, I am—absolutely. No doubt philosophers have brought important corrections to this formulation, notably that in that which thinks (*cogitans*), I can never constitute myself as anything but object (*cogitatum*). Nonetheless it remains true that by way of this extreme purification of the transcendental subject,² my existential link to its project seems irrefutable, at least in its present form, and that: '*cogito ergo sum*' *ubi cogito, ibi sum*,³ overcomes this objection.

Of course, this limits me to being there in my being only in so far as I think that I am in my thought; just how far I actually think this concerns only myself and if I say it, interests no one.⁴

Yet to elude this problem on the pretext of its philosophical pretensions is simply to admit one's inhibition. For the notion of subject is indispensable even to the operation of a science such as strategy (in the modern sense) whose calculations exclude all 'subjectivism'.

It is also to deny oneself access to what might be called the Freudian universe—in the way that we speak of the Copernican universe.⁵ It was in

7. The sign \cong here designates congruence [Lacan's note].

8. According to the equation, the metaphoric connection "crosses over"—it breaks through the bar between the unconscious signified and the signifying chain.

9. S' designating here the term productive of the signifying effect (or significance); one can see that the term is latent in metonymy, patent in metaphor [Lacan's note].

1. The Latin is the foundational statement of the French philosopher René Descartes (1596–1650), who relied on this certainty of existence to deduce other truths. Lacan will subtly critique American "ego psychology" for modeling the psyche on this attempt to make "thinking" coincide with "being," or to make the unconscious

more like consciousness.

2. That is, the subject abstractly considered, outside of any experience.

3. Where I think, there I am (Latin).

4. It is quite otherwise if by posing a question such as "Why philosophers?" I become more candid than nature, for then I am asking not only the question that philosophers have been asking themselves for all time, but also the one in which they are perhaps most interested [Lacan's note].

5. That is, the universe at whose center was the sun, as the Polish astronomer Nicolaus Copernicus (1473–1543) suggested, and not the earth, as the Egyptian astronomer Ptolemy (active 127–148 C.E.) had believed. Freud compares his discoveries to a Copernican revolution in his *Introductory Lectures on Psychoanalysis* (1917).

fact the so-called Copernican revolution to which Freud himself compared his discovery, emphasizing that it was once again a question of the place man assigns to himself at the centre of a universe.

Is the place that I occupy as the subject of a signifier concentric or excentric, in relation to the place I occupy as subject of the signified?—that is the question.

It is not a question of knowing whether I speak of myself in a way that conforms to what I am, but rather of knowing whether I am the same as that of which I speak. And it is not at all inappropriate to use the word 'thought' here. For Freud uses the term to designate the elements involved in the unconscious, that is the signifying mechanisms that we now recognize as being there.

It is nonetheless true that the philosophical *cogito* is at the centre of the mirage that renders modern man so sure of being himself even in his uncertainties about himself, and even in the mistrust he has learned to practise against the traps of self-love.

Furthermore, if, turning the weapon of metonymy against the nostalgia that it serves, I refuse to seek any meaning beyond tautology, if in the name of 'war is war' and 'a penny's a penny' I decide to be only what I am, how even here can I elude the obvious fact that I am in that very act?

And it is no less true if I take myself to the other, metaphoric pole of the signifying quest, and if I dedicate myself to becoming what I am, to coming into being, I cannot doubt that even if I lose myself in the process, I am in that process.

Now it is on these very points, where evidence will be subverted by the empirical, that the trick of the Freudian conversion lies.

This signifying game between metonymy and metaphor, up to and including the active edge that splits my desire between a refusal of the signifier and a lack of being, and links my fate to the question of my destiny, this game, in all its inexorable subtlety, is played until the match is called,⁶ there where I am not, because I cannot situate myself there.

That is to say, what is needed is more than these words with which, for a brief moment I disconcerted my audience: I think where I am not, therefore I am where I do not think. Words that render sensible to an ear properly attuned with what elusive ambiguity⁷ the ring of meaning flees from our grasp along the verbal thread.

What one ought to say is: I am not wherever I am the plaything of my thought; I think of what I am where I do not think to think.

This two-sided mystery is linked to the fact that the truth can be evoked only in that dimension of alibi in which all 'realism' in creative works takes its virtue from metonymy; it is likewise linked to this other fact that we accede to meaning only through the double twist of metaphor when we have the one and only key: the S and the s of the Saussurian algorithm are not on the same level, and man only deludes himself when he believes his true place is at their axis, which is nowhere.

6. That is, until I die.

7. *Ambiguïté de furet*—literally, "ferret-like ambiguity." This is one of a number of references in Lacan to the game "hunt-the-slipper" (*jeu du*

furet) [translator's note]. The wordplay depends on the name of the game (literally, "game of the ferret"), not the animal. "Hunt-the-slipper" is also known as "button, button, who's got the button."

Was nowhere, that is, until Freud discovered it; for if what Freud discovered isn't that, it isn't anything.

1957

The Signification of the Phallus¹

The following is the original, unaltered text of a lecture that I delivered in German on 9 May, 1958, at the Max-Planck Institute, Munich, where Professor Paul Matussek had invited me to speak.

If one has any notion of the state of mind then prevalent in even the least unaware circles, one will appreciate the effect that my use of such terms as, for example, 'the other scene', which I was the first to extract from Freud's work, must have had.

If 'deferred action' (*Nachtrag*), to rescue another of these terms from the facility into which they have since fallen, renders this effort impracticable, it should be known that they were unheard of at that time.

We know that the unconscious castration complex² has the function of a knot:

- (1) in the dynamic structuring of symptoms in the analytic sense of the term, that is to say, in that which is analysable in the neuroses, perversions, and psychoses;
- (2) in a regulation of the development that gives its *ratio* to this first role: namely, the installation in the subject of an unconscious position without which he would be unable to identify himself with the ideal type of his sex, or to respond without grave risk to the needs of his partner in the sexual relation, or even to accept in a satisfactory way the needs of the child who may be produced by this relation.

There is an antinomy, here, that is internal to the assumption by man (*Mensch*)³ of his sex: why must he assume the attributes of that sex only through a threat—the threat, indeed, of their privation? In 'Civilization and its Discontents' Freud, as we know, went so far as to suggest a disturbance of human sexuality, not of a contingent, but of an essential kind, and one of his last articles concerns the irreducibility in any finite (*endliche*) analysis of the sequellae⁴ resulting from the castration complex in the masculine unconscious and from *penisneid*⁵ in the unconscious of women.

1. Translated by Alan Sheridan, who occasionally includes the original French or German in parentheses.

2. A more general understanding of the castration complex theorized by SIGMUND FREUD. For Freud, "castration anxiety" was the fear of every male child that his desire to sleep with his

mother would lead to his castration by his father (see *Three Essays on the Theory of Sexuality*, 1905).

3. A human being of either sex (German).

4. Secondary consequences. *Civilization and Its Discontents* was published in 1930.

5. Penis envy (German).

This is not the only aporia,⁶ but it is the first that the Freudian experience and the metapsychology that resulted from it introduced into our experience of man. It is insoluble by any reduction to biological givens: the very necessity of the myth subjacent to the structuring of the Oedipus complex⁷ demonstrates this sufficiently.

It would be mere trickery to invoke in this case some hereditary amnesic trait, not only because such a trait is in itself debatable, but because it leaves the problem unsolved: namely, what is the link between the murder of the father and the pact of the primordial law, if it is included in that law that castration should be the punishment for incest?

It is only on the basis of the clinical facts that any discussion can be fruitful. These facts reveal a relation of the subject to the phallus that is established without regard to the anatomical difference of the sexes, and which, by this very fact, makes any interpretation of this relation especially difficult in the case of women. This problem may be treated under the following four headings:

- (1) from this 'why', the little girl considers herself, if only momentarily, as castrated, in the sense of deprived of the phallus, by someone, in the first instance by her mother, an important point, and then by her father, but in such a way that one must recognize in it a transference in the analytic sense of the term;
- (2) from this 'why', in a more primordial sense, the mother is considered, by both sexes, as possessing the phallus, as the phallic mother;
- (3) from this 'why', correlatively, the signification of castration in fact takes on its (clinically manifest) full weight as far as the formation of symptoms is concerned, only on the basis of its discovery as castration of the mother;
- (4) these three problems lead, finally, to the question of the reason, in development, for the phallic stage.⁸ We know that in this term Freud specifies the first genital maturation: on the one hand, it would seem to be characterized by the imaginary dominance of the phallic attribute and by masturbatory *jouissance*⁹ and, on the other, it localizes this *jouissance* for the woman in the clitoris, which is thus raised to the function of the phallus. It therefore seems to exclude in both sexes, until the end of this stage, that is, to the decline of the Oedipal stage, all instinctual mapping of the vagina as locus of genital penetration.

This ignorance is suspiciously like *méconnaissance*¹ in the technical sense of the term—all the more so in that it is sometimes quite false. Does this not bear out the fable in which Longus² shows us the initiation of Daphnis and Chloe subordinated to the explanations of an old woman?

Thus certain authors have been led to regard the phallic stage as the effect of a repression, and the function assumed in it by the phallic object as a

6. Difficulty, logical impasse (a term often used in deconstructive criticism to indicate the point in a text where inherent contradictions render interpretation undecidable).

7. The universal internalization by the male child of the prohibited desire for his mother and the love-hate relation to his father, as posited by Freud.

8. According to Freud, the stages through which the child passes are the oral, anal, phallic, and

(if the Oedipal complex is successfully resolved) genital (i.e., mature sexuality).

9. Orgasm (French).

1. Misrecognition; misprision (French).

2. Greek author (dates highly uncertain; 2d–6th c. C.E.) credited with writing the first pastoral prose romance, *Daphnis and Chloë*, which tells of two foundlings brought up by shepherds who meet in childhood and gradually fall in love.

symptom. The difficulty begins when one asks, *what* symptom? Phobia, says one, perversion, says another, both, says a third. It seems in the last case that nothing more can be said: not that interesting transmutations of the object of a phobia into a fetish do not occur, but if they are interesting it is precisely on account of the difference of their place in the structure. It would be pointless to demand of these authors that they formulate this difference from the perspectives currently in favour, that is to say, in terms of the object relation. Indeed, there is no other reference on the subject than the approximate notion of part-object, which—unfortunately, in view of the convenient uses to which it is being put in our time, has never been subjected to criticism since Karl Abraham³ introduced it.

The fact remains that the now abandoned discussion of the phallic stage, to be found in the surviving texts of the years 1928–32, is refreshing for the example it sets us of a *devotion to doctrine*—to which the degradation of psychoanalysis consequent on its *American transplantation* adds a note of nostalgia.

Merely to summarize the debate would be to distort the authentic diversity of the positions taken up by a Helene Deutsch, a Karen Horney, and an Ernest Jones,⁴ to mention only the most eminent.

The series of three articles devoted by Jones to the subject are especially fruitful—if only for the development of the notion of *aphanisis*, a term that he himself had coined.⁵ For, in positing so correctly the problem of the relation between castration and desire, he demonstrates his inability to recognize what he nevertheless grasped so clearly that the term that earlier provided us with the key to it seems to emerge from his very failure.

Particularly amusing is the way in which he manages to extract from a letter by Freud himself a position that is strictly contrary to it: an excellent model in a difficult *genre*.

Yet the matter refuses to rest there, Jones appearing to contradict his own case for a re-establishment of the equality of natural rights (does he not win the day with the Biblical ‘God created them man and woman’ with which his plea concludes?). In fact, what has he gained in normalizing the function of the phallus as a part-object if he has to invoke its presence in the mother’s body as an internal object, which term is a function of the phantasies revealed by Melanie Klein,⁶ and if he cannot separate himself from Klein’s view that these phantasies originate as far back as in early childhood, during Oedipal formation?

It might be a good idea to re-examine the question by asking what could have necessitated for Freud the evident paradox of his position. For one has to admit that he was better guided than anyone in his recognition of the order of unconscious phenomena, of which he was the inventor, and that,

3. German psychoanalyst (1877–1925), who focused on child sexual development. “Part-object”: the tendency of a child to relate to parts rather than to complete objects (e.g., to the breast rather than the mother).

4. All early psychoanalysts: Deutsch (1884–1982), a Polish-born American who wrote on the psychology of women; Horney (1885–1952), a German-born American who rejected the notion of penis envy; and Jones (1879–1958), a British champion of psychoanalysis who wrote the first

definitive biography of Freud (3 vols., 1953–57).

5. *Aphanisis*, the disappearance of sexual desire. This Greek term was introduced into psychoanalysis by Jones in “Early Development of Female Sexuality” (1927), in *Papers on Psycho-analysis*, 5th ed. (London, 1950). For Jones, the fear of aphanisis exists, in both boys and girls, at a deeper level than the castration complex [translator’s note].

6. Austrian-born English psychoanalyst (1882–1960), particularly interested in early mother-child relations.

failing an adequate articulation of the nature of these phenomena, his followers were doomed to lose their way to a greater or lesser degree.

It is on the basis of the following bet—which I lay down as the principle of a commentary of Freud's work that I have pursued during the past seven years—that I have been led to certain results: essentially, to promulgate as necessary to any articulation of analytic phenomena the notion of the signifier, as opposed to that of the signified, in modern linguistic analysis.⁷ Freud could not take this notion, which postdates him, into account, but I would claim that Freud's discovery stands out precisely because, although it set out from a domain in which one could not expect to recognize its reign, it could not fail to anticipate its formulas. Conversely, it is Freud's discovery that gives to the signifier / signified opposition the full extent of its implications: namely, that the signifier has an active function in determining certain effects in which the signifiable appears as submitting to its mark, by becoming through that passion the signified.

This passion of the signifier now becomes a new dimension of the human condition in that it is not only man who speaks, but that in man and through man *it* speaks (*ça parle*), that his nature is woven by effects in which is to be found the structure of language, of which he becomes the material, and that therefore there resounds in him, beyond what could be conceived of by a psychology of ideas, the relation of speech.

In this sense one can say that the consequences of the discovery of the unconscious have not yet been so much as glimpsed in theory, although its effects have been felt in praxis to a greater degree than perhaps we are aware of, if only in the form of effects of retreat.

It should be made clear that this advocacy of man's relation to the signifier as such has nothing to do with a 'culturalist' position in the ordinary sense of the term, the position in which Karen Horney, for example, was anticipated in the dispute concerning the phallus by a position described by Freud himself as a feminist one. It is not a question of the relation between man and language as a social phenomenon, there being no question even of something resembling the ideological psychogenesis with which we are familiar, and which is not superseded by peremptory recourse to the quite metaphysical notion, which lurks beneath its question-begging appeal to the concrete, conveyed so pitifully by the term 'affect'.

It is a question of rediscovering in the laws that govern that other scene (*ein andere Schauplatz*),⁸ which Freud, on the subject of dreams, designates as being that of the unconscious, the effects that are discovered at the level of the chain of materially unstable elements that constitutes language: effects determined by the double play of combination and substitution in the signifier, according to the two aspects that generate the signified, metonymy and metaphor; determining effects for the institution of the subject. From this test, a *topology*, in the mathematical sense of the term,⁹ appears, without

7. The sign was divided into *signified* (the meaning conveyed) and *signifier* (the symbol or sound that conveys that meaning) by the Swiss linguist FERDINAND DE SAUSSURE (1857–1913).

8. Another theater (German). Freud, in *The Interpretation of Dreams*, uses this metaphor to refer to conscious and unconscious processes.

Lacan extends this "topological" model of psychic location, suggesting that while a bourgeois drama may be playing on the main stage, a Greek tragedy is being performed somewhere else.

9. That is, the study of a figure's properties that are unchanged by such deformations as stretching.

which one soon realizes that is impossible simply to note the structure of a symptom in the analytic sense of the term.

It speaks in the Other, I say, designating by the Other the very locus evoked by the recourse to speech in any relation in which the Other intervenes. If *it* speaks in the Other, whether or not the subject hears it with his ear, it is because it is there that the subject, by means of a logic anterior to any awakening of the signified, finds its signifying place. The discovery of what it articulates in that place, that is to say, in the unconscious, enables us to grasp at the price of what splitting (*Spaltung*) it has thus been constituted.¹

The phallus reveals its function here. In Freudian doctrine, the phallus is not a phantasy, if by that we mean an imaginary effect. Nor is it as such an object (part-, internal, good, bad, etc.) in the sense that this term tends to accentuate the reality pertaining in a relation. It is even less the organ, penis or clitoris, that it symbolizes. And it is not without reason that Freud used the reference to the simulacrum that it represented for the Ancients.

For the phallus is a signifier, a signifier whose function, in the intra-subjective economy of the analysis, lifts the veil perhaps from the function it performed in the mysteries. For it is the signifier intended to designate as a whole the effects of the signified,² in that the signifier conditions them by its presence as a signifier.

Let us now examine the effects of this presence. In the first instance, they proceed from a deviation of man's needs from the fact that he speaks, in the sense that in so far as his needs are subjected to demand, they return to him alienated. This is not the effect of his real dependence (one should not expect to find here the parasitic conception represented by the notion of dependence in the theory of neurosis), but rather the turning into signifying form as such, from the fact that it is from the locus of the Other that its message is emitted.

That which is thus alienated in needs constitutes an *Urverdrängung* (primal repression), an inability, it is supposed, to be articulated in demand, but it re-appears in something it gives rise to that presents itself in man as desire (*das Begehren*). The phenomenology that emerges from analytic experience is certainly of a kind to demonstrate in desire the paradoxical, deviant, erratic, eccentric, even scandalous character by which it is distinguished from need. This fact has been too often affirmed not to have been always obvious to moralists worthy of the name. The Freudianism of earlier days seemed to owe its status to this fact. Paradoxically, however, psychoanalysis is to be found at the head of an ever-present obscurantism that is still more boring when it denies the fact in an ideal of theoretical and practical reduction of desire to need.

This is why we must articulate this status here, beginning with *demand*, whose proper characteristics are eluded in the notion of frustration (which Freud never used).

1. In other words, the subject is "split" by language: even the most nonverbal of needs are formulated through the "elsewhere" that the system of language constitutes.

2. Lacan writes that the phallic signifier designates as a whole "les effets DE signifié" ("signified-effects," like "sound effects" or "special effects"), not "les effets DU signifié," which would imply that the signified functions as a knowable cause.

Demand in itself bears on something other than the satisfactions it calls for. It is demand of a presence or of an absence—which is what is manifested in the primordial relation to the mother, pregnant with that Other to be situated *within* the needs that it can satisfy. Demand constitutes the Other as already possessing the ‘privilege’ of satisfying needs, that it is to say, the power of depriving them of that alone by which they are satisfied. This privilege of the Other thus outlines the radical form of the gift of that which the Other does not have, namely, its love.

In this way, demand annuls (*aufhebt*) the particularity of everything that can be granted by transmuting it into a proof of love, and the very satisfactions that it obtains for need are reduced (*sich erniedrigt*) to the level of being no more than the crushing of the demand for love (all of which is perfectly apparent in the psychology of child-rearing, to which our analyst-nurses are so attached).

It is necessary, then, that the particularity thus abolished should reappear *beyond* demand. It does, in fact, reappear there, but preserving the structure contained in the unconditional element of the demand for love. By a reversal that is not simply a negation of the negation, the power of pure loss emerges from the residue of an obliteration. For the unconditional element of demand, desire substitutes the ‘absolute’ condition: this condition unties the knot of that element in the proof of love that is resistant to the satisfaction of a need. Thus desire is neither the appetite for satisfaction, nor the demand for love, but the difference that results from the subtraction of the first from the second, the phenomenon of their splitting (*Spaltung*).

One can see how the sexual relation occupies this closed field of desire, in which it will play out its fate. This is because it is the field made for the production of the enigma that this relation arouses in the subject by doubly ‘signifying’ it to him: the return of the demand that it gives rise to, as a demand on the subject of the need—an ambiguity made present on to the Other in question in the proof of love demanded. The gap in this enigma betrays what determines it, namely, to put it in the simplest possible way, that for both partners in the relation, both the subject and the Other, it is not enough to be subjects of need, or objects of love, but that they must stand for the cause of desire.

This truth lies at the heart of all the distortions that have appeared in the field of psychoanalysis on the subject of the sexual life. It also constitutes the condition of the happiness of the subject: and to disguise the gap it creates by leaving it to the virtue of the ‘genital’ to resolve it through the maturation of tenderness (that is to say, solely by recourse to the Other as reality), however well intentioned, is fraudulent nonetheless. It has to be said here that the French analysts, with their hypocritical notion of genital oblativity,³ opened the way to the moralizing tendency, which, to the accompaniment of its Salvationist choirs, is now to be found everywhere.

In any case, man cannot aim at being whole (the ‘total personality’ is another of the deviant premises of modern psychotherapy), while ever the play of displacement and condensation to which he is doomed in the exercise of his functions marks his relation as a subject to the signifier.

3. A mature form of love in which it is the person as a whole, and not what he or she can give, that is loved.

The phallus is the privileged signifier of that mark in which the role of the logos⁴ is joined with the advent of desire.

It can be said that this signifier is chosen because it is the most tangible element in the real of sexual copulation, and also the most symbolic in the literal (typographical) sense of the term, since it is equivalent there to the (logical) copula. It might also be said that, by virtue of its turgidity, it is the image of the vital flow as it is transmitted in generation.

All these propositions merely conceal the fact that it can play its role only when veiled, that is to say, as itself a sign of the latency with which any signifiable is struck, when it is raised (*aufgehoben*) to the function of signifier.

The phallus is the signifier of this *Aufhebung*⁵ itself, which it inaugurates (initiates) by its disappearance. That is why the demon of *Αἰδώς* (*Scham*, shame) arises at the very moment when, in the ancient mysteries, the phallus is unveiled (cf. the famous painting in the Villa di Pompei⁶).

It then becomes the bar which, at the hands of this demon, strikes the signified,⁷ marking it as the bastard offspring of this signifying concatenation.

Thus a condition of complementarity is produced in the establishment of the subject by the signifier—which explains the *Spaltung* in the subject and the movement of intervention in which that ‘splitting’ is completed.

Namely:

- (1) that the subject designates his being only by barring everything he signifies, as it appears in the fact that he wants to be loved for himself, a mirage that cannot be dismissed as merely grammatical (since it abolishes discourse);
- (2) that the living part of that being in the *urverdrängt* (primally repressed) finds its signifier by receiving the mark of the *Verdrängung* (repression) of the phallus (by virtue of which the unconscious is language).

The phallus as signifier gives the ratio of desire (in the sense in which the term is used in music in the ‘mean and extreme ratio’ of harmonic division).

I shall also be using the phallus as an algorithm, so if I am to help you to grasp this use of the term I shall have to rely on the echoes of the experience that we share—otherwise, my account of the problem could go on indefinitely.

The fact that the phallus is a signifier means that it is in the place of the Other that the subject has access to it. But since this signifier is only veiled, as ratio of the Other’s desire, it is this desire of the Other as such that the subject must recognize, that is to say, the other in so far as he is himself a subject divided by the signifying *Spaltung*.

The emergences that appear in psychological genesis confirm this signifying function of the phallus.

4. Word, speech (Greek).

5. Raising, abolition (German), a term taken from the German philosopher GEORG WILHELM FRIEDRICH HEGEL (1770–1831). The verb *aufheben*, which means “to annul,” “to preserve,” and “to raise,” is often translated “to sublimate.”

6. In the entrance hall of Pompeii’s House of the Vettii is a fresco of the fertility god Priapus weighing his enormous phallus.

7. On this “bar,” see Lacan’s “Agency of the Letter in the Unconscious” (1957; above).

Thus, to begin with, the Kleinian fact that the child apprehends from the outset that the mother 'contains' the phallus may be formulated more correctly.

But it is in the dialectic⁸ of the demand for love and the test of desire that development is ordered.

The demand for love can only suffer from a desire whose signifier is alien to it. If the desire of the mother is the phallus, the child wishes to be the phallus in order to satisfy that desire. Thus the division immanent in desire is already felt to be experienced in the desire of the Other, in that it is already opposed to the fact that the subject is content to present to the Other what in reality he may *have* that corresponds to this phallus, for what he has is worth no more than what he does not have, as far as his demand for love is concerned because that demand requires that he be the phallus.

Clinical experience has shown us that this test of the desire of the Other is decisive not in the sense that the subject learns by it whether or not he has a real phallus, but in the sense that he learns that the mother does not have it. This is the moment of the experience without which no symptomatic consequence (phobia) or structural consequence (*Penisneid*) relating to the castration complex can take effect. Here is signed the conjunction of desire, in that the phallic signifier is its mark, with the threat or nostalgia of lacking it.

Of course, its future depends on the law introduced by the father into this sequence.

But one may, simply by reference to the function of the phallus, indicate the structures that will govern the relations between the sexes.

Let us say that these relations will turn around a 'to be' and a 'to have', which, by referring to a signifier, the phallus, have the opposed effect, on the one hand, of giving reality to the subject in this signifier, and, on the other, of derealizing the relations to be signified.

This is brought about by the intervention of a 'to seem' that replaces the 'to have', in order to protect it on the one side, and to mask its lack in the other, and which has the effect of projecting in their entirety the ideal or typical manifestations of the behaviour of each sex, including the act of copulation itself, into the comedy.

These ideals take on new vigour from the demand that they are capable of satisfying, which is always a demand for love, with its complement of the reduction of desire to demand.

Paradoxical as this formulation may seem, I am saying that it is in order to be the phallus, that is to say, the signifier of the desire of the Other, that a woman will reject an essential part of femininity, namely, all her attributes in the masquerade.⁹ It is for that which she is not that she wishes to be desired as well as loved. But she finds the signifier of her own desire in the body of him to whom she addresses her demand for love. Perhaps it should not be forgotten that the organ that assumes this signifying function takes on the value of a fetish. But the result for the woman remains that an experience of love, which, as such (cf. above), deprives her ideally of that which the object gives, and a desire which finds its signifier in this object, converge on

8. Reciprocal interaction.

9. An allusion to Joan Riviere's famous 1929 essay, "Womanliness as a Masquerade."

the same object. That is why one can observe that a lack in the satisfaction proper to sexual need, in other words, frigidity, is relatively well tolerated in women, whereas the *Verdrängung* (repression) inherent in desire is less present in women than in men.

In the case of men, on the other hand, the dialectic of demand and desire engenders the effects—and one must once more admire the sureness with which Freud situated them at the precise articulations on which they depended—of a specific depreciation (*Erniedrigung*) of love.

If, in effect, the man finds satisfaction for his demand for love in the relation with the woman, in as much as the signifier of the phallus constitutes her as giving in love what she does not have—conversely, his own desire for the phallus will make its signifier emerge in its persistent divergence towards ‘another woman’ who may signify this phallus in various ways, either as a virgin or as a prostitute. There results from this a centrifugal tendency of the genital drive in love life, which makes impotence much more difficult to bear for him, while the *Verdrängung* inherent in desire is more important.

Yet it should not be thought that the sort of infidelity that would appear to be constitutive of the male function is proper to it. For if one looks more closely, the same redoubling is to be found in the woman, except that the Other of Love as such, that is to say, in so far as he is deprived of what he gives, finds it difficult to see himself in the retreat in which he is substituted for the being of the very man whose attributes she cherishes.

One might add here that male homosexuality, in accordance with the phallic mark that constitutes desire, is constituted on the side of desire, while female homosexuality, on the other hand, as observation shows, is orientated on a disappointment that reinforces the side of the demand for love. These remarks should really be examined in greater detail, from the point of view of a return to the function of the mask in so far as it dominates the identifications in which refusals of demand are resolved.

The fact that femininity finds its refuge in this mask, by virtue of the fact of the *Verdrängung* inherent in the phallic mark of desire, has the curious consequence of making virile display in the human being itself seem feminine.

Correlatively, one can glimpse the reason for a characteristic that had never before been elucidated, and which shows once again the depth of Freud’s intuition: namely, why he advances the view that there is only one *libido*,¹ his text showing that he conceives it as masculine in nature. The function of the phallic signifier touches here on its most profound relation: that in which the Ancients embodied the *Noûs* and the *Λογός*.²

2. “Mind” and “Word” (Greek).

LANGSTON HUGHES

1902–1967

The most celebrated African American writer of the first half of the twentieth century, Langston Hughes was a poet, playwright, and fiction writer who also worked tirelessly to promote black literature and, more generally, the status of black people in American society. Associated with the Harlem Renaissance, Hughes was interested in the relation of literature to the other arts; but he was particularly concerned with bridging the gap between “high” culture and the life of his people.

Hughes was born in Missouri and spent an impoverished childhood living with various relatives after his father, discouraged by American racism, moved to Mexico shortly after his birth. His mother was a Langston, born of a family that had played a prominent role in the fight against slavery. Among Hughes’s Langston relatives were a veteran of John Brown’s famous raid on Harpers Ferry in 1859 and a congressman from Virginia during the Reconstruction years. Hughes’s life stabilized on joining his remarried mother in Cleveland when he was thirteen. After a successful four years at an integrated high school, he went to Columbia University for a year (1921–22) but dropped out.

Over the next four years, Hughes traveled widely, held a number of menial jobs, and published poetry in the journals that constituted the literary portion of the Harlem Renaissance—the outpouring of work in all the arts by young blacks during the 1920s and early 1930s. Hughes’s work was included in Alain Locke’s famous anthology *The New Negro* (1925), which announced the movement, and Hughes knew—and collaborated with—almost all the major figures of the Harlem Renaissance, though he did not himself spend much time in New York during the 1920s. His first book of poems, *Weary Blues*, was published in 1926, the same year he wrote the essay “The Negro Artist and the Racial Mountain” and enrolled in Lincoln University, the all-male black college in southeastern Pennsylvania from which he received his B.A.

During the 1930s Hughes was desperately poor, living on funds provided by patrons or on the earnings he could garner from poetry readings. Increasingly involved in radical causes, he wrote plays in support of the Scottsboro Boys (nine young black men from Alabama accused of raping two white women), spent almost a year in Russia, and served as a war correspondent during the Spanish Civil War. After World War II he taught at various universities, was called before the House Un-American Activities Committee as a suspected Communist, and lived to champion some of the young writers of the 1960s Black Arts Movement. Whether or not Hughes was a homosexual is a matter of dispute among scholars; not surprisingly, given the times and his position as a prominent representative of his race, Hughes was secretive about his sexual desires and experiences. Hughes’s poetry remains his claim to fame since his death, but growing attention has been paid by critics to his fiction (both novels and short stories), plays, and nonfiction prose, which includes many essays of social advocacy and extensive travel writings in addition to his autobiographies.

His biographer Arnold Rampersad calls our selection, “The Negro Artist and the Racial Mountain” (1926), the “finest essay of Hughes’s life.” It was written for the *Nation* as a solicited response to an essay by George Schuyler called “The Negro-Art Hokum,” which argued that the idea of a separate black American culture and aesthetic was untenable. Hughes’s reply succinctly captures the varied pressures under which the African American artist labors. First and foremost, perhaps, is the problem of a heterogeneous audience. The Negro (to use Hughes’s term) poet knows that both black and white people are potential readers of his work. Yet those two

audiences have very different expectations and demands. To complicate matters even further, Hughes's ever-present sensitivity to class deprives him of any simple image of the black audience. "High-toned" blacks are mostly terrified by the artist, afraid that he will endanger their desperate hold on respectability. "O, be respectable, write about nice people, show how good we are," Hughes imagines them saying. The "low-down folks," on the other hand, "are not ashamed of [the artist]—if they know he exists at all." Whereas "the better class Negro would tell the artist what to do, the people at least let him alone." But it's hardly a happy situation for the writer caught between an anxious and an unaware black audience.

Meanwhile, "'Be stereotyped, don't go too far, don't shatter our illusions about you, don't amuse us too seriously. We will pay you,' say the whites." The Negro writer can win acclaim and fortune in the white world so long as he does nothing to disturb the whites' comfort, their conviction that they are good, enlightened people. The temptations created by these constraints are obvious. Just as the modernist artist often set out deliberately to shock and outrage the bourgeoisie, so the black artist will be tempted merely to shake the patronizing white audience out of its complacency.

Hughes intimates, without quite saying it directly, that the best work will please neither the black nor the white audience. (His example is Jean Toomer's *Cane*.) And like many modernists, he believes that such problems are best solved by developing an indifference to all audiences—by cultivating an art that is true to itself: "We younger Negro artists who create now intend to express our individual dark-skinned selves without fear or shame." Bravely and defiantly, Hughes proclaims that it "doesn't matter" if neither white nor colored audiences "are pleased" by this work. "Free within ourselves" and building "our temples for tomorrow," the younger artists are already creating "an honest American Negro literature."

Out of what material is that literature created? Here Hughes raises another recurring problem for African American writers. Despite his line about expressing "our individual dark-skinned selves," Hughes actually looks toward the collective experience of the black folk as the "great field of unused material ready for his art." Anticipating the black power movement of the 1960s, Hughes responds to America's persistent racism by insisting that "I am a Negro—and beautiful." The black artist should "interest himself in interpreting the beauty of his own people." Hence the essay's essential move: the repudiation of a black middle and upper class that has alienated itself from the black folk; Hughes will celebrate the common people. The problem, of course, is that Hughes himself is not of the folk, and to "interpret" their "beauty" is not identical with "expressing" his own "dark-skinned" individuality. There is a sizable gap between the "they" who "furnish a wealth of colorful, distinctive material for any artist" and the artist who belongs more obviously with the classes Hughes wishes to repudiate.

Hughes strives to find a meeting place in African American music, especially jazz (but also the blues): "Jazz to me is one of the inherent expressions of Negro life in America." Music provides an entry point to the "Negro soul," offering themes to which "the Negro artist can give his racial individuality." Hughes hopes that jazz's merger of the folk and the artist can be reproduced in the other arts: theater, painting, dance. He believes that a "racial art" is already evident in the literature of the Harlem Renaissance.

Writing in 1926, Hughes is uneasy about "the present vogue in things Negro," and he is scathing in his 1940 autobiography about the whites who poured into Harlem in the 1920s to listen to black music in clubs (like the famous Cotton Club) that excluded black patrons and black employees (with the sole exception of the musicians). He knows that black artists want their voices to be heard and that they are, like all artists, hungry for acclaim as well as for an audience. But he worries about the price paid for gaining the attention of whites. The perils facing the black

artist are so many—from self-loathing to currying the favor of whites to providing a safe window on the exotic world of the racial other—that success depends on an honesty and fearlessness that are almost too much to ask. But these very difficulties point to another source of material for the African American artist, for “when he chooses to touch on the relations between Negroes and whites in this country with their innumerable overtones and undertones, . . . there is an inexhaustible supply of themes at hand.” In calling on the African American artist to affirm his race, to cut loose from white standards and white ideals of high culture, and to explore the experience of the black folk and the realities of racism, Hughes enunciates a program for and vision of black literature that is taken up again during the civil rights and black power movements of the mid-1950s to the early 1970s.

The Negro Artist and the Racial Mountain

One of the most promising of the young Negro poets¹ said to me once, “I want to be a poet—not a Negro poet,” meaning, I believe, “I want to write like a white poet”; meaning subconsciously, “I would like to be a white poet”; meaning behind that, “I would like to be white.” And I was sorry the young man said that, for no great poet has ever been afraid of being himself. And I doubted then that, with his desire to run away spiritually from his race, this boy would ever be a great poet. But this is the mountain standing in the way of any true Negro art in America—this urge within the race toward whiteness, the desire to pour racial individuality into the mold of American standardization, and to be as little Negro and as much American as possible.

But let us look at the immediate background of this young poet. His family is of what I suppose one would call the Negro middle class: people who are by no means rich yet never uncomfortable nor hungry—smug, contented, respectable folk, members of the Baptist church. The father goes to work every morning. He is a chief steward at a large white club. The mother sometimes does fancy sewing or supervises parties for the rich families of the town. The children go to a mixed school. In the home they read white papers and magazines. And the mother often says “Don’t be like niggers” when the children are bad. A frequent phrase from the father is, “Look how well a white man does things.” And so the word white comes to be unconsciously a symbol of all the virtues. It holds for the children beauty, morality, and money. The whisper of “I want to be white” runs silently through their minds. This young poet’s home is, I believe, a fairly typical home of the colored middle class. One sees immediately how difficult it would be for an artist born in such a home to interest himself in interpreting the beauty of his own people. He is never taught to see that beauty. He is taught rather not to see it, or if he does, to be ashamed of it when it is not according to Caucasian patterns.

For racial culture the home of a self-styled “high-class” Negro has nothing better to offer. Instead there will perhaps be more aping of things white

1. According to Hughes’s biographer Arnold Rampersad, this is almost certainly Countee Cullen (1903–1946), one of the African American poets associated with the Harlem Renaissance.

than in a less cultured or less wealthy home. The father is perhaps a doctor, lawyer, landowner, or politician. The mother may be a social worker, or a teacher, or she may do nothing and have a maid. Father is often dark but he has usually married the lightest woman he could find. The family attend a fashionable church where few really colored faces are to be found. And they themselves draw a color line. In the North they go to white theaters and white movies. And in the South they have at least two cars and a house "like white folks." Nordic manners, Nordic faces, Nordic hair, Nordic art (if any), and an Episcopal heaven. A very high mountain indeed for the would-be racial artist to climb in order to discover himself and his people.

But then there are the low-down folks, the so-called common element, and they are the majority—may the Lord be praised! The people who have their nip of gin on Saturday nights and are not too important to themselves or the community, or too well fed, or too learned to watch the lazy world go round. They live on Seventh Street in Washington or State Street in Chicago and they do not particularly care whether they are like white folks or anybody else. Their joy runs, bang! into ecstasy. Their religion soars to a shout. Work maybe a little today, rest a little tomorrow. Play awhile. Sing awhile. O, let's dance! These common people are not afraid of spirituals, as for a long time their more intellectual brethren were, and jazz is their child. They furnish a wealth of colorful, distinctive material for any artist because they still hold their own individuality in the face of American standardizations. And perhaps these common people will give to the world its truly great Negro artist, the one who is not afraid to be himself. Whereas the better-class Negro would tell the artist what to do, the people at least let him alone when he does appear. And they are not ashamed of him—if they know he exists at all. And they accept what beauty is their own without question.

Certainly there is, for the American Negro artist who can escape the restrictions the more advanced among his own group would put upon him, a great field of unused material ready for his art. Without going outside his race, and even among the better classes with their "white" culture and conscious American manners, but still Negro enough to be different, there is sufficient matter to furnish a black artist with a lifetime of creative work. And when he chooses to touch on the relations between Negroes and whites in this country with their innumerable overtones and undertones, surely, and especially for literature and the drama, there is an inexhaustible supply of themes at hand. To these the Negro artist can give his racial individuality, his heritage of rhythm and warmth, and his incongruous humor that so often, as in the Blues, becomes ironic laughter mixed with tears. But let us look again at the mountain.

A prominent Negro clubwoman in Philadelphia paid eleven dollars to hear Raquel Meller² sing Andalusian popular songs. But she told me a few weeks before she would not think of going to hear "that woman," Clara Smith,³ a great black artist, sing Negro folksongs. And many an upper-class Negro church, even now, would not dream of employing a spiritual in its services.

2. Spanish singer (1888–1962) who made her highly successful New York debut in the spring of 1926 (with the New York Philharmonic). Andalusia is a region of Spain; Meller would introduce her Spanish songs by telling little sto-

ries about the folkways of the different regions from which they came.

3. African American blues singer (1894–1935) who performed regularly in Harlem throughout the 1920s.

The drab melodies in white folks' hymnbooks are much to be preferred. "We want to worship the Lord correctly and quietly. We don't believe in 'shouting.' Let's be dull like the Nordics," they say, in effect.

The road for the serious black artist, then, who would produce a racial art is most certainly rocky and the mountain is high. Until recently he received almost no encouragement for his work from either white or colored people. The fine novels of Chesnutt⁴ go out of print with neither race noticing their passing. The quaint charm and humor of Dunbar's⁵ dialect verse brought to him, in his day, largely the same kind of encouragement one would give a side-show freak (A colored man writing poetry! How odd!) or a clown (How amusing!).

The present vogue in things Negro, although it may do as much harm as good for the budding colored artist, has at least done this: it has brought him forcibly to the attention of his own people among whom for so long, unless the other race had noticed him beforehand, he was a prophet with little honor. I understand that Charles Gilpin⁶ acted for years in Negro theaters without any special acclaim from his own, but when Broadway gave him eight curtain calls, Negroes, too, began to beat a tin pan in his honor. I know a young colored writer, a manual worker by day, who had been writing well for the colored magazines for some years, but it was not until he recently broke into the white publications and his first book was accepted by a prominent New York publisher that the "best" Negroes in his city took the trouble to discover that he lived there. Then almost immediately they decided to give a grand dinner for him. But the society ladies were careful to whisper to his mother that perhaps she'd better not come. They were not sure she would have an evening gown.

The Negro artist works against an undertow of sharp criticism and misunderstanding from his own group and unintentional bribes from the whites. "O, be respectable, write about nice people, show how good we are," say the Negroes. "Be stereotyped, don't go too far, don't shatter our illusions about you, don't amuse us too seriously. We will pay you," say the whites. Both would have told Jean Toomer⁷ not to write "*Cane*." The colored people did not praise it. The white people did not buy it. Most of the colored people who did read "*Cane*" hate it. They are afraid of it. Although the critics gave it good reviews the public remained indifferent. Yet (excepting the work of Du Bois)⁸ "*Cane*" contains the finest prose written by a Negro in America. And like the singing of Robeson,⁹ it is truly racial.

But in spite of the Nordicized Negro intelligentsia and the desires of some white editors we have an honest American Negro literature already with us. Now I await the rise of the Negro theater. Our folk music, having achieved world-wide fame, offers itself to the genius of the great individual American Negro composer who is to come. And within the next decade I expect to see the work of a growing school of colored artists who paint and model the

4. Charles Chesnutt (1858–1932), African American novelist who lived in Cleveland and published most of his work between 1890 and 1910.

5. Paul Laurence Dunbar (1872–1906), African American poet who died young of tuberculosis. He was a major influence on Hughes.

6. African American actor and theater manager (1878–1930). He played the title role in Eugene O'Neill's *Emperor Jones* in 1920, the first black actor to play the lead in a Broadway production. His all-black Lafayette stock company was based

in Harlem.

7. African American writer (1894–1967). His book *Cane* (1923), a formally experimental mixture of poetry and prose, was a major landmark in the Harlem Renaissance.

8. W. E. B. DU BOIS (1868–1963), African American historian, sociologist, political activist, and author; the foremost black intellectual and academic of the first half of the twentieth century.

9. Paul Robeson (1898–1976), African American stage actor, singer, and political activist.

beauty of dark faces and create with new technique the expressions of their own soul-world. And the Negro dancers who will dance like flame and the singers who will continue to carry our songs to all who listen—they will be with us in even greater numbers tomorrow.

Most of my own poems are racial in theme and treatment, derived from the life I know. In many of them I try to grasp and hold some of the meanings and rhythms of jazz. I am sincere as I know how to be in these poems and yet after every reading I answer questions like these from my own people: Do you think Negroes should always write about Negroes? I wish you wouldn't read some of your poems to white folks. How do you find anything interesting in a place like a cabaret? Why do you write about black people? You aren't black. What makes you do so many jazz poems?

But jazz to me is one of the inherent expressions of Negro life in America: the eternal tom-tom beating in the Negro soul—the tom-tom of revolt against weariness in a white world, a world of subway trains, and work, work, work; the tom-tom of joy and laughter, and pain swallowed in a smile. Yet the Philadelphia clubwoman is ashamed to say that her race created it and she does not like me to write about it. The old subconscious "white is best" runs through her mind. Years of study under white teachers, a lifetime of white books, pictures, and papers, and white manners, morals, and Puritan standards made her dislike the spirituals. And now she turns up her nose at jazz and all its manifestations—likewise almost everything else distinctly racial. She doesn't care for the Winold Reiss¹ portraits of Negroes because they are "too Negro." She does not want a true picture of herself from anybody. She wants the artist to flatter her, to make the white world believe that all Negroes are as smug and as near white in soul as she wants to be. But, to my mind, it is the duty of the younger Negro artist, if he accepts any duties at all from outsiders, to change through the force of his art that old whispering "I want to be white," hidden in the aspirations of his people, to "Why should I want to be white? I am a Negro—and beautiful!"

So I am ashamed for the black poet who says, "I want to be a poet, not a Negro poet," as though his own racial world were not as interesting as any other world. I am ashamed, too, for the colored artist who runs from the painting of Negro faces to the painting of sunsets after the manner of the academicians because he fears the strange un-whiteness of his own features. An artist must be free to choose what he does, certainly, but he must also never be afraid to do what he might choose.

Let the blare of Negro jazz bands and the bellowing voice of Bessie Smith² singing Blues penetrate the closed ears of the colored near-intellectuals until they listen and perhaps understand. Let Paul Robeson singing *Water Boy*, and Rudolph Fisher³ writing about the streets of Harlem, and Jean Toomer holding the heart of Georgia in his hands, and Aaron Douglas⁴ drawing strange black fantasies cause the smug Negro middle class to turn from their

1. German-born painter (1886–1953), best known for his portraits of Native Americans and African Americans. He contributed most of the illustrations to Alain Locke's pathbreaking anthology *The New Negro* (1925).

2. African American singer (ca. 1894–1937), known as "the Empress of the Blues."

3. African American short story writer and physi-

cian (1897–1934), associated with the Harlem Renaissance.

4. African American artist and educator (1899–1979), the most significant visual artist of the Harlem Renaissance. Douglas studied with Winold Reiss, and his work was included in Locke's *New Negro*.

white, respectable, ordinary books and papers to catch a glimmer of their own beauty. We younger Negro artists who create now intend to express our individual dark-skinned selves without fear or shame. If white people are pleased we are glad. If they are not, it doesn't matter. We know we are beautiful. And ugly too. The tom-tom cries and the tom-tom laughs. If colored people are pleased we are glad. If they are not, their displeasure doesn't matter either. We build our temples for tomorrow, strong as we know how, and we stand on top of the mountain, free within ourselves.

1926

LIONEL TRILLING

1905–1975

Lionel Trilling was a contemporary of the major theorists and practitioners of the New Criticism, including Robert Penn Warren, CLEANTH BROOKS, and WILLIAM K. WIMSATT JR. His first book, a study of the English poet-critic MATTHEW ARNOLD, was published in 1939, a year after Brooks and Warren's influential textbook of New Critical interpretation, *Understanding Poetry*. But in his teaching and writing, Trilling did not emphasize the explication of poems and other literary texts. While literature was his central field of interest, he was fundamentally an eloquent and wide-ranging cultural critic, not a close reader. In Trilling's view, the New Criticism excluded too much. It was narrowly academic, not historical, not worldly. Attentive to social and cultural issues, Trilling crafted and cultivated an identity for himself as an articulate generalist and elegant stylist whose essays—the essay became his preferred form—treated topics and themes in literature and criticism that led him toward general reflections on politics, education, psychoanalysis, and more.

For example, in his best-known book, *The Liberal Imagination*, an essay collection published in 1950, Trilling wrote literary criticism about American and English authors—Sherwood Anderson, HENRY JAMES, Mark Twain, Rudyard Kipling, WILLIAM WORDSWORTH, and F. Scott Fitzgerald. He also examined the Roman historian Tacitus, SIGMUND FREUD, and the sex researcher Alfred Kinsey, and he explored still other social, cultural, and historical topics in “Reality in America,” “The Function of the Little Magazine,” “Art and Neurosis,” “The Sense of the Past,” “Manners, Morals, and the Novel,” “Art and Fortune,” and “The Meaning of a Literary Idea.”

The Liberal Imagination was an extraordinary success, selling more than 70,000 copies in hardcover and more than 100,000 in paperback. This book and Trilling's other written work, his position at Columbia, and his network of friendships and connections with New York writers and critics, editors, and publishers transformed him by the mid-1950s into an exemplary public intellectual—in the words of the scholar John Rodden, “America's first academic celebrity in the humanities.”

Lionel Trilling was born in New York City on July 4, 1905, the son of eastern European Jews: David W. Trilling, first a tailor and then a maker of men's fur-lined coats, and Fannie Cohen, who had been born and educated in London. Trilling recalled that when he was a child, his mother read to him from the works of English writers such as Dickens and Kipling, and throughout his career he felt a special

affinity with the English literary canon and culture. Trilling attended grammar school and high school in New York City and did his undergraduate and graduate work at Columbia (B.A., 1925; M.A., 1926; Ph.D., 1938).

In 1927, while a graduate student at Columbia, Trilling met Diana Rubin, another native New Yorker; her parents were Jewish immigrants from Poland, and in 1924 she had graduated from Radcliffe College, a women's liberal arts college that functioned as a female coordinate institution for the all-male Harvard College. They married in 1929, and, as Diana Trilling later observed, "with marriage I had entered Lionel's world. It was with his friends that I chiefly associated. They were not easy companions, these intellectuals. They were overbearing and arrogant, excessively competitive; they lacked magnanimity and often they lacked common courtesy. Ours was a cruelly judgmental society, often malicious and riddled with envy." The dynamic, intense, and demanding world of the New York Intellectuals that she describes has been much chronicled, teeming with literary and political rivalry and argument and with powerful, often brilliantly incisive and polemical writing. Among this loosely connected group in the 1930s and early 1940s, and affiliated with the journal *Partisan Review*, were the literary critic Philip Rahv, the art critics Clement Greenberg and Harold Rosenberg, the essayist and novelist Mary McCarthy, and the editor and cultural critic Dwight Macdonald; later participants in this heady New York City-based milieu were the critics Irving Howe, Alfred Kazin, and SUSAN SONTAG.

Dedicated to modernism in the arts and hostile to Soviet Communism, the New York Intellectuals sought, in Howe's formulation, "the union of politics and culture, with the politics radical and the culture cosmopolitan." These men and women, it has been said, very much resembled a family—because they fought with one another all the time. Sometimes, they are labeled (as they called themselves) a "herd of independent minds." What they had in common, as again Howe has remarked, was a commitment to an advanced alliance of "critical consciousness and political conscience." Diana Trilling, combative and contentious in her prose like many of her fellow New York Intellectuals, herself became an astute reviewer and a critic about literature, culture, and politics; a number of her essays are collected in *Claremont Essays* (1964), *We Must March My Darlings: A Critical Decade* (1977), and *Reviewing the Forties* (1978). She is the author as well of *The Beginning of the Journey: The Marriage of Diana and Lionel Trilling* (1993), a compelling and, in its revelations about Lionel Trilling's bouts of depression and alcoholism, unsettling memoir.

Trilling lived and worked in the midst of this intellectual scene in New York City, but without being confrontational. His concern was with ideas, not with names, personalities, or partisan disputes about literary and political positions. In his introduction to *The Portable Matthew Arnold* (1949), Trilling's summary of Arnold's style captures his sense of his own role: "He spoke of literature as one who loved it and lived in it; but he spoke too as one who knew the world and lived in the world and believed that literature was connected in a complex multitude of ways with actual practical life." Trilling's writing is suggestive, rather elusive, tending toward the philosophical; it is highly generalized, detached yet brooding and troubled in tone, and perhaps above all complicated. According to his colleague Jacques Barzun, Trilling typically replied to ideas and arguments expressed by others by saying, "It's complicated. . . . It's much more complicated. . . . It's very complicated." When the sociologist Richard Sennett said to Trilling, "You have no position; you are always in between," he answered, "Between is the only honest place to be."

Trilling taught first at the University of Wisconsin (1926–27), and then at Hunter College in New York City (1927–30). In 1931, he began teaching at Columbia, where he remained for the rest of his career. Trilling's first decade at Columbia was difficult for him because, as a Jew, he was regarded with suspicion and even hostility by some of his colleagues, who did not believe he could ever be wholly at one with Anglo-Saxon cultural values and with the great authors and Christian contexts of

English literature. From 1923 to 1931, Trilling had been a contributor to, and editorial assistant for, *The Menorah Journal*, a Jewish leftist periodical edited by Elliot Cohen that, on the one hand, was attached to Jewish culture but, on the other hand, aspired to bring about the full involvement of Jews in American intellectual life.

Through his work for *The Menorah Journal*, Trilling said that he and other Jewish writers found they could "define ourselves and our society; we could discover who we were and who we wished to be." Yet in the 1930s and later, he also insisted, "I do not think of myself as a Jewish writer," despite his uneasy situation at Columbia, where "my appointment to an instructorship was pretty openly regarded as an experiment and for some time my career in the College was conditioned by my being Jewish."

In 1936, Trilling nearly lost his job, after being told that as "a Freudian, a Marxist, and a Jew, I would be more comfortable teaching somewhere else"; he fought to stay on and prevailed. Following the publication of his dissertation on Matthew Arnold, in 1939 he became the first Jewish tenured English professor at Columbia, even as he was cautioned by his adviser not to use his own success "as a wedge to open the English department to more Jews." His second book, published in 1943, was a study of the English novelist E. M. Forster. Meanwhile, Trilling was writing essays and reviews for *Partisan Review*, the *Nation*, and the *New Republic*, establishing his reputation as a critic and a man of letters among readers outside the academy.

The great irony of Trilling's career is that this eminent critic desired above all to be a writer of fiction. He wrote a number of short stories in the 1940s, the most famous of which, "Of This Time, Of That Place," was published in *Partisan Review* in January–February 1943. He also published a novel, *The Middle of the Journey* (1947), which locates its characters in the midst of Cold War politics. In particular, the novel criticizes the tendency among liberals to retain a sentimental, corrupting attachment to the Soviet Union, excusing or not wanting to face the hideous cruelty and mass murder perpetuated by Stalin's regime. *The Middle of the Journey* is a meditative, absorbing novel but not really a vital one: it came across to readers in the late 1940s (as it does today) as a skillful seminar-like study of political ideas, populated with characters who represent positions that Trilling aligned against one another, as if in a debate. He never gave up his interest in the writing of fiction, and his papers include an unfinished second novel. But the critical response to *The Middle of the Journey* impelled Trilling to concentrate on a career as a critic. With the publication of *The Liberal Imagination*, he became a distinguished and honored presence, the foremost intellectual of the early Cold War era.

In the early 1950s, Trilling was elected to the American Academy of Arts and Letters, and he took part in literary and cultural programs sponsored by the Ford Foundation and the U.S. State Department. In 1955 he gave the prestigious Freud Anniversary Lecture to the New York Psychoanalytic Society, and in 1962 he prepared an abridgment of Ernest Jones's *The Life and Work of Sigmund Freud* (3 vols., 1953–57). Trilling also served during the 1950s as an editorial adviser for book clubs, writing short essays about the biographies, literary studies, and other books that these subscription services offered. He edited textbooks, including *The Experience of Literature: A Reader with Commentaries* (1967) and *Literary Criticism: An Introductory Reader* (1970), and co-edited the volumes on Victorian prose and poetry and on Romantic poetry and prose in *The Oxford Anthology of English Literature* (1973). In 1970, he was appointed university professor, the highest honor awarded to a faculty member at Columbia, and around the same time he lectured at Harvard (1969–70)—delivering lectures that formed the basis of his book *Sincerity and Authenticity* (1972)—and at Oxford (1972–73).

In his novel, in his essays of the 1940s, and in *The Liberal Imagination*, Trilling presented himself as a liberal critic of liberalism—a term that for him has a massive reach and inclusiveness, including communists, socialists, sympathizers with the Soviet Union, progressives, and (it seems) Democratic Party members. For Trilling,

being liberal, or liberal minded, should mean openness, balance, nuance, the acceptance of multiple points of view and complexity—virtues and values that, in his judgment, liberalism had lost, in its politically and morally dangerous commitment to the making of a better society whatever the social and personal costs. For Trilling, the truly “liberal imagination” is a tragic one that acknowledges the risks and perils of liberal and radical ideas and projects for social change.

Trilling was highly respected for his resistance to liberalism, insistence on complexity, and dialectical turn of mind. But he also came in for sharp criticism. In *A Margin of Hope* (1982), Irving Howe recalled that the “most subtle and perhaps most influential mind in the culture of the fifties was that of Lionel Trilling”; but he stressed too that some liberal critics and intellectuals “felt that his work had come to serve as a high-toned justification for the increasingly accommodating moods of American intellectuals. . . . To a generation that in its youth had been persuaded, even coerced, to believe that action in the public world was a moral necessity, Trilling’s critique of ‘the liberal imagination’ eased a turning away from all politics, whether liberal, radical, or conservative.” In an essay published in the *Sewanee Review* in 1963, Joseph Frank made this point forcefully, declaring that “from a critic of the liberal imagination, Mr. Trilling has evolved into one of the least belligerent and most persuasive spokesmen of the conservative imagination.”

One of Trilling’s literary heroes was the Romantic poet John Keats, about whom he said: “Keats believed that life was given for him to find the right use of it, that it was a kind of continuous magical confrontation requiring to be met with the right answer. He believed that this answer was to be derived from intuition, courage, and the accumulation of experience. It was not, of course, to be a formula of any kind, not a piece of rationality, but rather a way of being and of acting.” In his literary and cultural criticism, Trilling sought to counter formulaic thinking and taken-for-granted views about authors, texts, and positions, and for many years he was a beloved teacher and lecturer at Columbia. Among his students who went on to great success are the poets Allen Ginsberg, John Hollander, and Richard Howard and the critics Steven Marcus, Louis Menand, and Leon Wieseltier. Like the readers of Trilling’s books, students were struck by his combination of passion for the life of the mind and cool contemplativeness—his care and his balance in judgment, forthright but measured, sage and shrewd.

With some extravagance, the scholar Peter Glassman remembered the impact of Trilling’s lectures: “He referred occasionally to his notes, read frequently from each of the volumes he’d placed on his desk, and in his protracted extemporaneous discourse created exquisite prose. . . . He wanted us to consider how radically the imaginative arts, literature in particular, celebrate, institutionalize, and yet subvert the authority of civilization.” This gets at one of the most important features of Trilling’s work—one that the selection below, “On the Teaching of Modern Literature,” dramatizes: the ambivalent power of literature, and the limits of this power.

In *The Liberal Imagination*, Trilling says that “literature is the human activity that takes the fullest and most precise account of variousness, possibility, complexity, and difficulty.” “The most effective agent of the moral imagination,” he contends, “has been the novel of the last two hundred years. . . . Its greatness and its practical usefulness lay in its unrelenting work of involving the reader himself in the moral life, inviting him to put his own motives under examination, suggesting that reality is not as his conventional education has led him to see it.” But in *Beyond Culture: Essays on Literature and Learning* (1965), a later collection of essays, Trilling emphasizes “that art does not always tell the truth and does not always point out the right way, that it can even generate falsehood and habituate us to it.” Great literature, then, instructs us yet may also mislead us. It can be a force both for illumination and for falsehood and self-deception.

In addition to *The Liberal Imagination*, Trilling gathered essays, reviews, and lectures in a number of other collections. In *The Opposing Self: Nine Essays in Criticism* (1955), his essays on Keats, Henry James, and George Orwell are especially keen and imply a closeness of Trilling himself to the writers he describes. The essays in *A Gathering of Fugitives* (1956) are also stimulating and cover a wide range of authors, critics, and topics—he is insightful on Edmund Wilson, F. R. LEAVIS, and Edith Wharton. In *Beyond Culture*, Trilling surveys the life and work of Jane Austen, Nathaniel Hawthorne, Freud, and Isaac Babel, and he explores other topics in literary study and the humanities. *The Last Decade: Essays and Reviews, 1965–1975*, edited by Diana Trilling (1979), brings together pieces from the final ten years of Trilling's life, including important statements on Joyce, Austen, and Freud; a reflection on modern art; and a memoir of Trilling's relationship with Whittaker Chambers, an acquaintance as an undergraduate at Columbia, who testified to a U.S. Senate committee that his former friend Alger Hiss had been a member of the Communist Party and had given government documents to the Soviet Union. Chambers was the basis for the character Gifford Maxim in *The Middle of the Journey* and became a prominent anticommunist during the cold war.

Other key late essays by Trilling include "What Is Criticism?" (1970), which served as the introduction to his edited collection, *Literary Criticism: An Introductory Reader*; "Mind in the Modern World" (1972), delivered as the first Thomas Jefferson Lecture sponsored by the Humanities of the National Endowment for the Humanities; "Art, Will, and Necessity" (1973), a lecture presented at Cambridge University; and "The Uncertain Future of the Humanistic Educational Ideal" (1974), a paper delivered at a conference at the Aspen Institute for Humanistic Studies.

"On the Teaching of Modern Literature" is one of Trilling's most rewarding essays. First published as "On the Modern Element in Modern Literature" in *Partisan Review* 28.1 (January–February 1961), it was reprinted with the current title as the first essay in *Beyond Culture*. This essay is still pertinent to contemporary debate and discussion about the power of literature and the institutionalization of literature and criticism in colleges and universities, where teachers and students often interpret and write about modern texts that present unsparing, sometimes nihilistic critiques of family, community, society, work, education—everything that in day-to-day life we consider most important and believe we should cherish. What does it mean, for example, for a student to write his or her term paper about the grim narratives of Joseph Conrad, the bleak stories of Franz Kafka, the radically erotic novels of D. H. Lawrence? Trilling makes vividly clear how much these literary works shock and alarm him, yet at the same time he says he finds as a teacher that his students at Columbia are, it seems, comfortable and at ease with these texts and their themes of madness, despair, and alienation from middle-class society.

One of the limitations of Trilling's essay is that he defines modernism in relation to a limited range of major texts. Sir James Frazer, Freud, NIETZSCHE: these authors and others whom Trilling highlights are essential figures for an understanding of modernism, but there are no women or minority authors here. Trilling says little about poetry, nor does he make any reference to American literature or more generally to modernism in the arts, nationally and internationally. RAYMOND WILLIAMS, commenting in the *Manchester Guardian* (April 1966) on Trilling's essay, gets at this point when he notes with some severity that Trilling's canon seemed "curiously dated and fixed" and that other approaches to modernism could emerge from the consideration of different texts. Trilling likely would acknowledge that his canon and conception of modernism are partial and slanted—not inaccurate, but testifying to his own preoccupations, in particular to the hostility of certain leading modern writers, in a variety of fields, to civilization and culture.

Trilling's tone is at moments condescending toward his students. Were they really so untroubled by the readings he assigned? Indeed, some of these students, includ-

ing Morris Dickstein in his memoir *Why Not Say What Happened: A Sentimental Education* (2015), recall having been more contentious in the classroom and more provoked by the authors and texts than Trilling suggests. But it is important to see Trilling's essay not as a sociological or historical report but rather as a form of intensely personal reflection. The essay is about the movements and ambivalences of Trilling's mind as he ponders the literature he most cares about, his vocation as teacher, and the career he has chosen.

Trilling's essay is itself a literary performance, an eloquent and complex one about his relation to literature, literary criticism, modernism, and higher education, especially the enthronement—which means the transformation, but which may entail the devaluation—of great and classic texts from the late nineteenth century into the early and mid-twentieth century as they became objects of study. During the 1930s, it seemed far from probable that Trilling, a Jew interested in Freud and MARX, would make a career for himself at Columbia. Two decades later, he was a major critic and public intellectual, giving courses on modern literature to hundreds of students in large lecture halls. There is something grand, but also something sobering, in Trilling's self-representation in this essay and in much of his writing in the aftermath of his great success in 1950 with *The Liberal Imagination*.

Trilling's essay was published during a decade that saw the rise of the civil rights movement, antiwar protests, and feminism. We now study, live, and work in a society far removed from the 1960s. Our vision of modernism is more capacious than Trilling's, and the academic study of literature today includes voices, texts, points of view, topics, theories, and media that extend beyond anything that Trilling imagined or ever would support. Yet in its central themes, "On the Teaching of Modern Literature" is acute and timely. Trilling urges that we confront vital questions: What is the ethical power of literature? What is its impact on each of us? Where do we stand in relation to it? New Critical close reading—dominant in the academy when Trilling was writing—is all well and good, but literature in its essence demands a deeply personal engagement by the reader.

"On the Teaching of Modern Literature" Keywords: The Canon/Tradition, Defense of Criticism, Ethics, Institutional Studies, Literary History, Modernity, Psychoanalysis

On the Teaching of Modern Literature

I propose to consider here a particular theme of modern literature which appears so frequently and with so much authority that it may be said to constitute one of the shaping and controlling ideas of our epoch. I can identify it by calling it the disenchantment of our culture with culture itself—it seems to me that the characteristic element of modern literature, or at least of the most highly developed modern literature, is the bitter line of hostility to civilization which runs through it. It happens that my present awareness of this theme is involved in a personal experience, and I am impelled to speak of it not abstractly but with the husks of the experience clinging untidily to it. I shall go so far in doing this as to describe the actual circumstances in which the experience took place. These circumstances are pedagogic—they consist of some problems in teaching modern literature to undergraduates and my attempt to solve these problems. I know that pedagogy is a depressing subject to all persons of sensibility, and yet I shall not apologize for touching upon it because the emphasis upon the teaching of literature and especially of modern

literature is in itself one of the most salient and significant manifestations of the culture of our time. Indeed, if, having in mind Matthew Arnold's lecture, "On the Modern Element in Literature,"¹ we are on the hunt for *the* modern element in modern literature, we might want to find it in the susceptibility of modern literature to being made into an academic subject.

For some years I have taught the course in modern literature in Columbia College. I did not undertake it without misgiving and I have never taught it with an undivided mind. My doubts do not refer to the value of the literature itself, only to the educational propriety of its being studied in college. These doubts persist even though I wholly understand that the relation of our collegiate education to modernity is no longer an open question. The unargued assumption of most curriculums is that the real subject of all study is the modern world; that the justification of all study is its immediate and presumably practical relevance to modernity; that the true purpose of all study is to lead the young person to be at home in, and in control of, the modern world. There is really no way of quarreling with the assumption or with what follows upon it, the instituting of courses of which the substance is chiefly contemporary or at least makes ultimate reference to what is contemporary.

It might be asked why anyone should *want* to quarrel with the assumption. To that question I can return only a defensive, eccentric, self-depreciatory answer. It is this: that to some of us who teach and who think of our students as the creators of the intellectual life of the future, there comes a kind of despair. It does not come because our students fail to respond to ideas, rather because they respond to ideas with a happy vagueness, a delighted glibness, a joyous sense of power in the use of received or receivable generalizations, a grateful wonder at how easy it is to formulate and judge, at how little resistance language offers to their intentions. When that despair strikes us, we are tempted to give up the usual and accredited ways of evaluating education, and instead of prizing responsiveness and aptitude, to set store by some sign of personal character in our students, some token of individual will. We think of this as taking the form of resistance and imperviousness, of personal density or gravity, of some power of supposing that ideas are real, a power which will lead a young man to say what Goethe² thought was the modern thing to say, "But is this really true—is it true for *me*?" And to say this not in the facile way, not following the progressive educational prescription to "think for yourself," which means to think in the progressive pieties rather than in the conservative pieties (if any of the latter do still exist), but to say it from his sense of himself as a person rather than as a bundle of attitudes and responses which are all alert to please the teacher and the progressive community.

We can't do anything about the quality of personal being of our students, but we are led to think about the cultural analogue of a personal character that is grave, dense, and resistant—we are led to think about the past. Perhaps the protagonist of Thomas Mann's story, "Disorder and Early Sorrow"

1. Delivered by the English poet, essayist, and social critic ARNOLD (1822–1888) in 1857 as his inaugural lecture as Oxford Professor of Poetry.

2. Johann Wolfgang von Goethe (1749–1832), German poet, playwright, novelist, philosopher, and scientist.

3. German novelist and essayist (1875–1955); his

novella *Disorder and Early Sorrow* (1925), which deals with the themes of economic struggle, social and cultural decline, and generational conflict, tells the story of the Cornelius family from the point of view of Abel Cornelius, a middle-aged university professor.

comes to mind, that sad Professor Cornelius with his intense and ambivalent sense of history. For Professor Cornelius, who is a historian, the past is dead, is death itself, but for that very reason it is the source of order, value, piety, and even love. If we think about education in the dark light of the despair I have described, we wonder if perhaps there is not to be found in the past that quiet place at which a young man might stand for a few years, at least a little beyond the competing attitudes and generalizations of the present, at least a little beyond the contemporary problems which he is told he can master only by means of attitudes and generalizations, that quiet place in which he can be silent, in which he can *know* something—in what year the Parthenon was begun, the order of battle at Trafalgar, how Linear B was deciphered:⁴ almost anything at all that has nothing to do with the talkative and attitudinizing present, anything at all but variations on the accepted formulations about *anxiety*, and *urban society*, and *alienation*, and *Gemeinschaft* and *Gesellschaft*,⁵ all the matter of the academic disciplines which are founded upon the modern self-consciousness and the modern self-pity. The modern self-pity is certainly not without its justification; but, if the circumstances that engender it are ever to be overcome, we must sometimes wonder whether this work can be done by minds which are taught in youth to accept these sad conditions of ours as the only right objects of contemplation. And quite apart from any practical consequences, one thinks of the simple aesthetic personal pleasure of having to do with young minds, and maturing minds, which are free of cant, which are, to quote an old poet, “fierce, moody, patient, venturous, modest, shy.”⁶

This line of argument I have called eccentric and maybe it ought to be called obscurantist and reactionary. Whatever it is called, it is not likely to impress a Committee on the Curriculum. It was, I think, more or less the line of argument of my department in Columbia College, when, up to a few years ago, it would decide, whenever the question came up, not to carry its courses beyond the late nineteenth century. But our rationale could not stand against the representations which a group of students made to our Dean and which he communicated to us. The students wanted a course in modern literature—very likely, in the way of students, they said that it was a scandal that no such course was being offered in the College. There was no argument that could stand against this expressed desire: we could only capitulate, and then, with pretty good grace, muster the arguments that justified our doing so. Was not the twentieth century more than half over? Was it not nearly fifty years since Eliot wrote “Portrait of a Lady”?⁷ George Meredith⁸ had not died until 1909, and even the oldest among us had read

4. All matters of fact: the Parthenon, the temple of Athena on the Acropolis in Athens, was built in 447 to 432 B.C.E.; the battle fought off Cape Trafalgar on the southwest coast of Spain, on October 21, 1805, was a decisive victory by a British fleet of 33 ships over 18 French and 15 Spanish ships; and Linear B, a syllabic script used ca. 1400 to 1200 B.C.E. in Crete and continental Greece, in 1952 was identified as an archaic form of Greek and deciphered by the English cryptographer Michael Ventris using statistical analysis.

5. Two ideal types of social organization, based respectively on social relations between individuals (close personal and family ties, community) and on

impersonal ties (contracts or duty to a society or organization). These terms, borrowed from the original German, derive from the categories first articulated in *Gemeinschaft und Gesellschaft* (1887, 2d ed. 1912; *Community and Civil Society*), by the German philosopher and sociologist Ferdinand Tönnies; they were also used by Max Weber in *Economy and Society* (1921).

6. Quoted from *The Prelude* (1850), 5.417, by the English Romantic poet WILLIAM WORDSWORTH (1770–1850).

7. A poem (1915) by the Anglo-American poet and critic T. S. ELIOT (1888–1965).

8. English novelist and poet (1828–1909).

one of his novels in a college course—many American universities had been quick to bring into their purview the literature of the later nineteenth century, and even the early twentieth century; there was a strong supporting tradition for our capitulation. Had not Yeats⁹ been Matthew Arnold's contemporary for twenty-three years?

Our resistance to the idea of the course had never been based on an adverse judgment of the literature itself. We are a department not only of English but of comparative literature, and if the whole of modern literature is surveyed, it could be said—and we were willing to say it—that no literature of the past surpassed the literature of our time in power and magnificence. Then too, it is a difficult literature, and it is difficult not merely as defenders of modern poetry say that all literature is difficult. We nowadays believe that Keats¹ is a very difficult poet, but his earlier readers did not. We now see the depths and subtleties of Dickens,² but his contemporary readers found him as simply available as a plate of oysters on the half shell. Modern literature, however, shows its difficulties at first blush; they are literal as well as doctrinal difficulties—if our students were to know their modern literary heritage, surely they needed all the help that a teacher can give?

These made cogent reasons for our decision to establish, at long last, the course in modern literature. They also made a ground for our display of a certain mean-spirited, last-ditch vindictiveness. I recall that we said something like, "Very well, if they want the modern, let them have it—let them have it, as Henry James³ says, full in the face. We shall give the course, but we shall give it on the highest level, and if they think, as students do, that the modern will naturally meet them in a genial way, let them have their gay and easy time with Yeats and Eliot, with Joyce and Proust and Kafka, with Lawrence, Mann and Gide."⁴

Eventually the course fell to me to give. I approached it with an uneasiness which has not diminished with the passage of time—it has, I think, even increased. It arises, this uneasiness, from my personal relation with the works that form the substance of the course. Almost all of them have been involved with me for a long time—I invert the natural order not out of lack of modesty but taking the cue of W. H. Auden's remark that a real book reads us.⁵ I have been read by Eliot's poems and by *Ulysses* and by *Remembrance of Things Past* and by *The Castle* for a good many years now, since early youth. Some of these books at first rejected me; I bored them. But as I grew older and they knew me better, they came to have more sympathy with me and to understand my hidden meanings. Their nature is such that our relationship has been very intimate. No literature has ever been so shockingly personal as that of our time—it asks every question that is forbidden in polite society. It asks us if we are content with our marriages,

9. William Butler Yeats (1865–1939), Irish poet and playwright.

1. John Keats (1795–1821), English Romantic poet.

2. Charles Dickens (1812–1870), the most popular English novelist of his time.

3. American writer of fiction and nonfiction (1843–1916; see above); he uses the phrase "full in the face" in a number of stories and novels, including *The American* (1877) and "The Figure in the Carpet" (1896).

4. Major modern writers of different nationalities:

James Joyce (1882–1941), Irish author of *Ulysses* (1922); Marcel Proust (1871–1922), French author of *À la recherche du temps perdu* (7 vols., 1913–27; first translated as *Remembrance of Things Past*); Franz Kafka (1883–1924), Czech-born writer of German fiction, including *The Castle* (1926); D. H. Lawrence (1885–1930), English; and André Gide (1869–1951), French.

5. This remark (or "A real book is not one that we read, but one that reads us") has not been found in any of the works by the English poet and critic Auden (1907–1973).

with our family lives, with our professional lives, with our friends. It is all very well for me to describe my course in the College catalogue as "paying particular attention to the role of the writer as a critic of his culture"—this is sheer evasion: the questions asked by our literature are not about our culture but about ourselves. It asks us if we are content with ourselves, if we are saved or damned—more than with anything else, our literature is concerned with salvation. No literature has ever been so intensely spiritual as ours. I do not venture to call it actually religious, but certainly it has the special intensity of concern with the spiritual life which Hegel⁶ noted when he spoke of the great modern phenomenon of the secularization of spirituality.

I do not know how other teachers deal with this extravagant personal force of modern literature, but for me it makes difficulty. Nowadays the teaching of literature inclines to a considerable technicality, but when the teacher has said all that can be said about formal matters, about verse-patterns, metrics, prose conventions, irony, tension, etc., he must confront the necessity of bearing personal testimony. He must use whatever authority he may possess to say whether or not a work is true, and if not, why not; and if so, why so. He can do this only at considerable cost to his privacy. How does one say that Lawrence is right in his great rage against the modern emotions, against the modern sense of life and ways of being, unless one speaks from the intimacies of one's own feelings, and one's own sense of life, and one's own wished-for way of being? How, except with the implication of personal judgment, does one say to students that Gide is perfectly accurate in his representation of the awful boredom and slow corruption of respectable life? Then probably one rushes in to say that this doesn't of itself justify homosexuality and the desertion of one's dying wife, certainly not.⁷ But then again, having paid one's *devoirs*⁸ to morality, how does one rescue from morality Gide's essential point about the supreme rights of the individual person, and without making it merely historical, academic?

My first response to the necessity of dealing with matters of this kind was resentment of the personal discomfort it caused me. These are subjects we usually deal with either quite unconsciously or in the privacy of our own conscious minds, and if we now and then disclose our thoughts about them, it is to friends of equal age and especial closeness. Or if we touch upon them publicly, we do so in the relative abstractness and anonymity of print. To stand up in one's own person and to speak of them in one's own voice to an audience which each year grows younger as one grows older—that is not easy, and probably it is not decent.

And then, leaving aside the personal considerations, or taking them merely as an indication of something wrong with the situation, can we not say that, when modern literature is brought into the classroom, the subject being taught is betrayed by the pedagogy of the subject? We have to ask ourselves whether in our day too much does not come within the purview of the academy. More and more, as the universities liberalize themselves, and turn their beneficent imperialistic gaze upon what is called Life Itself, the feeling grows among our educated classes that little can be experienced unless it is validated by some established intellectual discipline, with the

German Idealist philosopher.

7. An allusion to the plot of Gide's novel *The*

Immoralist (1902).

8. Duties, respects (French).

result that experience loses much of its personal immediacy for us and becomes part of an accredited societal activity. This is not entirely true and I don't want to play the boring academic game of pretending that it is entirely true, that the university mind wilts and withers whatever it touches. I must believe, and I do believe, that the university study of art is capable of confronting the power of a work of art fully and courageously. I even believe that it can discover and disclose power where it has not been felt before. But the university study of art achieves this end chiefly with works of art of an older period. Time has the effect of seeming to quiet the work of art, domesticating it and making it into a classic, which is often another way of saying that it is an object of merely habitual regard. University study of the right sort can reverse this process and restore to the old work its freshness and force—can, indeed, disclose unguessed-at power. But with the works of art of our own present age, university study tends to accelerate the process by which the radical and subversive work becomes the classic work, and university study does this in the degree that it is vivacious and responsive and what is called non-academic. In one of his poems Yeats mocks the literary scholars, “the bald heads forgetful of their sins,” “the old, learned, respectable bald heads,”⁹ who edit the poems of the fierce and passionate young men.

Lord, what would they say
Did their Catullus¹ walk this way?

Yeats, of course, is thinking of his own future fate, and no doubt there is all the radical and comical discrepancy that he sees between the poet's passions and the scholars' close-eyed concentration on the text. Yet for my part, when I think of Catullus, I am moved to praise the tact of all those old heads, from Heinsius and Bentley to Munro and Postgate,² who worked on Codex C and Codex O and drew conclusions from them about the lost Codex V—for doing only this and for not trying to realize and demonstrate the true intensity and the true quality and the true cultural meaning of Catullus's passion and managing to bring it somehow into eventual accord with their respectability and baldness. Nowadays we who deal with books in universities live in fear that the World, which we imagine to be a vital, palpitating, passionate, reality-loving World, will think of us as old, respectable, and bald, and we see to it that in our dealings with Yeats (to take him as the example) his wild cry of rage and sexuality is heard by our students and quite thoroughly understood by them as—what is it that we eventually call it?—*a significant expression of our culture*. The exasperation of Lawrence and the subversiveness of Gide, by the time we have dealt with them boldly and straightforwardly, are notable instances of the *alienation of modern man as exemplified by the artist*. “Compare Yeats, Gide, Lawrence, and Eliot in the use which they make of the theme of sexuality to criticize the deficiencies of modern culture. Support your statement by specific references to the work of each author. [Time: one hour.]” And the distressing

9. Slightly misquoted from “The Scholars” (1919); the couplet below is the poem's conclusion.

1. Roman poet (ca. 84—ca. 54 B.C.E.), known particularly for his love poems.

2. All classical scholars who published editions of Catullus: the Dutch Nicolaas Heinsius the Elder (1620–1681) and the British Richard Bentley

(1662–1742), Hugh Andrew Johnstone Munro (1819–1885), and John Percival Postgate (1853–1926). The main book manuscripts (codices) for Catullus are codex Sangermanensis (G), in Paris, and codex Oxoniensis (O), at Oxford, both derived from the codex Veronensis (V), preserved at Verona but now lost.

thing about our examination questions is that they are not ridiculous, they make perfectly good sense—such good sense that the young person who answers them can never again know the force and terror of what has been communicated to him by the works he is being examined on.

Very likely it was with the thought of saving myself from the necessity of speaking personally and my students from having to betray the full harsh meaning of a great literature that I first taught my course in as *literary* a way as possible. A couple of decades ago the discovery was made that a literary work is a structure of words: this doesn't seem a surprising thing to have learned except for its polemical tendency, which is to urge us to minimize the amount of attention we give to the poet's social and personal will, to what he wants to happen outside the poem as a result of the poem; it urges us to fix our minds on what is going on inside the poem. For me this polemical tendency has been of the greatest usefulness, for it has corrected my inclination to pay attention chiefly to what the poet *wants*. For two or three years I directed my efforts toward dealing with the matter of the course chiefly as structures of words, in a formal way, with due attention paid to the literal difficulty which marked so many of the works. But it went against the grain. It went against my personal grain. It went against the grain of the classroom situation, for formal analysis is best carried on by question-and-answer, which needs small groups, and the registration for the course in modern literature in any college is sure to be large. And it went against the grain of the authors themselves—structures of words they may indeed have created, but these structures were not pyramids or triumphal arches, they were manifestly contrived to be not static and commemorative but mobile and aggressive, and one does not describe a quinquereme³ or a howitzer or a tank without estimating how much *damage* it can do.

Eventually I had to decide that there was only one way to give the course, which was to give it without strategies and without conscious caution. It was not honorable, either to the students or to the authors, to conceal or disguise my relation to the literature, my commitment to it, my fear of it, my ambivalence toward it. The literature had to be dealt with in the terms it announced for itself. As for the students, I have never given assent to the modern saw about "teaching students, not subjects"—I have always thought it right to teach subjects, believing that if one gives his first loyalty to the subject, the student is best instructed. So I resolved to give the course with no considerations in mind except my own interests. And since my own interests lead me to see literary situations as cultural situations, and cultural situations as great elaborate fights about moral issues, and moral issues as having something to do with gratuitously chosen images of personal being, and images of personal being as having something to do with literary style, I felt free to begin with what for me was a first concern, the animus of the author, the objects of his will, the things he wants or wants to have happen.

My cultural and non-literary method led me to decide that I would begin the course with a statement of certain themes or issues that might especially engage our attention. I even went so far in non-literariness as to think that my purposes would best be served if I could contrive a "background"

3. An ancient warship, used by the Romans and Hellenistic Greeks, with oarsmen arranged in groups of five (perhaps stacked in a vertical group of two or three banks of oars on each side).

for the works we would read—I wanted to propose a history for the themes or issues that I hoped to discover. I did not intend that this history should be either very extensive or very precise. I wanted merely to encourage a *sense* of a history, some general intuition of a past, in students who, as it seems to me, have not been provided with any such thing by their education and who are on the whole glad to be without it. And because there is as yet no adequate general work of history of the culture of the last two hundred years, I asked myself what books of the age just preceding ours had most influenced our literature, or, since I was far less concerned with showing influence than with discerning a tendency, what older books might seem to fall into a line the direction of which pointed to our own literature and thus might serve as a prolegomenon to the course.

It was virtually inevitable that the first work that should have sprung to mind was Sir James Frazer's *The Golden Bough*,⁴ not, of course, the whole of it, but certain chapters, those that deal with Osiris, Attis, and Adonis.⁵ Anyone who thinks about modern literature in a systematic way takes for granted the great part played in it by myth, and especially by those examples of myth which tell about gods dying and being reborn—the imagination of death and rebirth, reiterated in the ancient world in innumerable variations that are yet always the same, captivated the literary mind at the very moment when, as all accounts of the modern age agree, the most massive and compelling of all the stories of resurrection had lost much of its hold upon the world.

Perhaps no book has had so decisive an effect upon modern literature as Frazer's. It was beautifully to my purpose that it had first been published ten years before the twentieth century began. Yet forty-three years later, in 1933, Frazer delivered a lecture,⁶ very eloquent, in which he bade the world be of good hope in the face of the threat to the human mind that was being offered by the Nazi power. He was still alive in 1941. Yet he had been born in 1854, three years before Matthew Arnold gave the lecture "On the Modern Element in Literature." Here, surely, was history, here was the past I wanted, beautifully connected with our present. Frazer was wholly a man of the nineteenth century, and the more so because the eighteenth century was so congenial to him—the lecture of 1933 in which he predicted the Nazi defeat had as its subject Condorcet's *Progress of the Human Mind*; when he took time from his anthropological studies to deal with literature, he prepared editions of Addison's essays and Cowper's letters.⁷ He had the old lost belief in the virtue and power of rationality. He loved and counted on order, decorum, and good sense. This great historian of the primitive

4. A study of comparative religion (2 vols., 1890; enlarged ed., 12 vols., 1911–15), in which the Scottish anthropologist Frazer (1854–1941) proposed an evolutionary theory of the development of human thought, from the magical to the religious to the scientific.

5. Frazer argued that the figures of Adonis (in Greek mythology, a beautiful youth beloved by both Aphrodite and Persephone and killed by a boar), Osiris (the Egyptian consort and brother of Isis, and god of the underworld after he was slain by Seth), and Attis (in Asia Minor, the youthful consort of the Great Mother Cybele who castrated himself and died) were all associ-

ated with resurrection and represented the yearly decay and revival of life, especially of vegetation in the spring.

6. "Condorcet on the Progress of the Human Mind," the Zaharoff Lecture at the University of Oxford. Nicolas de Caritat, marquis de Condorcet (1743–1794), French philosopher, mathematician, and political scientist; he wrote *Outlines of a Historical View of the Progress of the Human Mind* (1795) in 1794 while he was in hiding during the French Revolution.

7. William Cowper (1731–1800), English poet. JOSEPH ADDISON (1672–1719), English writer and Whig politician.

imagination was in the dominant intellectual tradition of the West which, since the days of the pre-Socratics,⁸ has condemned the ways of thought that we call primitive.

It can be said of Frazer that in his conscious intention he was a perfect representative of what Arnold meant when he spoke of a modern age. And perhaps nothing could make clearer how the conditions of life and literature have changed in a hundred years than to note the difference between the way in which Arnold defines the modern element in literature and the way in which we must define it.

Arnold used the word *modern* in a wholly honorific sense. So much so that he seems to dismiss all temporal idea from the word and makes it signify certain timeless intellectual and civic virtues—his lecture, indeed, was about the modern element in the ancient literatures. A society, he said, is a modern society when it maintains a condition of repose, confidence, free activity of the mind, and the tolerance of divergent views. A society is modern when it affords sufficient material well-being for the conveniences of life and the development of taste. And, finally, a society is modern when its members are intellectually mature, by which Arnold means that they are willing to judge by reason, to observe facts in a critical spirit, and to search for the law of things. By this definition Periclean Athens is for Arnold a modern age, Elizabethan England is not; Thucydides is a modern historian, Sir Walter Raleigh is not.⁹

I shall not go into further details of Arnold's definition or description of the modern.¹ I have said enough, I think, to suggest what Arnold was up to, what he wanted to see realized as the desideratum² of his own society, what ideal he wanted the works of intellect and imagination of his own time to advance. And at what a distance his ideal of the modern puts him from our present sense of modernity, from our modern literature! To anyone conditioned by our modern literature, Arnold's ideal of order, convenience, decorum, and rationality might well seem to reduce itself to the small advantages and excessive limitations of the middle-class life of a few prosperous nations of the nineteenth century. Arnold's historic sense presented to his mind the long, bitter, bloody past of Europe, and he seized passionately upon the hope of true civilization at last achieved. But the historic sense of our literature has in mind a long excess of civilization to which may be ascribed the bitterness and bloodiness both of the past and of the present and of which the peaceful aspects are to be thought of as mainly contemptible—its order achieved at the cost of extravagant personal repression, either that of coer-

8. The Greek speculative philosophers, most born before the philosopher Socrates (469–399 B.C.E.), who attempted to find rational explanations for natural phenomena. Among the best known are Parmenides (b. ca. 515 B.C.E.), Heraclitus (active ca. 500 B.C.E.), and Pythagoras (6th c. B.C.E.).

9. Raleigh (1554–1618), an English explorer, courtier, and writer, was a favorite of Queen Elizabeth (1533–1603; reigned 1558–1603). The Greek historian Thucydides (ca. 455–ca. 400 B.C.E.) wrote extensively in his *History of the Peloponnesian War* about Pericles (ca. 495–429 B.C.E.), the Athenian statesman, military leader, and supporter of the arts who was the most influential man in Athens during the city's golden age.

1. I leave out of my summary account the two supreme virtues that Arnold ascribes to the most successful examples of a "modern" literature. One is the power of effecting an "intellectual deliverance," by which Arnold means leading men to comprehend the "vast multitude of facts" which make up "a copious and complex present, and behind it a copious and complex past." The other is "adequacy," the ability to represent the complex high human development of a modern age "in its completest and most harmonious" aspect, doing so with "the charm of that noble serenity which always accompanies true insight" [Trilling's note].

2. Something desired or needed.

cion or that of acquiescence; its repose otiose; its tolerance either flaccid or capricious; its material comfort corrupt and corrupting; its taste a manifestation either of timidity or of pride; its rationality attained only at the price of energy and passion.

For the understanding of this radical change of opinion nothing is more illuminating than to be aware of the doubleness of mind of the author of *The Golden Bough*. I have said that Frazer in his conscious mind and in his first intention exemplifies all that Arnold means by the modern. He often speaks quite harshly of the irrationality and the orgiastic excesses of the primitive religions he describes, and even Christianity comes under his criticism both because it stands in the way of rational thought and because it can draw men away from intelligent participation in the life of society. But Frazer had more than one intention, and he had an unconscious as well as a conscious mind. If he deplores the primitive imagination, he also does not fail to show it as wonderful and beautiful. It is the rare reader of *The Golden Bough* who finds the ancient beliefs and rituals wholly alien to him. It is to be expected that Frazer's adduction of the many pagan analogues to the Christian mythos will be thought by Christian readers to have an adverse effect on faith, it was undoubtedly Frazer's purpose that it should, yet many readers will feel that Frazer makes all faith and ritual indigenous to humanity, virtually biological; they feel, as De Quincey³ put it, that not to be at least a *little* superstitious is to lack generosity of mind. Scientific though his purpose was, Frazer had the effect of validating those old modes of experiencing the world which modern men, beginning with the Romantics, have sought to revive in order to escape from positivism and common sense.

The direction of the imagination upon great and mysterious objects of worship is not the only means men use to liberate themselves from the bondage of quotidian fact, and although Frazer can scarcely be held accountable for the ever-growing modern attraction to the extreme mental states—to rapture, ecstasy, and transcendence, which are achieved by drugs, trance, music and dance, orgy, and the derangement of personality—yet he did provide a bridge to the understanding and acceptance of these states, he proposed to us the idea that the desire for them and the use of them for heuristic purposes is a common and acceptable manifestation of human nature.

This one element of Frazer's masterpiece could scarcely fail to suggest the next of my prolegomenal⁴ works. It is worth remarking that its author was in his own way as great a classical scholar as Frazer himself—Nietzsche⁵ was Professor of Classical Philology at the University of Basel when, at the age of twenty-seven, he published his essay *The Birth of Tragedy*. After the appearance of this stunningly brilliant account of Greek civilization, of which Socrates is not the hero but the villain,⁶ what can possibly be left to us of that rational and ordered Greece, that modern, that eighteenth-century,

3. Thomas De Quincey (1785–1859), English essayist and critic.

4. Preliminary, introductory.

5. FRIEDRICH NIETZSCHE (1844–1900), German philosopher; in *The Birth of Tragedy* (1872; excerpted above), he argues that Greek tragedy reflects a struggle between two elements, one identified with Dionysus, the god of fertility and wine who was later associated with wild and

ecstatic religious rites (i.e., enthusiasm, frenzy, chaos), and the other identified with Apollo, the god of the sun, healing, prophecy, and poetry (i.e., measure, reason, calm, harmony).

6. Socrates appears as the hero of Western rationalism mainly through his depiction in the dialogues written by PLATO (ca. 427–ca. 347 B.C.E.), his student.

Athens that Arnold so entirely relied on as the standard for judging all civilizations? Professor Kaufmann⁷ is right when he warns us against supposing that Nietzsche exalts Dionysus over Apollo and tells us that Nietzsche “emphasizes the Dionysiac only because he feels that the Apollonian genius of the Greeks cannot be fully understood apart from it.” But no one reading Nietzsche’s essay for the first time is likely to heed this warning. What will reach him before due caution intervenes, before he becomes aware of the portentous dialectic between Dionysus and Apollo, is the excitement of suddenly being liberated from Aristotle,⁸ the joy of finding himself acceding to the author’s statement that “art rather than ethics constitutes the essential metaphysical activity of man,” that tragedy has its source in the Dionysiac rapture, “whose closest analogy is furnished by physical intoxication,” and that this rapture, in which “the individual forgets himself completely,” was in itself no metaphysical state but an orgiastic display of lust and cruelty, “of sexual promiscuity overriding every form of tribal law.” This sadic⁹ and masochistic frenzy, Nietzsche is at pains to insist, needs the taming hand of Apollo before it can become tragedy, but it is the primal stuff of the great art, and to the modern experience of tragedy this explanation seems far more pertinent than Aristotle’s, with its eagerness to forget its origin in its achievement of a state of noble imperturbability.

Of supreme importance in itself, Nietzsche’s essay had for me the added pedagogic advantage of allowing me to establish a historical line back to William Blake.¹ Nothing is more characteristic of modern literature than its discovery and canonization of the primal, non-ethical energies, and the historical point could be made the better by remarking the correspondence of thought of two men of different nations and separated from each other by a good many decades, for Nietzsche’s Dionysian orgy and Blake’s Hell are much the same thing.

Whether or not Joseph Conrad² read either Blake or Nietzsche I do not know, but his *Heart of Darkness* follows in their line. This very great work has never lacked for the admiration it deserves, and it has been given a kind of canonical place in the legend of modern literature by Eliot’s having it so clearly in mind when he wrote *The Waste Land* and his having taken from it the epigraph to “The Hollow Men.”³ But no one, to my knowledge, has ever confronted in an explicit way its strange and terrible message of ambivalence toward the life of civilization. Consider that its protagonist, Kurtz, is a progressive and a liberal and that he is the highly respected representative of a society which would have us believe it is benign, although in fact it is vicious. Consider too that he is a practitioner of several arts, a painter, a writer, a musician, and into the bargain a political orator. He is at once the most idealistic and the most practically successful of all the agents of the

7. Walter A. Kaufmann (1921–1980), German-born American philosopher and renowned scholar and translator of Nietzsche. The quotation is from Nietzsche: *Philosopher, Psychologist, Antichrist* (1950).

8. Greek philosopher and scientist (384–322 B.C.E.), one of the great systematizers of Western intellectual history. His *Poetics* (see above) is one of the most influential accounts of Greek tragedy.

9. Sadistic.

1. English artist and Romantic poet (1757–1827), whose works include monumental “prophetic”

poems that present his own mythology. In *The Marriage of Heaven and Hell* (1790–93), a prose work, he appears to favor Hell and the Devil.

2. Polish-born British novelist (1857–1924); his novella *Heart of Darkness* (1899) is a nightmarish exploration of the themes of imperialism, racism, and obsession.

3. The first epigraph of this 1925 poem by Eliot is “Mistah Kurtz—he dead.” *The Waste Land* (1922), Eliot’s most important poem, is a key text of modernism.

Belgian exploitation of the Congo.⁴ Everybody knows the truth about him which Marlow⁵ discovers—that Kurtz's success is the result of a terrible ascendancy he has gained over the natives of his distant station, an ascendancy which is derived from his presumed magical or divine powers, that he has exercised his rule with an extreme of cruelty, that he has given himself to unnamable acts of lust. This is the world of the darker pages of *The Golden Bough*. It is one of the great points of Conrad's story that Marlow speaks of the primitive life of the jungle not as being noble or charming or even free but as being base and sordid—and for *that* reason compelling; he himself feels quite overtly its dreadful attraction. It is to this devilish baseness that Kurtz has yielded himself, and yet Marlow, although he does indeed treat him with hostile irony, does not find it possible to suppose that Kurtz is anything but a hero of the spirit. For me it is still ambiguous whether Kurtz's famous deathbed cry, "The horror! The horror!" refers to the approach of death or to his experience of savage life. Whichever it is, to Marlow the fact that Kurtz could utter this cry at the point of death, while Marlow himself, when death threatens him, can know it only as a weary grayness, marks the difference between the ordinary man and a hero of the spirit. Is this not the essence of the modern belief about the nature of the artist, the man who goes down into that hell which is the historical beginning of the human soul, a beginning not outgrown but established in humanity as we know it now, preferring the reality of this hell to the bland lies of the civilization that has overlaid it?

This idea is proposed again in the somewhat less powerful but still very moving work with which I followed *Heart of Darkness*, Thomas Mann's *Death in Venice*.⁶ I wanted this story not so much for its account of an extravagantly Apollonian personality surrendering to forces that, in his Apollonian character, he thought shameful—although this was certainly to my purpose—but rather for Aschenbach's fevered dreams of the erotic past, and in particular that dream of the goat-orgy which Mann, being the kind of writer he is, having the kind of relation to Nietzsche he had, might well have written to serve as an illustration of what *The Birth of Tragedy* means by religious frenzy, the more so, of course, because Mann chooses that particular orgiastic ritual, the killing and eating of the goat, from which tragedy is traditionally said to have been derived.⁷

A notable element of this story in which the birth of tragedy plays an important part is that the degradation and downfall of that protagonist is not represented as tragic in the usual sense of the word—that is, it is not represented as a great deplorable event. It is a commonplace of modern literary thought that the tragic mode is not available even to the gravest and noblest of our writers. I am not sure that this is the deprivation that some people think it to be and a mark of our spiritual inferiority. But if we ask why it has come about, one reason may be that we have learned to think our

4. The Congo Free State, coextensive with the modern Democratic Republic of the Congo, was privately owned by Europeans and ruled with notorious brutality by King Leopold II of Belgium from 1885 to 1908.

5. The narrator of *Heart of Darkness*.

6. A 1912 novella by the German novelist and essayist Mann (1875–1955). Its main character

is Gustav von Aschenbach, a famous author who is disciplined and ascetic but becomes obsessed with a beautiful Polish boy, Tadzio, whom he encounters in a Venetian hotel.

7. The traditional etymology of the Greek word *tragōidia* is "goat song," and the earliest Greek tragedies are associated with the festival of Dionysus.

way back through tragedy to the primal stuff out of which tragedy arose. If we consider the primitive forbidden ways of conduct which traditionally in tragedy led to punishment by death, we think of them as being the path to reality and truth, to an ultimate self-realization. We have always wondered if tragedy itself may not have been saying just this in a deeply hidden way, drawing us to think of the hero's sin and death as somehow conferring justification, even salvation of a sort—no doubt this is what Nietzsche had in mind when he said that "tragedy denies ethics."⁸ What tragedy once seemed to hint, our literature now is willing to say quite explicitly. If Mann's Aschenbach dies at the height of his intellectual and artistic powers, overcome by a passion that his ethical reason condemns, we do not take this to be a defeat, rather a kind of terrible rebirth; at his latter end the artist knows a reality that he had until now refused to admit to consciousness.

Thoughts like these suggested that another of Nietzsche's works, *The Genealogy of Morals*,⁹ might be in point. It proposes a view of society which is consonant with the belief that art and not ethics constitutes the essential metaphysical activity of man and with the validation and ratification of the primitive energies. Nietzsche's theory of the social order dismisses all ethical impulse from its origins—the basis of society is to be found in the rationalization of cruelty: as simple as that. Nietzsche has no ultimate Utopian intention in saying this, no hope of revising the essence of the social order, although he does believe that its pain can be mitigated. He represents cruelty as a social necessity, for only by its exercise could men ever have been induced to develop a continuity of will: nothing else than cruel pain could have created in mankind that memory of intention which makes society possible. The method of cynicism which Nietzsche pursued—let us be clear that it is a method and not an attitude—goes so far as to describe punishment in terms of the pleasure derived from the exercise of cruelty: "Compensation," he says, "consists in a legal warrant entitling one man to exercise his cruelty on another."¹ There follows that most remarkable passage in which Nietzsche describes the process whereby the individual turns the cruelty of punishment against himself and creates the bad conscience and the consciousness of guilt which manifests itself as a pervasive anxiety. Nietzsche's complexity of mind is beyond all comparison, for in this book which is dedicated to the liberation of the conscience, Nietzsche makes his defense of the bad conscience as a decisive force in the interests of culture. It is much the same line of argument that he takes when, having attacked the Jewish morality and the priestly existence in the name of the health of the spirit, he reminds us that only by his sickness does man become interesting.

From *The Genealogy of Morals* to Freud's *Civilization and Its Discontents*² is but a step, and some might think that, for pedagogic purposes, the step is so small as to make the second book supererogatory. But although Freud's view of society and culture has indeed a very close affinity to Nietzsche's, Freud does add certain considerations which are essential to our sense of the modern disposition.

8. A Nietzschean sentiment, though this precise phrase has not been found in any specific work by Nietzsche.

9. Published in 1887.

1. Nietzsche, *The Genealogy of Morals: An Attack, in The Birth of Tragedy and The Genealogy of Mor-*

als, trans. Francis Golffing (New York: Anchor Doubleday, 1956), p. 197.

2. Published in 1929, by the Austrian neurologist and founder of psychoanalysis SIGMUND FREUD (1856–1939).

For one thing, he puts to us the question of whether or not we want to *accept* civilization. It is not the first time that the paradox of civilization has been present to the mind of civilized people, the sense that civilization makes men behave worse and suffer more than does some less developed state of human existence. But hitherto all such ideas were formulated in a moralizing way—civilization was represented as being “corrupt,” a divagation from a state of innocence. Freud had no illusions about a primitive innocence, he conceived no practicable alternative to civilization. In consequence, there was a unique force to the question he asked: whether we wished to accept civilization, with all its contradictions, with all its pains—pains, for “discontents” does not accurately describe what Freud has in mind. He had his own answer to the question—his tragic, or stoic, sense of life dictated it: we do well to accept it, although we also do well to cast a cold eye on the fate that makes it our better part to accept it. Like Nietzsche, Freud thought that life was justified by our heroic response to its challenge.

But the question Freud posed has not been set aside or closed up by the answer that he himself gave to it. His answer, like Nietzsche’s, is essentially in the line of traditional humanism—we can see this in the sternness with which he charges women not to interfere with men in the discharge of their cultural duty, not to claim men for love and the family to the detriment of their free activity in the world. But just here lies the matter of Freud’s question that the world more and more believes Freud himself did not answer. The pain that civilization inflicts is that of the instinctual renunciation that civilization demands, and it would seem that fewer and fewer people wish to say with Freud that the loss of instinctual gratification, emotional freedom, or love, is compensated for either by the security of civilized life or by the stern pleasures of the masculine moral character.

With Freud’s essay I brought to a close my list of prolegomenal books for the first term of the course. I shall not do much more than mention the books with which I introduced the second term, but I should like to do at least that. I began with *Rameau’s Nephew*,³ thinking that the peculiar moral authority which Diderot assigns to the envious, untalented, unregenerate protagonist was peculiarly relevant to the line taken by the ethical explorations of modern literature. Nothing is more characteristic of the literature of our time than the replacement of the hero by what has come to be called the anti-hero, in whose indifference to or hatred of ethical nobility there is presumed to lie a special authenticity. Diderot is quite overt about this—he himself in his public character is the deuteragonist,⁴ the “honest consciousness,” as Hegel calls him,⁵ and he takes delight in the discomfiture of the decent, dull person he is by the Nephew’s nihilistic mind.

It seemed to me too that there was particular usefulness in the circumstance that this anti-hero should avow so openly his *envy*, which Tocqueville⁶ has called the ruling emotion of democracy, and that, although he envied

3. A novel by the French man of letters and philosopher Denis Diderot (1713–1784), completed in 1774 but first published in a German translation in 1805. The book is a lively, witty philosophical conversation between Lui (“Him,” Rameau’s nephew) and Moi (“Me,” Diderot).

4. In ancient Greek tragedy, the actor playing the second most important figure; the most impor-

tant is the protagonist.

5. Hegel alludes to the book in *Phänomenologie des Geistes* (1807, *Phenomenology of Spirit or Mind*), VI.B.I.a.

6. Alexis de Tocqueville (1805–1859), French politician, political scientist, and historian; he called envy the “democratic sentiment” in *Democracy in America* (4 vols., 1835–40), part 1, chap. 13.

anyone at all who had access to the creature-comforts and the social status which he lacked, what chiefly animated him was envy of men of genius. Ours is the first cultural epoch in which many men aspire to high achievement in the arts and, in their frustration, form a dispossessed class which cuts across the conventional class lines, making a proletariat of the spirit.

Although *Rameau's Nephew* was not published until fairly late in the century, it was known in manuscript by Goethe and Hegel: it suited the temper and won the admiration of Marx⁷ and Freud for reasons that are obvious. And there is ground for supposing that it was known to Dostoevski, whose *Notes from Underground*⁸ is a restatement of the essential idea of Diderot's dialogue in terms both more extreme and less genial. The *Nephew* is still on the defensive—he is naughtily telling secrets about the nature of man and society. But Dostoevski's underground man shouts aloud his envy and hatred and carries the ark of his self-hatred and alienation into a remorseless battle with what he calls "the good and the beautiful," mounting an attack upon every belief not merely of bourgeois society but of the whole humanist tradition. The inclusion of *Notes from Underground* among my prolegomenal books constituted something of a pedagogic risk, for if I wished to emphasize the subversive tendency of modern literature, here was a work which made all subsequent subversion seem like affirmation, so radical and so brilliant was its negation of our traditional pieties and its affirmation of our new pieties.

I hesitated in compunction before following *Notes from Underground* with Tolstoi's *Death of Ivan Ilyitch*,⁹ which so ruthlessly and with such dreadful force destroys the citadel of the commonplace life in which we all believe we can take refuge from ourselves and our fate. But I did assign it and then two of Pirandello's¹ plays which, in the atmosphere of the sordidness of the commonplace life, undermine all the certitudes of the commonplace, common-sense mind.

From time to time I have raised with myself the question of whether my choice of these prolegomenal works was not extravagant, quite excessively tendentious. I have never been able to believe that it is. And if these works do indeed serve to indicate in an accurate way the nature of modern literature, a teacher might find it worth asking how his students respond to the strong dose.

One response I have already described—the readiness of the students to engage in the process that we might call the socialization of the anti-social, or the acculturation of the anti-cultural, or the legitimization of the subversive. When the term-essays come in, it is plain to me that almost none of the students have been taken aback by what they have read: they have wholly contained the attack. The chief exceptions are the few who simply do not comprehend, although they may be awed by, the categories of our discourse. In their papers, like poor hunted creatures in a Kafka story, they take refuge first in misunderstood large phrases, then in bad grammar, then in general incoherence. After my pedagogical exasperation has run its course, I find

7. KARL MARX (1818–1883), German philosopher and revolutionary; in a letter to FRIEDRICH ENGELS of April 15, 1869, he calls *Rameau's Nephew* a "unique masterpiece."

8. *Notes from Underground* (1864), a novella by the Russian writer Fyodor Dostoyevsky (1821–

1881).

9. *The Death of Ivan Ilyich* (1886), a novella by the Russian writer Leo Tolstoy (1828–1910).

1. Luigi Pirandello (1867–1936), prolific Italian playwright and novelist, often seen as a forerunner of the theater of the absurd.

that I am sometimes moved to give them a queer respect, as if they had stood up and said what in fact they don't have the wit to stand up and say: "Why do you harry us? Leave us alone. We are not Modern Man. We are the Old People. Ours is the Old Faith. We serve the little Old Gods, the gods of the copybook maxims, the small, dark, somewhat powerful deities of lawyers, doctors, engineers, accountants. With them is neither sensibility nor *angst*. With them is no disgust—it is they, indeed, who make ready the way for 'the good and the beautiful' about which low-minded doubts have been raised in this course, that 'good and beautiful' which we do not possess and don't want to possess but which we know justifies our lives. Leave us alone and let us worship our gods in the way they approve, in peace and unawareness." Crass, but—to use that interesting modern word which we have learned from the curators of museums—authentic. The rest, the minds that give me the A papers and the B papers and even the C+ papers, move through the terrors and mysteries of modern literature like so many Parsifals,² asking no questions at the behest of wonder and fear. Or like so many seminarists³ who have been systematically instructed in the constitution of Hell and the ways to damnation. Or like so many *readers*, entertained by moral horror stories. I asked them to look into the Abyss, and, both dutifully and gladly, they have looked into the Abyss, and the Abyss has greeted them with the grave courtesy of all objects of serious study, saying: "Interesting, am I not? And *exciting*, if you consider how deep I am and what dread beasts lie at my bottom. Have it well in mind that a knowledge of me contributes materially to your being whole, or well-rounded, men."

In my distress over the outrage I have conspired to perpetrate upon a great literature, I wonder if perhaps I have not been reading these papers too literally. After all, a term-essay is not a diary of the soul, it is not an occasion for telling the truth. What my students might reveal of their true feelings to a younger teacher they will not reveal to me; they will give me what they conceive to be the proper response to the official version of terror I have given them. I bring to mind their faces, which are not necessarily the faces of the authors of these unperturbed papers, nor are they, not yet, the faces of fathers of families, or of theatergoers, or of buyers of modern paintings: not yet. I must think it possible that in ways and to a degree which they keep secret they have responded directly and personally to what they have read.

And if they have? And if they have, am I the more content?

What form would I want their response to take? It is a teacher's question that I am asking, not a critic's. We have decided in recent years to think of the critic and the teacher of literature as one and the same, and no doubt it is both possible and useful to do so. But there are some points at which the functions of the two do not coincide, or can be made to coincide only with great difficulty. Of criticism we have been told, by Arnold, that "it must be apt to study and praise elements that for fullness of spiritual perfection are wanted even though they belong to a power which in the practical sphere may be maleficent."⁴ But teaching, or at least undergraduate teaching, is not

2. In the medieval story of Perceval or Parsival, which is the basis of the opera *Parsifal* (1882) by the German composer Richard Wagner, the hero—a naive youth who becomes a knight of King Arthur's Round Table—initially is punished for his failure to ask the essential question

of the keeper of the Holy Grail (the legendary cup used by Jesus at the Last Supper and used to catch his blood while he was on the cross).

3. Seminarists.

4. From "The Function of Criticism at the Present Time" (1864; see above).

given the same licensed mandate—cannot be given it because the teacher's audience, which stands before his very eyes, as the critic's audience does not, asks questions about "the practical sphere," as the critic's audience does not. For instance, on the very day that I write this, when I had said to my class all I could think of to say about *The Magic Mountain*⁵ and invited questions and comments, one student asked. "How would you generalize the idea of the educative value of illness, so that it would be applicable not only to a particular individual, Hans Castorp, but to young people at large?" It makes us smile, but it was asked in all seriousness, and it is serious in its substance, and it had to be answered seriously, in part by the reflection that this idea, like so many ideas encountered in the books of the course, had to be thought of as having reference only to the private life; that it touched the public life only in some indirect or tangential way; that it really ought to be encountered in solitude, even in secrecy, since to talk about it in public and in our academic setting was to seem to propose for it a public practicality and thus to distort its meaning. To this another student replied; he said that, despite the public ritual of the classroom, each student inevitably experienced the books in privacy and found their meaning in reference to his own life. True enough, but the teacher sees the several privacies coming together to make a group, and they propose—no doubt the more because they come together every Monday, Wednesday, and Friday at a particular hour—the idea of a community, that is to say, "the practical sphere."

This being so, the teacher cannot escape the awareness of certain circumstances which the critic, who writes for an ideal, uncircumstanced reader, has no need to take into account. The teacher considers, for example, the social situation of his students—they are not of patrician origin, they do not come from homes in which stubbornness, pride, and conscious habit prevail, nor are they born into a culture marked by these traits, a culture in which other interesting and valuable things compete with and resist ideas; they come, mostly, from "good homes" in which authority and valuation are weak or at least not very salient and bold, so that ideas have for them, at their present stage of development, a peculiar power and preciousness. And in this connection the teacher will have in mind the special prestige that our culture, in its upper reaches, gives to art, and to the ideas that art proposes—the agreement, ever growing in assertiveness, that art yields more truth than any other intellectual activity. In this culture what a shock it is to encounter Santayana's⁶ acerbic skepticism about art, or Keats's remark, which the critics and scholars never take notice of, presumably because they suppose it to be an aberration, that poetry is "not so fine a thing as philosophy—For the same reason that an eagle is not so fine a thing as a truth."⁷ For many students no ideas that they will encounter in any college discipline will equal in force and sanction the ideas conveyed to them by modern literature.

The author of *The Magic Mountain* once said that all his work could be understood as an effort to free himself from the middle class,⁸ and this, of

5. Thomas Mann's celebrated 1924 bildungsroman (novel of moral and psychological education); Castorp, its main character, spends 7 years in a tuberculosis sanitarium in the Swiss mountains.

6. George Santayana (1863–1952), Spanish-born American philosopher, essayist, poet, and novelist; though he celebrated the power of art, he

was highly skeptical of the idea that it might rest on some transcendent inspiration.

7. Quoted from Keats's letter dated February 19, 1819, to his younger brother George Keats and George's wife, Georgiana.

8. This statement attributed to Mann has not been found in any of his writings.

course, will serve to describe the chief intention of all modern literature. And the means of freedom which Mann prescribes (the characteristic irony notwithstanding) is the means of freedom which in effect all of modern literature prescribes. It is, in the words of Clavdia Chauchat, "*se perdre et même . . . se laisser dépérir*,"⁹ and thus to name the means is to make plain that the end is not merely freedom from the middle class but freedom from society itself. I venture to say that the idea of losing oneself up to the point of self-destruction, of surrendering oneself to experience without regard to self-interest or conventional morality, of escaping wholly from the societal bonds, is an "element" somewhere in the mind of every modern person who dares to think of what Arnold in his unaffected Victorian way called "the fulness of spiritual perfection."¹ But the teacher who undertakes to present modern literature to his students may not allow that idea to remain in the *somewhere* of his mind; he must take it from the place where it exists habitual and unrealized and put it in the conscious forefront of his thought. And if he is committed to an admiration of modern literature, he must also be committed to this chief idea of modern literature. I press the logic of the situation not in order to question the legitimacy of the commitment, or even the propriety of expressing the commitment in the college classroom (although it does seem odd!), but to confront those of us who do teach modern literature with the striking actuality of our enterprise.

1961, 1965

9. "To lose oneself and likewise . . . to let oneself be ruined" (French). Chauchat (in French, literally "Hot Cat") is Castorp's romantic interest in

The Magic Mountain.

HANNAH ARENDT

1906–1975

The life and work of the political theorist Hannah Arendt have been equally controversial and inspirational. Especially after the attacks of 9/11, her reflections on human rights, statelessness, evil, and particularly the nature of the political have become central to discussions of terrorism and the varied responses to it. She contended that violence renders political relationships impossible, even as she examined the various forms of violence perpetrated by state and nonstate agents. Arendt was also a strong critic of commercial culture, and our selections from her work highlight her insistence that politics is not primarily about economic well-being. Thus, her work is often enlisted in critiques of neoliberalism and in defenses of the humanities against utilitarian understandings of education's value.

Raised in Königsberg (the Prussian birthplace of KANT) in a prosperous and well-assimilated Jewish family, Arendt was a sickly child whose father died when she was seven. At sixteen Arendt began classes at the University of Berlin to complete her secondary schooling; two years later she started her university education at Marburg, specifically to study with MARTIN HEIDEGGER. By the end of her first year, she was having an affair with him. In part because of the complications of this relationship (he was thirty-five, married, and controlling), a year after it began Arendt left

Marburg for Heidelberg, where she completed her dissertation under the direction of Karl Jaspers in 1929. She then moved to Berlin, where she worked on her habilitation thesis—the second thesis required in Germany to obtain an academic position—and married Günther Stern, a leftist whom she had met in Heidegger's lectures. When the Nazis came to power in 1933, she was arrested and detained for a week because of her communist connections; after being released, she immediately left for Paris, where Stern had already fled. But their marriage fell apart, and he went on to America in 1936. In Paris's German ex-pat community Arendt met WALTER BENJAMIN and Heinrich Blücher, whom she married in 1940. Separately held in internment camps in 1941 as "enemy aliens," after several weeks Arendt and Blücher both escaped, reunited, and, with the help of Stern, managed to get papers to leave Marseilles for the United States via Portugal. They reached New York in May 1941.

The thirty-five-year-old Arendt set about learning English and became involved with Jewish émigré groups based in New York. By 1944, she was working for Schocken Books (where she oversaw the first publication in English of Kafka's and Benjamin's work) and publishing essays in *Partisan Review*, a leftist quarterly literary magazine. Her first book, the masterpiece *The Origins of Totalitarianism* (1951), offers a detailed historical and theoretical explanation for the deadly regimes of Hitler and Stalin. Arendt was associated with the New York Intellectuals, a group of liberal and leftist writers who during the cold war were critical of the United States but extremely hostile to the Soviet Union. Between 1955 and her death, Arendt wrote a series of works in political theory, most notably *The Human Condition* (1958). She also wrote about current affairs in popular venues, including the *New Yorker*, *New York Times*, and *New York Review of Books*. She taught at Princeton University, at the University of Chicago from 1963 to 1967, and at the New School for Social Research from 1967 to 1975.

In 1960, Arendt persuaded the *New Yorker* to send her to Jerusalem to cover the trial of Adolph Eichmann, who had been seized in Argentina by Israeli agents for his war crimes—he had been the Nazi functionary in charge of transporting Europe's Jews to the death camps. Eichmann presented himself merely as a bureaucrat, and Arendt's published report, with its famous phrase "the banality of evil," sparked a firestorm. Many readers, Jews and non-Jews alike, saw it as an attack on Israel, whitewashing Nazi crimes while appearing to blame Jewish victims (especially their community leaders) for the horrors of the Holocaust. The posthumous revelation of Arendt's affair with Heidegger, who in 1933 joined the Nazi Party, together with her making several visits to him in the 1950s and corresponding with him until her death, added fuel to the claim that she was a "self-hating Jew." Arendt did criticize Heidegger's infamous support of the Nazis in several essays, but she seemed to have mostly forgiven him for his political sins. The controversy lives on, as Jewish writers such as JUDITH BUTLER and Corey Robin have gone to Arendt's work when voicing their own objections to policies pursued by the state of Israel.

Arendt's distinctive understanding of the political rests on a three-part distinction between labor, work, and (especially) action. Labor is the effort required to produce the necessities of life. Arendt's hostility to both Marxism and capitalism is rooted in their reduction of life to labor. Inspired by the Greeks, especially ARISTOTLE, Arendt insists that life is meaningful only when humans *work* to produce things of lasting value (things that persist, as opposed to the necessities of life that are consumed) and *act*. Our selection from *The Human Condition* presents her theory of action, which is the centerpiece of her political philosophy. Crucially, action produces nothing, even as it is the highest expression of human freedom. In action is revealed the actor's identity—an identity that was unknown to the agent and to others prior to the performed action. Arendt's notion of action is thus recognizably performative (to use a term from J. L. AUSTIN's contemporaneous work, of which she appears to have been unaware). An equally crucial point is that action occurs in public, in the intersubjective space where the "I" appears in front of

others. That space is the political for Arendt: action's performative nature creates both the agent's identity and the *polis* (political community). The political disappears unless public action is ongoing, as action creates and sustains "the web of relationships" that is the stuff of politics.

This understanding of politics is radically nonutilitarian. Politics is not about the distribution of resources (whether those resources consist of power, wealth, or status). Rather, politics is about freedom and meaning—an emphasis that suggests Arendt's affinity with the existentialism of Heidegger. Arendt's "action" is free because it is divorced from having to provide the necessities of life, and meaningful because it enables the agent to discover "who" she is—and to discover "who" these others she lives with are. The "joy" of politics, Arendt tells us at the end of our second selection, comes from "inserting ourselves into the world by word and deed, thus acquiring and sustaining our personal identity and beginning something entirely new." Action as self-creation requires others even as it introduces something new—this unique self—into the world.

Especially important to literary theorists has been Arendt's connection of action to speech and storytelling. In JULIA KRISTEVA's words, Arendt shows us "we must tell the story of our life before we can ascribe a meaning to it." Mute action is without meaning, partly because the meaning of actions is not under the control of the agent. Instead, it is in the intersubjectively produced story of deeds that their meaning unfolds. Elsewhere in her work, Arendt laments that the possibility of this intersubjective relationship, dependent on the existence of a public sphere that is nonutilitarian, has diminished in modernity, which relentlessly focuses on the production of items for exchange, the accumulation of wealth, and the consumption of commodities. In *The Human Condition* she stresses the inability of any single agent to make or control the story that action tells. The notion of "an invisible actor behind the scenes" who dictates what occurs in the public space of appearances has haunted Western thought since PLATO, she tells us, but should be rejected. Action unfolds without guarantees; its consequences and meanings will develop in ways we cannot predict or control. That is why Aristotle was correct to identify "action" as the key component of tragedy and why "theater is the political art par excellence." In front of others, the risk-laden drama of one's identity unfolds in a space of exhilarating yet terrifying freedom.

Our second selection, from the essay "Truth and Politics" (1968), touches again on Arendt's emphasis on storytelling as the site of meaning. However, meaning is distinct from truth. Meaning attends to the significance we as humans attach to our actions and existence, whereas truth refers to the basic conditions of existence within which our actions and our efforts to attain meaning take place. Arendt was led to this account of truth because of the many falsehoods that she felt pervaded the attacks on her report of the Eichmann trial. Her attempt to define and defend truth enriches her understanding of the political. Arendt famously—and influentially—argues that truth is irrelevant, even dangerous, in the political sphere. In that sphere, citizens argue about *things*, often about the best course of action for the collective to undertake. In those arguments, every citizen's opinion is entitled to be heard. (Arendt's valorization of "opinion" as the stuff of politics is a deliberate repudiation of the Platonic attempt to banish opinion from the ideal republic in favor of the philosopher's truths.) And the things we argue about have no right or wrong answer. Should my town build a bridge over the nearby river? Since we cannot know consequences in advance, arguments for and against building it are equally worth hearing. When as a group we come to a decision, we are making only an educated guess about those future consequences. For that reason, those who vote on the other side from me must be recognized. We disagree, but neither of us has access to an unequivocal truth about this matter we are debating. In that debate, I am also revealing who I am and realizing what is most meaningful to me through my interaction with others. So it is meaning, not truth, that is political.

Truth, Arendt says, compels—and that is why it has no place in the political, which deals with uncertain matters open to debate. But that does not mean truth is irrelevant. Quite the contrary. Rather, she argues, truth should be established apart from the political sphere. In our selection, she sees the judiciary, the university, and the press as three places for the discovery of truth. In a court, the trial should decide if the person actually committed the deed of which he or she is accused; at a university, scholars should “find out, stand guard over, and interpret factual truth”; and journalists should give us the truth about what our politicians, those engaged in business, and other public actors are doing. The political debates Arendt so cherishes are impossible, she declares, unless grounded on truth. We can legitimately argue about the causes of World War I and the question of who was to blame, but such an argument is impossible if one party to the dispute denies that Germany invaded Belgium in August 1914. Arendt’s position here is, in part, a passionate defense of academic freedom, and it resonates with the later work of MARTHA NUSSBAUM. If a polity allows political ideology to override the disinterested, impartial pursuit of the truth, then it abandons any footing in reality.

Arendt wants to maintain both the purity of a political sphere separated from all questions of interest and the clarity of a truth separated from the taint of disputable opinion, though her success in doing so may be limited. Even so, her passionate commitment to nonutilitarian values, her attention to the centrality of storytelling and meaning as human concerns, and her attempt to balance truth and opinion in ways that leave space open for reasonable political debate have inspired defenders of the humanities as they struggle to articulate how there is more to life than evidence-based science and economic productivity.

From The Human Condition

From 24. The Disclosure of the Agent in Speech and Action

* * *

Action and speech are so closely related because the primordial and specifically human act must at the same time contain the answer to the question asked of every newcomer: “Who are you?” This disclosure of who somebody is, is implicit in both his words and his deeds; yet obviously the affinity between speech and revelation is much closer than that between action and revelation, just as the affinity between action and beginning is closer than that between speech and beginning, although many, and even most acts, are performed in the manner of speech. Without the accompaniment of speech, at any rate, action would not only lose its revelatory character, but, and by the same token, it would lose its subject, as it were; not acting men but performing robots would achieve what, humanly speaking, would remain incomprehensible. Speechless action would no longer be action because there would no longer be an actor, and the actor, the doer of deeds, is possible only if he is at the same time the speaker of words. The action he begins

is humanly disclosed by the word, and though his deed can be perceived in its brute physical appearance without verbal accompaniment, it becomes relevant only through the spoken word in which he identifies himself as the actor, announcing what he does, has done, and intends to do.

No other human performance requires speech to the same extent as action. In all other performances speech plays a subordinate role, as a means of communication or a mere accompaniment to something that could also be achieved in silence. It is true that speech is extremely useful as a means of communication and information, but as such it could be replaced by a sign language, which then might prove to be even more useful and expedient to convey certain meanings, as in mathematics and other scientific disciplines or in certain forms of teamwork. Thus, it is also true that man's capacity to act, and especially to act in concert, is extremely useful for purposes of self-defense or pursuit of interests; but if nothing more were at stake here than to use action as a means to an end, it is obvious that the same end could be much more easily attained in mute violence, so that action seems a not very efficient substitute for violence, just as speech, from the viewpoint of sheer utility, seems an awkward substitute for sign language.

In acting and speaking, men show who they are, reveal actively their unique personal identities and thus make their appearance in the human world, while their physical identities appear without any activity of their own in the unique shape of the body and sound of the voice. This disclosure of "who" in contradistinction to "what" somebody is—his qualities, gifts, talents, and shortcomings, which he may display or hide—is implicit in everything somebody says and does. It can be hidden only in complete silence and perfect passivity, but its disclosure can almost never be achieved as a willful purpose, as though one possessed and could dispose of this "who" in the same manner he has and can dispose of his qualities. On the contrary, it is more than likely that the "who," which appears so clearly and unmistakably to others, remains hidden from the person himself, like the *daimōn*¹ in Greek religion which accompanies each man throughout his life, always looking over his shoulder from behind and thus visible only to those he encounters.

This revelatory quality of speech and action comes to the fore where people are *with* others and neither for nor against them—that is, in sheer human togetherness. Although nobody knows whom he reveals when he discloses himself in deed or word, he must be willing to risk the disclosure, and this neither the doer of good works, who must be without self and preserve complete anonymity, nor the criminal, who must hide himself from others, can take upon themselves. Both are lonely figures, the one being for, the other against, all men; they, therefore, remain outside the pale of human intercourse and are, politically, marginal figures who usually enter the historical scene in times of corruption, disintegration, and political bankruptcy. Because of its inherent tendency to disclose the agent together with the act, action needs for its full appearance the shining brightness we once called glory, and which is possible only in the public realm.

Without the disclosure of the agent in the act, action loses its specific character and becomes one form of achievement among others. It is then

1. Divine power, especially a power controlling the destiny of an individual.

indeed no less a means to an end than making is a means to produce an object. This happens whenever human togetherness is lost, that is, when people are only for or against other people, as for instance in modern warfare, where men go into action and use means of violence in order to achieve certain objectives for their own side and against the enemy. In these instances, which of course have always existed, speech becomes indeed "mere talk," simply one more means toward the end, whether it serves to deceive the enemy or to dazzle everybody with propaganda; here words reveal nothing, disclosure comes only from the deed itself, and this achievement, like all other achievements, cannot disclose the "who," the unique and distinct identity of the agent.

In these instances action has lost the quality through which it transcends mere productive activity, which, from the humble making of use objects to the inspired creation of art works, has no more meaning than is revealed in the finished product and does not intend to show more than is plainly visible at the end of the production process. Action without a name, a "who" attached to it, is meaningless, whereas an art work retains its relevance whether or not we know the master's name. The monuments to the "Unknown Soldier" after World War I bear testimony to the then still existing need for glorification, for finding a "who," an identifiable somebody whom four years of mass slaughter should have revealed. The frustration of this wish and the unwillingness to resign oneself to the brutal fact that the agent of the war was actually nobody inspired the erection of the monuments to the "unknown," to all those whom the war had failed to make known and had robbed thereby, not of their achievement, but of their human dignity.²

25. *The Web of Relationships and the Enacted Stories*

The manifestation of who the speaker and doer unexchangeably is, though it is plainly visible, retains a curious intangibility that confounds all efforts toward unequivocal verbal expression. The moment we want to say *who* somebody is, our very vocabulary leads us astray into saying *what* he is; we get entangled in a description of qualities he necessarily shares with others like him; we begin to describe a type or a "character" in the old meaning of the word, with the result that his specific uniqueness escapes us.

This frustration has the closest affinity with the well-known philosophic impossibility to arrive at a definition of man, all definitions being determinations or interpretations of *what* man is, of qualities, therefore, which he could possibly share with other living beings, whereas his specific difference would be found in a determination of what kind of a "who" he is. Yet apart from this philosophic perplexity, the impossibility, as it were, to solidify in words the living essence of the person as it shows itself in the flux of action and speech, has great bearing upon the whole realm of human affairs, where we exist primarily as acting and speaking beings. It excludes in principle our ever being able to handle these affairs as we handle things whose nature is at our disposal because we can name them. The point is

2. William Faulkner's *A Fable* (1954) surpasses almost all of World War I literature in perceptiveness and clarity because its hero is the Unknown Soldier [Arendt's note].

that the manifestation of the “who” comes to pass in the same manner as the notoriously unreliable manifestations of ancient oracles, which, according to Heraclitus, “neither reveal nor hide in words, but give manifest signs.”³ This is a basic factor in the equally notorious uncertainty not only of all political matters, but of all affairs that go on between men directly, without the intermediary, stabilizing, and solidifying influence of things.⁴

This is only the first of many frustrations by which action, and consequently the togetherness and intercourse of men, are ridden. It is perhaps the most fundamental of those we shall deal with, in so far as it does not rise out of comparisons with more reliable and productive activities, such as fabrication or contemplation or cognition or even labor, but indicates something that frustrates action in terms of its own purposes. What is at stake is the revelatory character without which action and speech would lose all human relevance.

Action and speech go on between men, as they are directed toward them, and they retain their agent-revealing capacity even if their content is exclusively “objective,” concerned with the matters of the world of things in which men move, which physically lies between them and out of which arise their specific, objective, worldly interests. These interests constitute, in the word’s most literal significance, something which *inter-est*, which lies between people and therefore can relate and bind them together. Most action and speech is concerned with this in-between, which varies with each group of people, so that most words and deeds are *about* some worldly objective reality in addition to being a disclosure of the acting and speaking agent. Since this disclosure of the subject is an integral part of all, even the most “objective” intercourse, the physical, worldly in-between along with its interests is overlaid and, as it were, overgrown with an altogether different in-between which consists of deeds and words and owes its origin exclusively to men’s acting and speaking directly *to* one another. This second, subjective in-between is not tangible, since there are no tangible objects into which it could solidify; the process of acting and speaking can leave behind no such results and end products. But for all its intangibility, this in-between is no less real than the world of things we visibly have in common. We call this reality the “web” of human relationships, indicating by the metaphor its somewhat intangible quality.

To be sure, this web is no less bound to the objective world of things than speech is to the existence of a living body, but the relationship is not like that of a façade or, in Marxian terminology, of an essentially superfluous superstructure⁵ affixed to the useful structure of the building itself. The basic error of all materialism in politics—and this materialism is not Marxian

3. *Oute legei oute kryptei alla semainei* (Diels, *Fragmente der Vorsokratiker* [4th ed., 1922], frag. B93) [Arendt’s note]. Heraclitus (active ca. 500 B.C.E.), Greek philosopher whose work has survived only in fragments quoted by later authors.

4. Socrates used the same word as Heraclitus, *semainein* (“to show and give signs”), for the manifestation of his *daimonion* [literally, “divine something”] (Xenophon *Memorabilia* 1.1.2, 4). If we are to trust Xenophon, Socrates likened his *daimonion* to the oracles and insisted that both should be used only for human affairs, where nothing is certain, and not for problems of the

arts and crafts, where everything is predictable (ibid. 7–9) [Arendt’s note]. Socrates (469–399 B.C.E.), Greek philosopher who speaks of his *daimonion* at the trial that condemns him to death; the most familiar account is in *Apology* 38d, by Socrates’ student PLATO (ca. 427–ca. 347 B.C.E.). Xenophon (ca. 428/27–ca. 354 B.C.E.), Greek historian and student of Socrates.

5. In Marxist thought, the elements of society—language, literature, political institutions, legal statutes—that emanate from the material “base” of production and the relations of production.

and not even modern in origin, but as old as our history of political theory—is to overlook the inevitability with which men disclose themselves as subjects, as distinct and unique persons, even when they wholly concentrate upon reaching an altogether worldly, material object. To dispense with this disclosure, if indeed it could ever be done, would mean to transform men into something they are not; to deny, on the other hand, that this disclosure is real and has consequences of its own is simply unrealistic.

The realm of human affairs, strictly speaking, consists of the web of human relationships which exists wherever men live together. The disclosure of the “who” through speech, and the setting of a new beginning through action, always fall into an already existing web where their immediate consequences can be felt. Together they start a new process which eventually emerges as the unique life story of the newcomer, affecting uniquely the life stories of all those with whom he comes into contact. It is because of this already existing web of human relationships, with its innumerable, conflicting wills and intentions, that action almost never achieves its purpose; but it is also because of this medium, in which action alone is real, that it “produces” stories with or without intention as naturally as fabrication produces tangible things.⁶ These stories may then be recorded in documents and monuments, they may be visible in use objects or art works, they may be told and retold and worked into all kinds of material. They themselves, in their living reality, are of an altogether different nature than these reifications. They tell us more about their subjects, the “hero” in the center of each story, than any product of human hands ever tells us about the master who produced it, and yet they are not products, properly speaking. Although everybody started his life by inserting himself into the human world through action and speech, nobody is the author or producer of his own life story. In other words, the stories, the results of action and speech, reveal an agent, but this agent is not an author or producer. Somebody began it and is its subject in the twofold sense of the word, namely, its actor and sufferer, but nobody is its author.

That every individual life between birth and death can eventually be told as a story with beginning and end is the prepolitical and prehistorical condition of history, the great story without beginning and end. But the reason why each human life tells its story and why history ultimately becomes the storybook of mankind, with many actors and speakers and yet without any tangible authors, is that both are the outcome of action. For the great unknown in history, that has baffled the philosophy of history in the modern age, arises not only when one considers history as a whole and finds that its subject, mankind, is an abstraction which never can become an active agent; the same unknown has baffled political philosophy from its beginning in antiquity and contributed to the general contempt in which philosophers since Plato have held the realm of human affairs. The perplexity is that in any series of events that together form a story with a unique meaning we can at best isolate the agent who set the whole process into motion; and although

6. In Arendt, “labor” is the effort required to produce the necessities of life (food, shelter, clothing) that are consumed and thus must be produced again. “Work” produces material objects that are

not consumed by use, but that often last longer than the worker’s lifetime. “Action,” unlike labor and work, is nonmaterial.

this agent frequently remains the subject, the “hero” of the story, we never can point unequivocally to him as the author of its eventual outcome.

It is for this reason that Plato thought that human affairs (*ta tōn anthrōpōn pragmata*), the outcome of action (*praxis*), should not be treated with great seriousness; the actions of men appear like the gestures of puppets led by an invisible hand behind the scene, so that man seems to be a kind of plaything of a god.⁷ It is noteworthy that Plato, who had no inkling of the modern concept of history, should have been the first to invent the metaphor of an actor behind the scenes who, behind the backs of acting men, pulls the strings and is responsible for the story. The Platonic god is but a symbol for the fact that real stories, in distinction from those we invent, have no author; as such, he is the true forerunner of Providence, the “invisible hand,” Nature, the “world spirit,” class interest,⁸ and the like, with which Christian and modern philosophers of history tried to solve the perplexing problem that although history owes its existence to men, it is still obviously not “made” by them. (Nothing in fact indicates more clearly the political nature of history—its being a story of action and deeds rather than of trends and forces or ideas—than the introduction of an invisible actor behind the scenes whom we find in all philosophies of history, which for this reason alone can be recognized as political philosophies in disguise. By the same token, the simple fact that Adam Smith needed an “invisible hand” to guide economic dealings on the exchange market shows plainly that more than sheer economic activity is involved in exchange and that “economic man,” when he makes his appearance on the market, is an acting being and neither exclusively a producer nor a trader and barterer.)

The invisible actor behind the scenes is an invention arising from a mental perplexity but corresponding to no real experience. Through it, the story resulting from action is misconstrued as a fictional story, where indeed an author pulls the strings and directs the play. The fictional story reveals a maker just as every work of art clearly indicates that it was made by somebody; this does not belong to the character of the story itself but only to the mode in which it came into existence. The distinction between a real and a fictional story is precisely that the latter was “made up” and the former not made at all. The real story in which we are engaged as long as we live has no visible or invisible maker because it is not made. The only “somebody” it reveals is its hero, and it is the only medium in which the originally intangible manifestation of a uniquely distinct “who” can become tangible *ex post facto*⁹ through action and speech. *Who* somebody is or was we can know only by knowing the story of which he is himself the hero—his biography, in other words; everything else we know of him, including the work he may have produced and left behind, tells us only *what* he is or was. Thus, although we know much less of Socrates, who did not write a single line and left no work behind, than of Plato or Aristotle,¹ we know

7. Laws 803 and 644 [Arendt's note]. *Ta tōn anthrōpōn pragmata*: literally, “practical matters related to humans” (Greek).

8. All nonhuman powers used to explain the source of events and the outcomes of human actions in different explanatory systems: Providence in much Protestant thought, the “invisible hand” in *The Wealth of Nations* (1776) by the

Scottish philosopher Adam Smith (1723–1790), Nature in modern science, the “world spirit” in the writing of GEORG WILHELM FRIEDRICH HEGEL (1770–1831), and class interest in the works of KARL MARX (1818–1883).

9. After the fact (Latin).

1. Greek philosopher (384–322 B.C.E.); see above.

much better and more intimately who he was, because we know his story, than we know who Aristotle was, about whose opinions we are so much better informed.

The hero the story discloses needs no heroic qualities; the word "hero" originally, that is, in Homer, was no more than a name given each free man who participated in the Trojan enterprise² and about whom a story could be told. The connotation of courage, which we now feel to be an indispensable quality of the hero, is in fact already present in a willingness to act and speak at all, to insert one's self into the world and begin a story of one's own. And this courage is not necessarily or even primarily related to a willingness to suffer the consequences; courage and even boldness are already present in leaving one's private hiding place and showing who one is, in disclosing and exposing one's self. The extent of this original courage, without which action and speech and therefore, according to the Greeks, freedom, would not be possible at all, is not less great and may even be greater if the "hero" happens to be a coward.

The specific content as well as the general meaning of action and speech may take various forms of reification in art works which glorify a deed or an accomplishment and, by transformation and condensation, show some extraordinary event in its full significance. However, the specific revelatory quality of action and speech, the implicit manifestation of the agent and speaker, is so indissolubly tied to the living flux of acting and speaking that it can be represented and "reified" only through a kind of repetition, the imitation or *mimēsis*,³ which according to Aristotle prevails in all arts but is actually appropriate only to the *drama*, whose very name (from the Greek verb *dran*, "to act") indicates that play-acting actually is an imitation of acting.⁴ But the imitative element lies not only in the art of the actor, but, as Aristotle rightly claims, in the making or writing of the play, at least to the extent that the drama comes fully to life only when it is enacted in the theater. Only the actors and speakers who re-enact the story's plot can convey the full meaning, not so much of the story itself, but of the "heroes" who reveal themselves in it.⁵ In terms of Greek tragedy, this would mean that the story's direct as well as its universal meaning is revealed by the chorus, which does not imitate⁶ and whose comments are pure poetry, whereas the intangible identities of the agents in the story, since they escape all generalization and therefore all reification, can be conveyed only through an imitation of their acting. This is also why the theater is the political art par

2. In Homer, the word *hērōs* has certainly a connotation of distinction, but of no other than every free man was capable. Nowhere does it appear in the later meaning of "half-god," which perhaps arose out of a deification of the ancient epic heroes [Arendt's note]. Homer (ca. 8th c. B.C.E.), Greek epic poet to whom the *Iliad* (the story of "the Trojan enterprise"—the Trojan War) and the *Odyssey* are attributed.

3. Imitation or representation (Greek): a key term in Plato's work and especially in Aristotle's *Poetics* (see above), where art is seen as a *mimēsis* of reality.

4. Aristotle already mentions that the word *drama* was chosen because *drōntes* ("acting people") are imitated (*Poetics* 1448a28). From the treatise itself, it is obvious that Aristotle's model for "imitation" in art is taken from the drama, and the

generalization of the concept to make it applicable to all arts seems rather awkward [Arendt's note].

5. Aristotle therefore usually speaks not of an imitation of action (*praxis*) but of the agents (*pratōntes*) (see *Poetics* 1448a1 ff., 1448b25, 1449b24 ff.). He is not consistent, however, in this use (cf. 1451a29, 1447a28). The decisive point is that tragedy does not deal with the qualities of men, their *poiōtēs*, but with whatever happened with respect to them, with their actions and life and good or ill fortune (1450a15–18). The content of tragedy, therefore, is not what we would call character but action or the plot [Arendt's note].

6. That the chorus "imitates less" is mentioned in the *Ps. Aristotelian Problemata* (918b28) [Arendt's note]. The *Pseudo-Aristotelian Problems* is a compilation of perhaps the 5th or 6th century C.E.

excellence; only there is the political sphere of human life transposed into art. By the same token, it is the only art whose sole subject is man in his relationship to others.

1958

From Truth and Politics

* * *

In conclusion, I return to the questions I raised at the beginning of these reflections. Truth, though powerless and always defeated in a head-on clash with the powers that be, possesses a strength of its own: whatever those in power may contrive, they are unable to discover or invent a viable substitute for it. Persuasion and violence can destroy truth, but they cannot replace it. And this applies to rational or religious truth just as it applies, more obviously, to factual truth. To look upon politics from the perspective of truth, as I have done here, means to take one's stand outside the political realm. This standpoint is the standpoint of the truth-teller, who forfeits his position—and, with it, the validity of what he has to say—if he tries to interfere directly in human affairs and to speak the language of persuasion or of violence. It is to this position and its significance for the political realm that we must now turn our attention.

The standpoint outside the political realm—outside the community to which we belong and the company of our peers—is clearly characterized as one of the various modes of being alone. Outstanding among the existential modes of truth-telling are the solitude of the philosopher, the isolation of the scientist and the artist, the impartiality of the historian and the judge, and the independence of the fact-finder, the witness, and the reporter. (This impartiality differs from that of the qualified, representative opinion, mentioned earlier, in that it is not acquired inside the political realm but is inherent in the position of the outsider required for such occupations.) These modes of being alone differ in many respects, but they have in common that as long as any one of them lasts, no political commitment, no adherence to a cause, is possible. They are, of course, common to all men; they are modes of human existence as such. Only when one of them is adopted as a way of life—and even then life is never lived in complete solitude or isolation or independence—is it likely to conflict with the demands of the political.

It is quite natural that we become aware of the non-political and, potentially, even anti-political nature of truth—*Fiat veritas, et pereat mundus*¹—only in the event of conflict, and I have stressed up to now this side of the matter. But this cannot possibly tell the whole story. It leaves out of account certain public institutions, established and supported by the powers that be, in which, contrary to all political rules, truth and truthfulness have always constituted the highest criteria of speech and endeavor. Among these we find notably the judiciary, which either as a branch of government

1. Let truth be served, though the world perish (Latin). By replacing *justitia* with *veritas*, Arendt alters a famous Latin phrase that means "Let jus-

tice be done, though the world perish"—the motto of the Holy Roman emperor Ferdinand I (1503–1564; emperor 1558–64).

or as direct administration of justice is carefully protected against social and political power, as well as all institutions of higher learning, to which the state entrusts the education of its future citizens. To the extent that the Academe remembers its ancient origins, it must know that it was founded by the polis's most determined and most influential opponent. To be sure, Plato's² dream did not come true: the Academe never became a counter-society, and nowhere do we hear of any attempt by the universities at seizing power. But what Plato never dreamed of did come true: The political realm recognized that it needed an institution outside the power struggle in addition to the impartiality required in the administration of justice; for whether these places of higher learning are in private or in public hands is of no great importance; not only their integrity but their very existence depends upon the good will of the government anyway. Very unwelcome truths have emerged from the universities, and very unwelcome judgments have been handed down from the bench time and again; and these institutions, like other refuges of truth, have remained exposed to all the dangers arising from social and political power. Yet the chances for truth to prevail in public are, of course, greatly improved by the mere existence of such places and by the organization of independent, supposedly disinterested scholars associated with them. And it can hardly be denied that, at least in constitutionally ruled countries, the political realm has recognized, even in the event of conflict, that it has a stake in the existence of men and institutions over which it has no power.

This authentically political significance of the Academe is today easily overlooked because of the prominence of its professional schools and the evolution of its natural-science divisions, where, unexpectedly, pure research has yielded so many decisive results that have proved vital to the country at large. No one can possibly gainsay the social and technical usefulness of the universities, but this importance is not political. The historical sciences and the humanities, which are supposed to find out, stand guard over, and interpret factual truth and human documents, are politically of greater relevance. The telling of factual truth comprehends much more than the daily information supplied by journalists, though without them we should never find our bearings in an ever-changing world and, in the most literal sense, would never know where we are. This is, of course, of the most immediate political importance; but if the press should ever really become the "fourth branch of government," it would have to be protected against government power and social pressure even more carefully than the judiciary is. For this very important political function of supplying information is exercised from outside the political realm, strictly speaking; no action and no decision are, or should be, involved.

Reality is different from, and more than, the totality of facts and events, which, anyhow, is unascertainable. Who says what is—λέγει τὰ ἔόντα³—always tells a story, and in this story the particular facts lose their contingency and acquire some humanly comprehensible meaning. It is perfectly

2. Greek philosopher (ca. 427–ca. 347 B.C.E.; see above); the words *academe* and *academy* derive from the name of the school that he founded on the outskirts of Athens, which in turn took its name from a nearby park, the Academy (*Akadēmeia*).

3. Says the things that are (Greek). This echoes Hesiod (active ca. 700 B.C.E.), *Theogony* 38 (from his invocation to the Muses, the 9 daughters of Memory who preside over the arts and all intellectual pursuits).

true that “all sorrows can be borne if you put them into a story or tell a story about them,” in the words of Isak Dinesen,⁴ who not only was one of the great storytellers of our time but also—and she was almost unique in this respect—knew what she was doing. She could have added that joy and bliss, too, become bearable and meaningful for men only when they can talk about them and tell them as a story. To the extent that the teller of factual truth is also a storyteller, he brings about that “reconciliation with reality” which Hegel,⁵ the philosopher of history *par excellence*, understood as the ultimate goal of all philosophical thought, and which, indeed, has been the secret motor of all historiography that transcends mere learnedness. The transformation of the given raw material of sheer happenings which the historian, like the fiction writer (a good novel is by no means a simple concoction or a figment of pure fantasy), must effect is closely akin to the poet’s transfiguration of moods or movements of the heart—the transfiguration of grief into lamentations or of jubilation into praise. We may see, with Aristotle,⁶ in the poet’s political function the operation of a catharsis, a cleansing or purging of all emotions that could prevent men from acting. The political function of the storyteller—historian or novelist—is to teach acceptance of things as they are. Out of this acceptance, which can also be called truthfulness, arises the faculty of judgment—that, again in Isak Dinesen’s words, “at the end we shall be privileged to view, and review, it—and that is what is named the day of judgment.”⁷

There is no doubt that all these politically relevant functions are performed from outside the political realm. They require non-commitment and impartiality, freedom from self-interest in thought and judgment. The disinterested pursuit of truth has a long history; its origin, characteristically, precedes all our theoretical and scientific traditions, including our tradition of philosophical and political thought. I think it can be traced to the moment when Homer chose to sing the deeds of the Trojans no less than those of the Achaeans, and to praise the glory of Hector, the foe and the defeated man, no less than the glory of Achilles, the hero of his kinfolk.⁸ This had happened nowhere before; no other civilization, however splendid, had been able to look with equal eyes upon friend and foe, upon success and defeat—which since Homer have not been recognized as ultimate standards of men’s judgment, even though they are ultimates for the destinies of men’s lives. Homeric impartiality echoes throughout Greek history, and it inspired the first great teller of factual truth, who became the father of history: Herodotus⁹ tells us in the very first sentences of his stories that he set out to prevent “the great and wondrous deeds of the Greeks *and* the barbarians from losing their due meed of glory.” This is the root of all

4. Pen name of Karen Blixen (1885–1962), Danish writer who wrote in Danish, French, and English. She is quoted from an interview by Bent Mohn published in the *New York Times Book Review*, November 3, 1957; Arendt uses the same quotation as an epigraph to chapter 5 in *The Human Condition* (1958; see above).

5. GEORG WILHELM FRIEDRICH HEGEL (1770–1831), German philosopher. The phrase “reconciliation with reality,” often used in discussions of Hegel, appears in *Elements of the Philosophy of Right* (1821).

6. Greek philosopher (384–322 B.C.E.); on catharsis, see *Poetics* 1449b, above.

7. Quoted from “The Day of Judgment” (1957); “it” refers to “the story.”

8. That is, the Greeks; Achilles is the mightiest of their warriors, as Hector is the mightiest of the Trojans. Their deeds in the Trojan War are sung in the *Iliad*, attributed to the Greek epic poet Homer (ca. 8th c. B.C.E.).

9. The earliest great Greek historian (ca. 484–ca. 425 B.C.E.); the quotation is from the first sentence of his *History*.

so-called objectivity—this curious passion, unknown outside Western civilization, for intellectual integrity at any price. Without it no science would ever have come into being.

Since I have dealt here with politics from the perspective of truth, and hence from a viewpoint outside the political realm, I have failed to mention even in passing the greatness and the dignity of what goes on inside it. I have spoken as though the political realm were no more than a battlefield of partial, conflicting interests, where nothing counted but pleasure and profit, partisanship, and the lust for dominion. In short, I have dealt with politics as though I, too, believed that all public affairs were ruled by interest and power, that there would be no political realm at all if we were not bound to take care of life's necessities. The reason for this deformation is that factual truth clashes with the political only on this lowest level of human affairs, just as Plato's philosophical truth clashed with the political on the considerably higher level of opinion and agreement. From this perspective, we remain unaware of the actual content of political life—of the joy and the gratification that arise out of being in company with our peers, out of acting together and appearing in public, out of inserting ourselves into the world by word and deed, thus acquiring and sustaining our personal identity and beginning something entirely new. However, what I meant to show here is that this whole sphere, its greatness notwithstanding, is limited—that it does not encompass the whole of man's and the world's existence. It is limited by those things which men cannot change at will. And it is only by respecting its own borders that this realm, where we are free to act and to change, can remain intact, preserving its integrity and keeping its promises. Conceptually, we may call truth what we cannot change; metaphorically, it is the ground on which we stand and the sky that stretches above us.

CLEANTH BROOKS

1906–1994

The reputation of Cleanth Brooks suffered during the 1970s and 1980s when his books and essays were repeatedly cited to illustrate the flaws of the American New Criticism. Brooks, it was said, isolated literary criticism by limiting it to intensive analysis of the text itself, ignored history, failed to consider writings by women and minorities, and disabled any and all attempts to relate literary study to political, social, and cultural issues and debates. But while there are shortcomings to Brooks's work, his criticism is more interesting and complex than the standard accounts suggest. He is an incisive interpreter of literary texts and an adept theorist whose turns and twists of argument anticipated the theories later deployed against him.

Brooks was born in Murray, Kentucky, one of six children of a Methodist minister. He attended McTyeire School, a private classical academy in Tennessee, and

received his B.A. from Vanderbilt in 1928 and his M.A. from Tulane University in 1929. He next studied as a Rhodes Scholar at Exeter College at Oxford, returning to the United States in 1932 to begin his teaching career at Louisiana State University in Baton Rouge.

While at Oxford, Brooks became good friends with Robert Penn Warren, another Vanderbilt graduate and Rhodes Scholar; when Warren joined LSU's English department in 1934, the two of them started to work together on criticism and pedagogy. Disturbed by the inability of their students to interpret literary works, Brooks and Warren prepared a booklet designed to teach the skills of close reading by providing examples. Their desire to improve literary study in the classroom led to Brooks and Warren's influential, best-selling textbooks: *An Approach to Literature* (1936), *Understanding Poetry* (1938), *Understanding Fiction* (1943), *Modern Rhetoric* (1949), and, with Robert Heilman, *Understanding Drama* (1945).

From 1935 to 1942, Brooks and Warren co-edited the *Southern Review*, making it one of the foremost journals of its era. They published not only critical essays but also creative writing by Eudora Welty, Katherine Anne Porter, and others. In the first year alone, the authors appearing in the *Southern Review* included JOHN CROWE RANSOM, Allen Tate, Wallace Stevens, Kenneth Burke, R. P. Blackmur, Randall Jarrell, Ford Madox Ford, and Yvor Winters—leading poets and critics of the time. In 1947 Brooks left LSU for a professorship at Yale University (Warren later followed), where he taught until retiring in 1975. He researched, wrote, and published many essays and books on modern fiction and literary criticism, as well as editing textbooks.

Brooks's two most important critical books, *Modern Poetry and the Tradition* (1939) and *The Well Wrought Urn: Studies in the Structure of Poetry* (1947), focus on poetry, and he extended and reinforced their arguments in essays, reviews, and lectures. For example, with J. E. Hardy, he edited and wrote detailed commentary for *Poems of Mr. John Milton* (1951), showing that Milton's verse, which T. S. ELIOT had attacked as numbing and monolithic, could be appreciated as subtle and complex.

In a retrospective 1989 essay on his teacher and friend John Crowe Ransom, Brooks said that as a student he had read the Southern Agrarian manifesto of 1930, *I'll Take My Stand*, "over and over": "I tried my best to assimilate the whole position, philosophical and political. I learned a great deal from my intensive study." But in his own work he never argued on behalf of conservative Southern traditions, values, and beliefs as specifically and as forcefully as did Ransom, Warren, and Tate. For him the lesson put forward by the Agrarians was a general and unobjectionable one: "They asked that we consider what the good life is or ought to be."

Brooks was above all a literary critic and theorist. He said that his interest in "close reading" was kindled in his school days when he studied the classical languages—"my prep school discipline in reading Latin and Greek." He noted too that he was affected by the approach to literature and criticism taken by his teachers and friends at Vanderbilt, especially the poets, "who were talking about the making of poems." Like many young literary critics in the 1930s, Brooks rebelled against the emphasis in graduate studies on "historical and biographical" information and protested the lack of attention to "the interior life of the poem." At Oxford he encountered the English theorist and critic I. A. Richards's books *The Principles of Literary Criticism* (1924) and *Practical Criticism* (1929). Brooks did not accept everything he found in Richards's work—in particular, he disapproved of its "psychological terminology" and "confident positivism"—but as he read and reread *Principles* ("perhaps a dozen times" the first year he encountered it) and *Practical Criticism*, he borrowed terms (such as *tone*, *irony*, and *attitude*) and developed Richards's guidelines for examining the poem itself into his own intrinsic (or formalist) criticism.

For Brooks, criticism means scrutinizing technical elements, textual patterns, and incongruities in texts; as he indicates at the outset of *The Well Wrought Urn*, the critic should always begin "by making the closest examination of what the poem says as a poem." Genuine literary criticism is neither biographical nor historical, a matter of sources-and-influences and background information. Nor is it subjective, the record of a reader's impressions as he or she reacts to a literary work. Illustrating the conclusions that WILLIAM K. WIMSATT JR. and MONROE C. BEARDSLEY presented in "The Intentional Fallacy" (1946; see below) and "The Affective Fallacy" (1949), Brooks shows how literary study deals not with the author, the reader, or the historical context but instead with the specific text at hand.

In one sense Brooks seeks to make literary criticism more like a science—rigorous, precise, intensive, analytical. But like other formalist critics, he insists that literature and science use language in very different ways. Science is referential, abstract, and denotative, whereas literature is nonreferential, concrete, and connotative. "The tendency of science," he states in *The Well Wrought Urn*, "is necessarily to stabilize terms, to freeze them into strict denotations; the poet's tendency is by contrast disruptive. The terms are continually modifying each other, and thus violating their dictionary meanings."

In the chapter we reprint below, "The Heresy of Paraphrase," Brooks emphasizes that it is not the purpose of a poem to produce a statement, a proposition, a didactic lesson, or message. Through irony, paradox, ambiguity, and other rhetorical and poetic devices of his or her art, the poet works constantly to resist any reduction of the poem to a paraphrasable core, favoring the presentation of conflicting facets of theme and patterns of resolved stresses. For Brooks, all poetry exhibits "irony," by which he means pervasive incongruity.

His focus on the text has led Brooks's critics to accuse him of narrowing the field of literary criticism and pedagogy by brushing aside biographical and historical contexts. Many later theorists, including EDWARD W. SAID and STEPHEN J. GREENBLATT, have called attention to the antihistorical thrust of the New Criticism and sought to connect literary criticism with new forms of ideological critique and historical inquiry. But this complaint about Brooks and the New Critics is in fact an old one: it was made from the beginning of the New Critical movement, both by traditional literary scholars and by public intellectuals and writers. Because Brooks did more than anyone else to articulate and codify the principles of Anglo-American New Criticism and demonstrate how they applied to a wide range of texts, he became a prime target for opponents of the approach.

Already in 1942, the American writer and essayist Alfred Kazin was attacking the New Critics for making "a fetish of form." Philip Rahv, who was, like Kazin, a critic and intellectual on the political left, also objected to the restricted nature of the New Critical approach: "Their attachment to the text is what is appealing about the 'new critics'; what is unappealing is their neglect of context." Rahv indicted the New Critics for "a narrow textual-formalistic approach which cannot account for change and movement in literature and which systematically eliminates ideas from criticism." Throughout his career, Brooks insisted that these charges were inaccurate and unfair. He claimed that he was not ignoring biography and history, but that as a literary critic he was intent on exploring the attitudes toward history that an author expressed in the language of the text itself. For Brooks the text possesses organic unity. A poem by Donne or Marvell does not depend for its success on outside knowledge that we bring to it; it is richly ambiguous yet harmoniously orchestrated, coherent in its own special aesthetic terms.

Brooks's close readings, while illuminating, do run the risk of always coming to more or less the same conclusion. Each poem that he examines, from whatever period, receives the same kind of inspection of its images, metaphors, tones of voice; each is valued or reproved for its handling of irony and paradox in the labor of

controlling incongruities. In a 1948 essay, the scholar-theorist R. S. Crane faulted Brooks for “critical monism,” remarking that all of the texts from the Renaissance through the modern period treated in *The Well Wrought Urn* end up seeming like seventeenth-century lyrics. Brooks from the outset pretty much conceded this point; as he notes in “The Heresy of Paraphrase,” he is undertaking in his book an analytical experiment—reading eighteenth- and nineteenth-century poems “as one has learned to read Donne and the moderns.” While acknowledging the historical differences among the poems, he intends to show that there are common elements in their use and organization of language.

The terms and emphases that shape Brooks’s argument about how poetry operates are an uneasy mix. On the one hand, he refers to the warping, resisting, and violating of meaning (for example, “the resistance which any good poem sets up against all attempts to paraphrase it”). On the other hand, taking his cue from SAMUEL TAYLOR COLERIDGE and I. A. Richards, he speaks of harmony, balance, order, unity. Perhaps these impulses are not contradictory; Brooks would likely say that the poem can contain a “tension” among its paradoxical meanings while maintaining its coherence. But later theorists exploited an opening in Brooks’s position. If there is a warping or resisting of meaning, how intense and deep is it? Can one claim that irony empowers the poem to achieve unity, or is irony the dimension of literary language that undermines and forestalls unity?

In the work of poststructuralists such as PAUL DE MAN and JACQUES DERRIDA, it is precisely the competing, conflicting, indeed warring relationship among the words in the text that keeps it from the self-contained equilibrium that Brooks celebrates. Where he sees in the poem’s “essential structure” a “pattern of resolutions and balances and harmonizations,” the deconstructionist critic, in the words of his younger Yale colleague J. Hillis Miller, seeks “the thread in the text in question which will unravel it all.”

Such an approach, in Brooks’s mind, was gravely mistaken, and in his final years he sharply criticized Miller, STANLEY FISH, HAROLD BLOOM, and other advocates of deconstruction and reader-response theory. In Brooks’s view, poststructuralist theory denied the authority of the work of art and invited subjectivism and relativism, as each critic played with the text’s language unmindful of aesthetic relevance and formal design. The irony is that the newer critics had been trained as New Critics themselves: they seized on and reframed the insights and arguments that Brooks had advanced, and were closer to him in their conception of literature and criticism than perhaps they realized. In 1975, Brooks’s Yale colleague Paul de Man affirmed in “Semiology and Rhetoric” (see below): “A literary text simultaneously asserts and denies the authority of its own rhetorical mode.” He found radical instability where Brooks perceived harmony and balance, but the special sense of the paradoxical workings of literary language is one that these critics share. Brooks and de Man, New Criticism and deconstruction, are very different from one another, yet not so different after all.

***The Well Wrought Urn* Keywords:** Aesthetics, Defense of Criticism, Formalism, Interpretation Theory, Poetry

From The Well Wrought Urn

Chapter 11. The Heresy of Paraphrase

The ten poems¹ that have been discussed were not selected because they happened to express a common theme or to display some particular style or to share a special set of symbols. It has proved, as a matter of fact, somewhat surprising to see how many items they do have in common: the light symbolism as used in "L'Allegro-Il Penseroso" and in the "Intimations" ode, for example; or, death as a sexual metaphor in "The Canonization" and in *The Rape of the Lock*; or the similarity of problem and theme in the "Intimations" ode and "Among School Children."

On reflection, however, it would probably warrant more surprise if these ten poems did not have much in common. For they are all poems which most of us will feel are close to the central stream of the tradition. Indeed, if there is any doubt on this point, it will have to do with only the first and last members of the series²—poems whose relation to the tradition I shall, for reasons to be given a little later, be glad to waive. The others, it will be granted, are surely in the main stream of the tradition.

As a matter of fact, a number of the poems discussed in this book were not chosen by me but were chosen for me. But having written on these, I found that by adding a few poems I could construct a chronological series which (though it makes no pretension to being exhaustive of periods or types) would not leave seriously unrepresented any important period since Shakespeare. In filling the gaps I tried to select poems which had been held in favor in their own day and which most critics still admire. There were, for example, to be no "metaphysical" poems³ beyond the first exhibit and no "modern" ones other than the last. But the intervening poems were to be read as one has learned to read Donne and the moderns. One was to attempt to see, in terms of this approach, what the masterpieces had in common rather than to see how the poems of different historical periods differed—and in particular to see whether they had anything in common with the "metaphysicals" and with the moderns.

The reader will by this time have made up his mind as to whether the readings are adequate. (I use the word advisedly, for the readings do not pretend to be exhaustive, and certainly it is highly unlikely that they are not in error in one detail or another.) If the reader feels that they are seriously inadequate, then the case has been judged; for the generalizations that follow will be thoroughly vitiated by the inept handling of the particular cases on which they depend.

If, however, the reader does feel them to be adequate, it ought to be readily apparent that the common goodness which the poems share will have to

1. *The Well Wrought Urn* contains sequential analyses of ten works: John Donne, "The Canonization" (1633); William Shakespeare, *Macbeth* (ca. 1606); John Milton, "L'Allegro" and "Il Penseroso" (1632); Robert Herrick, "Corinna's Going A-Maying" (1648); ALEXANDER POPE, *The Rape of the Lock* (1714); Thomas Gray, "Elegy Written in a Country Churchyard" (1751); WILLIAM WORDSWORTH, "Ode: Intimations of Immortality from

Recollections of Early Childhood" (1807); John Keats, "Ode on a Grecian Urn" (1819); Alfred, Lord Tennyson, "Tears, Idle Tears" (1847); and William Butler Yeats, "Among School Children" (1927).

2. That is, the poems by Donne and Yeats.

3. The metaphysical poetry of the early 17th century (including that of Donne) is characterized by complex extended metaphors, unusual imagery, irregular meter, and highly condensed meanings.

be stated, not in terms of “content” or “subject matter” in the usual sense in which we use these terms, but rather in terms of structure. The “content” of the poems is various, and if we attempt to find one *quality* of content which is shared by all the poems—a “poetic” subject matter or diction or imagery—we shall find that we have merely confused the issues. For what is it to be poetic? Is the schoolroom of Yeats’s poem poetic or unpoetic? Is Shakespeare’s “new-borne babe / Striding the blast” poetic whereas the idiot of his “Life is a tale tolde by an idiot”⁴ is unpoetic? If Herrick’s “budding boy or girl” is poetic, then why is not that monstrosity of the newspaper’s society page, the “society bud,”⁵ poetic too?

To say this is not, of course, to say that all materials have precisely the same potentialities (as if the various pigments on the palette had the same potentialities, any one of them suiting the given picture as well as another). But what has been said, on the other hand, requires to be said: for, if we are to proceed at all, we must draw a sharp distinction between the attractiveness or beauty of any particular item taken as such and the “beauty” of the poem considered as a whole. The latter is the effect of a total pattern, and of a kind of pattern which can incorporate within itself items intrinsically beautiful or ugly, attractive or repulsive. Unless one asserts the primacy of the pattern, a poem becomes merely a bouquet of intrinsically beautiful items.

But though it is in terms of structure that we must describe poetry, the term “structure” is certainly not altogether satisfactory as a term. One means by it something far more internal than the metrical pattern, say, or than the sequence of images. The structure meant is certainly not “form” in the conventional sense in which we think of form as a kind of envelope which “contains” the “content.” The structure obviously is everywhere conditioned by the nature of the material which goes into the poem. The nature of the material sets the problem to be solved, and the solution is the ordering of the material.

Pope’s *Rape of the Lock* will illustrate: the structure is not the heroic couplet⁶ as such, or the canto arrangement; for, important as is Pope’s use of the couplet as one means by which he secures the total effect, the heroic couplet can be used—has been used many times—as an instrument in securing very different effects. The structure of the poem, furthermore, is not that of the mock-epic convention, though here, since the term “mock-epic” has implications of attitude, we approach a little nearer to the kind of structure of which we speak.

The structure meant is a structure of meanings, evaluations, and interpretations; and the principle of unity which informs it seems to be one of balancing and harmonizing connotations, attitudes, and meanings. But even here one needs to make important qualifications: the principle is not one which involves the arrangement of the various elements into homogeneous groupings, pairing like with like. It unites the like with the unlike. It does not unite them, however, by the simple process of allowing one connotation to cancel out another nor does it reduce the contradictory attitudes to harmony by a process of subtraction. The unity is not a unity of the sort to be achieved by the reduction and simplification appropriate to an algebraic formula. It is a

woman.

6. A rhymed couplet in iambic pentameter (called “heroic” because of its use in English epic poetry).

positive unity, not a negative; it represents not a residue but an achieved harmony.

The attempt to deal with a structure such as this may account for the frequent occurrence in the preceding chapters of such terms as "ambiguity," "paradox," "complex of attitudes," and—most frequent of all, and perhaps most annoying to the reader—"irony." I hasten to add that I hold no brief for these terms as such. Perhaps they are inadequate. Perhaps they are misleading. It is to be hoped in that case that we can eventually improve upon them. But adequate terms—whatever those terms may turn out to be—will certainly have to be terms which do justice to the special kind of structure which seems to emerge as the common structure of poems so diverse on other counts as are *The Rape of the Lock* and "Tears, Idle Tears."

The conventional terms are much worse than inadequate: they are positively misleading in their implication that the poem constitutes a "statement" of some sort, the statement being true or false, and expressed more or less clearly or eloquently or beautifully; for it is from this formula that most of the common heresies about poetry derive. The formula begins by introducing a dualism which thenceforward is rarely overcome, and which at best can be overcome only by the most elaborate and clumsy qualifications. Where it is not overcome, it leaves the critic lodged upon one or the other of the horns of a dilemma: the critic is forced to judge the poem by its political or scientific or philosophical truth; or, he is forced to judge the poem by its form as conceived externally and detached from human experience. Mr. Alfred Kazin,⁷ for example, to take an instance from a recent and popular book, accuses the "new formalists"—his choice of that epithet is revealing—of accepting the latter horn of the dilemma because he notices that they have refused the former. In other words, since they refuse to rank poems by their messages, he assumes that they are compelled to rank them by their formal embellishments.

The omnipresence of this dilemma, a false dilemma, I believe, will also account for the fact that so much has been made in the preceding chapters of the resistance which any good poem sets up against all attempts to paraphrase it. The point is surely not that we cannot describe adequately enough for many purposes what the poem in general is "about" and what the general effect of the poem is: *The Rape of the Lock* is about the foibles of an eighteenth-century belle. The effect of "Corinna's going a-Maying" is one of gaiety tempered by the poignance of the fleetingness of youth. We can very properly use paraphrases as pointers and as shorthand references provided that we know what we are doing. But it is highly important that we know what we are doing and that we see plainly that the paraphrase is not the real core of meaning which constitutes the essence of the poem.

For the imagery and the rhythm are not merely the instruments by which this fancied core-of-meaning-which-can-be-expressed-in-a-paraphrase is directly rendered. Even in the simplest poem their mediation is not positive and direct. Indeed, whatever statement we may seize upon as incorporating the "meaning" of the poem, immediately the imagery and the rhythm seem to set up tensions with it, warping and twisting it, qualifying and revising

7. American critic (1915–1998); his book is *On Native Grounds: An Interpretation of Modern American Prose Literature* (1942).

it. This is true of Wordsworth's "Ode" no less than of Donne's "Canonization." To illustrate: if we say that the "Ode" celebrates the spontaneous "naturalness" of the child, there is the poem itself to indicate that Nature has a more sinister aspect—that the process by which the poetic lamb becomes the dirty old sheep or the child racing over the meadows becomes the balding philosopher is a process that is thoroughly "natural." Or, if we say that the thesis of the "Ode" is that the child brings into the natural world a supernatural glory which acquaintance with the world eventually and inevitably quenches in the light of common day, there is the last stanza and the drastic qualifications which it asserts: it is significant that the thoughts that lie too deep for tears are mentioned in this sunset stanza of the "Ode" and that they are thoughts, not of the child, but of the man.

We have precisely the same problem if we make our example *The Rape of the Lock*. Does the poet assert that Belinda is a goddess? Or does he say that she is a brainless chit? Whichever alternative we take, there are elaborate qualifications to be made. Moreover, if the simple propositions offered seem in their forthright simplicity to make too easy the victory of the poem over any possible statement of its meaning, then let the reader try to formulate a proposition that will say what the poem "says." As his proposition approaches adequacy, he will find, not only that it has increased greatly in length, but that it has begun to fill itself up with reservations and qualifications—and most significant of all—the formulator will find that he has himself begun to fall back upon metaphors of his own in his attempt to indicate what the poem "says." In sum, his proposition, as it approaches adequacy, ceases to be a proposition.

Consider one more case, "Corinna's going a-Maying." Is the doctrine preached to Corinna throughout the first four stanzas true? Or is it damnable false? Or is it a "harmlesse follie"? Here perhaps we shall be tempted to take the last option as the saving mean—what the poem really *says*—and my account of the poem at the end of the third chapter is perhaps susceptible of this interpretation—or misinterpretation. If so, it is high time to clear the matter up. For we mistake matters grossly if we take the poem to be playing with opposed extremes, only to point the golden mean in a doctrine which, at the end, will correct the falsehood of extremes. The reconciliation of opposites which the poet characteristically makes is not that of a prudent splitting of the difference between antithetical overemphases.

It is not so in Wordsworth's poem nor in Keats's nor in Pope's. It is not so even in this poem of Herrick's. For though the poem reflects, if we read it carefully, the primacy of the Christian mores, the pressure exerted throughout the poem is upon the pagan appeal; and the poem ends, significantly, with a reiteration of the appeal to Corinna to go a-Maying, an appeal which, if qualified by the Christian view, still, in a sense, has been deepened and made more urgent by that very qualification. The imagery of loss and decay, it must be remembered, comes in this last stanza after the admission that the May-day rites⁸ are not a real religion but a "harmless follie."

If we are to get all these qualifications into our formulation of what the poem says—and they are relevant—then, our formulation of the "statement" made by Herrick's poem will turn out to be quite as difficult as that

8. The traditional celebration of spring on May 1, including setting up and dancing around a maypole, crowning a May queen, and other amusements.

of Pope's mock-epic. The truth of the matter is that all such formulations lead away from the center of the poem—not toward it; that the "prose-sense" of the poem is not a rack on which the stuff of the poem is hung; that it does not represent the "inner" structure or the "essential" structure or the "real" structure of the poem. We may use—and in many connections must use—such formulations as more or less convenient ways of referring to parts of the poem. But such formulations are scaffoldings which we may properly for certain purposes throw about the building; we must not mistake them for the internal and essential structure of the building itself.

Indeed, one may sum up by saying that most of the distempers of criticism come about from yielding to the temptation to take certain remarks which we make *about* the poem—statements about what it says or about what truth it gives or about what formulations it illustrates—for the essential core of the poem itself. As W. M. Urban puts it in his *Language and Reality*:⁹ "The general principle of the inseparability of intuition and expression holds with special force for the aesthetic intuition. Here it means that form and content, or content and medium, are inseparable. The artist does not first intuit his object and then find the appropriate medium. It is rather in and through his medium that he intuits the object." So much for the process of composition. As for the critical process: "To pass from the intuitible to the nonintuitable is to negate the function and meaning of the symbol." For it "is precisely because the more universal and ideal relations cannot be adequately expressed directly that they are indirectly expressed by means of the more intuitible." The most obvious examples of such error (and for that reason those which are really least dangerous) are those theories which frankly treat the poem as propaganda. The most subtle (and the most stubbornly rooted in the ambiguities of language) are those which, beginning with the "paraphrasable" elements of the poem, refer the other elements of the poem finally to some role subordinate to the paraphrasable elements. (The relation between all the elements must surely be an organic one—there can be no question about that. There is, however, a very serious question as to whether the paraphrasable elements have primacy.)

Mr. Winters¹ position will perhaps the most respectable example of the paraphrastic heresy. He assigns primacy to the "rational meaning" of the poem. "The relationship, in the poem, between rational statement and feeling," he remarks in his latest book, "is thus seen to be that of motive to emotion." He goes on to illustrate his point by a brief and excellent analysis of the following lines from Browning:

*So wore night; the East was gray,
White the broad-faced hemlock flowers. . . .*²

"The verb *wore*," he continues, "means literally that the night passed, but it carries with it connotations of exhaustion and attrition which belong to the condition of the protagonist; and grayness is a color which we associate with such a condition. If we change the phrase to read: 'Thus night passed,' we

(1900–1968). The "latest book" from which Brooks quotes is *In Defense of Reason* (1947)—specifically, an essay reprinted from *Anatomy of Nonsense* (1943).

2. "A Serenade at the Villa" (1855), by the English poet Robert Browning (1812–1889).

shall have the same rational meaning, and a meter quite as respectable, but no trace of the power of the line: the connotation of *wore* will be lost, and the connotation of *gray* will remain in a state of ineffective potentiality."

But the word *wore* does not mean *literally* "that the night passed," it means literally "that the night *wore*"—whatever *wore* may mean, and as Winters' own admirable analysis indicates, *wore* "means," whether *rationally* or *irrationally*, a great deal. Furthermore, "So wore night" and "Thus night passed" can be said to have "the same rational meaning" only if we equate "rational meaning" with the meaning of a loose paraphrase. And can a loose paraphrase be said to be the "motive to emotion"? Can it be said to "generate" the feelings in question? (Or, would Mr. Winters not have us equate "rational statement" and "rational meaning"?)

Much more is at stake here than any quibble. In view of the store which Winters sets by rationality and of his penchant for poems which make their evaluations overtly, and in view of his frequent blindness to those poems which do not—in view of these considerations, it is important to see that what "So wore night" and "Thus night passed" have in common as their "rational meaning" is not the "rational meaning" of each but the lowest common denominator of both. To refer the structure of the poem to what is finally a paraphrase of the poem is to refer it to something outside the poem.

To repeat, most of our difficulties in criticism are rooted in the heresy of paraphrase. If we allow ourselves to be misled by it, we distort the relation of the poem to its "truth," we raise the problem of belief in a vicious and crippling form, we split the poem between its "form" and its "content"—we bring the statement to be conveyed into an unreal competition with science or philosophy or theology. In short, we put our questions about the poem in a form calculated to produce the battles of the last twenty-five years over the "use of poetry."³

If we allow ourselves to be misled by the heresy of paraphrase, we run the risk of doing even more violence to the internal order of the poem itself. By taking the paraphrase as our point of stance, we misconceive the function of metaphor and meter. We demand logical coherences where they are sometimes irrelevant, and we fail frequently to see imaginative coherences on levels where they are highly relevant. Some of the implications of the paraphrastic heresy are so stubborn and so involved that I have thought best to relegate them to an appendix.⁴ There the reader who is interested may find further discussion of the problem and, I could hope, answers to certain misapprehensions of the positive theory to be adumbrated here.

But what would be a positive theory? We tend to embrace the doctrine of a logical structure the more readily because, to many of us, the failure to do so seems to leave the meaning of the poem hopelessly up in the air. The alternative position will appear to us to lack even the relative stability of an Ivory Tower: it is rather commitment to a free balloon. For, to deny the possibility of pinning down what the poem "says" to some "statement" will seem to assert that the poem really says nothing. And to point out what has been suggested in earlier chapters and brought to a head in this one, namely, that one can never measure a poem against the scientific or philosophical yard-

3. I do not, of course, intend to minimize the fact that some of these battles have been highly profitable, or to imply that the foregoing paragraphs could have been written except for the illumina-

tion shed by the discussions of the last 25 years [Brooks's note].

4. In an appendix, Brooks discusses literary history, value judgments, and critical relativism.

stick for the reason that the poem, when laid along the yardstick, is never the "full poem" but an abstraction from the poem—such an argument will seem to such readers a piece of barren logic-chopping—a transparent dodge.

Considerations of strategy then, if nothing more, dictate some positive account of what a poem is and does. And some positive account can be given, though I cannot promise to do more than suggest what a poem is, nor will my terms turn out to be anything more than metaphors.⁵

The essential structure of a poem (as distinguished from the rational or logical structure of the "statement" which we abstract from it) resembles that of architecture or painting: it is a pattern of resolved stresses. Or, to move closer still to poetry by considering the temporal arts, the structure of a poem resembles that of a ballet or musical composition. It is a pattern of resolutions and balances and harmonizations, developed through a temporal scheme.⁶

Or, to move still closer to poetry, the structure of a poem resembles that of a play. This last example, of course, risks introducing once more the distracting element, since drama, like poetry, makes use of words. Yet, on the whole, most of us are less inclined to force the concept of "statement" on drama than on a lyric poem; for the very nature of drama is that of something "acted out"—something which arrives at its conclusion through conflict—something which builds conflict into its very being. The dynamic nature of drama, in short, allows us to regard it as *an action* rather than as a formula for action or as a statement about action. For this reason, therefore, perhaps the most helpful analogy by which to suggest the structure of poetry is that of the drama, and for many readers at least, the least confusing way in which to approach a poem is to think of it as a drama.

The general point, of course, is not that either poetry or drama makes no use of ideas, or that either is "merely emotional"—whatever *that* is—or that there is not the closest and most important relationship between the intellectual materials which they absorb into their structure and other elements in the structure. The relationship between the intellectual and the nonintellectual elements in a poem is actually far more intimate than the conventional accounts would represent it to be: the relationship is not that of an idea "wrapped in emotion" or a "prose-sense decorated by sensuous imagery."

5. For those who cannot be content with metaphors (or with the particular metaphors which I can give) I recommend René Wellek's excellent "The Mode of Existence of a Literary Work of Art" (*Southern Review*, spring, 1942). I shall not try to reproduce here as a handy, thumb-nail definition his account of a poem as "a stratified system of norms," for the definition would be relatively meaningless without the further definitions which he assigns to the individual terms which he uses. I have made no special use of his terms in this chapter, but I believe that the generalizations about poetry outlined here can be thoroughly accommodated to the position which his essay sets forth [Brooks's note]. Wellek (1903–1995), Austrian-born New Critic and historian of criticism.

6. In recent numbers of *Accent*, two critics for whose work I have high regard have emphasized the dynamic character of poetry. Kenneth Burke argues that if we are to consider a poem as a poem, we must consider it as a "mode of action." R. P. Blackmur asks us to think of it as gesture, "the outward and dramatic play of inward and imagined meaning." I do not mean to commit either of these

critics to my own interpretation of dramatic or symbolic action; and I have, on my own part, several rather important reservations with respect to Mr. Burke's position. But there are certainly large areas of agreement among our positions. The reader might also compare the account of poetic structure given in this chapter with the following passage from Susanne Langer's *Philosophy in a New Key* [1942]: "... though the *material* of poetry is verbal, its import is not the literal assertion made in the words, but *the way the assertion is made*, and this involves the sound, the tempo, the aura of associations of the words, the long or short sequences of ideas, the wealth or poverty of transient imagery that contains them, the sudden arrest of fantasy by pure fact, or of familiar fact by sudden fantasy, the suspense of literal meaning by a sustained ambiguity resolved in a long-awaited key-word, and the unifying, all-embracing artifice of rhythm" [Brooks's note]. Burke (1897–1993), American critic and philosopher. Blackmur (1904–1965), American critic and poet. Langer (1895–1985), American philosopher and aesthetician.

The dimension in which the poem moves is not one which excludes ideas, but one which does include attitudes. The dimension includes ideas, to be sure; we can always abstract an “idea” from a poem—even from the simplest poem—even from a lyric so simple and unintellectual as

*Western wind, when wilt thou blow
That the small rain down can rain?
Christ, that my love were in my arms
And I in my bed again!*⁷

But the idea which we abstract—assuming that we can all agree on what that idea is—will always be *abstracted*: it will always be the projection of a plane along a line or the projection of a cone upon a plane.

If this last analogy proves to be more confusing than illuminating, let us return to the analogy with drama. We have argued that any proposition asserted in a poem is not to be taken in abstraction but is justified, in terms of the poem, if it is justified at all, not by virtue of its scientific or historical or philosophical truth, but is justified in terms of a principle analogous to that of dramatic propriety. Thus, the proposition that “Beauty is truth, truth beauty”⁸ is given its precise meaning and significance by its relation to the total context of the poem.

This principle is easy enough to see when the proposition is asserted overtly in the poem—that is, when it constitutes a specific detail of the poem. But the reader may well ask: is it not possible to frame a proposition, a statement, which will adequately represent the total meaning of the poem; that is, is it not possible to elaborate a summarizing proposition which will “say,” briefly and in the form of a proposition, what the poem “says” as a poem, a proposition which will say it fully and will say it exactly, no more and no less? Could not the poet, if he had chosen, have framed such a proposition? Cannot we as readers and critics frame such a proposition?

The answer must be that the poet himself obviously did not—else he would not have had to write his poem. We as readers can attempt to frame such a proposition in our effort to understand the poem; it may well help toward an understanding. Certainly, the efforts to arrive at such propositions can do no harm *if we do not mistake them for the inner core of the poem*—if we do not mistake them for “what the poem *really* says.” For, if we take one of them to represent the essential poem, we have to disregard the qualifications exerted by the total context as of no account, or else we have assumed that we can reproduce the effect of the total context in a condensed prose statement.⁹

7. Anonymous 15th-century lyric.

8. From the next-to-last line of Keats’s “Ode on a Grecian Urn.”

9. We may, it is true, be able to adumbrate what the poem says if we allow ourselves enough words, and if we make enough reservations and qualifications, thus attempting to come nearer to the meaning of the poem by successive approximations and refinements, gradually encompassing the meaning and pointing to the area in which it lies rather than realizing it. The earlier chapters of this book, if they are successful, are obviously illustrations of this process. But such adumbrations will lack, not only the tension—the dramatic force—of the poem; they will be at best

crude approximations of the poem. Moreover—and this is the crucial point—they will be compelled to resort to the methods of the poem—analogy, metaphor, symbol, etc.—in order to secure even this near an approximation.

Urban’s comment upon this problem is interesting: he says that if we expand the symbol, “we lose the ‘sense’ or value of the symbol *as symbol*.” The solution . . . seems to me to lie in an adequate theory of interpretation of the symbol. It does not consist in substituting *literal* for symbol sentences, in other words substituting ‘blunt’ truth for symbolic truth, but rather in deepening and enriching the meaning of the symbol” [Brooks’s note].

But to deny that the coherence of a poem is reflected in a logical paraphrase of its "real meaning" is not, of course, to deny coherence to poetry; it is rather to assert that its coherence is to be sought elsewhere. The characteristic unity of a poem (even of those poems which may accidentally possess a logical unity as well as this poetic unity) lies in the unification of attitudes into a hierarchy subordinated to a total and governing attitude. In the unified poem, the poet has "come to terms" with his experience. The poem does not merely eventuate in a logical conclusion. The conclusion of the poem is the working out of the various tensions—set up by whatever means—by propositions, metaphors, symbols. The unity is achieved by a dramatic process, not a logical; it represents an equilibrium of forces, not a formula. It is "proved" as a dramatic conclusion is proved: by its ability to resolve the conflicts which have been accepted as the *données*¹ of the drama.

Thus, it is easy to see why the relation of each item to the whole context is crucial, and why the effective and essential structure of the poem has to do with the complex of attitudes achieved. A scientific proposition can stand alone. If it is true, it is true. But the expression of an attitude, apart from the occasion which generates it and the situation which it encompasses, is meaningless. For example, the last two lines of the "Intimations" ode,

*To me the meanest flower that blows can give
Thoughts that do often lie too deep for tears,*

when taken in isolation—I do not mean quoted in isolation by one who is even vaguely acquainted with the context—makes a statement which is sentimental if taken in reference to the speaker, and one which is patent nonsense if taken with a general reference. The man in the street (of whom the average college freshman is a good enough replica) knows that the meanest flower that grows does not give *him* thoughts that lie too deep for tears: and, if he thinks about the matter at all, he is inclined to feel that the person who can make such an assertion is a very fuzzy sentimentalist.

We have already seen the ease with which the statement "Beauty is truth, truth beauty" becomes detached from its context, even in the hands of able critics; and we have seen the misconceptions that ensue when this detachment occurs. To take one more instance: the last stanza of Herrick's "Corinna," taken in isolation, would probably not impress the average reader as sentimental nonsense. Yet it would suffer quite as much by isolation from its context as would the lines from Keats's "Ode." For, as mere statement, it would become something flat and obvious—of course our lives are short! And the conclusion from the fact would turn into an obvious truism for the convinced pagan, and, for the convinced Christian, equally obvious, though damnable, nonsense.

Perhaps this is why the poet, to people interested in hard-and-fast generalizations, must always seem to be continually engaged in blurring out distinctions, effecting compromises, or, at the best, coming to his conclusions only after provoking and unnecessary delays. But this last position is merely another variant of the paraphrastic heresy: to assume it is to misconceive the end of poetry—to take its meanderings as negative, or to excuse them (with the comfortable assurance that the curved line is the line of beauty)

1. Basic facts or assumptions (French).

because we can conceive the purpose of a poem to be only the production, in the end, of a proposition—of a statement.

But the meanderings of a good poem (they are meanderings only from the standpoint of the prose paraphrase of the poem) are not negative, and they do not have to be excused; and most of all, we need to see what their positive function is; for unless we can assign them a positive function, we shall find it difficult to explain why one divergence from “the prose line of the argument” is not as good as another. The truth is that the apparent irrelevancies which metrical pattern and metaphor introduce do become relevant when we realize that they function in a good poem to modify, qualify, and develop the total attitude which we are to take in coming to terms with the total situation.

If the last sentence seems to take a dangerous turn toward some special “use of poetry”—some therapeutic value for the sake of which poetry is to be cultivated—I can only say that I have in mind no special ills which poetry is to cure. Uses for poetry are always to be found, and doubtless will continue to be found. But my discussion of the structure of poetry is not being conditioned at this point by some new and special role which I expect poetry to assume in the future or some new function to which I would assign it. The structure described—a structure of “gestures” or attitudes—seems to me to describe the essential structure of both the *Odyssey* and *The Waste Land*.² It seems to be the kind of structure which the ten poems considered in this book possess in common.

If the structure of poetry is a structure of the order described, that fact may explain (if not justify) the frequency with which I have had to have recourse, in the foregoing chapters, to terms like “irony” and “paradox.” By using the term irony, one risks, of course, making the poem seem arch and self-conscious, since irony, for most readers of poetry, is associated with satire, *vers de société*,³ and other “intellectual” poetries. Yet, the necessity for some such term ought to be apparent; and irony is the most general term that we have for the kind of qualification which the various elements in a context receive from the context. This kind of qualification, as we have seen, is of tremendous importance in any poem. Moreover, irony is our most general term for indicating that recognition of incongruities—which, again, pervades all poetry to a degree far beyond what our conventional criticism has been heretofore willing to allow.

Irony in this general sense, then, is to be found in Tennyson’s “Tears, Idle Tears” as well as in Donne’s “Canonization.” We have, of course, been taught to expect to find irony in Pope’s *Rape of the Lock*, but there is a profound irony in Keats’s “Ode on a Grecian Urn”; and there is irony of a very powerful sort in Wordsworth’s “Intimations” ode. For the thrusts and pressures exerted by the various symbols in this poem are not avoided by the poet: they are taken into account and played, one against the other. Indeed, the symbols—from a scientific point of view—are used perversely: it is the child who is the best philosopher; it is from a kind of darkness—from something that is “shadowy”—that the light proceeds; growth into manhood is viewed, not as an extrication from, but as an incarceration within, a prison.

2. The modernist poem (1922) by T. S. ELIOT (1888–1965), usually not seen as structured like Homer’s Greek epic (8th c. B.C.E.).

3. Verse of society (French); that is, verse that wittily treats topics favored by polite society.

There should be no mystery as to why this must be so. The terms of science are abstract symbols which do not change under the pressure of the context. They are pure (or aspire to be pure) denotations; they are defined in advance. They are not to be warped into new meanings. But where is the dictionary which contains the terms of a poem? It is a truism that the poet is continually forced to remake language. As Eliot has put it, his task is to "dislocate language into meaning."⁴ And, from the standpoint of a scientific vocabulary, this is precisely what he performs: for, rationally considered, the ideal language would contain one term for each meaning, and the relation between term and meaning would be constant. But the word, as the poet uses it, has to be conceived of, not as a discrete particle of meaning, but as a potential of meaning, a nexus⁵ or cluster of meanings.

What is true of the poet's language in detail is true of the larger wholes of poetry. And therefore, if we persist in approaching the poem as primarily a rational statement, we ought not to be surprised if the statement seems to be presented to us always in the ironic mode. When we consider the statement immersed in the poem, it presents itself to us, like the stick immersed in the pool of water, warped and bent. Indeed, whatever the statement, it will always show itself as deflected away from a positive, straightforward formulation.

It may seem perverse, however, to maintain, in the face of our revived interest in Donne, that the essential structure of poetry is not logical. For Donne has been appealed to of late as the great master of metaphor who imposes a clean logic on his images beside which the ordering of the images in Shakespeare's sonnets is fumbling and loose. It is perfectly true that Donne makes a great show of logic; but two matters need to be observed. In the first place, the elaborated and "logical" figure is not Donne's only figure or even his staple one. "Telescoped" figures like "Made one another's hermitage" are to be found much more frequently than the celebrated comparison of the souls of the lovers to the legs of a pair of compasses. In the second place, where Donne uses "logic," he regularly uses it to justify illogical positions. He employs it to overthrow a conventional position or to "prove" an essentially illogical one.

Logic, as Donne uses it, is nearly always an ironic logic to state the claims of an idea or attitude which we have agreed, with our everyday logic, is false. This is not to say, certainly, that Donne is not justified in using his logic so, or that the best of his poems are not "proved" in the only senses in which poems can be proved.

But the proof is not a logical proof. "The Canonization" will scarcely prove to the hard-boiled naturalist that the lovers, by giving up the world, actually attain a better world. Nor will the argument advanced in the poem convince the dogmatic Christian that Donne's lovers are really saints.

In using logic, Donne as a poet is fighting the devil with fire. To adopt Robert Penn Warren's⁶ metaphor (which, though I lift it somewhat scandalously out of another context, will apply to this one): "The poet, somewhat less spectacularly [than the saint], proves his vision by submitting it to the fires of irony—to the drama of the structure—in the hope that the fires will

5. Connected series or group; center or focus.

6. Poet, novelist, and critic (1905–1989); co-editor

with Brooks of *Understanding Poetry* (1938). The quotation is from Warren's essay "Pure and Impure Poetry" (1943).

refine it. In other words, the poet wishes to indicate that his vision has been earned, that it can survive reference to the complexities and contradictions of experience."

The same principle that inspires the presence of irony in so many of our great poems also accounts for the fact that so many of them seem to be built around paradoxes. Here again the conventional associations of the term may prejudice the reader just as the mention of Donne may prejudice him. For Donne, as one type of reader knows all too well, was of that group of poets who wished to impress their audience with their cleverness. All of us are familiar with the censure passed upon Donne and his followers by Dr. Johnson,⁷ and a great many of us still retain it as our own, softening only the rigor of it and the thoroughness of its application, but not giving it up as a principle.

Yet there are better reasons than that of rhetorical vain-glory that have induced poet after poet to choose ambiguity and paradox rather than plain, discursive simplicity. It is not enough for the poet to analyse his experience as the scientist does, breaking it up into parts, distinguishing part from part, classifying the various parts. His task is finally to unify experience. He must return to us the unity of the experience itself as man knows it in his own experience. The poem, if it be a true poem, is a simulacrum⁸ of reality—in this sense, at least, it is an "imitation"—by *being* an experience rather than any mere statement about experience or any mere abstraction from experience.

Tennyson cannot be content with *saying* that in memory the poet seems both dead *and* alive; he must dramatize its life-in-death for us, and his dramatization involves, necessarily, ironic shock and wonder. The dramatization demands that the antithetical aspects of memory be coalesced into one entity which—if we take it on the level of statement—is a paradox, the assertion of the union of opposites. Keats's Urn must express a life which is above life and its vicissitudes, but it must also bear witness to the fact that its life is not life at all but is a kind of death. To put it in other terms, the Urn must, in its role as historian, assert that myth is truer than history. Donne's lovers must reject the world in order to possess the world.

Or, to take one further instance: Wordsworth's light must serve as the common symbol for aspects of man's vision which seem mutually incompatible—intuition and analytic reason. Wordsworth's poem, as a matter of fact, typifies beautifully the poet's characteristic problem itself. For even this poem, which testifies so heavily to the way in which the world is split up and parceled out under the growing light of reason, cannot rest in this fact as its own mode of perception, and still be a poem. Even after the worst has been said about man's multiple vision, the poet must somehow prove that the child is father to the man, that the dawn light is still somehow the same light as the evening light.

If the poet, then, must perforce dramatize the oneness of the experience, even though paying tribute to its diversity, then his use of paradox and ambiguity is seen as necessary. He is not simply trying to spice up, with a superficially exciting or mystifying rhetoric, the old stale stockpot (though doubtless this will be what the inferior poet does generally and what the real poet

7. SAMUEL JOHNSON (1709–1784), English critic, lexicographer, and poet. See his comments on metaphysical poetry in *Life of Cowley* (1783;

above).

8. Image or representation.

does in his lapses). He is rather giving us an insight which preserves the unity of experience and which, at its higher and more serious levels, triumphs over the apparently contradictory and conflicting elements of experience by unifying them into a new pattern.

Wordsworth's "Intimations" ode, then, is not only a poem, but, among other things, a parable about poetry. Keats's "Ode on a Grecian Urn" is quite obviously such a parable. And, indeed, most of the poems which we have discussed in this study may be taken as such parables.

In one sense, Pope's treatment of Belinda raises all the characteristic problems of poetry. For Pope, in dealing with his "goddess," must face the claims of naturalism and of common sense which would deny divinity to her. Unless he faces them, he is merely a sentimentalist. He must do an even harder thing: he must transcend the conventional and polite attributions of divinity which would be made to her as an acknowledged belle. Otherwise, he is merely trivial and obvious. He must "prove" her divinity against the common-sense denial (the brutal denial) and against the conventional assertion (the polite denial). The poetry must be wrested from the context: Belinda's lock, which is what the rude young man wants and which Belinda rather prudishly defends and which the naturalist asserts is only animal and which displays in its curled care the style of a particular era of history, must be given a place of permanence among the stars.

WILLIAM K.
WIMSATT JR.
1907–1975

MONROE C.
BEARDSLEY
1915–1985

"The Intentional Fallacy" (1946) and "The Affective Fallacy" (1949), coauthored by William K. Wimsatt Jr. and Monroe C. Beardsley, are two of the most important position papers in the history of twentieth-century criticism. Neither presents an argument that is wholly original, but each codifies a crucial tenet of New Critical formalist orthodoxy. In "The Intentional Fallacy," our selection below, Wimsatt and Beardsley argue that we cannot use the author's intention, even when we possess information about it, to judge a literary work; the work is a public utterance, not a private one that depends for its meaning on the intent or design of its author. In the later piece, "The Affective Fallacy," Wimsatt and Beardsley emphasize that the meaning of a literary work is not equivalent to its effects, especially its emotional impact, on the reader. Both of these positions are connected to Wimsatt and Beardsley's formalist view that analysis must center on the text itself: the critic's task is to examine its linguistic structure and its aesthetic unity as an autonomous object.

Wimsatt, born in Washington, D.C., attended Georgetown University and Yale University, where he received his Ph.D. In 1939 he became a member of Yale's English department, and he soon won wide acclaim for his work in eighteenth-century studies and in literary theory and criticism. Beardsley, a native of Connecticut,

received his B.A. and Ph.D. from Yale University, and held a position in the philosophy department there before moving on to Mount Holyoke College in 1944. He later taught at Swarthmore College and at Temple University, focusing on aesthetics and literary criticism.

In their critique of intention, Wimsatt and Beardsley take aim at the Romantic idea of poetry as the expression of a writer's soul or personality. Influenced by T. S. ELIOT, as well as by JOHN CROWE RANSOM, CLEANTH BROOKS, and other New Critics, Wimsatt and Beardsley define poetry as an impersonal art: what matters is the text itself. They also challenge literary historians who, according to Wimsatt and Beardsley, mistakenly believe that when evaluating a poem, one must know its biographical and historical origins. For Wimsatt and Beardsley, one must attend only to the organization of the words on the page and the coherence that the words do or do not possess. As they affirm near the beginning of the essay, "the poem itself shows what [the poet] is trying to do. And if the poet did not succeed, then the poem is not adequate evidence, and the critic must go outside the poem—for evidence of an intention that did not become effective in the poem."

"The Intentional Fallacy" is a powerful polemic, but somewhat confused, as critics have pointed out. How convincing, for example, is the distinction that its authors draw between the inside and the outside of a text? They insist a poem is a public utterance and hence cannot depend for its success on personal or private knowledge about the author, whether deliberately revealed or unearthed by literary historians and biographers. But one could reply that what an author says and the information that a scholar brings forward are public as well. It is precisely the idea that a text has discrete inside and outside meanings that clearly separate into the private and public that Kenneth Burke, HAROLD BLOOM, and SANDRA M. GILBERT and SUSAN GUBAR, among others, have in their different ways disputed. For the purposes of their polemic, Wimsatt and Beardsley's distinction is effective, but it has not held up under attack.

As is true of many New Critical precepts, one of the appeals of "the intentional fallacy" is pedagogical. A teacher and students can concentrate on the text at hand without feeling that interpretive work needs the support of information about the author and the historical period when the text was composed. Wimsatt and Beardsley have a convenient rule of thumb: if information about the author or period is relevant, it will be *in* the poem; if it is not realized in the poem already, then it is not relevant. Thus they regard as extraneous all reference to psychology, social history, and anthropology, disciplines focused on *extrinsic* rather than *intrinsic* matters—a key distinction for New Critics. Yet their claim creates pedagogical problems of its own, as E. D. Hirsch noted in *Validity in Interpretation* (1967) and *The Aims of Interpretation* (1976). Once we set aside the author's intention, Hirsch maintains, we have no way to determine which reading of a poem is correct. The words on the page, he argues, can sustain interpretations that conflict with one another, and the only principled way to resolve such disagreements is by recourse to the author's "original meaning."

Such foregrounding of authorial intention might seem to be common sense, but poets and novelists as well as critics have denied that the author is the best authority on the meaning of his or her work. T. S. Eliot, the most influential poet-critic of the twentieth century, remarks in *The Use of Poetry and the Use of Criticism* (1933) that "What a poem means is as much what it means to others as what it means to the author; and indeed, in the course of time a poet may become merely a reader in respect to his own works, forgetting his original meaning—or without forgetting, merely changing." Earlier, in *Studies in Classic American Literature* (1923), D. H. Lawrence set out this maxim: "Never trust the artist. Trust the tale. The proper function of a critic is to save the tale from the artist who created it." Wimsatt and Beardsley would accept these claims only insofar as they reaffirm the primacy of the text. For them, the text shapes and controls what we say about it. Meaning is in the text, not in the intention of the author and, as "The Affective Fallacy" suggests, not in the reader, either.

In "The Affective Fallacy," Wimsatt and Beardsley contend that what the poem is is one thing (and the important thing), and what it *does* is another: it should be judged on the basis of itself, not according to its effects. For these theorists, the affective fallacy is "a special case of epistemological skepticism"; it derives "the standard of criticism from the psychological effects of the poem and ends in impressionism and relativism." While not forbidding discussion of emotion or feeling, they seek instead to keep all lines of inquiry connected to the "text": that is, to the elements of the poem that account for the effects that it creates. They distinguish between "classical objectivity" and "romantic reader psychology," and accent the former.

For Wimsatt and Beardsley, the authority is the poem. Only by keeping our focus on the text can we guard against the dangers of impressionism, subjectivism, and relativism—a vital concern for scholars and teachers intent on giving legitimacy to "English" as an academic field of study and source of scientific knowledge. This position reaches back at least as far as MATTHEW ARNOLD, who in "The Study of Poetry" (1880) warned against the "personal fallacy," by which we judge poetry "on grounds personal to ourselves." Paradoxically, however, many of the same critics who in the nineteenth and twentieth centuries highlighted the priority of the text also spoke about the creative or constructive role played by the reader. I. A. Richards, for example, in "The Interactions of Words" (1942) maintained: "Understanding is not a preparation for reading the poem. It is itself the poem. And it is a constructive, hazardous, free creative process, a process of conception through which a new being is growing in the mind."

During the late 1960s and 1970s, a new movement in criticism, reader-response theory, drew on the insights about the reading process that Richards and others had advanced or implied in formulating their text-centered approaches. One of its most important members, STANLEY FISH, explicitly invoked Wimsatt and Beardsley's arguments in his essay "Literature in the Reader" (1970). For Fish, criticism should be concerned with the "analysis of the developing responses of the reader in relation to the words as they succeed one another in time."

Other critics and theorists during this same period challenged and complicated Wimsatt and Beardsley's conception—in effect, a diminution—of the author. For example, MICHEL FOUCAULT and STEPHEN J. GREENBLATT are as much opposed to the Romantic conception of the author as were Wimsatt and Beardsley. But for them the author, reimagined and reconfigured, is nonetheless a focal point for literary investigation and analysis. Thus in "What Is an Author?" (1969; see below), Foucault considers not the author as such but rather the historical "author-function," a "mode of existence, circulation, and functioning of certain discourses within a society." For Wimsatt and Beardsley, and for those they influenced, this position, and reader-response criticism as well, takes us too far afield from the specific text, the self-contained poem. Studying literature, in a disciplined way, means directly examining literary artifacts, not authors or readers or social contexts.

"The Intentional Fallacy" and "The Affective Fallacy" are important historically as documents in the theory and practice of New Criticism, the major mode of American academic criticism during the mid-twentieth century. They remain pertinent to debates today about interpretation and judgment. Where do we locate the authority or control for textual meaning? in the poem itself? in the author? or in the reader? How do we define these terms, and what is their relationship to one another? Can we make a distinction between the inside and the outside of a text, between intrinsic and extrinsic criticism? What is the nature of the knowledge that literary study gives us? These are permanent questions in the field of literary theory and criticism, and Wimsatt and Beardsley raised them as vividly as anyone has done.

"The Intentional Fallacy" Keywords: Authorship, Defense of Criticism, Formalism, Interpretation Theory, Poetry, Subjectivity

The Intentional Fallacy

He owns with toil he wrote the following scenes;
But, if they're naught, ne'er spare him for his pains:
Damn him the more; have no commiseration
For dullness on mature deliberation.

—William Congreve, Prologue to
*The Way of the World*¹

The claim of the author's "intention" upon the critic's judgment has been challenged in a number of recent discussions, notably in the debate entitled *The Personal Heresy*, between Professors Lewis and Tillyard,² and at least implicitly in periodical essays like those in the "Symposiums" of 1940 in the *Southern* and *Kenyon Reviews*.³ But it seems doubtful if this claim and most of its romantic corollaries are as yet subject to any widespread questioning. The present writers, in a short article entitled "Intention" for a *Dictionary*⁴ of literary criticism, raised the issue but were unable to pursue its implications at any length. We argued that the design or intention of the author is neither available nor desirable as a standard for judging the success of a work of literary art, and it seems to us that this is a principle which goes deep into some differences in the history of critical attitudes. It is a principle which accepted or rejected points to the polar opposites of classical "imitation" and romantic expression. It entails many specific truths about inspiration, authenticity, biography, literary history and scholarship, and about some trends of contemporary poetry, especially its allusiveness. There is hardly a problem of literary criticism in which the critic's approach will not be qualified by his view of "intention."

"Intention," as we shall use the term, corresponds to *what he intended* in a formula which more or less explicitly has had wide acceptance. "In order to judge the poet's performance, we must know *what he intended*." Intention is design or plan in the author's mind. Intention has obvious affinities for the author's attitude toward his work, the way he felt, what made him write.

We begin our discussion with a series of propositions summarized and abstracted to a degree where they seem to us axiomatic, if not truistic.

1. A poem does not come into existence by accident. The words of a poem, as Professor Stoll⁵ has remarked, come out of a head, not out of a hat. Yet to insist on the designing intellect as a *cause* of a poem is not to grant the design or intention as a *standard*.

2. One must ask how a critic expects to get an answer to the question about intention. How is he to find out what the poet tried to do? If the poet succeeded in doing it, then the poem itself shows what he was trying to do.

1. Restoration comedy (1700) by the English dramatist and poet Congreve (1670–1729).

2. *The Personal Heresy: A Controversy* (1939), by the English literary scholar E. M. W. Tillyard (1889–1962) and the Irish-born literary scholar and novelist C. S. Lewis (1898–1963).

3. Cf. Louis Teeter, "Scholarship and the Art of Criticism," *ELH* 5 (Sept. 1938), 173–94; René Wellek, review of Geoffrey Tillotson's *Essays in Criticism and Research*, *Modern Philology* 41 (May 1944), 262; G. Wilson Knight, *Shakespeare*

and Tolstoy, English Association Pamphlet no. 88 (April 1934), p. 10; Bernard C. Heyl, *New Bearings in Esthetics and Art Criticism* (New Haven, 1943), pp. 66, 113, 149 [Wimsatt and Beardsley's note].

4. *Dictionary of World Literature*, ed. Joseph T. Shipley (New York, 1943), pp. 326–39 [Wimsatt and Beardsley's note].

5. E. E. Stoll (1874–1959), literary critic whose works focused primarily on drama (especially Shakespeare).

And if the poet did not succeed, then the poem is not adequate evidence, and the critic must go outside the poem—for evidence of an intention that did not become effective in the poem. “Only one *caveat* must be borne in mind,” says an eminent intentionalist⁶ in a moment when his theory repudiates itself; “the poet’s aim must be judged at the moment of the creative act, that is to say, by the art of the poem itself.”

3. Judging a poem is like judging a pudding or a machine. One demands that it work. It is only because an artifact works that we infer the intention of an artificer. “A poem should not mean but be.”⁷ A poem can *be* only through its *meaning*—since its medium is words—yet it *is*, simply *is*, in the sense that we have no excuse for inquiring what part is intended or meant.⁸ Poetry is a feat of style by which a complex of meaning is handled all at once. Poetry succeeds because all or most of what is said or implied is relevant; what is irrelevant has been excluded, like lumps from pudding and “bugs” from machinery. In this respect poetry differs from practical messages, which are successful if and only if we correctly infer the intention. They are more abstract than poetry.

4. The meaning of a poem may certainly be a personal one, in the sense that a poem expresses a personality or state of soul rather than a physical object like an apple. But even a short lyric poem is dramatic, the response of a speaker (no matter how abstractly conceived) to a situation (no matter how universalized). We ought to impute the thoughts and attitudes of the poem immediately to the dramatic *speaker*, and if to the author at all, only by a biographical act of inference.

5. If there is any sense in which an author, by revision, has better achieved his original intention, it is only the very abstract, tautological, sense that he intended to write a better work and now has done it. (In this sense every author’s intention is the same.) His former specific intention was not his intention. “He’s the man we were in search of, that’s true,” says Hardy’s rustic constable, “and yet he’s not the man we were in search of. For the man we were in search of was not the man we wanted.”⁹

“Is not a critic,” asks Professor Stoll, “. . . a judge, who does not explore his own consciousness, but determines the author’s meaning or intention, as if the poem were a will, a contract, or the constitution? The poem is not the critic’s own.”¹ He has diagnosed very accurately two forms of irresponsibility, one which he prefers. Our view is yet different. The poem is not the critic’s own and not the author’s (it is detached from the author at birth and goes about the world beyond his power to intend about it or control it). The

6. J. E. Spingarn, “The New Criticism,” in *Criticism in America* (New York, 1924), pp. 24–25 [Wimsatt and Beardsley’s note]. *Caveat*: let a person beware (Latin); that is, a warning or proviso.

7. From “Ars Poetica” (1926), by the American poet Archibald MacLeish (1892–1982).

8. As critics and teachers constantly do. “We have here a deliberate blurring. . . .” “Should this be regarded as ironic or unplanned?” “. . . is the literal meaning intended. . . .?” “. . . a paradox of religious faith which is intended to exult. . . .” “It seems to me that Herbert intends. . . .” These examples are chosen from three pages of an issue of *The Explicator* (Fredericksburg, Va.), 2, no. 1

(Oct. 1943). Authors often judge their own works in the same way. See *This Is My Best*, ed. Whit Burnett (New York, 1942), e.g., pp. 539–40 [Wimsatt and Beardsley’s note].

9. A close relative of the intentional fallacy is that of talking about “means” and “end” in poetry instead of “part” and “whole.” We have treated this relation concisely in our dictionary article [Wimsatt and Beardsley’s note]. The quotation is from “The Three Strangers” (1883), by the English writer Thomas Hardy (1840–1928).

1. E. E. Stoll, “*The Tempest*,” *PMLA* 47 (Sept. 1932), 703 [Wimsatt and Beardsley’s note].

poem belongs to the public. It is embodied in language, the peculiar possession of the public, and it is about the human being, an object of public knowledge. What is said about the poem is subject to the same scrutiny as any statement in linguistics or in the general science of psychology or morals. Mr. Richards² has aptly called the poem a *class*—"a class of experiences which do not differ in any character more than a certain amount . . . from a standard experience." And he adds, "We may take as this standard experience the relevant experience of the poet when contemplating the completed composition." Professor Wellek³ in a fine essay on the problem has preferred to call the poem "a system of norms," "extracted from every individual experience," and he objects to Mr. Richards' deference to the poet as reader. We side with Professor Wellek in not wishing to make the poet (outside the poem) an authority.

A critic of our *Dictionary* article, Mr. Ananda K. Coomaraswamy, has argued⁴ that there are two kinds of enquiry about a work of art: (1) whether the artist achieved his intentions; (2) whether the work of art "ought ever to have been undertaken at all" and so "whether it is worth preserving." Number (2), Mr. Coomaraswamy maintains, is not "criticism of any work of art *qua* work of art," but is rather moral criticism; number (1) is artistic criticism. But we maintain that (2) need not be moral criticism: that there is another way of deciding whether works of art are worth preserving and whether, in a sense, they "ought" to have been undertaken, and this is the way of objective criticism of works of art as such, the way which enables us to distinguish between a skilful murder and a skilful poem. A skilful murder is an example which Mr. Coomaraswamy uses, and in his system the difference between the murder and the poem is simply a "moral" one, not an "artistic" one, since each if carried out according to plan is "artistically" successful. We maintain that (2) is an enquiry of more worth than (1), and since (2), and not (1), is capable of distinguishing poetry from murder, the name "artistic criticism" is properly given to (2).

II

It is not so much an empirical as an analytic judgment, not a historical statement, but a definition, to say that the intentional fallacy is a romantic one. When a rhetorician, presumably of the first century A.D., writes: "Sublimity is the echo of a great soul," or tells us that "Homer enters into the sublime actions of his heroes" and "shares the full inspiration of the combat," we shall not be surprised to find this rhetorician considered as a distant harbinger of romanticism and greeted in the warmest terms by so romantic a critic as Saintsbury.⁵ One may wish to argue whether Longinus should be called romantic,⁶ but there can hardly be a doubt that in one important way he is.

2. I. A. Richards (1893–1979), English literary theorist. His *Principles of Literary Criticism* (1925) is quoted here.

3. René Wellek (1903–1995), Austrian-born American literary theorist and scholar; the "fine essay" is "The Mode of Existence of a Literary Work of Art," *Southern Review* 7 (spring 1942), 735–54.

4. Ananda K. Coomaraswamy, "Intention," *American Bookman* 1 (winter 1944), 41–48 [Wimsatt and Beardsley's note].

5. George Saintsbury (1845–1933), English scholar and critic, whose works include *A History of Criticism and Literary Taste in Europe from the Earliest Texts to the Present Day* (3 vols., 1900–05).

6. For the relation of Longinus to modern romanticism, see R. S. Crane, review of Samuel Monk's *The Sublime, Philological Quarterly* 15 (April 1936), 165–66 [Wimsatt and Beardsley's note]. On the Greek rhetorician LONGINUS, see above.

Goethe's⁷ three questions for "constructive criticism" are "What did the author set out to do? Was his plan reasonable and sensible, and how far did he succeed in carrying it out?" If one leaves out the middle question, one has in effect the system of Croce⁸—the culmination and crowning philosophic expression of romanticism. The beautiful is the successful intuition-expression, and the ugly is the unsuccessful; the intuition or private part of art is *the* aesthetic fact, and the medium or public part is not the subject of aesthetic at all. Yet aesthetic reproduction takes place only "if all the other conditions remain equal."

Oil-paintings grow dark, frescoes fade, statues lose noses . . . the text of a poem is corrupted by bad copyists or bad printing.

The Madonna of Cimabue is still in the Church of Santa Maria Novella; but does she speak to the visitor of to-day as to the Florentines of the thirteenth century?

Historical interpretation labours . . . to reintegrate in us the psychological conditions which have changed in the course of history. It . . . enables us to see a work of art (a physical object) as its *author saw it* in the moment of production.⁹

The first italics are Croce's, the second ours. The upshot of Croce's system is an ambiguous emphasis on history. With such passages as a point of departure a critic may write a close analysis of the meaning or "spirit" of a play of Shakespeare or Corneille¹—a process that involves close historical study but remains aesthetic criticism—or he may write sociology, biography, or other kinds of non-aesthetic history. The Crocean system seems to have given more of a boost to the latter way of writing.

"What has the poet tried to do," asks Spingarn in his 1910 Columbia Lecture from which we have already quoted, "and how has he fulfilled his intention?" The place to look for "insuperable" ugliness, says Bosanquet, in his third *Lecture* of 1914, is the "region of insincere and affected art."² The seepage of the theory into a non-philosophic place may be seen in such a book as Marguerite Wilkinson's inspirational *New Voices*,³ about the poetry of 1919 to 1931—where symbols "as old as the ages . . . retain their strength and freshness" through "Realization." We close this section with two examples from quarters where one might least expect a taint of the Crocean. Mr. I. A. Richards' fourfold distinction of meaning into "sense," "feeling," "tone," "intention" has been probably the most influential statement of intentionalism in the past fifteen years, though it contains a hint of self-repudiation: "This function [intention]," says Mr. Richards, "is not on all

7. Johann Wolfgang von Goethe (1749–1832), German poet, playwright, and novelist.

8. Benedetto Croce (1866–1952), Italian literary critic, and philosopher; Wimsatt and Beardsley quote his *Aesthetics as Science of Expression and General Linguistic* (1909).

9. It is true that Croce himself in his *Ariosto, Shakespeare, and Corneille*, trans. Douglas Ainslie (London, 1920), chap. 7, "The Practical Personality and the Poetical Personality," and in his *Defence of Poetry*, trans. E. F. Carritt (Oxford, 1933), p. 24, has delivered a telling

attack on intentionalism, but the prevailing drift of such passages in the *Aesthetics* as we quote is in the opposite direction [Wimsatt and Beardsley's note].

1. PIERRE CORNEILLE (1606–1684), French dramatist.

2. From *Three Lectures on Aesthetics* (1915) by the English philosopher Bernard Bosanquet (1848–1923).

3. *New Voices: An Introduction to Contemporary Poetry* (1919; rev. ed., 1923), by the Canadian-born poet Wilkinson (1883–1928).

fours with the others.”⁴ In an essay on “Three Types of Poetry” Mr. Allen Tate⁵ writes as follows:

We must understand that the lines
 Life like a dome of many-colored glass
 Stains the white radiance of eternity
 are not poetry; they express the *frustrated will* trying to compete with science. The *will* asserts a rhetorical proposition about the whole of life, but the *imagination* has not seized upon the materials of the poem and made them into a whole. Shelley’s simile is imposed upon the material from above; it does not grow out of the material.

The last sentence contains a promise of objective analysis which is not fulfilled. The reason why the essay relies so heavily throughout on the terms “will” and “imagination” is that Mr. Tate is accusing the romantic poets of a kind of insincerity (romanticism in reverse) and at the same time is trying to describe something mysterious and perhaps indescribable, an “imaginative whole of life,” a “wholeness of vision at a particular moment of experience,” something which “yields us the quality of the experience.” If a poet had a toothache at the moment of conceiving a poem, that would be part of the experience, but Mr. Tate of course does not mean anything like that. He is thinking about some kind of “whole” which in this essay at least he does not describe, but which doubtless it is the prime need of criticism to describe—in terms that may be publicly tested.

III

I went to the poets; tragic, dithyrambic, and all sorts. . . . I took them some of the most elaborate passages in their own writings, and asked what was the meaning of them. . . . Will you believe me? . . . there is hardly a person present who would not have talked better about their poetry than they did themselves. Then I knew that not by wisdom do poets write poetry, but by a sort of genius and inspiration.⁶

That reiterated mistrust of the poets which we hear from Socrates may have been part of a rigorously ascetic view in which we hardly wish to participate, yet Plato’s Socrates saw a truth about the poetic mind which the world no longer commonly sees—so much criticism, and that the most inspirational and most affectionately remembered, has proceeded from the poets themselves.

Certainly the poets have had something to say that the analyst and professor could not say; their message has been more exciting: that poetry should come as naturally as leaves to a tree, that poetry is the lava of the imagination, or that it is emotion recollected in tranquillity.⁷ But it is necessary that we realize the character and authority of such testimony. There is

only a fine shade between those romantic expressions and a kind of earnest advice that authors often give. Thus Edward Young, Carlyle, Walter Pater:⁸

I know two golden rules from *ethics*, which are no less golden in *Composition*, than in life. 1. *Know thyself*; 2dly, *Reverence thyself*.

This is the grand secret for finding readers and retaining them: let him who would move and convince others, be first moved and convinced himself. Horace's rule, *Si vis me flere*,⁹ is applicable in a wider sense than the literal one. To every poet, to every writer, we might say: Be true, if you would be believed.

Truth! there can be no merit, no craft at all, without that. And further, all beauty is in the long run only *fineness* of truth, or what we call expression, the finer accommodation of speech to that vision within.

And Housman's little handbook¹ to the poetic mind yields the following illustration:

Having drunk a pint of beer at luncheon—beer is a sedative to the brain, and my afternoons are the least intellectual portion of my life—I would go out for a walk of two or three hours. As I went along, thinking of nothing in particular, only looking at things around me and following the progress of the seasons, there would flow into my mind, with sudden and unaccountable emotion, sometimes a line or two of verse, sometimes a whole stanza at once. . . .

This is the logical terminus of the series already quoted. Here is a confession of how poems were written which would do as a definition of poetry just as well as "emotion recollected in tranquility"—and which the young poet might equally well take to heart as a practical rule. Drink a pint of beer, relax, go walking, think on nothing in particular, look at things, surrender yourself to yourself, search for the truth in your own soul, listen to the sound of your own inside voice, discover and express the *vraie vérité*.²

It is probably true that all this is excellent advice for poets. The young imagination fired by Wordsworth and Carlyle is probably closer to the verge of producing a poem than the mind of the student who has been sobered by Aristotle³ or Richards. The art of inspiring poets, or at least of inciting something like poetry in young persons, has probably gone further in our day than ever before. Books of creative writing such as those issued from the Lincoln School are interesting evidence of what a child can do if taught how to manage himself honestly.⁴ All this, however, would appear to belong to an art separate from criticism, or to a discipline which one might call the

2. True truth (French).

3. That is, by the *Poetics* (see above) of ARISTOTLE (384–322 B.C.E.).

4. See Hugh Mearns, *Creative Youth* (Garden City, 1925), esp. pp. 10, 27–29. The technique of inspiring poems keeps pace today with a parallel analysis of the process of inspiration in successful artists. See Rosamond E. M. Harding, *An Anatomy of Inspiration* (Cambridge, 1940); Julius Portnoy, *A Psychology of Art Creation* (Philadelphia, 1942) [Wimsatt and Beardsley's note]. Lincoln School: an experimental school affiliated with Teachers College of Columbia University.

psychology of composition, valid and useful, an individual and private culture, yoga, or system of self-development which the young poet would do well to notice, but different from the public science of evaluating poems.

Coleridge and Arnold⁵ were better critics than most poets have been, and if the critical tendency dried up the poetry in Arnold and perhaps in Coleridge, it is not inconsistent with our argument, which is that judgment of poems is different from the art of producing them. Coleridge has given us the classic "anodyne" story, and tells what he can about the genesis of a poem⁶ which he calls a "psychological curiosity," but his definitions of poetry and of the poetic quality "imagination" are to be found elsewhere and in quite other terms.

The day may arrive when the psychology of composition is unified with the science of objective evaluation, but so far they are separate. It would be convenient if the passwords of the intentional school, "sincerity," "fidelity," "spontaneity," "authenticity," "genuineness," "originality," could be equated with terms of analysis such as "integrity," "relevance," "unity," "function"; with "maturity," "subtlety," and "adequacy," and other more precise axiological terms—in short, if "expression" always meant aesthetic communication. But this is not so.

"Aesthetic" art, says Professor Curt Ducasse, an ingenious theorist of expression, is the conscious objectification of feelings, in which an intrinsic part is the critical moment. The artist corrects the objectification when it is not adequate, but this may mean that the earlier attempt was not successful in objectifying the self, or "it may also mean that it was a successful objectification of a self which, when it confronted us clearly, we disowned and repudiated in favor of another."⁷ What is the standard by which we disown or accept the self? Professor Ducasse does not say. Whatever it may be, however, this standard is an element in the definition of art which will not reduce to terms of objectification. The evaluation of the work of art remains public; the work is measured against something outside the author.

IV

There is criticism of poetry and there is, as we have seen, author psychology, which when applied to the present or future takes the form of inspirational promotion; but author psychology can be historical too, and then we have literary biography, a legitimate and attractive study in itself, one approach, as Mr. Tillyard would argue, to personality, the poem being only a parallel approach. Certainly it need not be with a derogatory purpose that one points out personal studies, as distinct from poetic studies, in the realm of literary scholarship. Yet there is danger of confusing personal and poetic studies; and there is the fault of writing the personal as if it were poetic.

There is a difference between internal and external evidence for the meaning of a poem. And the paradox is only verbal and superficial that what is (1) internal is also public: it is discovered through the semantics and syntax of a poem, through our habitual knowledge of the language, through grammars,

dictionaries, and all the literature which is the source of dictionaries, in general through all that makes a language and culture; while what is (2) external is private or idiosyncratic; not a part of the work as a linguistic fact: it consists of revelations (in journals, for example, or letters or reported conversations) about how or why the poet wrote the poem—to what lady, while sitting on what lawn, or at the death of what friend or brother. There is (3) an intermediate kind of evidence about the character of the author or about private or semi-private meanings attached to words or topics by an author or by a coterie of which he is a member. The meaning of words is the history of words, and the biography of an author, his use of a word, and the associations which the word had for *him*, are part of the word's history and meaning.⁸ But the three types of evidence, especially (2) and (3), shade into one another so subtly that it is not always easy to draw a line between examples, and hence arises the difficulty for criticism. The use of biographical evidence need not involve intentionalism, because while it may be evidence of what the author intended, it may also be evidence of the meaning of his words and the dramatic character of his utterance. On the other hand, it may not be all this. And a critic who is concerned with evidence of type (1) and moderately with that of type (3) will in the long run produce a different sort of comment from that of the critic who is concerned with type (2) and with (3) where it shades into (2).

The whole glittering parade of Professor Lowes' *Road to Xanadu*,⁹ for instance, runs along the border between types (2) and (3) or boldly traverses the romantic region of (2). "Kubla Khan," says Professor Lowes, "is the fabric of a vision, but every image that rose up in its weaving had passed that way before. And it would seem that there is nothing haphazard or fortuitous in their return." This is not quite clear—not even when Professor Lowes explains that there were clusters of associations, like hooked atoms, which were drawn into complex relation with other clusters in the deep well of Coleridge's memory, and which then coalesced and issued forth as poems. If there was nothing "haphazard or fortuitous" in the way the images returned to the surface, that may mean (1) that Coleridge could not produce what he did not have, that he was limited in his creation by what he had read or otherwise experienced, or (2) that having received certain clusters of associations, he was bound to return them in just the way he did, and that the value of the poem may be described in terms of the experiences on which he had to draw. The latter pair of propositions (a sort of Hartleyan associationism¹ which Coleridge himself repudiated in the *Biographia*) may not be assented to. There were certainly other combinations, other poems, worse or better, that might have been written by men who had read Bartram and Purchas and Bruce and Milton.² And this will be true no matter how many times

8. And the history of words *after* a poem is written may contribute meanings which if relevant to the original pattern should not be ruled out by a scruple about intention. Cf. C. S. Lewis and E. M. W. Tillyard, *The Personal Heresy* (Oxford, 1939), p. 16; Teeter, loc cit., pp. 183, 192; review of Tillotson's *Essays*, *TLS* 41 (April 1942), 174 [Wimsatt and Beardsley's note].

9. An exhaustive examination (1927; rev. ed., 1930) of the sources of Coleridge's poems "The Rime of the Ancient Mariner" and "Kubla Khan," by the literary historian John Livingston Lowes (1867–1945).

1. Characteristic of David Hartley (1705–1757), English philosopher and physician; his *Observations on Man: His Frame, His Duty, and His Expectations* (1749) links mental phenomena to the associations of simple sensation.

2. The English poet John Milton (1608–1674) is an anomaly in this list, whose other members are the American naturalist and traveler William Bartram (1739–1823), author of *Travels through North and South Carolina* (1791); the English compiler of travel books Samuel Purchas (ca. 1577–1626); and the Scottish traveler and author James Bruce (1730–1794).

we are able to add to the brilliant complex of Coleridge's reading. In certain flourishes (such as the sentence we have quoted) and in chapter headings like "The Shaping Spirit," "The Magical Synthesis," "Imagination Creatrix," it may be that Professor Lowes pretends to say more about the actual poems than he does. There is a certain deceptive variation in these fancy chapter titles; one expects to pass on to a new stage in the argument, and one finds—more and more sources, more about "the streamy nature of association."³

"Wohin der Weg?" quotes Professor Lowes for the motto of his book. "Kein Weg! Ins Unbetretene."⁴ Precisely because the way is *unbetreten*, we should say, it leads away from the poem. Bartram's *Travels* contains a good deal of the history of certain words and romantic Floridian conceptions that appear in "Kubla Khan." And a good deal of that history has passed and was then passing into the very stuff of our language. Perhaps a person who has read Bartram appreciates the poem more than one who has not. Or, by looking up the vocabulary of "Kubla Khan" in the *Oxford English Dictionary*, or by reading some of the other books there quoted, a person may know the poem better. But it would seem to pertain little to the poem to know that Coleridge had read Bartram. There is a gross body of life, of sensory and mental experience, which lies behind and in some sense causes every poem, but can never be and need not be known in the verbal and hence intellectual composition which is the poem. For all the objects of our manifold experience, especially for the intellectual objects, for every unity, there is an action of the mind which cuts off roots, melts away context—or indeed we should never have objects or ideas or anything to talk about.

It is probable that there is nothing in Professor Lowes' vast book which could detract from anyone's appreciation of either *The Ancient Mariner* or *Kubla Khan*. We next present a case where preoccupation with evidence of type (3) has gone so far as to distort a critic's view of a poem (yet a case not so obvious as those that abound in our critical journals).

In a well-known poem by John Donne appears the following quatrain:

Moving of th' earth brings harmes and feares,
Men reckon what it did and meant,
But trepidation of the speares,
Though greater farre, is innocent.⁵

A recent critic in an elaborate treatment of Donne's learning has written of this quatrain as follows:

. . . he touches the emotional pulse of the situation by a skillful allusion to the new and the old astronomy. . . . Of the new astronomy, the "moving of the earth" is the most radical principle; of the old, the "trepidation of the spheres" is the motion of the greatest complexity. . . . As the poem is a valediction forbidding mourning, the poet must exhort his love to quietness and calm upon his departure; and for this purpose the figure based

3. Chapters 8, "The Pattern," and 16, "The Known and Familiar Landscape," will be found of most help to the student of the poem. For an extreme example of intentionalist criticism, see Kenneth Burke's analysis of *The Ancient Mariner* in *The Philosophy of Literary Form* (Baton Rouge, 1941), pp. 22–23, 93–102. Mr. Burke must be

credited with realizing very clearly what he is up to [Wimsatt and Beardsley's note]. Burke (1897–1993), American critic.

4. Where is the way? No way! It is untrodden (German). From Goethe's *Faust* (1808, 1832).

5. "A Valediction: Forbidding Mourning" (1633), lines 9–12, by the English poet Donne (1572–1631).

upon the latter motion (trepidation), long absorbed into the traditional astronomy, fittingly suggests the tension of the moment without arousing the "harmes and feares" implicit in the figure of the moving earth.⁶

The argument is plausible and rests on a well-substantiated thesis that Donne was deeply interested in the new astronomy and its repercussions in the theological realm. In various works Donne shows his familiarity with Kepler's *De Stella Nova*, with Galileo's *Siderius Nuncius*, with William Gilbert's *De Magnete*, and with Clavius's commentary on the *De Sphaera* of Sacrobosco.⁷ He refers to the new science in his Sermon at Paul's Cross and in a letter to Sir Henry Goodyer.⁸ In *The First Anniversary* he says the "new philosophy calls all in doubt." In the *Elegy on Prince Henry* he says that the "least moving of the center" makes "the world to shake."

It is difficult to answer argument like this, and impossible to answer it with evidence of like nature. There is no reason why Donne might not have written a stanza in which the two kinds of celestial motion stood for two sorts of emotion at parting. And if we become full of astronomical ideas and see Donne only against the background of the new science, we may believe that he did. But the text itself remains to be dealt with, the analyzable vehicle of a complicated metaphor. And one may observe: (1) that the movement of the earth according to the Copernican theory⁹ is a celestial motion, smooth and regular, and while it might cause religious or philosophic fears, it could not be associated with the crudity and earthiness of the kind of commotion which the speaker in the poem wishes to discourage; (2) that there is another moving of the earth, an earthquake, which has just these qualities and is to be associated with the tear-floods and sigh-tempests of the second stanza of the poem; (3) that "trepidation" is an appropriate opposite of earthquake, because each is a shaking or vibratory motion; and "trepidation of the spheres" is "greater far" than an earthquake, but not much greater (if two such motions can be compared as to greatness) than the annual motion of the earth; (4) that reckoning what it "did and meant" shows that the event has passed, like an earthquake, not like the incessant celestial movement of the earth. Perhaps a knowledge of Donne's interest in the new science may add another shade of meaning, an overtone to the stanza in question, though to say even this runs against the words. To make the geocentric and heliocentric antithesis the core of the metaphor is to disregard the English language, to prefer private evidence to public, external to internal.

V

If the distinction between kinds of evidence has implications for the historical critic, it has them no less for the contemporary poet and his critic. Or, since every rule for a poet is but another side of a judgment by a critic,

6. Charles M. Coffin, *John Donne and the New Philosophy* (New York, 1927), pp. 97-98 [Wimsatt and Beardsley's note].

7. All works of science, by Johannes Kepler (1571-1630), German astronomer and mathematician; Galileo (1564-1642), Italian astronomer and physicist; Gilbert (1544-1603), English court physician who studied electricity and magnetism; and Johannes de Sacrobosco (or John Holywood or Halifax), English mathematician (mid-13th c.),

whose commentators include the Italian mathematician Christopher Clavius (16th c.).

8. Goodyer (1571-1628), a friend of Donne's and an occasional poet himself.

9. That is, the heliocentric theory of the Polish astronomer Nicolaus Copernicus (1473-1543), that the sun is the center of the universe; it replaced the geocentric theory of the Greek astronomer Ptolemy (active 127-148 c.e.), according to which all heavenly bodies revolve around the earth.

and since the past is the realm of the scholar and critic, and the future and present that of the poet and the critical leaders of taste, we may say that the problems arising in literary scholarship from the intentional fallacy are matched by others which arise in the world of progressive experiment.

The question of "allusiveness," for example, as acutely posed by the poetry of Eliot, is certainly one where a false judgment is likely to involve the intentional fallacy. The frequency and depth of literary allusion in the poetry of Eliot and others has driven so many in pursuit of full meanings to the *Golden Bough*¹ and the Elizabethan drama that it has become a kind of commonplace to suppose that we do not know what a poet means unless we have traced him in his reading—a supposition redolent with intentional implications. The stand taken by Mr. F. O. Matthiessen² is a sound one and partially forestalls the difficulty.

If one reads these lines with an attentive ear and is sensitive to their sudden shifts in movement, the contrast between the actual Thames and the idealized vision of it during an age before it flowed through a megalopolis is sharply conveyed by that movement itself, whether or not one recognizes the refrain to be from Spenser.³

Eliot's allusions work when we know them—and to a great extent even when we do not know them, through their suggestive power.

But sometimes we find allusions supported by notes, and it is a very nice question whether the notes function more as guides to send us where we may be educated, or more as indications in themselves about the character of the allusions. "Nearly everything of importance . . . that is apposite to an appreciation of 'The Waste Land,'" writes Mr. Matthiessen of Miss Weston's book,⁴ "has been incorporated into the structure of the poem itself, or into Eliot's Notes." And with such an admission it may begin to appear that it would not much matter if Eliot invented his sources (as Sir Walter Scott⁵ invented chapter epigraphs from "old plays" and "anonymous" authors, or as Coleridge wrote marginal glosses for "The Ancient Mariner"). Allusions to Dante, Webster, Marvell, or Baudelaire,⁶ doubtless gain something because these writers existed, but it is doubtful whether the same can be said for an allusion to an obscure Elizabethan:

The sound of horns and motors, which shall bring
Sweeney to Mrs. Porter in the spring.⁷

"Cf. Day, *Parliament of Bees*:" says Eliot,

When of a sudden, listening, you shall hear,
A noise of horns and hunting, which shall bring

1. *The Golden Bough: A Study in Magic and Religion* (12 vols., 1890–1915), by J. G. Frazer; alluded to in *The Waste Land* (1922) by T. S. ELIOT (1888–1965).

2. American literary critic (1902–1950); the quotation is from *The Achievement of T. S. Eliot: An Essay on the Nature of Poetry* (1935).

3. Edmund Spenser (1552–1599), English poet. In "The Fire Sermon," part 3 of *The Waste Land*, Eliot quotes and cites Spenser's "Prothalamion" (1596).

4. *From Ritual to Romance* (1920), by Jessie

Weston (1850–1928).

5. Scottish poet and novelist (1771–1832).

6. Charles Baudelaire (1821–1867), French writer, translator, and critic. DANTE ALIGHIERI (1265–1321), Italian poet. John Webster (ca. 1580–ca. 1634), English playwright. Andrew Marvell (1621–1678), English metaphysical poet.

7. From "The Fire Sermon." The "obscure Elizabethan" is John Day (1574–ca. 1640), whose *Parliament of Bees* is an allegorical masque.

Actaeon to Diana⁸ in the spring,
Where all shall see her naked skin. . . .

The irony is completed by the quotation itself; had Eliot, as is quite conceivable, composed these lines to furnish his own background, there would be no loss of validity. The conviction may grow as one reads Eliot's next note: "I do not know the origin of the ballad from which these lines are taken: it was reported to me from Sydney, Australia." The important word in this note—on Mrs. Porter and her daughter who washed their feet in soda water—is "ballad." And if one should feel from the lines themselves their "ballad" quality, there would be little need for the note. Ultimately, the inquiry must focus on the integrity of such notes as part of the poem, for where they constitute special information about the meaning of phrases in the poem, they ought to be subject to the same scrutiny as any of the other words in which it is written. Mr. Matthiessen believes the notes were the price Eliot "had to pay in order to avoid what he would have considered muffling the energy of his poem by extended connecting links in the text itself." But it may be questioned whether the notes and the need for them are not equally muffling. The omission from poems of the explanatory stratum on which is built the dramatic or poetic stuff is a dangerous responsibility. Mr. F. W. Bateson has plausibly argued⁹ that Tennyson's "The Sailor Boy" would be better if half the stanzas were omitted, and the best versions of ballads like "Sir Patrick Spens"¹ owe their power to the very audacity with which the minstrel has taken for granted the story upon which he comments. What then if a poet finds he cannot take so much for granted in a more recondite context and rather than write informatively, supplies notes? It can be said in favor of this plan that at least the notes do not pretend to be dramatic, as they would if written in verse. On the other hand, the notes may look like unassimilated material lying loose beside the poem, necessary for the meaning of the verbal symbol, but not integrated, so that the symbol stands incomplete.

We mean to suggest by the above analysis that whereas notes tend to seem to justify themselves as external indexes to the author's *intention*, yet they ought to be judged like any other parts of a composition (verbal arrangement special to a particular context), and when so judged their reality as parts of the poem or their imaginative integration with the rest of the poem, may come into question. Mr. Matthiessen, for instance, sees that Eliot's titles for poems and his epigraphs are informative apparatus, like the notes. But while he is worried by some of the notes and thinks that Eliot "appears to be mocking himself for writing the note at the same time that he wants to convey something by it," Mr. Matthiessen believes that the "device" of epigraphs "is not at all open to the objection of not being sufficiently structural." "The *intention*," he says, "is to enable the poet to secure a condensed expression in the poem itself." "In each case the epigraph is *designed* to form an integral part of the effect of the poem." And Eliot himself, in his notes, has justified his poetic practice in terms of intention.

8. The Roman name of Artemis, the Greek goddess of the hunt; after the hunter Actaeon by chance saw her bathing, she turned him into a stag and he was torn apart by his own dogs.

9. In *English Poetry and the English Language*:

An Experiment in Literary History (1934), by the English academic Bateson (1901–1978).

1. An early Scottish ballad. "The Sailor Boy" (1861), a 6-stanza poem by Alfred, Lord Tennyson (1809–1892).

The Hanged Man, a member of the traditional pack, fits my purpose in two ways: because he is associated in my mind with the Hanged God of Frazer, and because I associate him with the hooded figure in the passage of the disciples to Emmaus in Part V. . . . The man with Three Staves (an authentic member of the Tarot pack) I associate, quite arbitrarily, with the Fisher King himself.

And perhaps he is to be taken more seriously here, when off guard in a note, than when in his Norton Lectures² he comments on the difficulty of saying what a poem means and adds playfully that he thinks of prefixing to a second edition of *Ash Wednesday* some lines from *Don Juan*:³

I don't pretend that I quite understand
My own meaning when I would be *very* fine;
But the fact is that I have nothing planned
Unless it were to be a moment merry.

If Eliot and other contemporary poets have any characteristic fault, it may be in *planning* too much.⁴

Allusiveness in poetry is one of several critical issues by which we have illustrated the more abstract issue of intentionalism, but it may be for today the most important illustration. As a poetic practice allusiveness would appear to be in some recent poems an extreme corollary of the romantic intentionalist assumption, and as a critical issue it challenges and brings to light in a special way the basic premise of intentionalism. The following instance from the poetry of Eliot may serve to epitomize the practical implications of what we have been saying. In Eliot's "Love Song of J. Alfred Prufrock," towards the end, occurs the line: "I have heard the mermaids singing, each to each," and this bears a certain resemblance to a line in a Song⁵ by John Donne, "Teach me to heare Mermaides singing," so that for the reader acquainted to a certain degree with Donne's poetry, the critical question arises: Is Eliot's line an allusion to Donne's? Is Prufrock thinking about Donne? Is Eliot thinking about Donne? We suggest that there are two radically different ways of looking for an answer to this question. There is (1) the way of poetic analysis and exegesis, which inquires whether it makes any sense if Eliot-Prufrock is thinking about Donne. In an earlier part of the poem, when Prufrock asks, "Would it have been worth while, . . . To have squeezed the universe into a ball," his words take half their sadness and irony from certain energetic and passionate lines of Marvell's "To His Coy Mistress."⁶ But the exegetical inquirer may wonder whether mermaids considered as "strange sights" (to hear them is in Donne's poem analogous to getting with child a mandrake root) have much to do with Prufrock's mermaids, which seem to be symbols of romance and dynamism, and which incidentally

2. Delivered at Harvard University in the winter of 1932–33; Eliot later published them as *The Use of Poetry and the Use of Criticism* (1933).

3. A mock epic (1819–24) by Lord Byron; the lines quoted are from canto 4, stanza 5. Eliot published *Ash Wednesday* in 1930.

4. In his critical writings Eliot has expressed the right view of author psychology. See *The Use of Poetry and the Use of Criticism* (Cambridge, 1933), p. 139, and "Tradition and the Individual Talent" in *Selected Essays* (New York, 1932),

though his record is not entirely consistent. See *A Choice of Kipling's Verse* (London, 1941), pp. 10–11, 20–21 [Wimsatt and Beardsley's note]. For "Tradition and the Individual Talent," see above.

5. "Go and catch a falling star" (1633). "Prufrock" was published in 1915.

6. "To His Coy Mistress" (1651), lines 41–42: "Let us roll our strength and all / Our sweetness up into one ball."

have literary authentication, if they need it, in a line of a sonnet by Gérard de Nerval.⁷ This method of inquiry may lead to the conclusion that the given resemblance between Eliot and Donne is without significance and is better not thought of, or the method may have the disadvantage of providing no certain conclusion. Nevertheless, we submit that this is the true and objective way of criticism, as contrasted to what the very uncertainty of exegesis might tempt a second kind of critic to undertake: (2) the way of biographical or genetic inquiry, in which, taking advantage of the fact that Eliot is still alive, and in the spirit of a man who would settle a bet, the critic writes to Eliot and asks what he meant, or if he had Donne in mind. We shall not here weigh the probabilities—whether Eliot would answer that he meant nothing at all, had nothing at all in mind—a sufficiently good answer to such a question—or in an unguarded moment might furnish a clear and, within its limit, irrefutable answer. Our point is that such an answer to such an inquiry would have nothing to do with the poem “Prufrock”; it would not be a critical inquiry. Critical inquiries, unlike bets, are not settled in this way. Critical inquiries are not settled by consulting the oracle.

1946

7. French symbolist poet (1808–1855); the sonnet is in *The Chimeras* (1854).

SIMONE DE BEAUVOIR

1908–1986

Written in the absence of any organized feminist movement, Simone de Beauvoir's classic manifesto, *The Second Sex* (1949), provided the theoretical basis for the emergence in the 1960s and 1970s of feminist activism in both Europe and North America. Though her significant contributions to existentialist philosophy have often been overshadowed by the fame of her lifelong associate and lover, the philosopher Jean-Paul Sartre, Beauvoir's importance for feminist theory is indisputable. With her famous remark that “One is not born, but rather becomes, a woman,” which opens the second volume of *The Second Sex* (the original French text was published separately in two volumes issued months apart), Beauvoir inaugurated the social constructionist critique of essentialism that occupied feminist literary theory starting in the 1980s. While her uncompromising rejection of any notion of a female nature or essence finds echoes in the writing of later feminist theorists such as JULIA KRISTEVA, MONIQUE WITTIG, and JUDITH BUTLER, *The Second Sex* has left its mark on virtually every aspect of the contemporary women's movement.

Born Simone Lucie Ernestine Marie Bertrande de Beauvoir in Paris, Beauvoir grew up the elder of two daughters in a comfortable middle-class family. Educated in a conservative Catholic girls' preparatory school, she attended various institutions of higher learning, successfully pursuing *licenses* (equivalent to a master's degree) in literature, philosophy, and mathematics. Among the first generation of women to be educated in the elite universities that had once been all-male preserves, Beauvoir graduated in 1929 from the Sorbonne with a degree in philosophy, having written a thesis on Leibniz. While a student she met Sartre, who was studying philosophy at the École Normale Supérieure, and began a friendship with the philosopher most

closely associated with existentialism; other fellow students included the phenomenologist Maurice Merleau-Ponty, the anthropologist CLAUDE LÉVI-STRAUSS, and the French theologian and mystic Simone Weil. Beauvoir was only the ninth woman and the youngest student ever to pass the rigorous *agrégation* in philosophy (a competitive national exam for students who want to become tenured *lycée* professors), taking second place to Sartre (who had failed the first time). After completing her degree, she taught at various *lycées* in Marseilles, Rouen, and Paris from 1931 to 1943, when her contract was suspended after she was accused of sleeping with a student. Although she was reinstated after the war, she never taught again; for the rest of her life she supported herself by her writing.

The variety of Beauvoir's writing over the next half century is impressive. In 1945 she and Sartre, along with Merleau-Ponty, founded *Les Temps Modernes*, a monthly magazine devoted to politics and literature. Between 1943 and 1968, Beauvoir wrote six novels, winning the Prix Goncourt in 1954 for *Les Mandarins* (1954), a fictionalized account of postwar leftist intellectuals and their attempts to give up their "mandarin" (educated elite) status and engage in political activism. This novel includes characters who resemble Beauvoir, Sartre, the French writer Albert Camus, and the American novelist Nelson Algren, with whom Beauvoir had a relationship for nearly fifteen years. During this time, she also wrote four books on philosophy—including *The Ethics of Ambiguity* (1947), which importantly articulates an ethics for Sartrean existentialism—and a number of essays, some of them book-length, the best known of which is *The Second Sex*. In addition to novels, philosophy, and feminist critique, Beauvoir wrote at least six volumes of autobiography between 1958 and 1972, creating a detailed portrait of French intellectual life from the 1930s to the 1970s. Beauvoir addressed the issue of aging in *A Very Easy Death* (1964, *Une Mort très douce*), on her mother's death in a hospital; *Old Age* (1970, *La Vieillesse*), a reflection on society's indifference to the elderly; and, in 1981, in *Adieux: A Farewell to Sartre*, a account of Sartre's last years. During the 1970s, Beauvoir was very active in feminist politics, in 1979 joining the editorial collective *Questions Féministes*.

The Second Sex is a wide-ranging, multidisciplinary essay that draws on and critiques history, biology, anthropology, literature, psychoanalysis, Marxism, and existentialist philosophy as means of understanding the lived experiences of women. Beauvoir argues that throughout history, women have been reduced to objects for men. Because men have imagined women as the "Other," women have been denied subjectivity. In this claim, Beauvoir echoes VIRGINIA WOOLF's statement in *A Room of One's Own* (1929) that women serve "as looking-glasses possessing the magic and delicious power of reflecting the figure of man at twice its natural size." While Beauvoir's argument that in patriarchal cultures man is the norm and woman the deviation has become a commonplace of feminist theory, in 1949 it was revolutionary. *The Second Sex* shows how these fundamental assumptions dominate social, political, and cultural life and how women have internalized this ideology, so that they live in a constant state of "inauthenticity." In existentialist terms, patriarchy constructs woman as immanence (as stagnation and immersion in nature) and man as transcendence (as continually striving for freedom and authenticity), thereby impeding women's struggle to achieve existential freedom and autonomous subjectivity.

To illustrate her theoretical insights, *The Second Sex* employs a number of different perspectives. In the first part Beauvoir examines woman "objectively"—that is, as object of analysis—through a series of cultural lenses, including biology, psychoanalysis, Marxism, history, literature, and myth. At the same time she critiques each of these cultural lenses. In the second part she examines women "subjectively" from the perspective of their own lived experience, showing the processes through which women internalize the ideologies of otherness that relegate them to immanence and to the position of being man's Other.

Our selection is the last in a series of three chapters on myths about women, asking what significance they have in “daily life.” What is the relationship between the myth of the Eternal Feminine and the lived experience of actual women? True to her roots in existentialism, Beauvoir argues that “essence does not precede existence”; that is, a human being is neither more nor less than the sum total of her or his acts. The myth of the Eternal Feminine, however, takes the values, beliefs, practices, and institutions that constitute women’s experience and projects them into the realm of Platonic Forms as timeless and unchanging essences. The myth becomes the only reality; against it, “the contrary facts of experience are impotent.” Woman is defined as the absolute Other of man and denied any subjectivity.

Moreover, the various and invariably partial myths about femininity—each claiming to be a totalizing explanation—are contradictory, leading to the biggest myth of all: that women are mysterious, beyond the comprehension of men, an explanation that Beauvoir argues “flatters laziness and vanity at once.” In fact, Beauvoir contends, in recognizing that all human beings have within them the potential for both transcendence and immanence, men would lose an attractive relationship that benefits them. Patriarchy relies on the myth of woman’s essential immanence and her otherness in constructing male subjectivity.

As this summary suggests, the primary influence on *The Second Sex* is Sartrean existentialism. However, the extent of Beauvoir’s debt to Sartre has been somewhat exaggerated and her own philosophical contributions to existentialism obscured. In particular, she rejects Sartre’s alienating view of freedom, preferring instead to see authentic relationships as involving reciprocity between subjects, “the mutual recognition of free beings who confirm one another’s freedom.” In addition, she more quickly understood and developed the notion that the body is situated in culture and history, an idea that makes possible a more nuanced analysis of oppression and political activism. Because of her close association with Sartre, readers have also tended to overlook the other influences on *The Second Sex*, including phenomenology, Marxism, and psychoanalysis.

Our selection, which heavily influenced Kate Millett’s 1970 feminist classic, *Sexual Politics*, illustrates what feminists in the 1960s and 1970s found most appealing in *The Second Sex*: its complete blurring of fictional and autobiographical ways of knowing the world and gaining a voice as a woman. Throughout *The Second Sex*, Beauvoir refuses to distinguish between literary accounts, anecdotes, and what might be taken as more “expert” discourses about women such as psychoanalysis and biology, a technique central to her project of tearing down (de-essentializing) patriarchal myths. This strategy empowered second-wave feminists to construct new discourses about women to counter those from which women’s voices had largely been excluded.

Although *The Second Sex* has been an enormously influential text for feminist literary theory (even if its influence has often been tacit rather than explicit), it has not been without its critics, most of whom point to a masculinist bias in the text (seen as a result of Sartre’s influence). Beauvoir, critics argue, tends to define what men do as transcendent and what women do—childbearing, motherhood, housework—as necessarily immanent. Economic independence is seen as the cornerstone of women’s liberation, while both marriage and motherhood are disparaged as inauthentic choices. As Kristeva points out in “Women’s Time” (1979), Beauvoir is unable to imagine that motherhood might be an active and authentic choice—even a form of transcendence. Beauvoir also tends to generalize from her specific observations of white, middle-class, and well-educated European women to universal claims about all women. Despite these criticisms, *The Second Sex*, revolutionary in its own time, offers a powerful analysis of the status of women and remains a foundational text for feminist theory.

*From The Second Sex*¹*Volume I: Facts and Myths*

FROM PART THREE: MYTHS

CHAPTER 3

The myth of woman plays a significant role in literature; but what is its importance in everyday life? To what extent does it affect individual social customs and behavior? To reply to this question, we will need to specify the relation of this myth to reality.

There are different kinds of myths. This one, sublimating an immutable aspect of the human condition—that is, the “division” of humanity into two categories of individuals—is a static myth; it projects into a Platonic heaven² a reality grasped through experience or conceptualized from experience; for fact, value, significance, notion, and empirical law, it substitutes a transcendent Idea, timeless, immutable, and necessary. This idea escapes all contention because it is situated beyond the given; it is endowed with an absolute truth. Thus, to the dispersed, contingent, and multiple existence of *women*, mythic thinking opposes the Eternal Feminine, unique and fixed; if the definition given is contradicted by the behavior of real flesh-and-blood women, it is women who are wrong: it is said not that Femininity is [not] an entity but that women are not feminine. Experiential denials cannot do anything against myth. Though in a way, its source is in experience. It is thus true that woman is other than man, and this alterity is concretely felt in desire, embrace, and love; but the real relation is one of reciprocity; as such, it gives rise to authentic dramas: through eroticism, love, friendship, and their alternatives of disappointment, hatred, and rivalry, the relation is a struggle of consciousnesses, each of which wants to be essential, it is the recognition of freedoms that confirm each other, it is the undefined passage from enmity to complicity. To posit the Woman is to posit the absolute Other, without reciprocity, refusing, against experience, that she could be a subject, a peer.

In concrete reality, women manifest themselves in many different ways; but each of the myths built around woman tries to summarize her as a whole; each is supposed to be unique; the consequence of this is a multiplicity of incompatible myths, and men are perplexed before the strange inconsistencies of the idea of Femininity; as every woman enters into many of these archetypes, each of which claims to incarnate its Truth alone, men also find the same old confusion before their companions as did the Sophists,³ who had difficulty understanding how a person could be light and dark at the same time. The transition to the absolute shows up in social representations: relations are quickly fixed in classes, and roles in types, just as, for the child-like mentality, relations are fixed in things. For example, patriarchal society, focused on preserving the patrimony, necessarily implies, in addition to individuals who hold and transmit goods, the existence of men and women who

1. Translated by Constance Borde and Sheila Malovany-Chevallier.

2. That is, the realm of Forms or Ideas, transcendent entities in whose reality existing things (their imperfect representations) participate; on

the Greek philosopher PLATO (ca. 427–ca. 347 B.C.E.), see above.

3. Itinerant professional teachers of philosophy and especially rhetoric in 5th-century B.C.E. Greece (see GORGIAS, above).

wrest them from their owners and circulate them; men—adventurers, crooks, thieves, speculators—are generally repudiated by the group; women using their sexual attraction can lure young people and even family men into dissipating their patrimony, all within the law; they appropriate men's fortunes or seize their inheritance; this role being considered bad, women who play it are called "bad women." But in other families—those of their fathers, brothers, husbands, or lovers—they can in fact seem like guardian angels; the courtesan who swindles rich financiers is a patroness of painters and writers. The ambiguity of personalities like Aspasia and Mme de Pompadour⁴ is easy to understand as a concrete experience. But if woman is posited as the Praying Mantis, the Mandrake, or the Demon, then the mind reels to discover in her the Muse, the Goddess Mother, and Beatrice⁵ as well.

As group representation and social types are generally defined by pairs of opposite terms, ambivalence will appear to be an intrinsic property of the Eternal Feminine. The saintly mother has its correlation in the cruel step-mother, the angelic young girl has the perverse virgin: so Mother will be said sometimes to equal Life and sometimes Death, and every virgin is either a pure spirit or flesh possessed by the devil.

It is obviously not reality that dictates to society or individuals their choices between the two opposing principles of unification; in every period, in every case, society and individual decide according to their needs. Very often they project the values and institutions to which they adhere onto the myth they adopt. Thus paternalism that calls for woman to stay at home defines her as sentiment, interiority, and immanence; in fact, every existent is simultaneously immanence and transcendence;⁶ when he is offered no goal, or is prevented from reaching any goal, or denied the victory of it, his transcendence falls uselessly into the past, that is, it falls into immanence; this is the lot assigned to women in patriarchy; but this is in no way a vocation, any more than slavery is the slave's vocation. The development of this mythology is all too clear in Auguste Comte.⁷ To identify Woman with Altruism is to guarantee man absolute rights to her devotion; it is to impose on women a categorical must-be.

The myth must not be confused with the grasp of a signification; signification is immanent in the object; it is revealed to consciousness in a living experience, whereas the myth is a transcendent Idea that escapes any act of consciousness. When Michel Leiris⁸ in *L'âge d'homme* (*Manhood*) describes

4. Jeanne-Antoinette Poisson, marquise de Pompadour (1721–1764), influential mistress (from 1745 on) of the French king Louis XV and a notable patron of literature and the arts. Aspasia: mistress of the 5th-century B.C.E. Athenian statesman Pericles, a woman of considerable learning.

5. Beatrice Portinari, the daughter of a noble Florentine family, who died at the age of 24 in 1290; she provided the inspiration for much of DANTE's poetry, especially his masterpiece, *The Divine Comedy* (1321). Praying Mantis: in the first paragraph of *The Second Sex*, Beauvoir writes of "the female praying mantis and the spider, gorged on love, crushing their partners and devouring them up." Mandrake: a plant long used as both a narcotic and an aphrodisiac. Muse: in Greek mythology, one of the 9 daughters of Memory who preside over the arts and all intellectual pursuits. Goddess Mother: any of a variety of feminine deities and maternal

symbols of creativity, birth, fertility, sexual union, nurturing, and the cycle of growth. The term also has been applied to figures as diverse as the so-called Stone Age Venuses and the Virgin Mary.

6. All terms associated with existential philosophy. The *existent* is the subject of existentialism, the human actor whose subjectivity is shaped through human activity. Activity that achieves liberty is a mode of *transcendence*; without it, there is only *immanence*, stagnation and subjugation to given conditions.

7. French philosopher (1798–1857), known as the founder of sociology and of positivism; he idealized the role of women in society.

8. French writer (1901–1990), a pioneer in modern confessional literature and a noted anthropologist, poet, and art critic. His *L'âge d'homme* (1939, *Manhood: A Journey from Childhood into the Fierce Order of Virility*) was autobiographical.

his vision of female organs, he provides significations and does not develop a myth. Wonder at the feminine body and disgust for menstrual blood are apprehensions of a concrete reality. There is nothing mythical in the experience of discovering the voluptuous qualities of feminine flesh, and expressing these qualities by comparisons to flowers or pebbles does not turn them into myth. But to say that Woman is Flesh, to say that Flesh is Night and Death, or that she is the splendor of the cosmos, is to leave terrestrial truth behind and spin off into an empty sky. After all, man is also flesh for woman; and woman is other than a carnal object; and for each person and in each experience the flesh takes on singular significations. It is likewise perfectly true that woman—like man—is a being rooted in nature; she is more enslaved to the species than the male is, her animality is more manifest; but in her as in him, the given is taken on by existence; she also belongs to the human realm. Assimilating her with Nature is simply a prejudice.

Few myths have been more advantageous to the ruling master caste than this one: it justifies all its privileges and even authorizes taking advantage of them. Men do not have to care about alleviating the suffering and burdens that are physiologically women's lot since they are "intended by Nature"; they take this as a pretext to increase the misery of the woman's condition—for example, by denying woman the right to sexual pleasure, or making her work like a beast of burden.⁹

Of all these myths, none is more anchored in masculine hearts than the feminine "mystery." It has numerous advantages. And first it allows an easy explanation for anything that is inexplicable; the man who does not "understand" a woman is happy to replace his subjective deficiency with an objective resistance; instead of admitting his ignorance, he recognizes the presence of a mystery exterior to himself: here is an excuse that flatters his laziness and vanity at the same time. An infatuated heart thus avoids many disappointments: if the loved one's behavior is capricious, her remarks stupid, the mystery serves as an excuse. And thanks to the mystery, this negative relation that seemed to Kierkegaard¹ infinitely preferable to positive possession is perpetuated; faced with a living enigma, man remains alone: alone with his dreams, hopes, fears, love, vanity; this subjective game that can range from vice to mystical ecstasy is for many a more attractive experience than an authentic relation with a human being. Upon what bases does such a profitable illusion rest?

Surely, in a way, woman is mysterious, "mysterious like everyone," according to Maeterlinck.² Each one is subject only for himself; each one can grasp only his own self in his immanence; from this point of view, the other is always mystery. In men's view, the opacity of the for-itself³ is more fla-

9. Cf. Balzac: *Physiology of Marriage* [1830]: "Do not trouble yourself in any way about her murmurings, her cries, her pains; nature has made her for your use, made her to bear all: the children, the worries, the blows, and the sorrows of man. But do not accuse us of harshness. In the codes of all the so-called civilised nations, man has written the laws which rule the destiny of woman beneath this blood inscription: *Vae victis!* Woe to the vanquished" [Beauvoir's note]. Honoré de Balzac (1799–1850), French novelist renowned

for fictions of French middle-class society.

1. Søren Kierkegaard (1813–1855), Danish philosopher and religious thinker, a forerunner of existentialism.

2. Maurice Maeterlinck (1862–1949), Belgian poet, dramatist, and essayist, whose antinaturalist plays were precursors of the theater of the absurd.

3. The *pour-soi* (being-for-itself), an existentialist term that contrasts human consciousness with the being-in-itself (*en-soi*) of those creatures that lack consciousness.

grant in the feminine other; they are unable to penetrate her unique experience by any effect of sympathy; they are condemned to ignorance about the quality of woman's sexual pleasure, the discomforts of menstruation, and the pains of childbirth. The truth is that mystery is reciprocal: as another, and as a masculine other, there is also a presence closed on itself and impenetrable to woman in the heart of every man; she is without knowledge of male eroticism. But according to a universal rule already mentioned, the categories in which men think the world are constituted from *their point of view as absolutes*: they fail to understand reciprocity here as everywhere. As she is mystery for man, woman is regarded as mystery in herself.

It is true that her situation especially disposes her to be seen in this image. Her physiological destiny is very complex; she herself endures it as a foreign story; her body is not for her a clear expression of herself; she feels alienated from it; the link that for every individual joins physiological to psychic life—in other words, the relation between the facticity of an individual and the freedom that assumes it—is the most difficult enigma brought about by the human condition: for woman, this enigma is posed in the most disturbing way.

But what is called mystery is not the subjective solitude of consciousness, or the secret of organic life. The word's true meaning is found at the level of communication: it cannot be reduced to pure silence, to obscurity, to absence; it implies an emerging presence that fails to appear. To say that woman is mystery is to say not that she is silent but that her language is not heard; she is there, but hidden beneath veils; she exists beyond these uncertain appearances. Who is she? An angel, a demon, an inspiration, an actress? One supposes that either there are answers impossible to uncover or none is adequate because a fundamental ambiguity affects the feminine being; in her heart she is indefinable for herself: a sphinx.⁴

The fact is, deciding *who she is* would be quite awkward for her; the question has no answer; but it is not that the hidden truth is too fluctuating to be circumscribed; in this area there is no truth. An existent is nothing other than what he does; the possible does not exceed the real, essence does not precede existence: in his pure subjectivity, the human being is *nothing*. He is measured by his acts. It can be said that a peasant woman is a good or bad worker, that an actress has or does not have talent: but if a woman is considered in her immanent presence, absolutely nothing can be said about that, she is outside of the realm of qualification. Now, in amorous or conjugal relations and in all relations where woman is the vassal, the Other, she is grasped in her immanence. It is striking that the woman friend, colleague, or associate is without mystery; on the other hand, if the vassal is male and if, in front of an older and richer man or woman, a young man, for example, appears as the inessential object, he also is surrounded in mystery. And this uncovers for us an infrastructure of feminine mystery that is economic. A sentiment cannot *be* something, either. "In the domain of feeling, what is real is indistinguishable from what is imaginary," writes Gide.⁵

4. That is, an enigma; in Greek mythology, the sphinx was a monster with a woman's face, a lion's body, and a bird's wings whose riddle was finally answered by Oedipus.

5. André Gide (1869–1951), major French literary figure of the first half of the 20th century. Beauvoir quotes from chapter 8 of *Les Faux-Monnayeurs* (1925, *The Counterfeiters*).

"And it is sufficient to imagine one loves, in order to love, so it is sufficient to say to oneself that when one loves one imagines one loves, in order to love a little less." There is no discriminating between the imaginary and the real except through behavior. As man holds a privileged place in this world, he is the one who is able actively to display his love; very often he keeps the woman, or at least he helps her out; in marrying her, he gives her social status; he gives her gifts; his economic and social independence permits his endeavors and innovations: separated from Mme de Villeparisis, M. de Norpois⁶ takes twenty-four-hour trips to be with her; very often he is busy and she is idle: he *gives* her the time he spends with her; she takes it: with pleasure, passion, or simply for entertainment? Does she accept these benefits out of love or out of one interest? Does she love husband or marriage? Of course, even the proof man gives is ambiguous: Is such a gift given out of love or pity? But while normally woman finds numerous advantages in commerce with man, commerce with woman is profitable to man only inasmuch as he loves her. Thus, the degree of his attachment to her can be roughly estimated by his general attitude, while woman barely has the means to sound out her own heart; according to her moods she will take different points of view about her own feelings, and as long as she submits to them passively, no interpretation will be truer than another. In the very rare cases where it is she who holds the economic and social privileges, the mystery is reversed: this proves that it is not linked to *this* sex rather than to the other but to a situation. For many women, the roads to transcendence are blocked: because they *do* nothing, they do not make themselves *be* anything; they wonder indefinitely what they *could have* become, which leads them to wonder what they *are*: it is a useless questioning; if man fails to find that secret essence, it is simply because it does not exist. Kept at the margins of the world, woman cannot be defined objectively through this world, and her mystery conceals nothing but emptiness.

Furthermore, like all oppressed people, woman deliberately dissimulates her objective image; slave, servant, indigent, all those who depend upon a master's whims⁷ have learned to present him with an immutable smile or an enigmatic impassivity; they carefully hide their real feelings and behavior. Woman is also taught from adolescence to lie to men, to outsmart, to sidestep them. She approaches them with artificial expressions; she is prudent, hypocritical, playacting.

But feminine Mystery as recognized by mythical thinking is a more profound reality. In fact, it is immediately implied in the mythology of the absolute Other. If one grants that the inessential consciousness is also a transparent subjectivity, capable of carrying out the *cogito*,⁸ one grants that it is truly sovereign and reverts to the essential; for all reciprocity to seem impossible, it is necessary that the Other be another for itself, that its very subjectivity be affected by alterity; this consciousness, which would be alienated as consciousness, in its pure immanent presence, would obviously

6. Two characters in Marcel Proust's 7-volume novel, *À la recherche du temps perdu* (1913–27, *In Search of Lost Time* [first translated into English as *Remembrance of Things Past*]).

7. An allusion to the famous Master-Slave dialectic of GEORG WILHELM FRIEDRICH HEGEL (1770–

1831), described in his *Phenomenology of Spirit* (1807; see above).

8. I think (Latin); an allusion to the French philosopher René Descartes (1596–1650), whose most fundamental proposition was "*cogito, ergo sum*" (I think, therefore I am).

be a Mystery; it would be a Mystery in itself because it would be it for itself; it would be absolute Mystery. It is thus that, beyond the secrecy their dissimulation creates, there is a mystery of the Black, of the Yellow, insofar as they are considered absolutely as the inessential Other. It must be noted that the American citizen who deeply confounds the average European is nonetheless not considered "mysterious": one more modestly claims not to understand him; likewise, woman does not always "understand" man, but there is no masculine mystery; the fact is that rich America and the male are on the side of the Master, and Mystery belongs to the slave.

Of course, one can only dream about the positive reality of the Mystery in the twilight of bad faith;⁹ like certain marginal hallucinations, it dissolves once one tries to pin it down. Literature always fails to depict "mysterious" women; they can only appear at the beginning of a novel as strange and enigmatic; but unless the story remains unfinished, they give up their secret in the end and become consistent and translucent characters. The heroes in Peter Cheyney's¹ books, for example, never cease to be amazed by women's unpredictable caprices; one can never guess how they will behave, they confound all calculations; in truth, as soon as the workings of their actions are exposed to the reader, they are seen as very simple mechanisms: this one is a spy or that one a thief; however clever the intrigue, there is always a key, and it could not be otherwise, even if the author had all the talent, all the imagination possible. Mystery is never more than a mirage; it vanishes as soon as one tries to approach it.

Thus we see that myths are explained in large part by the use man makes of them. The myth of the woman is a luxury. It can appear only if man escapes the imperious influence of his needs; the more relations are lived concretely, the less idealized they are. The fellah in ancient Egypt, the bedouin² peasant, the medieval artisan, and the worker of today, in their work needs and their poverty, have relations with the particular woman who is their companion that are too basic for them to embellish her with an auspicious or fatal aura. Eras and social classes that had the leisure to daydream were the ones who created the black-and-white statues of femininity. But luxury also has its usefulness; these dreams were imperiously guided by interest. Yes, most myths have their roots in man's spontaneous attitude to his own existence and the world that invests it: but the move to surpass experience toward the transcendent Idea was deliberately effected by patriarchal society for the end of self-justification; through myths, this society imposed its laws and customs on individuals in an imagistic and sensible way; it is in a mythical form that the group imperative insinuated itself into each consciousness. By way of religions, traditions, language, tales, songs, and film, myths penetrate even into the existence of those most harshly subjected to material realities. Everyone can draw on myth to sublimate his own modest experiences: betrayed by a woman he loves, one man calls her a slut; another is obsessed by his own virile impotence: this woman is a praying mantis; yet another takes pleasure in his wife's company: here we

9. An existentialist term referring to the effort to avoid the responsibility of one's own freedom by denying its full extent.

1. English writer of detective fiction (1896–1951).

2. Arabic-speaking pastoral nomad of the Middle East and North Africa. "Fellah": agricultural laborer (Arabic), as opposed to a nomadic desert dweller.

have Harmony, Repose, Mother Earth. The taste for eternity at bargain prices and for a handy, pocket-sized absolute, seen in most men, is satisfied by myths. The least emotion, a small disagreement, become the reflection of a timeless Idea; this illusion comfortably flatters one's vanity.

The myth is one of those traps of false objectivity into which the spirit of seriousness falls headlong. It is once again a matter of replacing lived experience and the free judgments of experience it requires by a static idol. The myth of Woman substitutes for an authentic relationship with an autonomous existent the immobile contemplation of a mirage. "Mirage! Mirage! Kill them since we cannot seize them; or else reassure them, instruct them, help them give up their taste for jewelry, make them real equal companions, our intimate friends, associates in the here and now, dress them differently, cut their hair, tell them everything," cried Laforgue.³ Man would have nothing to lose, quite the contrary, if he stopped disguising woman as a symbol. Dreams, when collective and controlled—clichés—are so poor and monotonous compared to living reality: for the real dreamer, for the poet, living reality is a far more generous resource than a worn-out fantasy. The times when women were the most sincerely cherished were not courtly feudal ones, nor the gallant nineteenth century; they were the times—the eighteenth century, for example—when men regarded women as their peers; this is when women looked truly romantic: only read *Les liaisons dangereuses* (*Dangerous Liaisons*), *Le rouge et le noir* (*The Red and the Black*), or *A Farewell to Arms* to realize this. Laclos' heroines like Stendhal's and Hemingway's⁴ are without mystery: and they are no less engaging for it. To recognize a human being in a woman is not to impoverish man's experience: that experience would lose none of its diversity, its richness, or its intensity if it was taken on in its intersubjectivity; to reject myths is not to destroy all dramatic relations between the sexes, it is not to deny the significations authentically revealed to man through feminine reality; it is not to eliminate poetry, love, adventure, happiness, and dreams: it is only to ask that behavior, feelings, and passion be grounded in truth.⁵

"Woman is lost. Where are the women? Today's women are not women"; we have seen what these mysterious slogans mean. In the eyes of men—and of the legions of women who see through these eyes—it is not enough to have a woman's body or to take on the female function as lover and mother to be a "real woman"; it is possible for the subject to claim autonomy through sexuality and maternity; the "real woman" is one who accepts herself as Other. The duplicitous attitude of men today creates a painful split for women; they accept, for the most part, that woman be a peer, an equal; and yet they continue to oblige her to remain the inessential; for her, these two destinies are not reconcilable; she hesitates between them without being

3. Jules Laforgue (1860–1887), French symbolist poet. Here and in note 5 below, Beauvoir quotes from his essay "Sur la femme" ("On Woman"), in *Melanges Posthumes* (1903).

4. The authors of the three novels named: the French Pierre Choderlos de Laclos (1741–1803) wrote *Dangerous Liaisons* (1782); the French Stendhal, pen name of Henri-Marie Beyle (1783–1842), wrote *The Red and the Black* (1830); and the American Ernest Hemingway (1899–1961)

wrote *A Farewell to Arms* (1929).

5. Laforgue goes on to say about woman: "Since she has been left in slavery, idleness, without arms other than her sex, she has overdeveloped it and has become the Feminine . . . we have permitted her to overdevelop; she is here on the earth for us. . . . Well, that is all wrong . . . we have played doll with the woman until now. This has gone on too long!" [Beauvoir's note].

exactly suited to either, and that is the source of her lack of balance. For man, there is no hiatus between public and private life: the more he asserts his grasp on the world through action and work, the more virile he looks; human and vital characteristics are merged in him; but women's own successes are in contradiction with her femininity since the "real woman" is required to make herself object, to be the Other. It is very possible that on this point even men's sensibility and sexuality are changing. A new aesthetic has already been born. Although the fashion for flat chests and narrow hips—the boyish woman—only lasted a short while, the opulent ideal of past centuries has nevertheless not returned. The feminine body is expected to be flesh, but discreetly so; it must be slim and not burdened with fat; toned, supple, robust, it has to suggest transcendence; it is preferred tanned, having been bared to a universal sun like a worker's torso, not white like a hothouse plant. Woman's clothes, in becoming more practical, have not made her look asexual: on the contrary, short skirts have shown off her legs and thighs more than before. There is no reason for work to deprive her of her erotic appeal. To see woman as both a social person and carnal prey can be disturbing: in a recent series of drawings by Peynet,⁶ there is a young fiancé deserting his fiancée because he was seduced by the pretty mayoress about to celebrate the marriage; that a woman could hold a "man's office" and still be desirable has long been a subject of more or less dirty jokes; little by little, scandal and irony have lost their bite and a new form of eroticism seems to be coming about: perhaps it will produce new myths.

What is certain is that today it is very difficult for women to assume both their status of autonomous individual and their feminine destiny; here is the source of the awkwardness and discomfort that sometimes leads them to be considered "a lost sex." And without doubt it is more comfortable to endure blind bondage than to work for one's liberation; the dead, too, are better suited to the earth than the living. In any case, turning back is no more possible than desirable. What must be hoped is that men will assume, without reserve, the situation being created; only then can women experience it without being torn. Then will Laforgue's wish be fulfilled: "O young women, when will you be our brothers, our closest brothers without ulterior motives of exploitation? When will we give to each other a true handshake?" Then "Melusina, no longer under the burden of the fate unleashed on her by man alone, Melusina rescued," will find "her human base."⁷ Then will she fully be a human being, "when woman's infinite servitude is broken, when she lives for herself and by herself, man—abominable until now—giving her her freedom."⁸

1949

6. November 1948 [Beauvoir's note]. Raymond Peynet (1909–1999), French graphic artist and designer.

7. Breton, *Arcanum* 17 [Beauvoir's note]. André Breton (1896–1966), French surrealist poet, essayist, critic, and editor. In the legends of Brit-

tany, Melusina was part sea serpent and part woman.

8. Rimbaud, to Paul Demeny, May 15, 1871 [Beauvoir's note]. Arthur Rimbaud (1854–1891), French symbolist poet. Demeny (1844–1918), French poet.

CLAUDE LÉVI-STRAUSS

1908–2009

The French anthropologist Claude Lévi-Strauss is most famous for his role in the cross-disciplinary phenomenon known as “structuralism” that came to prominence in the late 1950s and reached its peak of popularity in the late 1960s. Taking inspiration from FERDINAND DE SAUSSURE (1857–1913), who had defined language as a system of signs and linguistics as a branch of semiology (the larger science of all signs), Lévi-Strauss argued that the objects of social anthropology—cultural phenomena such as kinship systems and rituals—consist of communications, not just functions. Focusing both on the role of unconscious structures in western European cultural practices and on the meaningful order informing what had appeared to earlier Western observers as the purely irrational or instinct-driven customs of so-called primitive peoples, he simultaneously proclaimed the death of the Enlightenment concept of “Man” and posited a kind of universal mind. Reframing anthropology as a study of Culture rather than cultures, Lévi-Strauss underscored the discipline’s implications for history, politics, art, literature, economics, and philosophy, dramatically transforming anthropology’s profile in the academy. Within the discipline many scholars contested the empirical validity of his analyses of kinship, totemism, and myth and accused Lévi-Strauss of engaging in a kind of metaphysical colonization. Nevertheless, his adoption of linguistic metaphors and methods and his acute self-consciousness about the role of the ethnographer have had a lasting impact on the practice of anthropology proper and on the humanities and social sciences more generally. Though the structuralist method that Lévi-Strauss pioneered has been superseded, the analogy he proposed—that cultural phenomena constitute exchanges of messages and that cultural codes may be analyzed as languages—remains a tacit working assumption of many forms of cultural theory.

While Lévi-Strauss may be the best-known and most broadly influential anthropologist of the twentieth century, he never received formal academic training in the study of other cultures (ethnology). Born in Brussels, son of a painter and grandson of a rabbi, he grew up primarily in Paris. Having pursued studies in philosophy and law and passed the prestigious *agrégation* exam in philosophy in 1931 (along with fellow students Maurice Merleau-Ponty and SIMONE DE BEAUVOIR), he went on to spend a couple of years teaching philosophy in provincial secondary schools; but he soon became disaffected with that discipline. Evincing a bias that JACQUES DERRIDA was later to remark on, he complained of philosophy that “the signifier did not relate to any signified; there was no referent” (*Tristes Tropiques*, 1955). Yet more empirically oriented anthropologists reproached Lévi-Strauss for failing to leave philosophy far enough behind. While his criticisms of philosophy seem implicitly to extol the virtues of firsthand observation, Lévi-Strauss later claimed to have “realized early on that [he] was a library man, not a fieldworker,” and he suggested that “fieldwork is a kind of ‘women’s work’” for which he had “neither the interest nor the patience” (Eribon, *Conversations*, 1988). Indeed, he was to spend relatively little time among the people whose cultures he studied, instead drawing heavily on others’ ethnographic data.

Lévi-Strauss conducted the fieldwork on which much of his later work was based between 1935 and 1938, during breaks from teaching sociology at the newly created University of São Paulo in Brazil. *Tristes Tropiques*, from which our selection is taken, was written almost twenty years later; it is among other things an autobiographical account of his expeditions into the Brazilian interior, where he sojourned among the Bororo, Caduveo, Nambikwara, and Tupi-Kawahib peoples. Lévi-Strauss returned to France in 1939 but the following year was dismissed from his teaching post: the racial

laws of the Vichy government of occupied France decreed him ineligible to teach because he was a Jew. In 1941, with the help of an aunt living in the United States and a Rockefeller Foundation program to assist European scientists and scholars threatened by World War II, he was able to obtain an exit visa to travel to New York, where he was offered a position at the New School for Social Research.

In New York Lévi-Strauss met the Russian ROMAN JAKOBSON and attended his lectures on linguistics. This encounter affected him as a "revelation": "Jakobson revealed to me the existence of a body of doctrine that had already been formed within a discipline, linguistics, with which I was unacquainted" (Eribon, *Conversations*). Jakobson was elaborating Saussurean linguistics, with its proposition that language does not consist of positive terms with meaning in and of themselves, but instead is a system of relations in which each term is defined by its difference from other terms. Suggesting that "the kinship system is a language," Lévi-Strauss proposed adapting the methods of structural linguistics to the analysis of kinship and other cultural phenomena. He pursued this semiological project in his doctoral thesis at the Sorbonne, published as *The Elementary Structures of Kinship* (1949). In his view, the prohibition of incest, which seems to be a universal rule in human society, is designed not to ward off biological or psychological damage but to make women available for "trade" by men of their group with men of other groups. Extending the argument of Marcel Mauss, who in *The Gift* (1925) had emphasized the symbolic rather than the economic value of gifts exchanged, Lévi-Strauss suggests that gift giving in general and wife trafficking in particular are above all modes of communication. In other words, women and other gifts are traded as words are exchanged in conversation; the fact that in matrimonial exchange "the mediating factor . . . should be the *women of the group*, who are *circulated* between clans, lineages, or families, in place of the *words of the group*, which are *circulated* between individuals, does not at all change the fact that the essential aspect of the phenomenon is identical in both cases" (*Structural Anthropology*, 1958).

As the feminist theorists Teresa de Lauretis and GAYLE RUBIN have observed, this way of reading kinship systems excludes women from the role of cultural *agents*, treating them only as cultural *objects*. In addition, Lévi-Strauss's account of the origin of culture through the exchange of female "valuables *par excellence*" puts the symbolization and subordination of women at the root of culture. Theorists of gender and sexuality have found the critique of Lévi-Strauss's blind spot a useful starting point in challenging the naturalization of gender hierarchy.

The interest of literary theorists was initially attracted by Lévi-Strauss's work in mythology. His writings about myth were first published in book form in the manifesto-like *Structural Anthropology* and later in a four-volume collection, *Mythologiques* (1964–71). These and later writings focus not on what myths *mean*, but on what they *do*. What they do, he argues, is to make a story out of fundamental and irresolvable human contradictions or enigmas (for example, the differences between humans and animals, life and death, one and two). They layer many different versions of the same contradiction on top of each other, so that in essence a myth is "three-dimensional," not linear. It might be useful here to compare the structural analysis of myth by Lévi-Strauss to the "morphological" study of folktales by the Russian formalist Vladimir Propp (1895–1970), since both kinds of analysis influenced structuralism. Propp studied a large number of Russian folktales and found that despite their differences, they all made use of a small number of functions (hero, helper, villain, test, prohibition, etc.) arranged in a predictable order. Narrative order was a function of unfolding linear time: the narrative had a beginning, a middle, and an end. For Lévi-Strauss, in contrast, the linear (or diachronic) ordering of a myth is less important than the systematic (or synchronic) pattern of repetitions, which can exist in different versions or different arrangements without disturbing the mythic system (he foresaw how useful computer analysis would be to this kind of study). In a famous essay, first pub-

lished in English in 1955, titled "The Structural Study of Myth," Lévi-Strauss applied his method to the myth of Oedipus. Myths make order out of the simultaneity of conflicting theories: they narrate over, without resolving, a cultural contradiction.

The essay was published in the same year as his influential book *Tristes Tropiques*, a year that marked a turning point for Lévi-Strauss. After two failed attempts to be appointed to France's prestigious Collège de France, in 1959 he was appointed to the first chair in social anthropology; in 1973 he was elected to the French Academy. Lévi-Strauss, who had always considered himself an outsider, had become the consummate insider.

Written twenty years after the fieldwork on which it is based, *Tristes Tropiques* was an instant sensation and Lévi-Strauss became a best-selling author. It was first published in English in 1961 as *A World on the Wane* (with several chapters omitted); the book appeared in a more complete translation that dates from 1973 and leaves the title in French (literally, "sad tropics"). *Tristes Tropiques* began as a novel, became an autobiography, and ended up an account of an exoticized journey just like those Lévi-Strauss feared it would resemble. The book's first sentence is "I hate travelling and explorers." Praised as a masterpiece by such leading critics as SUSAN SONTAG and George Steiner, loved and hated by a generation of anthropologists, and made into an opera in 1996 with libretto by the French feminist Catherine Clément and music by Georges Aperghis, *Tristes Tropiques* is a unique and symptomatic book. The sadness of its title comes from the unbearable loss of all societies previously uncontaminated by Western intrusions. But the desire to find and document such societies is a form of the very same evil that has already violated them: "Not content with having eliminated savage life, and unaware even of having done so, it [the Western public] feels the need feverishly to appease the nostalgic cannibalism of history with the shadows of those that history has already destroyed." Lamenting the blindness of the West, Lévi-Strauss also personifies it—an irony he recognizes.

Our selection from the work, "A Writing Lesson," shows Lévi-Strauss in all of his dimensions. Constantly baffled, lost, and nervous, yet confident in the intuitions of his own mind, he narrates a succession of encounters with the Nambikwara societies he tries to understand. His skill as a narrator is to make the reader feel that a great deal is not being understood and, at the same time, that all of human life is at stake. Something of the fictional power of writing is unmasked when Lévi-Strauss's wife contracts an eye disease and has to be evacuated. This is the only mention of her presence. The "eye disease" affects Lévi-Strauss's own narrative eye, previously so solitary and single: it reveals that Lévi-Strauss is not a lone fieldworker but part of a group of Westerners that had remained invisible. The chapter thus illustrates the manipulations of writing that it discusses in its central passages.

When an unpopular chief pretends to his people that he knows how to write, Lévi-Strauss launches into a famous meditation on the role of writing in world history. His theory of writing (discussed by Derrida in his poststructuralist *Of Grammatology*) can be usefully compared to PLATO's censorious myth of writing in the *Phaedrus* (see above; see also Derrida's comments on Plato in *Dissemination*). Writing, concludes Lévi-Strauss, is a technology for mass exploitation, a point MICHEL FOUCAULT would develop in his *Discipline and Punish* (1975). But the apparent anti-Western animus in Lévi-Strauss's remarks depends on a concept of societies without writing, an idealization of innocence lost, that is tied to an entirely Western fantasy he both attacks and prolongs: the fantasy of the noble savage.

It is tempting to apply Lévi-Strauss's theory of myths to his own multilayered writing in *Tristes Tropiques*, as Clifford Geertz (in *Works and Lives*, 1988) and Cleo McNelly (in "Natives, Women, and Claude Lévi-Strauss," 1975), in different ways, have done. What is the contradiction that Lévi-Strauss himself is covering over? One answer is suggested by his publication of "The Structural Study of Myth" at the same time as *Tristes Tropiques*. While *Tristes Tropiques* expresses the pain and mourns the

destructive impact of Western civilization on non-Western people, the study of myth sees the different moments of human history as structurally simultaneous. On the one hand, this allows for a cultural relativism that enables Lévi-Strauss to contest any narrative of “progress,” with its concomitant belief in the superiority of the modern. But on the other hand, it makes the destruction of “primitive” societies *total* so as to internalize the lost object. In seeing “neolithic” structures as located *within* modern civilization, he is papering over loss (and also survival) through incorporation. It is no longer necessary to mourn, because in a sense nothing is lost: the “savage” is internalized in the deep structures of “all” thought. Yet such structural consolation remains haunted by the history and remainders it represses. In *Tristes Tropiques*, Lévi-Strauss gives voice to that haunting.

*From Tristes Tropiques*¹

Chapter 28. A Writing Lesson

I was keen to find out, at least indirectly, the approximate size of the Nambikwara² population. In 1915, Rondon³ had suggested a figure of twenty thousand, which was probably too high an estimate; but at that time, each group comprised several hundred members, and, according to information I had picked up along the line, there had since been a rapid decline. Thirty years ago, the known fraction of the Sabané⁴ group comprised more than a thousand individuals; when the group visited the telegraph station at Campos Novos⁵ in 1928, a hundred and twenty-seven men were counted in addition to women and children. However, in 1929 an influenza epidemic broke out when the group was camping in a locality known as Espirro. The illness developed into a form of pulmonary oedema⁶ and, within forty-eight hours, three hundred natives had died. The group broke up, leaving the sick and the dying behind. Of the thousand Sabané who were once known to exist, there remained in 1938 only nineteen men with their women and children. These figures are perhaps to be explained, not only by the epidemic, but also by the fact that, a few years before, the Sabané had started a war against some of their eastern neighbours. But a large group, which had settled not far from Tres Buritis,⁷ was wiped out by a flu epidemic in 1927, with the exception of six or seven individuals, of whom only three were still alive in 1938. The Tarundé⁸ group, which was once one of the largest, numbered only twelve men (plus the women and children) in 1936; of these twelve men four survived in 1939.

Now, there were perhaps no more than two thousand natives scattered across the area. A systematic census was out of the question, because of the

1. Translated by John and Doreen Weightman.

2. A tribe of hunter-gatherers who live scattered in villages, primarily in Amazon rain forests in central Brazil.

3. Cândido Mariano da Silva Rondon (1865–1958), a Brazilian army engineer who “discovered” the Nambikwara in 1907 when he entered their territory to supervise construction of a telegraph line.

4. A language of the Nambikwara linguistic fam-

ily; also, the subgroup of Nambikwara who speak this dialect.

5. A Brazilian settlement that was established on the telegraph line built through the Nambikwara territory.

6. That is, edema: accumulation of fluids.

7. Another Brazilian settlement built on the telegraph line.

8. A subgroup of the Nambikwara tribe (later anthropologists found no trace of this name).

permanent hostility shown by certain groups and the fact that all groups were on the move during the nomadic period. But I tried to persuade my Utiarity⁹ friends to take me to their village, after organizing some kind of meeting there with other groups to whom they were related either by kinship or marriage; in this way I would be able to gauge the size of a contemporary gathering and compare it in this respect with those previously observed. I promised to bring presents and to engage in barter. The chief of the group was rather reluctant to comply with my request: he was not sure of his guests, and if my companions and myself were to disappear in an area where no white men had set foot since the murder of the seven telegraph employees in 1925, the precarious peace which had prevailed since then might well be endangered for some time to come.

He finally agreed on condition that we reduced the size of our expedition, taking only four oxen to carry the presents. Even so, it would be impossible to follow the usual tracks along the valley bottoms where the vegetation was too dense for the animals to get through. We would have to go across the plateaux following a route specially worked out for the occasion.

In retrospect, this journey, which was an extremely hazardous one, seems to me now to have been like some grotesque interlude. We had hardly left Juruena¹ when my Brazilian companion noticed that the women and children were not with us: we were accompanied only by the men, armed with bows and arrows. In travel books, such circumstances mean that an attack is imminent. So we moved ahead with mixed feelings, checking the position of our Smith-and-Wesson revolvers (our men pronounced the name as 'Cemite Vechetone') and our rifles from time to time. Our fears proved groundless: about midday we caught up with the rest of the group, whom the chief had taken the precaution of sending off the previous evening, knowing that our mules would advance more quickly than the basket-carrying women, whose pace was further slowed down by the children.

A little later, however, the Indians lost their way: the new route was not as straightforward as they had imagined. Towards evening we had to stop in the bush; we had been told that there would be game to shoot; the natives were relying on our rifles and had brought nothing with them; we only had emergency provisions, which could not possibly be shared out among everybody. A herd of deer grazing around a water-hole fled at our approach. The next morning, there was widespread discontent, openly directed against the chief who was held responsible for a plan he and I had devised together. Instead of setting out on a hunting or collecting expedition, all the natives decided to lie down under the shelters, leaving the chief to discover the solution to the problem. He disappeared along with one of his wives; towards evening we saw them both return, their heavy baskets full of the grasshoppers they had spent the entire day collecting. Although crushed grasshopper is considered rather poor fare, the natives all ate heartily and recovered their spirits. We set off again the following morning.

At last we reached the appointed meeting-place. It was a sandy terrace overlooking a stream lined with trees, between which lay half-hidden native gardens. Groups arrived intermittently. Towards evening, there were seventy-

9. The site of another telegraph station in Nambikwara territory.

1. The site of a telegraph station on the edge of Nambikwara territory.

five persons representing seventeen families, all grouped together under thirteen shelters hardly more substantial than those to be found in native camps. It was explained to me that, during the rainy season, all these people would be housed in five round huts built to last for some months. Several of the natives appeared never to have seen a white man before and their surly attitude and the chief's edginess suggested that he had persuaded them to come rather against their will. We did not feel safe, nor did the Indians. The night promised to be cold, and as there were no trees on the terrace, we had to lie down like the Nambikwara on the bare earth. Nobody slept: the hours were spent keeping a close but polite watch on each other.

It would have been unwise to prolong such a dangerous situation, so I urged the chief to proceed without further delay to the exchange of gifts. It was at this point that there occurred an extraordinary incident that I can only explain by going back a little. It is unnecessary to point out that the Nambikwara have no written language, but they do not know how to draw either, apart from making a few dotted lines or zigzags on their gourds. Nevertheless, as I had done among the Caduveo² I handed out sheets of paper and pencils. At first they did nothing with them, then one day I saw that they were all busy drawing wavy, horizontal lines. I wondered what they were trying to do, then it was suddenly borne upon me that they were writing or, to be more accurate, were trying to use their pencils in the same way as I did mine, which was the only way they could conceive of, because I had not yet tried to amuse them with my drawings. The majority did this and no more, but the chief had further ambitions. No doubt he was the only one who had grasped the purpose of writing. So he asked me for a writing-pad, and when we both had one, and were working together, if I asked for information on a given point, he did not supply it verbally but drew wavy lines on his paper and presented them to me, as if I could read his reply. He was half taken in by his own make-believe; each time he completed a line, he examined it anxiously as if expecting the meaning to leap from the page, and the same look of disappointment came over his face. But he never admitted this, and there was a tacit understanding between us to the effect that his unintelligible scribbling had a meaning which I pretended to decipher; his verbal commentary followed almost at once, relieving me of the need to ask for explanations.

As soon as he had got the company together, he took from a basket a piece of paper covered with wavy lines and made a show of reading it, pretending to hesitate as he checked on it the list of objects I was to give in exchange for the presents offered me: so-and-so was to have a chopper in exchange for a bow and arrows, someone else beads in exchange for his necklaces . . . This farce went on for two hours. Was he perhaps hoping to delude himself? More probably he wanted to astonish his companions, to convince them that he was acting as an intermediary agent for the exchange of the goods, that he was in alliance with the white man and shared his secrets. We were eager to be off, since the most dangerous point would obviously be reached when all the marvels I had brought had been transferred to native hands. So I did not try to explore the matter further, and we began the return journey with the Indians still acting as our guides.

2. Another tribe living in Brazil.

The abortive meeting and the piece of humbug of which I had unwittingly been the cause had created an atmosphere of irritation; to make matters worse, my mule had ulcers in its mouth which were causing it pain. It either rushed impatiently ahead or came to a sudden stop; the two of us fell out. Suddenly, before I realized what was happening, I found myself alone in the bush, with no idea which way to go.

Travel books tell us that the thing to do is attract the attention of the main party by firing a shot. I got down from my mount and fired. No response. At the second shot I seemed to hear a reply. I fired a third, the only effect of which was to frighten the mule; it trotted off and stopped some distance away.

I systematically divested myself of my weapons and photographic equipment and laid them all at the foot of a tree, carefully noting its position. Then I ran off to recapture my mule, which I had glimpsed in the distance, seemingly in docile mood. It waited till I got near, then fled just as I was about to seize the reins, repeating this little game several times and leading me further and further on. In despair I took a leap and hung on to its tail with both hands. Surprised at this unwonted procedure, it made no further attempt to escape from me. I climbed back into the saddle and tried to return to collect my equipment, but we had wandered round so much that I was unable to find it.

Disheartened by the loss, I then decided to try and rejoin the caravan. Neither the mule nor I knew which way it had gone. Either I would decide on one direction which the mule was reluctant to follow, or I would let it have its head, and it would start going round in circles. The sun was sinking towards the horizon, I had lost my weapons and at any moment I expected to be pierced by a shower of arrows. I might not be the first person to have entered that hostile area, but my predecessors had not returned, and, irrespective of myself, my mule would be a most desirable prey for people whose food supplies were scanty. While turning these sombre thoughts over and over in my mind, I waited for the sun to set, my plan being to start a bush fire, since at least I had some matches. Just when I was about to do this, I heard voices: two Nambikwara had turned back as soon as my absence was noticed and had been following my trail since midday; for them, finding my equipment was child's play. They led me back through the darkness to the encampment, where the others were waiting.

Being still perturbed by this stupid incident, I slept badly and whiled away the sleepless hours by thinking over the episode of the exchange of gifts. Writing had, on that occasion, made its appearance among the Nambikwara but not, as one might have imagined, as a result of long and laborious training. It had been borrowed as a symbol, and for a sociological rather than an intellectual purpose, while its reality remained unknown. It had not been a question of acquiring knowledge, of remembering or understanding, but rather of increasing the authority and prestige of one individual—or function—at the expense of others. A native still living in the Stone Age had guessed that this great means towards understanding, even if he was unable to understand it, could be made to serve other purposes. After all, for thousands of years, writing has existed as an institution—and such is still the case today in a large part of the world—in societies the majority of whose members have never learnt to handle it. The inhabitants of the villages

I stayed in in the Chittagong hills in eastern Pakistan were illiterate, but each village had its scribe who acted on behalf of individuals or of the community as a whole. All the villagers know about writing, and make use of it if the need arises, but they do so from the outside, as if it were a foreign mediatory agent that they communicate with by oral methods. The scribe is rarely a functionary or employee of the group: his knowledge is accompanied by power, with the result that the same individual is often both scribe and money-lender; not just because he needs to be able to read and write to carry on his business, but because he thus happens to be, on two different counts, someone who *has a hold* over others.

Writing is a strange invention. One might suppose that its emergence could not fail to bring about profound changes in the conditions of human existence, and that these transformations must of necessity be of an intellectual nature. The possession of writing vastly increases man's ability to preserve knowledge. It can be thought of as an artificial memory, the development of which ought to lead to a clearer awareness of the past, and hence to a greater ability to organize both the present and the future. After eliminating all other criteria which have been put forward to distinguish between barbarism and civilization, it is tempting to retain this one at least: there are peoples with, or without, writing; the former are able to store up their past achievements and to move with ever-increasing rapidity towards the goal they have set themselves, whereas the latter, being incapable of remembering the past beyond the narrow margin of individual memory, seem bound to remain imprisoned in a fluctuating history which will always lack both a beginning and any lasting awareness of an aim.

Yet nothing we know about writing and the part it has played in man's evolution justifies this view. One of the most creative periods in the history of mankind occurred during the early stages of the neolithic age, which was responsible for agriculture, the domestication of animals and various arts and crafts. This stage could only have been reached if, for thousands of years, small communities had been observing, experimenting and handing on their findings. This great development was carried out with an accuracy and a continuity which are proved by its success, although writing was still unknown at the time. If writing was invented between 4000 and 3000 B.C., it must be looked upon as an already remote (and no doubt indirect) result of the neolithic revolution, but certainly not as the necessary precondition for it. If we ask ourselves what great innovation writing was linked to, there is little we can suggest on the technical level, apart from architecture. But Egyptian and Sumerian architecture was not superior to the achievements of certain American peoples who knew nothing of writing in the pre-Columbian period. Conversely, from the invention of writing right up to the birth of modern science, the world lived through some five thousand years when knowledge fluctuated more than it increased. It has often been pointed out that the way of life of a Greek or Roman citizen was not so very different from that of an eighteenth-century middle-class European. During the neolithic age, mankind made gigantic strides without the help of writing; with writing, the historic civilizations of the West stagnated for a long time. It would no doubt be difficult to imagine the expansion of science in the nineteenth and twentieth centuries without writing. But, although a necessary precondition, it is certainly not enough to explain the expansion.

To establish a correlation between the emergence of writing and certain characteristic features of civilization, we must look in a quite different direction. The only phenomenon with which writing has always been concomitant is the creation of cities and empires, that is, the integration of large numbers of individuals into a political system, and their grading into castes or classes. Such, at any rate, is the typical pattern of development to be observed from Egypt to China, at the time when writing first emerged: it seems to have favoured the exploitation of human beings rather than their enlightenment. This exploitation, which made it possible to assemble thousands of workers and force them to carry out exhausting tasks, is a much more likely explanation of the birth of architecture than the direct link referred to above. My hypothesis, if correct, would oblige us to recognize the fact that the primary function of written communication is to facilitate slavery. The use of writing for disinterested purposes, and as a source of intellectual and aesthetic pleasure, is a secondary result, and more often than not it may even be turned into a means of strengthening, justifying or concealing the other.

There are, nevertheless, exceptions to the rule: there were native empires in Africa which grouped together several hundreds of thousands of subjects; millions lived under the Inca empire in pre-Columbian America. But in both continents such attempts at empire building did not produce lasting results. We know that the Inca empire was established around the twelfth century: Pizarro's³ soldiers would not have conquered it so easily, three centuries later, had they not found it in a state of advanced decay. Although we know little about ancient African history, we can sense that the situation must have been similar: great political groupings came into being and then vanished again within the space of a few decades. It is possible, then, that these examples confirm the hypothesis, instead of contradicting it. Although writing may not have been enough to consolidate knowledge, it was perhaps indispensable for the strengthening of dominion. If we look at the situation nearer home, we see that the systematic development of compulsory education in the European countries goes hand in hand with the extension of military service and proletarianization. The fight against illiteracy is therefore connected with an increase in governmental authority over the citizens. Everyone must be able to read, so that the government can say: Ignorance of the law is no excuse.

The process has moved from the national to the international level, thanks to a kind of complicity that has grown up between newly created states—which find themselves facing problems which we had to cope with a hundred or two hundred years ago—and an international society of privileged countries worried by the possibility of its stability being threatened by the reactions of peoples insufficiently trained in the use of the written word to think in slogans that can be modified at will or to be an easy prey to suggestion. Through gaining access to the knowledge stored in libraries, these peoples have also become vulnerable to the still greater proportion of lies propagated in printed documents. No doubt, there can be no turning back now. But in my Nambikwara village, the insubordinate characters were the most sensible. The villagers who withdrew their allegiance to their chief after he had

3. Francisco Pizarro (ca. 1475–1541), a Spanish explorer and colonizer who conquered the Inca empire in western South America.

tried to exploit a feature of civilization (after my visit he was abandoned by most of his people) felt in some obscure way that writing and deceit had penetrated simultaneously into their midst. They went off into a more remote area of the bush to allow themselves a period of respite. Yet at the same time I could not help admiring their chief's genius in instantly recognizing that writing could increase his authority, thus grasping the basis of the institution without knowing how to use it. At the same time, the episode drew my attention to another aspect of Nambikwara life: the political relationships between individuals and groups. I was soon to be able to observe them more directly.

While we were still at Utiarity, an epidemic of putrid ophthalmia had broken out among the natives. The infection, which was gonorrheal in origin, spread to the whole community, causing terrible pain and temporary blindness which could become permanent. For several days the group was completely paralysed. The natives treated the infection with water in which a certain kind of bark had been allowed to soak and which they injected into the eye by means of a leaf rolled into a cornet shape. The disease spread to our group: the first person to catch it was my wife who had taken part in all my expeditions so far, her speciality being the study of material culture and skills; the infection was so serious that she had to be evacuated. Then it affected most of the men, as well as my Brazilian companion. Soon the expedition was brought to a halt; I left the main body to rest, with our doctor to give them such treatment as they needed, and with two men and a few beasts I headed for Campos Novos, near which post several bands of natives had been reported. I spent a fortnight there in semi-idleness, gathering barely ripe fruit in an orchard which had reverted to the wild state: there were guavas, the bitter taste and gritty texture of which always fall far short of their aroma, and caju, as brilliantly coloured as parrots, which contain an acid and strongly flavoured juice in the spongy cells of their coarse pulp. To get meat for our meals we had only to go a few hundred metres from the camp at dawn to a copse regularly visited by wood-pigeons, which were easy to shoot. It was at Campos Novos that I met with two groups, whom the expectation of my presents had lured down from the north.

These two groups were as ill-disposed towards each other as they both were towards me. From the start, they did not so much ask for my presents as demand to be given them. During the first few days, only one group was present, as well as a native from Utiarity who had gone on ahead of me. I think perhaps he was showing too great an interest in a young woman belonging to his hosts' group, since relations between the strangers and their visitor became strained almost at once and he started coming to my encampment in search of a more friendly atmosphere; he also shared my meals. This fact was noticed and one day while he was out hunting I received a visit from four natives forming a kind of delegation. In threatening tones, they urged me to put poison in my guest's food; they had, in fact, brought the necessary preparation along with them, a grey powder packed in four little tubes tied together with thread. It was a very awkward situation: if I refused outright, I might well be attacked by the group, whose hostile intentions called for a prudent response. I therefore thought it better to exaggerate my ignorance of the language, and I pretended to understand nothing at all. After several attempts, during which I was told over and over again that my protégé was *kakoré*, that is, very wicked, and should be got rid of as soon as possible, the

delegation withdrew with many expressions of displeasure. I warned the interested party, who at once disappeared; I did not see him again until I returned to the area several months later.

Fortunately, the second group arrived the next day, thus providing the first with a different object on which to vent their animosity. The meeting took place at my encampment which was both neutral territory and the goal of these various journeyings. Consequently, I had a good view of the proceedings. The men had come alone; and almost immediately a lengthy conversation began between their respective chiefs. It might be more accurately termed a series of alternating monologues, uttered in plaintive, nasal tones which I had never heard before. 'We are extremely annoyed. You are our enemies!' moaned one group, whereupon the others replied more or less, 'We are not annoyed. We are your brothers. We are friends—friends! We can get along together! etc.' Once this exchange of provocations and protestations was over, a communal camp was set up next to mine. After a few songs and dances, during which each group ran down its own performance by comparing it with that of its opponents ('The Taimaindé are good singers! We are poor singers!'), the quarrel was resumed, and before long the tension heightened. The night had only just begun when the mixture of songs and arguments produced a most extraordinary din, the meaning of which I failed to grasp. Threatening gestures were made, and sometimes scuffles broke out, and other natives intervened as peacemakers. All the threatening gestures centred round the sexual organs. A Nambikwara Indian expresses dislike by grasping his penis in both hands and pointing it towards his opponent. This gesture is followed by an assault on that person, the aim being to pull off the tuft of *buriti* straw attached to the front of the belt above the genitals. These 'are hidden by the straw', and 'the object of the fight is to pull off the straw.' The action is purely symbolical, because the genital covering of the male is made of such flimsy material and is so insubstantial that it neither affords protection nor conceals the organs. Attempts are also made to seize the opponent's bow and arrows and to put them beyond his reach. Throughout these actions, the natives remain extremely tense, as if they were in a state of violent and pent-up anger. The scuffles may sometimes degenerate into a free-for-all, but on this occasion the fighting subsided at dawn. Still in the same stare of visible irritation and with gestures that were anything but gentle, the two sets of opponents then set about examining each other, fingering their ear-pendants, cotton bracelets and little feather ornaments, and muttering a series of rapid comments, such as 'Give it . . . give it . . . see, that's pretty,' while the owner would protest, 'It's ugly . . . old, . . . damaged!'

This 'reconciliatory inspection' marked the end of the quarrel, and initiated another kind of relationship between the groups: commercial exchanges. Rudimentary the material culture of the Nambikwara may be, but the crafts and produce of each group are highly prized by the others. The eastern Nambikwara need pottery and seeds; those from the north consider that their more southerly neighbours make particularly delicate necklaces. It follows that when a meeting between two groups is conducted peacefully, it leads to a reciprocal exchange of gifts; strife is replaced by barter.

Actually, it was difficult to believe that an exchange of gifts was in progress; the morning after the quarrel, each man went about his usual business and the objects or produce were passed from one to another without the giver

calling attention to the fact that he was handing over a gift, and without the receiver paying any heed to his new acquisition. The items thus exchanged included raw cotton and balls of thread; lumps of wax or resin; urucu⁴ paste; shells, ear-drops, bracelets and necklaces; tobacco and seeds, feathers and bamboo laths to be made into arrow heads; bundles of palm fibres, porcupine quills; whole pots or fragments of pottery and gourds. This mysterious exchange of goods went on for half a day, after which the groups took leave of each other and went their separate ways.

The Nambikwara rely, then, on the generosity of the other side. It simply does not occur to them to evaluate, argue, bargain, demand or take back. I offered a native a machete as payment for taking a message to a neighbouring group. On his return, I omitted to hand over the agreed reward immediately, thinking that he would come to fetch it. He did not do so, and the next day I could not find him; he had departed in a rage, so his companions told me, and I never saw him again. I had to ask another native to accept the present on his behalf. This being so, it is hardly surprising that, when the exchanges are over, one group should go off dissatisfied with its share, and (taking stock of its acquisitions and remembering its own gifts) should build up feelings of resentment which become increasingly aggressive. Very often these feelings are enough to start a war; of course, there are other causes, such as the need to commit, or avenge, a murder or the kidnapping of a woman; however, it does not seem that a group feels collectively bound to exact reprisals for some injury done to one of its members. Nevertheless, because of the hostility between the groups, such pretexts are often willingly accepted, especially if a particular group feels itself to be strong. The proposal is presented by a warrior who expounds his grievances in the same tone and style as is used for the inter-group speeches: 'Hallo! Come here! Come along! I am angry! very angry! arrows! big arrows!'

Clad in special finery, consisting of tufts of *buriti* straw daubed with red and helmets made from jaguar hides, the men assemble under the leadership of their chief and dance. A divinatory rite has to be performed: the chief, or the shaman in those groups which have one, hides an arrow somewhere in the bush. A search is made for it the following day. If it is stained with blood, war is decided upon; if not, the idea is dropped. Many expeditions begun in this way come to an end after a few kilometres' march. The excitement and enthusiasm abate, and the warriors return home. But some expeditions are carried through and may result in bloodshed. The Nambikwara attack at dawn and arrange their ambush by posting themselves at intervals in the bush. The signal for the attack is passed from man to man by means of the whistle which each carries slung around his neck. This consists of two bamboo tubes bound together with thread, and its sound approximates to the cricket's chirp; no doubt this is why its name is the same as that of the insect. The war arrows are identical to those normally used for hunting large animals, except that their spear-shaped tip is given a serrated edge. Arrows dipped in curare poison, which are commonly employed for hunting, are never used, because an opponent hit by one would be able to remove it before the poison had time to spread through his body.

4. A tropical shrub (*Bixa orellana*), from whose seeds a red dye can be extracted.

J. L. AUSTIN

1911–1960

The work of the Oxford University philosopher John Langshaw Austin (along with that of the Cambridge-based Ludwig Wittgenstein) broke the stranglehold of logical positivism on Anglo-American philosophy in the 1950s. Championing the virtues of “ordinary language” against the idealized and purified language that logical positivism tried to create, Austin stressed varieties of linguistic utterance that do not simply use names to refer to existing objects. His account of “performatives”—that is, words that are used to do things—has been especially influential for the understanding of literary language and, more recently, of the social processes through which identity is created and cultural values transmitted.

Although he published only seven essays during his lifetime, Austin was a legendary figure at Oxford University and in the philosophy departments of Harvard University and the University of California at Berkeley, where he lectured in the late 1950s. Austin was born in Lancaster, England, but spent his childhood in Scotland, where his father was a schoolmaster. After studying at Oxford, he joined the faculty there, briefly at All Souls College, then from 1935 on at Magdalen College. He worked for the British Intelligence Corps during World War II and played a large role in coordinating intelligence for the Allied invasion of France on D-day (June 6, 1944). He ended the war a lieutenant colonel, decorated by both France and the United States, as well as receiving the Order of the British Empire from the British government. Returning to Oxford in 1948, Austin presided over a generation of philosophers noted for their fierce intelligence and even fiercer subjection of one another's work to careful scrutiny. Austin's ability to find the holes in others' arguments made him feared as well as admired, while his own lectures and (few) published essays were models of clarity and logic. His was not a style of work likely to lead to prolific publication, but philosophers on both sides of the Atlantic came to believe something must be right if Austin could be convinced of its validity. Austin's early death in 1960 left his major projects unfinished, but two books—*Sense and Sensibilia* and *How to Do Things with Words*—were assembled posthumously from his lecture notes.

The logical positivism of Bertrand Russell, the early Wittgenstein, and the “Vienna Circle” (many of whom, notably Rudolph Carnap and Otto Neurath, joined American university faculties after fleeing the Nazis) reigned supreme in Anglo-American philosophy from the 1930s into the 1970s. But as early as 1937, Wittgenstein was radically rethinking his earlier position (in work not published until after his death in 1951), and Austin was leading a parallel attack at Oxford.

The three cornerstones of logical positivism were an epistemology based on sense data as the only source of certain knowledge, an account of linguistic meaning that tied a word's meaning to its reference to (or correspondence with) a perceivable fact in the world, and an insistence that knowledge claims and linguistic uses that did not meet these stringent criteria were “nonsense.” Thus, famously, the positivists saw ethical judgments of right and wrong as emotive statements that presented personal preferences or recommendations for action in the guise of statements of fact. A. J. Ayer codified the positivist position in his widely read *Language, Truth, and Logic* (1936). Significantly, positivists recognized that everyday language was full of uses they deemed “nonsense.” Their interest was directed, therefore, toward creating a rigorous language that, once purified of nonsense, would be adequate for the needs (as they understood them) of an epistemologically sound modern science. But, as critics soon pointed out, the positivists' own account of what was nonsense and what was certain knowledge was based not on sense data but on a normative understanding of what counts as true.

In *Sense and Sensibilia*, Austin dismantles the logical positivists' account of perception in order to undermine their model of knowledge. When he turns his attention to language, Austin champions "ordinary language" against the purified language the positivists try to create. He starts from a faith in the usages and distinctions found in the languages we already possess. His working principle is that such usages and distinctions probably make sense precisely because people have maintained them. We would not continue to use an expression like "saving for a rainy day" or make a distinction between "an accident" and "a mistake" unless such expressions and distinctions fit our experiences and served to clarify them. The philosopher should work from ordinary language, striving to make explicit the claims about the world and the social relations that such language already contains.

Austin is sometimes castigated as conservative, as accepting the world as given. And, certainly, he is suspicious of an intellectual arrogance that regards common sense and daily practice as most likely faulty. But the clarity that philosophy can bring to prevailing habits of speech and daily practice does not necessarily reinforce such habits and practices; it may stir efforts at reform.

Austin is a pluralist. In examining ordinary language, he sees that we use words for many different purposes. The logical positivists were fixated on reference—the use of words to pick out and designate some thing in the world. They believed that meaning resided in correspondence between word and world. Where such correspondence was absent, so was meaning. Austin recognizes referential utterances ("statements, reports or descriptions") as one kind of meaningful speech but chastises logical positivism for failing to notice, or for denigrating when noticing, other kinds, including greetings, apologies, imperatives, pleas, curses, exclamations, and counterconditionals ("if I were king, I would . . .").

In considering this range, Austin attempts in our selection, "Performative Utterances," to make a basic distinction. There are "statements," which refer to an already existing state of affairs "out there" and are "true" or "false" depending on whether the words fit the facts. And there are "performatives," which do not refer to an existing state of affairs but which, instead, bring a state of affairs into existence by being uttered. Performatives are speech acts, cases in which saying something counts as an action: they serve to alter the world, to bring something new into existence, or to modify, create, or establish a certain relationship between people. "[P]erformative utterances are not true or false, then"; rather, Austin deems them "felicitous" when they succeed in establishing the state of affairs they strive to create. He is interested in outlining the conditions that must be fulfilled for a performative to be felicitous.

For starters, Austin realizes (as did FERDINAND DE SAUSSURE and Wittgenstein) that individual utterances rely heavily on "background conditions" in order to make sense. Among these conditions are a whole set of "conventions," as well as the context in which an utterance is made. Austin points out that many conventions are, in fact, institutional, understanding "institutions" as formal organizations of authority. Performative speech acts such as a judge's sentencing of a criminal or a minister's "I now pronounce you man and wife" succeed only when uttered by a person with the appropriate authority.

Austin also considers noninstitutional causes of infelicity—insincerity, misunderstanding, and nonseriousness. When discussing these sources of "unhappy" utterances and returning to questions of truth and falsehood, Austin finds himself increasingly unable to sort out the different uses of language into separate bins. He cannot maintain the firm line between statements and performatives. If I say "with a stern look, he opened the debate," am I being merely descriptive, or does my use of the adjective "stern" create a view of events for my auditors? In addition, the verb "opened" is a "dead metaphor"; that is, a word designating physical action ("opening") is used to describe a different action. In other words, Austin runs into the kinds of difficulties FRIEDRICH NIETZSCHE describes in the essay "On Truth and Lying in a Non-Moral Sense" (1873; see above), difficulties that led Nietzsche eventually to claim that "there are no facts, only interpretations."

Austin does not phrase the problem in Nietzschean terms. But he does recognize that we seldom speak purely descriptively; we are always doing other things—even when we say “the chair is blue.” We have a reason to say “the chair is blue,” and that reason is almost always a desire to sway our auditor in some way or another. Austin’s essay on performatives thus leads him to recognize the *rhetorical* element in most utterances. We say things in particular contexts to certain others with the aim of influencing their opinions, attitudes, beliefs, and so on. For this reason, Austin concludes the essay with the suggestion that utterances have “force” as well as “meaning”; he uses “force” to designate their impact on listeners, an impact that the speaker can try but cannot always manage to control. And he also concludes that we need to “loosen up” the dichotomy “true/false” so we can more subtly appraise the complex relation between facts and utterances.

Austin’s notion of performatives entered literary theory through the JACQUES DERRIDA—John Searle debate of the 1970s. Derrida found Austin’s work suggestive but castigated the British philosopher for trying to exclude “non-serious” utterances (a category that included statements made in poems) from consideration. The American philosopher Searle had studied under Austin at Oxford and he defended Austin against what he saw as Derrida’s misunderstandings. The pyrotechnics of the debate—which cemented the hostility between Anglo-American philosophers and “French theory”—obscured the fact that Derrida actually wanted to endorse the general notion of performatives, even though he criticized some of Austin’s ways of characterizing them. JUDITH BUTLER and EVE KOSOFSKY SEDGWICK in the 1990s recuperated the notion of the performative for literary and cultural theorists by stressing the extent to which gender (and other) identities are produced through performances of the ritualized practices of daily life. Joining Derrida’s emphasis on “iteration” (repetition) with Austin’s insistence that language is productive, Butler and Sedgwick show how prevailing social scripts (ideology) acquire reality for individuals through being performed.

“Performative Utterances” Keywords: Institutional Studies, Language, Rhetoric, Semiotics, Vernacular Language

Performative Utterances

I

You are more than entitled not to know what the word ‘performative’ means. It is a new word and an ugly word, and perhaps it does not mean anything very much. But at any rate there is one thing in its favour, it is not a profound word. I remember once when I had been talking on this subject that somebody afterwards said: ‘You know, I haven’t the least idea what he means, unless it could be that he simply means what he says’. Well, that is what I should like to mean.

Let us consider first how this affair arises. We have not got to go very far back in the history of philosophy to find philosophers assuming more or less as a matter of course that the sole business, the sole interesting business, of any utterance—that is, of anything we say—is to be true or at least false. Of course they had always known that there are other kinds of things which we say—things like imperatives, the expressions of wishes, and exclamations—some of which had even been classified by grammarians, though it wasn’t perhaps too easy to tell always which was which. But still philosophers have assumed that the only things that they are interested in

are utterances which report facts or which describe situations truly or falsely. In recent times this kind of approach has been questioned—in two stages, I think. First of all people began to say: 'Well, if these things are true or false it ought to be possible to decide which they are, and if we can't decide which they are they aren't any good but are, in short, nonsense'. And this new approach did a great deal of good; a great many things which probably are nonsense were found to be such. It is not the case, I think, that all kinds of nonsense have been adequately classified yet, and perhaps some things have been dismissed as nonsense which really are not; but still this movement, the verification movement, was, in its way, excellent.

However, we then come to the second stage. After all, we set some limits to the amount of nonsense that we talk, or at least the amount of nonsense that we are prepared to admit we talk; and so people began to ask whether after all some of those things which, treated as statements, were in danger of being dismissed as nonsense did after all really set out to be statements at all. Mightn't they perhaps be intended not to report facts but to influence people in this way or that, or to let off steam in this way or that? Or perhaps at any rate some elements in these utterances performed such functions, or, for example, drew attention in some way (without actually reporting it) to some important feature of the circumstances in which the utterance was being made. On these lines people have now adopted a new slogan, the slogan of the 'different uses of language'. The old approach, the old statemental approach, is sometimes called even a fallacy, the descriptive fallacy.

Certainly there are a great many uses of language. It's rather a pity that people are apt to invoke a new use of language whenever they feel so inclined, to help them out of this, that, or the other well-known philosophical tangle; we need more of a framework in which to discuss these uses of language; and also I think we should not despair too easily and talk, as people are apt to do, about the *infinite* uses of language. Philosophers will do this when they have listed as many, let us say, as seventeen; but even if there were something like ten thousand uses of language, surely we could list them all in time. This, after all, is no larger than the number of species of beetle that entomologists have taken the pains to list. But whatever the defects of either of these movements—the 'verification' movement or the 'use of language' movement—at any rate they have effected, nobody could deny, a great revolution in philosophy and, many would say, the most salutary in its history. (Not, if you come to think of it, a very immodest claim.)

Now it is one such sort of use of language that I want to examine here. I want to discuss a kind of utterance which looks like a statement and grammatically, I suppose, would be classed as a statement, which is not nonsensical, and yet is not true or false. These are not going to be utterances which contain curious verbs like 'could' or 'might', or curious words like 'good', which many philosophers regard nowadays simply as danger signals. They will be perfectly straightforward utterances, with ordinary verbs in the first person singular present indicative active, and yet we shall see at once that they couldn't possibly be true or false. Furthermore, if a person makes an utterance of this sort we should say that he is *doing* something rather than merely *saying* something. This may sound a little odd, but the examples I shall give will in fact not be odd at all, and may even seem decidedly dull. Here are three or four. Suppose, for example, that in the course of a marriage ceremony I say,

as people will, 'I do'—(sc.¹ take this woman to be my lawful wedded wife). Or again, suppose that I tread on your toe and say 'I apologize'. Or again, suppose that I have the bottle of champagne in my hand and say 'I name this ship the *Queen Elizabeth*'. Or suppose I say 'I bet you sixpence it will rain tomorrow'. In all these cases it would be absurd to regard the thing that I say as a report of the performance of the action which is undoubtedly done—the action of betting, or christening, or apologizing. We should say rather that, in saying what I do, I actually perform that action. When I say 'I name this ship the *Queen Elizabeth*' I do not describe the christening ceremony, I actually perform the christening; and when I say 'I do' (sc. take this woman to be my lawful wedded wife), I am not reporting on a marriage, I am indulging in it.

Now these kinds of utterance are the ones that we call *performative* utterances. This is rather an ugly word, and a new word, but there seems to be no word already in existence to do the job. The nearest approach that I can think of is the word 'operative', as used by lawyers. Lawyers when talking about legal instruments will distinguish between the preamble, which recites the circumstances in which a transaction is effected, and on the other hand the operative part—the part of it which actually performs the legal act which it is the purpose of the instrument to perform. So the word 'operative' is very near to what we want. 'I give and bequeath my watch to my brother' would be an operative clause and is a performative utterance. However, the word 'operative' has other uses, and it seems preferable to have a word specially designed for the use we want.

Now at this point one might protest, perhaps even with some alarm, that I seem to be suggesting that marrying is simply saying a few words, that just saying a few words *is* marrying. Well, that certainly is not the case. The words have to be said in the appropriate circumstances, and this is a matter that will come up again later. But the one thing we must not suppose is that what is needed in addition to the saying of the words in such cases is the performance of some internal spiritual act, of which the words then are to be the report. It's very easy to slip into this view at least in difficult, portentous cases, though perhaps not so easy in simple cases like apologizing. In the case of promising—for example, 'I promise to be there tomorrow'—it's very easy to think that the utterance is simply the outward and visible (that is, verbal) sign of the performance of some inward spiritual act of promising, and this view has certainly been expressed in many classic places. There is the case of Euripides' Hippolytus,² who said 'My tongue swore to, but my heart did not'—perhaps it should be 'mind' or 'spirit' rather than 'heart', but at any rate some kind of backstage artiste. Now it is clear from this sort of example that, if we slip into thinking that such utterances are reports, true or false, of the performance of inward and spiritual acts, we open a loop-hole to perjurers and welshers and bigamists and so on, so that there are disadvantages in being excessively solemn in this way. It is better, perhaps, to stick to the old saying that our word is our bond.

However, although these utterances do not themselves report facts and are not themselves true or false, saying these things does very often *imply* that certain things are true and not false, in some sense at least of that rather

1. Scilicet; namely.

2. *Hippolytus* (428 B.C.E.), line 612, by the Greek playwright Euripides (ca. 485–ca. 406 B.C.E.).

The Greek word here translated "heart" is *phrēn*, which can also mean "mind" or "understanding."

woolly word 'imply'. For example, when I say 'I do take this woman to be my lawful wedded wife', or some other formula in the marriage ceremony, I do imply that I'm not already married, with wife living, sane, undivorced, and the rest of it. But still it is very important to realize that to imply that something or other is true, is not at all the same as saying something which is true itself.

These performative utterances are not true or false, then. But they do suffer from certain disabilities of their own. They can fail to come off in special ways, and that is what I want to consider next. The various ways in which a performative utterance may be unsatisfactory we call, for the sake of a name, the infelicities; and an infelicity arises—that is to say, the utterance is unhappy—if certain rules, transparently simple rules, are broken. I will mention some of these rules and then give examples of some infringements.

First of all, it is obvious that the conventional procedure which by our utterance we are purporting to use must actually exist. In the examples given here this procedure will be a verbal one, a verbal procedure for marrying or giving or whatever it may be; but it should be borne in mind that there are many non-verbal procedures by which we can perform exactly the same acts as we perform by these verbal means. It's worth remembering too that a great many of the things we do are at least in part of this conventional kind. Philosophers at least are too apt to assume that an action is always in the last resort the making of a physical movement, whereas it's usually, at least in part, a matter of convention.

The first rule is, then, that the convention invoked must exist and be accepted. And the second rule, also a very obvious one, is that the circumstances in which we purport to invoke this procedure must be appropriate for its invocation. If this is not observed, then the act that we purport to perform would not come off—it will be, one might say, a misfire. This will also be the case if, for example, we do not carry through the procedure—whatever it may be—correctly and completely, without a flaw and without a hitch. If any of these rules are not observed, we say that the act which we purported to perform is void, without effect. If, for example, the purported act was an act of marrying, then we should say that we 'went through a form' of marriage, but we did not actually succeed in marrying.

Here are some examples of this kind of misfire. Suppose that, living in a country like our own, we wish to divorce our wife. We may try standing her in front of us squarely in the room and saying, in a voice loud enough for all to hear, 'I divorce you'. Now this procedure is not accepted. We shall not thereby have succeeded in divorcing our wife, at least in this country and others like it. This is a case where the convention, we should say, does not exist or is not accepted. Again, suppose that, picking sides at a children's party, I say 'I pick George'. But George turns red in the face and says 'Not playing'. In that case I plainly, for some reason or another, have not picked George—whether because there is no convention that you can pick people who aren't playing, or because George in the circumstances is an inappropriate object for the procedure of picking. Or consider the case in which I say 'I appoint you Consul', and it turns out that you have been appointed already—or perhaps it may even transpire that you are a horse;³ here again

3. A reference to an anecdote about the Roman emperor known as Caligula (Gaius Caesar Germanicus, 12–41 C.E.), who was said to have wished to make his favorite horse consul.

we have the infelicity of inappropriate circumstances, inappropriate objects, or what not. Examples of flaws and hitches are perhaps scarcely necessary—one party in the marriage ceremony says 'I will', the other says 'I won't'; I say 'I bet sixpence', but nobody says 'Done', nobody takes up the offer. In all these and other such cases, the act which we purport to perform, or set out to perform, is not achieved.

But there is another and a rather different way in which this kind of utterance may go wrong. A good many of these verbal procedures are designed for use by people who hold certain beliefs or have certain feelings or intentions. And if you use one of these formulae when you do not have the requisite thoughts or feelings or intentions then there is an abuse of the procedure, there is insincerity. Take, for example, the expression, 'I congratulate you'. This is designed for use by people who are glad that the person addressed has achieved a certain feat, believe that he was personally responsible for the success, and so on. If I say 'I congratulate you' when I'm not pleased or when I don't believe that the credit was yours, then there is insincerity. Likewise if I say I promise to do something, without having the least intention of doing it or without believing it feasible. In these cases there is something wrong certainly, but it is not like a misfire. We should not say that I didn't in fact promise, but rather that I did promise but promised insincerely; I did congratulate you but the congratulations were hollow. And there may be an infelicity of a somewhat similar kind when the performative utterance commits the speaker to future conduct of a certain description and then in the future he does not in fact behave in the expected way. This is very obvious, of course, if I promise to do something and then break my promise, but there are many kinds of commitment of a rather less tangible form than that in the case of promising. For instance, I may say 'I welcome you', bidding you welcome to my home or wherever it may be, but then I proceed to treat you as though you were exceedingly unwelcome. In this case the procedure of saying 'I welcome you' has been abused in a way rather different from that of simple insincerity.

Now we might ask whether this list of infelicities is complete, whether the kinds of infelicity are mutually exclusive, and so forth. Well, it is not complete, and they are not mutually exclusive; they never are. Suppose that you are just about to name the ship, you have been appointed to name it, and you are just about to bang the bottle against the stem; but at that very moment some low type comes up, snatches the bottle out of your hand, breaks it on the stem, shouts out 'I name this ship the *Generalissimo Stalin*', and then for good measure kicks away the chocks. Well, we agree of course on several things. We agree that the ship certainly isn't now named the *Generalissimo Stalin*, and we agree that it's an infernal shame and so on and so forth. But we may not agree as to how we should classify the particular infelicity in this case. We might say that here is a case of a perfectly legitimate and agreed procedure which, however, has been invoked in the wrong circumstances, namely by the wrong person, this low type instead of the person appointed to do it. But on the other hand we might look at it differently and say that this is a case where the procedure has not as a whole been gone through correctly, because part of the procedure for naming a ship is that you should first of all get yourself appointed as the person to do the naming and that's what this fellow did not do. Thus the way we should classify infelicities in

different cases will be perhaps rather a difficult matter, and may even in the last resort be a bit arbitrary. But of course lawyers, who have to deal very much with this kind of thing, have invented all kinds of technical terms and have made numerous rules about different kinds of cases, which enable them to classify fairly rapidly what in particular is wrong in any given case.

As for whether this list is complete, it certainly is not. One further way in which things may go wrong is, for example, through what in general may be called misunderstanding. You may not hear what I say, or you may understand me to refer to something different from what I intended to refer to, and so on. And apart from further additions which we might make to the list, there is the general over-riding consideration that, as we are performing an act when we issue these performative utterances, we may of course be doing so under duress or in some other circumstances which make us not entirely responsible for doing what we are doing. That would certainly be an unhappiness of a kind—any kind of non-responsibility might be called an unhappiness; but of course it is a quite different kind of thing from what we have been talking about. And I might mention that, quite differently again, we could be issuing any of these utterances, as we can issue an utterance of any kind whatsoever, in the course, for example, of acting a play or making a joke or writing a poem—in which case of course it would not be seriously meant and we shall not be able to say that we seriously performed the act concerned. If the poet says ‘Go and catch a falling star’⁴ or whatever it may be, he doesn’t seriously issue an order. Considerations of this kind apply to any utterance at all, not merely to performatives.

That, then, is perhaps enough to be going on with. We have discussed the performative utterance and its infelicities. That equips us, we may suppose, with two shining new tools to crack the crib of reality maybe. It also equips us—it always does—with two shining new skids under our metaphysical feet. The question is how we use them.

II

So far we have been going firmly ahead, feeling the firm ground of prejudice glide away beneath our feet which is always rather exhilarating, but what next? You will be waiting for the bit when we bog down, the bit where we take it all back, and sure enough that’s going to come but it will take time. First of all let us ask a rather simple question. How can we be sure, how can we tell, whether any utterance is to be classed as a performative or not? Surely, we feel, we ought to be able to do that. And we should obviously very much like to be able to say that there is a grammatical criterion for this, some grammatical means of deciding whether an utterance is performative. All the examples I have given hitherto do in fact have the same grammatical form; they all of them begin with the verb in the first person singular present indicative active—not just any kind of verb of course, but still they all are in fact of that form. Furthermore, with these verbs that I have used there is a typical asymmetry between the use of this person and tense of the verb and the use of the same verb in other persons and other tenses, and this asymmetry is rather an important clue.

4. The first line of an untitled poem (1633) by John Donne.

For example, when we say 'I promise that . . .', the case is very different from when we say 'He promises that . . .', or in the past tense 'I promised that . . .'. For when we say 'I promise that . . .' we do perform an act of promising—we give a promise. What we do *not* do is to report on somebody's performing an act of promising—in particular, we do not report on somebody's use of the expression 'I promise'. We actually do use it and do the promising. But if I say 'He promises', or in the past tense 'I promised', I precisely do report on an act of promising, that is to say an act of using this formula 'I promise'—I report on a present act of promising by him, or on a past act of my own. There is thus a clear difference between our first person singular present indicative active, and other persons and tenses. This is brought out by the typical incident of little Willie whose uncle says he'll give him half-a-crown⁵ if he promises never to smoke till he's 55. Little Willie's anxious parent will say 'Of course he promises, don't you, Willie?' giving him a nudge, and little Willie just doesn't vouchsafe. The point here is that he must do the promising himself by saying 'I promise', and his parent is going too fast in saying he promises.

That, then, is a bit of a test for whether an utterance is performative or not, but it would not do to suppose that every performative utterance has to take this standard form. There is at least one other standard form, every bit as common as this one, where the verb is in the passive voice and in the second or third person, not in the first. The sort of case I mean is that of a notice inscribed 'Passengers are warned to cross the line by the bridge only', or of a document reading 'You are hereby authorized' to do so-and-so. These are undoubtedly performative, and in fact a signature is often required in order to show who it is that is doing the act of warning, or authorizing, or whatever it may be. Very typical of this kind of performative—especially liable to occur in written documents of course—is that the little word 'hereby' either actually occurs or might naturally be inserted.

Unfortunately, however, we still can't possibly suggest that every utterance which is to be classed as a performative has to take one or another of these two, as we might call them, standard forms. After all it would be a very typical performative utterance to say 'I order you to shut the door'. This satisfies all the criteria. It is performing the act of ordering you to shut the door, and it is not true or false. But in the appropriate circumstances surely we could perform exactly the same act by simply saying 'Shut the door', in the imperative. Or again, suppose that somebody sticks up a notice 'This bull is dangerous', or simply 'Dangerous bull', or simply 'Bull'. Does this necessarily differ from sticking up a notice, appropriately signed, saying 'You are hereby warned that this bull is dangerous'? It seems that the simple notice 'Bull' can do just the same job as the more elaborate formula. Of course the difference is that if we just stick up 'Bull' it would not be quite clear that it is a warning; it might be there just for interest or information, like 'Wallaby' on the cage at the zoo, or 'Ancient Monument'. No doubt we should know from the nature of the case that it was a warning, but it would not be explicit.

Well, in view of this break-down of grammatical criteria, what we should like to suppose—and there is a good deal in this—is that any utterance which

5. Under the old U.K. system of money, a crown was worth 5 shillings; little Willie is given the equivalent of about a half-dollar.

is performative could be reduced or expanded or analysed into one of these two standard forms beginning 'I . . .' so and so or beginning 'You (or he) hereby . . .' so and so. If there was any justification for this hope, as to some extent there is, then we might hope to make a list of all the verbs which can appear in these standard forms, and then we might classify the kinds of acts that can be performed by performative utterances. We might do this with the aid of a dictionary, using such a test as that already mentioned—whether there is the characteristic asymmetry between the first person singular present indicative active and the other persons and tenses—in order to decide whether a verb is to go into our list or not. Now if we make such a list of verbs we do in fact find that they fall into certain fairly well-marked classes. There is the class of cases where we deliver verdicts and make estimates and appraisals of various kinds. There is the class where we give undertakings, commit ourselves in various ways by saying something. There is the class where by saying something we exercise various rights and powers, such as appointing and voting and so on. And there are one or two other fairly well-marked classes.

Suppose this task accomplished. Then we could call these verbs in our list explicit performative verbs, and any utterance that was reduced to one or the other of our standard forms we could call an explicit performative utterance. 'I order you to shut the door' would be an explicit performative utterance, whereas 'Shut the door' would not—that is simply a 'primary' performative utterance or whatever we like to call it. In using the imperative we may be ordering you to shut the door, but it just isn't made clear whether we are ordering you or entreating you or imploring you or beseeching you or inciting you or tempting you, or one or another of many other subtly different acts which, in an unsophisticated primitive language, are very likely not yet discriminated. But we need not over-estimate the unsophistication of primitive languages. There are a great many devices that can be used for making clear, even at the primitive level, what act it is we are performing when we say something—the tone of voice, cadence, gesture—and above all we can rely upon the nature of the circumstances, the context in which the utterance is issued. This very often makes it quite unmistakable whether it is an order that is being given or whether, say, I am simply urging you or entreating you. We may, for instance, say something like this: 'Coming from him I was bound to take it as an order'. Still, in spite of all these devices, there is an unfortunate amount of ambiguity and lack of discrimination in default of our explicit performative verbs. If I say something like 'I shall be there', it may not be certain whether it is a promise, or an expression of intention, or perhaps even a forecast of my future behaviour, of what is going to happen to me; and it may matter a good deal, at least in developed societies, precisely which of these things it is. And that is why the explicit performative verb is evolved—to make clear exactly which it is, how far it commits me and in what way, and so forth.

This is just one way in which language develops in tune with the society of which it is the language. The social habits of the society may considerably affect the question of which performative verbs are evolved and which, sometimes for rather irrelevant reasons, are not. For example, if I say 'You are a poltroon', it might be that I am censuring you or it might be that I am insulting you. Now since apparently society approves of censuring or reprimanding,

we have here evolved a formula 'I reprimand you', or 'I censure you', which enables us expeditiously to get this desirable business over. But on the other hand, since apparently we don't approve of insulting, we have not evolved a simple formula 'I insult you', which might have done just as well.

By means of these explicit performative verbs and some other devices, then, we make explicit what precise act it is that we are performing when we issue our utterance. But here I would like to put in a word of warning. We must distinguish between the function of making explicit what act it is we are performing, and the quite different matter of *stating* what act it is we are performing. In issuing an explicit performative utterance we are not stating what act it is, we are showing or making explicit what act it is. We can draw a helpful parallel here with another case in which the act, the conventional act that we perform, is not a speech-act but a physical performance. Suppose I appear before you one day and bow deeply from the waist. Well, this is ambiguous. I may be simply observing the local flora, tying my shoe-lace, something of that kind; on the other hand, conceivably I might be doing obeisance to you. Well, to clear up this ambiguity we have some device such as raising the hat, saying 'Salaam',⁶ or something of that kind, to make it quite plain that the act being performed is the conventional one of doing obeisance rather than some other act. Now nobody would want to say that lifting your hat was stating that you were performing an act of obeisance; it certainly is not, but it does make it quite plain that you are. And so in the same way to say 'I warn you that . . .' or 'I order you to . . .' or 'I promise that . . .' is not to state that you are doing something, but makes it plain that you are—it does constitute your verbal performance, a performance of a particular kind.

So far we have been going along as though there was a quite clear difference between our performative utterances and what we have contrasted them with, statements or reports or descriptions. But now we begin to find that this distinction is not as clear as it might be. It's now that we begin to sink in a little. In the first place, of course, we may feel doubts as to how widely our performatives extend. If we think up some odd kinds of expression we use in odd cases, we might very well wonder whether or not they satisfy our rather vague criteria for being performative utterances. Suppose, for example, somebody says 'Hurrah'. Well, not true or false; he is performing the act of cheering. Does that make it a performative utterance in our sense or not? Or suppose he says 'Damn'; he is performing the act of swearing, and it is not true or false. Does that make it performative? We feel that in a way it does and yet it's rather different. Again, consider cases of 'suiting the action to the words'; these too may make us wonder whether perhaps the utterance should be classed as performative. Or sometimes, if somebody says 'I am sorry', we wonder whether this is just the same as 'I apologize'—in which case of course we have said it's a performative utterance—or whether perhaps it's to be taken as a description, true or false, of the state of his feelings. If he had said 'I feel perfectly awful about it', then we should think it must be meant to be a description of the state of his feelings. If he had said 'I apologize', we should feel this was clearly a performative utterance, going through the ritual of apologizing. But if he says 'I am sorry' there is an unfortunate hovering between the two. This phenomenon is quite common.

6. Literally, "peace" (Arabic); a greeting sometimes spoken while making a ceremonial bow.

We often find cases in which there is an obvious pure performative utterance and obvious other utterances connected with it which are not performative but descriptive, but on the other hand a good many in between where we're not quite sure which they are. On some occasions of course they are obviously used the one way, on some occasions the other way, but on some occasions they seem positively to revel in ambiguity.

Again, consider the case of the umpire when he says 'Out' or 'Over',⁷ or the jury's utterance when they say that they find the prisoner guilty. Of course, we say, these are cases of giving verdicts, performing the act of appraising and so forth, but still in a way they have some connexion with the facts. They seem to have something like the duty to be true or false, and seem not to be so very remote from statements. If the umpire says 'Over', this surely has at least something to do with six balls in fact having been delivered rather than seven, and so on. In fact in general we may remind ourselves that 'I state that . . .' does not look so very different from 'I warn you that . . .' or 'I promise to . . .'. It makes clear surely that the act that we are performing is an act of stating, and so functions just like 'I warn' or 'I order'. So isn't 'I state that . . .' a performative utterance? But then one may feel that utterances beginning 'I state that . . .' do have to be true or false, that they *are* statements.

Considerations of this sort, then, may well make us feel pretty unhappy. If we look back for a moment at our contrast between statements and performative utterances, we realize that we were taking statements very much on trust from, as we said, the traditional treatment. Statements, we had it, were to be true or false; performative utterances on the other hand were to be felicitous or infelicitous. They were the doing of something, whereas for all we said making statements was not doing something. Now this contrast surely, if we look back at it, is unsatisfactory. Of course statements are liable to be assessed in this matter of their correspondence or failure to correspond with the facts, that is, being true or false. But they are also liable to infelicity every bit as much as are performative utterances. In fact some troubles that have arisen in the study of statements recently can be shown to be simply troubles of infelicity. For example, it has been pointed out that there is something very odd about saying something like this: 'The cat is on the mat but I don't believe it is'. Now this is an outrageous thing to say, but it is not self-contradictory. There is no reason why the cat shouldn't be on the mat without my believing that it is. So how are we to classify what's wrong with this peculiar statement? If we remember now the doctrine of infelicity we shall see that the person who makes this remark about the cat is in much the same position as somebody who says something like this: 'I promise that I shall be there, but I haven't the least intention of being there'. Once again you can of course perfectly well promise to be there without having the least intention of being there, but there is something outrageous about saying it, about actually avowing the insincerity of the promise you give. In the same way there is insincerity in the case of the person who says 'The cat is on the mat but I don't believe it is', and he is actually avowing that insincerity—which makes a peculiar kind of nonsense.

A second case that has come to light is the one about John's children—the case where somebody is supposed to say 'All John's children are bald but John

7. Umpire's calls in cricket.

hasn't got any children'.⁸ Or perhaps somebody says 'All John's children are bald', when as a matter of fact—he doesn't say so—John has no children. Now those who study statements have worried about this; ought they to say that the statement 'All John's children are bald' is meaningless in this case? Well, if it is, it is not a bit like a great many other more standard kinds of meaninglessness; and we see, if we look back at our list of infelicities, that what is going wrong here is much the same as what goes wrong in, say, the case of a contract for the sale of a piece of land when the piece of land referred to does not exist. Now what we say in the case of this sale of land, which of course would be effected by a performative utterance, is that the sale is void—void for lack of reference or ambiguity of reference; and so we can see that the statement about all John's children is likewise void for lack of reference. And if the man actually says that John has no children in the same breath as saying they're all bald, he is making the same kind of outrageous utterance as the man who says 'The cat is on the mat and I don't believe it is', or the man who says 'I promise to but I don't intend to'.

In this way, then, ills that have been found to afflict statements can be precisely paralleled with ills that are characteristic of performative utterances. And after all when we state something or describe something or report something, we do perform an act which is every bit as much an act as an act of ordering or warning. There seems no good reason why stating should be given a specially unique position. Of course philosophers have been wont to talk as though you or I or anybody could just go round stating anything about anything and that would be perfectly in order, only there's just a little question: is it true or false? But besides the little question, is it true or false, there is surely the question: *is it in order?* Can you go round just making statements about anything? Suppose for example you say to me 'I'm feeling pretty mouldy this morning'. Well, I say to you 'You're not'; and you say 'What the devil do you mean, I'm not?' I say 'Oh nothing—I'm just stating you're not, is it true or false?' And you say 'Wait a bit about whether it's true or false, the question is what did you mean by making statements about somebody else's feelings? I told you I'm feeling pretty mouldy. You're just not in a position to say, to state that I'm not'. This brings out that you can't just make statements about other people's feelings (though you can make guesses if you like); and there are very many things which, having no knowledge of, not being in a position to pronounce about, you just can't state. What we need to do for the case of stating, and by the same token describing and reporting, is to take them a bit off their pedestal, to realize that they are speech-acts no less than all these other speech-acts that we have been mentioning and talking about as performative.

Then let us look for a moment at our original contrast between the performative and the statement from the other side. In handling performatives we have been putting it all the time as though the only thing that a performative utterance had to do was to be felicitous, to come off, not to be a misfire, not to be an abuse. Yes, but that's not the end of the matter. At least in the case of many utterances which, on what we have said, we should have to class as performative—cases where we say 'I warn you to . . .', 'I advise you to . . .'

8. A reference to a famous example in "On Denoting" (1905) by Bertrand Russell, one of the earliest of the logical positivists: "The present king of France is bald." (France had no king.)

and so on—there will be other questions besides simply: was it in order, was it all right, as a piece of advice or a warning, did it come off? After that surely there will be the question: was it good or sound advice? Was it a justified warning? Or in the case, let us say, of a verdict or an estimate: was it a good estimate, or a sound verdict? And these are questions that can only be decided by considering how the content of the verdict or estimate is related in some way to fact, or to evidence available about the facts. This is to say that we do require to assess at least a great many performative utterances in a general dimension of correspondence with fact. It may still be said, of course, that this does not make them *very* like statements because still they are not true or false, and that's a little black and white speciality that distinguishes statements as a class apart. But actually—though it would take too long to go on about this—the more you think about truth and falsity the more you find that very few statements that we ever utter are just true or just false. Usually there is the question are they fair or are they not fair, are they adequate or not adequate, are they exaggerated or not exaggerated? Are they too rough, or are they perfectly precise, accurate, and so on? 'True' and 'false' are just general labels for a whole dimension of different appraisals which have something or other to do with the relation between what we say and the facts. If, then, we loosen up our ideas of truth and falsity we shall see that statements, when assessed in relation to the facts, are not so very different after all from pieces of advice, warnings, verdicts, and so on.

We see then that stating something is performing an act just as much as is giving an order or giving a warning; and we see, on the other hand, that, when we give an order or a warning or a piece of advice, there is a question about how this is related to fact which is not perhaps so very different from the kind of question that arises when we discuss how a statement is related to fact. Well, this seems to mean that in its original form our distinction between the performative and the statement is considerably weakened, and indeed breaks down. I will just make a suggestion as to how to handle this matter. We need to go very much farther back, to consider all the ways and senses in which saying anything at all is doing this or that—because of course it is always doing a good many different things. And one thing that emerges when we do do this is that, besides the question that has been very much studied in the past as to what a certain utterance *means*, there is a further question distinct from this as to what was the *force*, as we may call it, of the utterance. We may be quite clear what 'Shut the door' means, but not yet at all clear on the further point as to whether as uttered at a certain time it was an order, an entreaty or whatnot. What we need besides the old doctrine about meanings is a new doctrine about all the possible forces of utterances, towards the discovery of which our proposed list of explicit performative verbs would be a very great help; and then, going on from there, an investigation of the various terms of appraisal that we use in discussing speech-acts of this, that, or the other precise kind—orders, warnings, and the like.

The notions that we have considered then, are the performative, the infelicity, the explicit performative, and lastly, rather hurriedly, the notion of the forces of utterances. I dare say that all this seems a little unremunerative, a little complicated. Well, I suppose in some ways it is unremunerative, and I suppose it ought to be remunerative. At least, though, I think that if we pay attention to these matters we can clear up some mistakes in philosophy; and

after all philosophy is used as a scapegoat, it parades mistakes which are really the mistakes of everybody. We might even clear up some mistakes in grammar, which perhaps is a little more respectable.

And is it complicated? Well, it is complicated a bit; but life and truth and things do tend to be complicated. It's not things, it's philosophers that are simple. You will have heard it said, I expect, that over-simplification is the occupational disease of philosophers, and in a way one might agree with that. But for a sneaking suspicion that it's their occupation.

1956

1961

NORTHROP FRYE

1912–1991

By the mid-1950s, the New Critical “close reading” of texts had become the dominant theory and practice of literary criticism in the North American academy (see JOHN CROWE RANSOM and CLEANTH BROOKS). Its reign was not uncontested; some scholars argued that this critical approach failed to consider historical and biographical contexts, and the “Chicago School” led by R. S. Crane maintained that the New Criticism emphasized irony and metaphor in all texts at the expense of crucial distinctions among the literary genres. But it was not until the late 1950s, with the publication of Northrop Frye's *Anatomy of Criticism* (1957), that the New Criticism was comprehensively challenged by a fully defined alternative.

In the *Anatomy of Criticism*, Frye pointedly contrasted his archetypal or myth criticism with the “rhetorical analysis of the new critics”:

The further back we go, the more conscious we are of the organizing design. At a great distance from, say, a Madonna, we can see nothing but the archetype of the Madonna, a large centripetal blue mass with a contrasting point of interest at its center. In the criticism of literature, too, we often have to “stand back” from the poem to see its archetypal organization.

Frye thus took issue with the critical orthodoxy of his own day, even as his approach looked forward to the structuralist poetics and analysis of narrative that theorists such as TZVETAN TODOROV, ROLAND BARTHES, and HAYDEN WHITE would articulate in the 1960s and 1970s.

A Canadian born in southern Quebec province, Frye attended the University of Toronto, studied theology at Emmanuel College in Toronto, was ordained in the United Church of Canada in 1936, and then did postgraduate work at Merton College, Oxford University. He began his academic career at Victoria College, University of Toronto, in 1939, and later held administrative positions both in the English department and in the college. He was keenly interested in Canadian literature, culture, and education, but his influence as a literary critic, theorist, and educator extended worldwide. He lectured and taught at many colleges and universities in the United States, England, and elsewhere, winning numerous awards and prizes for his scholarship and criticism.

Frye's first book was *Fearful Symmetry: A Study of William Blake* (1947), an influential examination of Blake's symbolism. Here, Frye describes the imagination as the “creative force in the mind” from which “everything that we call culture and

civilization” derives: “it is the power of transforming a sub-human physical world into a world with a human shape and meaning.” The next important work, *Anatomy of Criticism*, articulated the role of archetypal symbols, myths, and generic conventions in creating literary meaning.

The word “archetype” derives from the Greek *archetypōn*, which means “beginning pattern”; as developed by Frye within the field of literary criticism, it refers to a recurrent image, character, plot, theme, or pattern that, through its repetitions in many works across the centuries, takes on a universal quality. Frye drew from many sources, including the Bible, Blake’s prophetic books, and (from the early twentieth century) the German historicist writer Oswald Spengler, SIGMUND FREUD, the Scottish folklorist and anthropologist J. G. Frazer, and the classical scholar Gilbert Murray. But perhaps the main source for Frye was the psychologist Carl Jung—his account of the “collective unconscious.” Part of what makes us human, according to Jung, is an “unconscious” inhabited by shared memories, desires, impulses, images, ideas—in a word, archetypes—distinct from the personal unconscious that each of us acquires from our individual experiences.

Frye objected to being called a “Jungian critic,” however. As he explains in *Anatomy of Criticism*, the literary critic should be “concerned only with ritual or dream patterns which are actually in what he is studying, however they got there.” Throughout his career, he continued to focus on and define the repeating images that are structural “building blocks” of literature. It was, he later observed, “a vision of literature as forming a total schematic order” (*Spiritus Mundi*, 1976).

This conception of literature as constituting a total order or universe explains why Frye’s work has intrigued and inspired theorists interested in intertextuality—the ways in which one text leads to, evokes, is made from, and is intersected by others. The French feminist theorist JULIA KRISTEVA, for example, described reading *Fearful Symmetry* in the late 1960s as a “revelation” in its insertion of the poetic text into Western literary tradition. Through *Anatomy of Criticism*, she adds, we can begin to grasp the “extraordinary polysemy [i.e., the coexistence of many possible meanings for a word or phrase] of literary art and take up the challenge it permanently poses.”

Frye’s work has been widely discussed and admired but also sharply criticized. Often, in reply, Frye embraces the charges made against him. He cheerfully admits his refusal to judge differences between good and bad literary works, even though this position puts him at odds with many of the major critics of the English and American traditions. Marxist and leftist critics have stated that Frye strips away the historical and political meanings from texts; in the words of TERRY EAGLETON, Frye’s “formalism” is “even more full-blooded than that of New Criticism. The New Critic allowed that literature was in some significant sense cognitive, yielding a sort of knowledge of the world; Frye insists that literature is an ‘autonomous verbal structure’ quite cut off from any reference beyond itself.” But for Frye this is hardly a failing, for he is determined to understand literature in its own terms, “opposed to any construct—Marxist, Freudian, Thomist [i.e., based on the thought of the thirteenth-century scholastic philosopher and theologian THOMAS AQUINAS], or whatever—that is going to annex literature and simply explain literature in its own terminology” (“Freedom and Concern,” 1985).

In our selection, “The Archetypes of Literature” (1951), Frye sketches an early version of his approach. He argues that literature teachers must not confuse literature with criticism: we cannot in our classrooms “teach literature”; rather, we teach the criticism of literature. If teachers aim as they should to make criticism a “systematic structure of knowledge,” then they will need to shed their mistaken ideas and habitual practices. For Frye, a common mistake is the assumption that criticism is the making of value judgments; these, he says, amount to no more than exercises in the history of taste. Other mistakes include the intensive analysis of specific texts (disconnected “close readings” do not lead us toward the goal of a unified and coherent field of scientific study) and a focus on conventional literary history (periods such as Gothic and baroque are cultural rather than truly literary categories).

In defining genuine criticism, Frye shows that it is connected to but different from philosophy, theology, history, and the social sciences, meriting autonomy as a rigorous and comprehensive professional university discipline. He finds the work of cultural anthropologists particularly valuable in his search for a "co-ordinating principle," and from Frazer, Jung, and others he develops his theory of "archetypes," such as the quest of the hero. Knowledge of the archetypes enables us to perceive the shared myths that literary works rely on and explore: through this awareness we can glimpse the underlying *structure* of the structures of all works.

Like Jung, Frye uses terms with a looseness that can make his writing both suggestive and exasperating. Sometimes he refers to archetype as different from myth; sometimes he states that the archetype is itself a myth, like the quest. While his theory, supported by a rich and wide range of reading, allows him to make connections between many texts, he rarely if ever attends to the text's language. We could also point out that Frye's canon, while capacious, is not capacious enough: few women and minorities figure in it. In this respect Frye is no different from most other critics and theorists of his generation, but his theory could be said to have a built-in answer to the charge: the nature of archetypes ensures that they also structure the literature he himself fails to discuss, and thus in a sense he has included it after all.

Frye is an extraordinary synthesizer, whose system building is matched in early to mid-twentieth-century literary criticism and theory only by the very different system building of I. A. Richards and Kenneth Burke. At a certain point, however, the categories, patterns, classifications, lists, and charts in Frye's major theoretical works threaten to become formulaic, as perhaps happens at the close of the selection below. Many texts are briefly touched on and connections among them made, but none of them is really brought into focus. Curiously enough, Frye now often seems most rewarding less for his bold vision of literature as a whole than for the essays on specific texts that he did produce. When he writes about Milton's elegy "Lycidas" (in *Fables of Identity*) or *Hamlet* (in *Northrop Frye on Shakespeare*), he demonstrates a subtle, sensitive, compelling feeling for the text in its own right—the text as related to countless other texts but a discrete literary experience nonetheless. Frye's work as a practical critic departs on occasion from the tenets of his theory, and is arguably the better for it.

"The Archetypes of Literature" Keywords: The Canon/Tradition, Defense of Criticism, Interpretation Theory, Literary History, Narrative Theory, Religion, Structuralism

The Archetypes of Literature¹

Every organized body of knowledge can be learned progressively; and experience shows that there is also something progressive about the learning of literature. Our opening sentence has already got us into a semantic difficulty. Physics is an organized body of knowledge about nature, and a student of it says that he is learning physics, not that he is learning nature. Art, like nature, is the subject of a systematic study, and has to be distinguished from the study itself, which is criticism. It is therefore impossible to "learn literature": one learns about it in a certain way, but what one learns, transitively, is the criticism of literature. Similarly, the difficulty often felt in "teaching literature" arises from the fact that it cannot be done: the criticism of litera-

1. First published in the *Kenyon Review* series "My Credo."

ture is all that can be directly taught. So while no one expects literature itself to behave like a science, there is surely no reason why criticism, as a systematic and organized study, should not be, at least partly, a science. Not a "pure" or "exact" science, perhaps, but these phrases form part of a 19th Century cosmology which is no longer with us. Criticism deals with the arts and may well be something of an art itself, but it does not follow that it must be unsystematic. If it is to be related to the sciences too, it does not follow that it must be deprived of the graces of culture.

Certainly criticism as we find it in learned journals and scholarly monographs has every characteristic of a science. Evidence is examined scientifically; previous authorities are used scientifically; fields are investigated scientifically; texts are edited scientifically. Prosody is scientific in structure; so is phonetics; so is philology. And yet in studying this kind of critical science the student becomes aware of a centrifugal movement carrying him away from literature. He finds that literature is the central division of the "humanities," flanked on one side by history and on the other by philosophy. Criticism so far ranks only as a subdivision of literature; and hence, for the systematic mental organization of the subject, the student has to turn to the conceptual framework of the historian for events, and to that of the philosopher for ideas. Even the more centrally placed critical sciences, such as textual editing, seem to be part of a "background" that recedes into history or some other non-literary field. The thought suggests itself that the ancillary critical disciplines may be related to a central expanding pattern of systematic comprehension which has not yet been established, but which, if it were established, would prevent them from being centrifugal. If such a pattern exists, then criticism would be to art what philosophy is to wisdom and history to action.

Most of the central area of criticism is at present, and doubtless always will be, the area of commentary. But the commentators have little sense, unlike the researchers, of being contained within some sort of scientific discipline: they are chiefly engaged, in the words of the gospel hymn, in brightening the corner where they are. If we attempt to get a more comprehensive idea of what criticism is about, we find ourselves wandering over quaking bogs of generalities, judicious pronouncements of value, reflective comments, perorations to works of research, and other consequences of taking the large view. But this part of the critical field is so full of pseudo-propositions, sonorous nonsense that contains no truth and no falsehood, that it obviously exists only because criticism, like nature, prefers a waste space to an empty one.

The term "pseudo-proposition" may imply some sort of logical positivist² attitude on my own part. But I would not confuse the significant proposition with the factual one; nor should I consider it advisable to muddle the study of literature with a schizophrenic dichotomy between subjective-emotional and objective-descriptive aspects of meaning, considering that in order to produce any literary meaning at all one has to ignore this dichotomy. I say only that the principles by which one can distinguish a significant from a meaningless statement in criticism are not clearly defined. Our first step, therefore, is to recognize and get rid of meaningless criticism: that is, talking

2. Characteristic of the philosophy that views all knowledge as deriving from empirical experience and logical reasoning; any statement that cannot

be proved true or false is nonsense (i.e., a "pseudo-proposition").

about literature in a way that cannot help to build up a systematic structure of knowledge. Casual value-judgments belong not to criticism but to the history of taste, and reflect, at best, only the social and psychological compulsions which prompted their utterance. All judgments in which the values are not based on literary experience but are sentimental or derived from religious or political prejudice may be regarded as casual. Sentimental judgments are usually based either on non-existent categories or antitheses ("Shakespeare studied life, Milton books") or on a visceral reaction to the writer's personality. The literary chit-chat which makes the reputations of poets boom and crash in an imaginary stock exchange is pseudo-criticism. That wealthy investor Mr. Eliot, after dumping Milton on the market, is now buying him again; Donne has probably reached his peak and will begin to taper off; Tennyson may be in for a slight flutter but the Shelley stocks are still bearish.³ This sort of thing cannot be part of any systematic study, for a systematic study can only progress: whatever dithers or vacillates or reacts is merely leisure-class conversation.

We next meet a more serious group of critics who say: the foreground of criticism is the impact of literature on the reader. Let us, then, keep the study of literature centripetal, and base the learning process on a structural analysis of the literary work itself. The texture of any great work of art is complex and ambiguous, and in unravelling the complexities we may take in as much history and philosophy as we please, if the subject of our study remains at the center. If it does not, we may find that in our anxiety to write about literature we have forgotten how to read it.

The only weakness in this approach is that it is conceived primarily as the antithesis of centrifugal or "background" criticism, and so lands us in a somewhat unreal dilemma, like the conflict of internal and external relations in philosophy. Antitheses are usually resolved, not by picking one side and refuting the other, or by making eclectic choices between them, but by trying to get past the antithetical way of stating the problem. It is right that the first effort of critical apprehension should take the form of a rhetorical or structural analysis of a work of art. But a purely structural approach has the same limitation in criticism that it has in biology. In itself it is simply a discrete series of analyses based on the mere existence of the literary structure, without developing any explanation of how the structure came to be what it was and what its nearest relatives are. Structural analysis brings rhetoric back to criticism, but we need a new poetics as well, and the attempt to construct a new poetics out of rhetoric alone can hardly avoid a mere complication of rhetorical terms into a sterile jargon. I suggest that what is at present missing from literary criticism is a co-ordinating principle, a central hypothesis which, like the theory of evolution in biology, will see the phenomena it deals with as parts of a whole. Such a principle, though it would retain the centripetal perspective of structural analysis, would try to give the same perspective to other kinds of criticism too.

The first postulate of this hypothesis is the same as that of any science: the assumption of total coherence. The assumption refers to the science, not to what it deals with. A belief in an order of nature is an inference from the

3. Frye is referring to the evaluations of poets that the poet and critic T. S. ELIOT (1888–1965) made, and that others—for example, the English critic

F. R. LEAVIS (1895–1978) and the American Yvor Winters (1900–1968)—subsequently reinforced, modified, or disputed.

intelligibility of the natural sciences; and if the natural sciences ever completely demonstrated the order of nature they would presumably exhaust their subject. Criticism, as a science, is totally intelligible; literature, as the subject of a science, is, so far as we know, an inexhaustible source of new critical discoveries, and would be even if new works of literature ceased to be written. If so, then the search for a limiting principle in literature in order to discourage the development of criticism is mistaken. The assertion that the critic should not look for more in a poem than the poet may safely be assumed to have been conscious of putting there is a common form of what may be called the fallacy of premature teleology.⁴ It corresponds to the assertion that a natural phenomenon is as it is because Providence in its inscrutable wisdom made it so.

Simple as the assumption appears, it takes a long time for a science to discover that it is in fact a totally intelligible body of knowledge. Until it makes this discovery it has not been born as an individual science, but remains an embryo within the body of some other subject. The birth of physics from "natural philosophy" and of sociology from "moral philosophy" will illustrate the process. It is also very approximately true that the modern sciences have developed in the order of their closeness to mathematics. Thus physics and astronomy assumed their modern form in the Renaissance, chemistry in the 18th Century, biology in the 19th, and the social sciences in the 20th. If systematic criticism, then, is developing only in our day, the fact is at least not an anachronism.

We are now looking for classifying principles lying in an area between two points that we have fixed. The first of these is the preliminary effort of criticism, the structural analysis of the work of art. The second is the assumption that there is such a subject as criticism, and that it makes, or could make, complete sense. We may next proceed inductively from structural analysis, associating the data we collect and trying to see larger patterns in them. Or we may proceed deductively, with the consequences that follow from postulating the unity of criticism. It is clear, of course, that neither procedure will work indefinitely without correction from the other. Pure induction will get us lost in haphazard guessing; pure deduction will lead to inflexible and over-simplified pigeon-holing. Let us now attempt a few tentative steps in each direction, beginning with the inductive one.

II

The unity of a work of art, the basis of structural analysis, has not been produced solely by the unconditioned will of the artist, for the artist is only its efficient cause: it has form, and consequently a formal cause.⁵ The fact that revision is possible, that the poet makes changes not because he likes them better but because they are better, means that poems, like poets, are born and not made. The poet's task is to deliver the poem in as uninjured a state as possible, and if the poem is alive, it is equally anxious to be rid of

4. That is, the assumption that everything is directed toward a particular end or shaped by a specific purpose.

5. Terms borrowed from the Greek philosopher ARISTOTLE (384–322 B.C.E.), who argued that there

were four types of cause or explanation: material (what a thing is made from), formal (a thing's shape or definition), efficient (the primary source of change in a thing), and final (the end or goal for which a thing is done).

him, and screams to be cut loose from his private memories and associations, his desire for self-expression, and all the other navel-strings and feeding tubes of his ego. The critic takes over where the poet leaves off, and criticism can hardly do without a kind of literary psychology connecting the poet with the poem. Part of this may be a psychological study of the poet, though this is useful chiefly in analysing the failures in his expression, the things in him which are still attached to his work. More important is the fact that every poet has his private mythology, his own spectroscopic band or peculiar formation of symbols, of much of which he is quite unconscious. In works with characters of their own, such as dramas and novels, the same psychological analysis may be extended to the interplay of characters, though of course literary psychology would analyse the behavior of such characters only in relation to literary convention.

There is still before us the problem of the formal cause of the poem, a problem deeply involved with the question of genres. We cannot say much about genres, for criticism does not know much about them. A good many critical efforts to grapple with such words as "novel" or "epic" are chiefly interesting as examples of the psychology of rumor. Two conceptions of the genre, however, are obviously fallacious, and as they are opposite extremes, the truth must lie somewhere between them. One is the pseudo-Platonic conception of genres as existing prior to and independently of creation,⁶ which confuses them with mere conventions of form like the sonnet. The other is that pseudo-biological conception of them as evolving species which turns up in so many surveys of the "development" of this or that form.

We next inquire for the origin of the genre, and turn first of all to the social conditions and cultural demands which produced it—in other words to the material cause of the work of art. This leads us into literary history, which differs from ordinary history in that its containing categories, "Gothic," "Baroque," "Romantic," and the like are cultural categories, of little use to the ordinary historian. Most literary history does not get as far as these categories, but even so we know more about it than about most kinds of critical scholarship. The historian treats literature and philosophy historically; the philosopher treats history and literature philosophically; and the so-called "history of ideas" approach marks the beginning of an attempt to treat history and philosophy from the point of view of an autonomous criticism.

But still we feel that there is something missing. We say that every poet has his own peculiar formation of images. But when so many poets use so many of the same images, surely there are much bigger critical problems involved than biographical ones. As Mr. Auden's brilliant essay *The Enchafed Flood*⁷ shows, an important symbol like the sea cannot remain within the poetry of Shelley or Keats or Coleridge:⁸ it is bound to expand over many poets into an archetypal symbol of literature. And if the genre has a historical origin, why does the genre of drama emerge from medieval religion in a way so strikingly similar to the way it emerged from Greek religion centuries before? This is

6. According to the Greek philosopher PLATO (ca. 427–ca. 347 B.C.E.), all phenomena derive from a realm of perfect and immutable transcendent Forms or Ideas.

7. A set of lectures published by the poet and

critic W. H. Auden (1907–1973) in 1950.

8. Three English Romantic poets: PERCY BYSSHE SHELLEY (1792–1822), John Keats (1795–1821), and SAMUEL TAYLOR COLERIDGE (1772–1834).

a problem of structure rather than origin, and suggests that there may be archetypes of genres as well as of images.

It is clear that criticism cannot be systematic unless there is a quality in literature which enables it to be so, an order of words corresponding to the order of nature in the natural sciences. An archetype should be not only a unifying category of criticism, but itself a part of a total form, and it leads us at once to the question of what sort of total form criticism can see in literature. Our survey of critical techniques has taken us as far as literary history. Total literary history moves from the primitive to the sophisticated, and here we glimpse the possibility of seeing literature as a complication of a relatively restricted and simple group of formulas that can be studied in primitive culture. If so, then the search for archetypes is a kind of literary anthropology, concerned with the way that literature is informed by pre-literary categories such as ritual, myth and folk tale. We next realize that the relation between these categories and literature is by no means purely one of descent, as we find them reappearing in the greatest classics—in fact there seems to be a general tendency on the part of great classics to revert to them. This coincides with a feeling that we have all had: that the study of mediocre works of art, however energetic, obstinately remains a random and peripheral form of critical experience, whereas the profound masterpiece seems to draw us to a point at which we can see an enormous number of converging patterns of significance. Here we begin to wonder if we cannot see literature, not only as complicating itself in time, but as spread out in conceptual space from some unseen center.

This inductive movement towards the archetype is a process of backing up, as it were, from structural analysis, as we back up from a painting if we want to see composition instead of brushwork. In the foreground of the grave-digger scene in *Hamlet*, for instance, is an intricate verbal texture, ranging from the puns of the first clown to the *danse macabre*⁹ of the Yorick soliloquy, which we study in the printed text. One step back, and we are in the Wilson Knight and Spurgeon group of critics,¹ listening to the steady rain of images of corruption and decay. Here too, as the sense of the place of this scene in the whole play begins to dawn on us, we are in the network of psychological relationships which were the main interest of Bradley.² But after all, we say, we are forgetting the genre: *Hamlet* is a play, and an Elizabethan play. So we take another step back into the Stoll and Shaw³ group and see the scene conventionally as part of its dramatic context. One step more, and we can begin to glimpse the archetype of the scene, as the hero's *Liebested*⁴ and first unequivocal declaration of his love, his struggle with Laertes and the sealing of his own fate, and the sudden sobering of his mood that marks the transition to the final scene, all take shape around a leap into and return from the grave that has so weirdly yawned open on the stage.

At each stage of understanding this scene we are dependent on a certain kind of scholarly organization. We need first an editor to clean up the text

9. Dance of death (French). See *Hamlet* (ca. 1600), 5.1.

1. Critics who call attention to Shakespeare's patterns of imagery and symbolism, led by Caroline Spurgeon (1869–1941) and G. Wilson Knight (1897–1985).

2. A. C. Bradley (1851–1935); his *Shakespearean Tragedy* (1904) provided a detailed study of "character."

3. The playwright and critic George Bernard Shaw (1856–1950). E. E. Stoll (1874–1959), critic who focused in his scholarship on the relationship of Shakespeare's plays to the dramatic conventions of the Elizabethan and Jacobean age.

4. Literally, "death of love" (German); the *Liebested* is specifically an operatic aria or duet on the suicide of lovers and, more generally, the thematic linking of love and death.

for us, then the rhetorician and philologist, then the literary psychologist. We cannot study the genre without the help of the literary social historian, the literary philosopher and the student of the "history of ideas," and for the archetype we need a literary anthropologist. But now that we have got our central pattern of criticism established, all these interests are seen as converging on literary criticism instead of receding from it into psychology and history and the rest. In particular, the literary anthropologist who chases the source of the Hamlet legend from the pre-Shakespeare play to Saxo,⁵ and from Saxo to nature-myths, is not running away from Shakespeare: he is drawing closer to the archetypal form which Shakespeare recreated. A minor result of our new perspective is that contradictions among critics, and assertions that this and not that critical approach is the right one, show a remarkable tendency to dissolve into unreality. Let us now see what we can get from the deductive end.

III

Some arts move in time, like music; others are presented in space, like painting. In both cases the organizing principle is recurrence, which is called rhythm when it is temporal and pattern when it is spatial. Thus we speak of the rhythm of music and the pattern of painting; but later, to show off our sophistication, we may begin to speak of the rhythm of painting and the pattern of music. In other words, all arts may be conceived both temporally and spatially. The score of a musical composition may be studied all at once; a picture may be seen as the track of an intricate dance of the eye. Literature seems to be intermediate between music and painting: its words form rhythms which approach a musical sequence of sounds at one of its boundaries, and form patterns which approach the hieroglyphic or pictorial image at the other. The attempts to get as near to these boundaries as possible form the main body of what is called experimental writing. We may call the rhythm of literature the narrative, and the pattern, the simultaneous mental grasp of the verbal structure, the meaning or significance. We hear or listen to a narrative, but when we grasp a writer's total pattern we "see" what he means.

The criticism of literature is much more hampered by the representational fallacy than even the criticism of painting. That is why we are apt to think of narrative as a sequential representation of events in an outside "life," and of meaning as a reflection of some external "idea." Properly used as critical terms, an author's narrative is his linear movement; his meaning is the integrity of his completed form. Similarly an image is not merely a verbal replica of an external object, but any unit of a verbal structure seen as part of a total pattern or rhythm. Even the letters an author spells his words with form part of his imagery, though only in special cases (such as alliteration) would they call for critical notice. Narrative and meaning thus become respectively, to borrow musical terms, the melodic and harmonic contexts of the imagery.

5. Saxo Grammaticus (12th–13th c.), Danish historian whose *Gesta Danorum* (*Deeds of the Danes*) includes the Hamlet story.

Rhythm, or recurrent movement, is deeply founded on the natural cycle, and everything in nature that we think of as having some analogy with works of art, like the flower or the bird's song, grows out of a profound synchronization between an organism and the rhythms of its environment, especially that of the solar year. With animals some expressions of synchronization, like the mating dances of birds, could almost be called rituals. But in human life a ritual seems to be something of a voluntary effort (hence the magical element in it) to recapture a lost rapport with the natural cycle. A farmer must harvest his crop at a certain time of year, but because this is involuntary, harvesting itself is not precisely a ritual. It is the deliberate expression of a will to synchronize human and natural energies at that time which produces the harvest songs, harvest sacrifices and harvest folk customs that we call rituals. In ritual, then, we may find the origin of narrative, a ritual being a temporal sequence of acts in which the conscious meaning or significance is latent: it can be seen by an observer, but is largely concealed from the participators themselves. The pull of ritual is toward pure narrative, which, if there could be such a thing, would be automatic and unconscious repetition. We should notice too the regular tendency of ritual to become encyclopedic. All the important recurrences in nature, the day, the phases of the moon, the seasons and solstices of the year, the crises of existence from birth to death, get rituals attached to them, and most of the higher religions are equipped with a definitive total body of rituals suggestive, if we may put it so, of the entire range of potentially significant actions in human life.

Patterns of imagery, on the other hand, or fragments of significance, are oracular in origin, and derive from the epiphanic moment, the flash of instantaneous comprehension with no direct reference to time, the importance of which is indicated by Cassirer in *Myth and Language*.⁶ By the time we get them, in the form of proverbs, riddles, commandments and etiological folk tales, there is already a considerable element of narrative in them. They too are encyclopedic in tendency, building up a total structure of significance, or doctrine, from random and empiric fragments. And just as pure narrative would be unconscious act, so pure significance would be an incommunicable state of consciousness, for communication begins by constructing narrative.

The myth is the central informing power that gives archetypal significance to the ritual and archetypal narrative to the oracle. Hence the myth is the archetype, though it might be convenient to say myth only when referring to narrative, and archetype when speaking of significance. In the solar cycle of the day, the seasonal cycle of the year, and the organic cycle of human life, there is a single pattern of significance, out of which myth constructs a central narrative around a figure who is partly the sun, partly vegetative fertility and partly a god or archetypal human being. The crucial importance of this myth has been forced on literary critics by Jung and Frazer⁷ in particular, but the several books now available on it are not always

6. Properly, *Language and Myth* (1925), by the German philosopher and historian of ideas Ernst Cassirer (1874–1945).

7. Sir James George Frazer (1854–1941), Scottish anthropologist and folklorist, whose *The*

Golden Bough (12 vols., 1890–1915) is largely concerned with the fertility figure. Carl Gustav Jung (1875–1961), Swiss psychiatrist and theorist of archetypes.

systematic in their approach, for which reason I supply the following table of its phases:

1.

The dawn, spring and birth phase. Myths of the birth of the hero, of revival and resurrection, of creation and (because the four phases are a cycle) of the defeat of the powers of darkness, winter and death. Subordinate characters: the father and the mother. The archetype of romance and of most dithyrambic and rhapsodic poetry.

2.

The zenith, summer, and marriage or triumph phase. Myths of apotheosis, of the sacred marriage, and of entering into Paradise. Subordinate characters: the companion and the bride. The archetype of comedy, pastoral and idyll.

3.

The sunset, autumn and death phase. Myths of fall, of the dying god, of violent death and sacrifice and of the isolation of the hero. Subordinate characters: the traitor and that siren. The archetype of tragedy and elegy.

4.

The darkness, winter and dissolution phase. Myths of the triumph of these powers; myths of floods and the return of chaos, of the defeat of the hero, and *Götterdämmerung*⁸ myths. Subordinate characters: the ogre and the witch. The archetype of satire (see, for instance, the conclusion of *The Dunciad*⁹).

The quest of the hero also tends to assimilate the oracular and random verbal structures, as we can see when we watch the chaos of local legends that results from prophetic epiphanies consolidating into a narrative mythology of departmental gods. In most of the higher religions this in turn has become the same central quest-myth that emerges from ritual, as the Messiah myth became the narrative structure of the oracles of Judaism. A local flood may beget a folk tale by accident, but a comparison of flood stories will show how quickly such tales become examples of the myth of dissolution. Finally, the tendency of both ritual and epiphany to become encyclopedic is realized in the definitive body of myth which constitutes the sacred scriptures of religions. These sacred scriptures are consequently the first documents that the literary critic has to study to gain a comprehensive view of his subject. After he has understood their structure, then he can descend from archetypes to genres, and see how the drama emerges from the ritual side of myth and lyric from the epiphanic or fragmented side, while the epic carries on the central encyclopedic structure.

8. Literally, "the twilight of the gods" (German), and the title of an opera (1876) by the German composer Richard Wagner. More generally, the term refers to catastrophic collapse into violence

and disorder.

9. Mock-heroic satire (1728–43) by ALEXANDER POPE.

Some words of caution and encouragement are necessary before literary criticism has clearly staked out its boundaries in these fields. It is part of the critic's business to show how all literary genres are derived from the quest-myth, but the derivation is a logical one within the science of criticism: the quest-myth will constitute the first chapter of whatever future handbooks of criticism may be written that will be based on enough organized critical knowledge to call themselves "introductions" or "outlines" and still be able to live up to their titles. It is only when we try to expound the derivation chronologically that we find ourselves writing pseudo-prehistorical fictions and theories of mythological contract. Again, because psychology and anthropology are more highly developed sciences, the critic who deals with this kind of material is bound to appear, for some time, a dilettante of those subjects. These two phases of criticism are largely undeveloped in comparison with literary history and rhetoric, the reason being the later development of the sciences they are related to. But the fascination which *The Golden Bough* and Jung's book on libido symbols¹ have for literary critics is not based on dilettantism, but on the fact that these books are primarily studies in literary criticism, and very important ones.

In any case the critic who is studying the principles of literary form has a quite different interest from the psychologist's concern with states of mind or the anthropologist's with social institutions. For instance: the mental response to narrative is mainly passive; to significance mainly active. From this fact Ruth Benedict's² *Patterns of Culture* develops a distinction between "Apollonian" cultures based on obedience to ritual and "Dionysiac" ones based on a tense exposure of the prophetic mind to epiphany. The critic would tend rather to note how popular literature which appeals to the inertia of the untrained mind puts a heavy emphasis on narrative values, whereas a sophisticated attempt to disrupt the connection between the poet and his environment produces the Rimbaud type of *illumination*, Joyce's solitary epiphanies, and Baudelaire's³ conception of nature as a source of oracles. Also how literature, as it develops from the primitive to the self-conscious, shows a gradual shift of the poet's attention from narrative to significant values, this shift of attention being the basis of Schiller's distinction between naive and sentimental poetry.⁴

The relation of criticism to religion, when they deal with the same documents, is more complicated. In criticism, as in history, the divine is always treated as a human artifact. God for the critic, whether he finds him in *Paradise Lost*⁵ or the Bible, is a character in a human story; and for the critic all epiphanies are explained, not in terms of the riddle of a possessing god or devil, but as mental phenomena closely associated in their origin with dreams. This once established, it is then necessary to say that nothing in criticism or art compels the critic to take the attitude of ordinary waking

2. American anthropologist (1887–1948); *Patterns of Culture* was published in 1934. On the opposition between Apollonian and Dionysian, see FRIEDRICH NIETZSCHE's *The Birth of Tragedy* (1872), above.

3. Charles Baudelaire (1821–1867), French sym-

bolist poet. Arthur Rimbaud (1854–1891), French symbolist poet. James Joyce (1882–1941), Irish novelist who extended the term "epiphany" to refer to peak moments recorded in literature.

4. See *On Naïve and Sentimental Poetry* (1795–96) by FRIEDRICH VON SCHILLER (1759–1805), German dramatist, poet, and historian.

5. Epic poem (1667) by John Milton (1608–1674).

consciousness towards the dream or the god. Art deals not with the real but with the conceivable; and criticism, though it will eventually have to have some theory of conceivability, can never be justified in trying to develop, much less assume, any theory of actuality. It is necessary to understand this before our next and final point can be made.

We have identified the central myth of literature, in its narrative aspect, with the quest-myth. Now if we wish to see this central myth as a pattern of meaning also, we have to start with the workings of the subconscious where the epiphany originates, in other words in the dream. The human cycle of waking and dreaming corresponds closely to the natural cycle of light and darkness, and it is perhaps in this correspondence that all imaginative life begins. The correspondence is largely an antithesis: it is in daylight that man is really in the power of darkness, a prey to frustration and weakness; it is in the darkness of nature that the "libido" or conquering heroic self awakes. Hence art, which Plato called a dream for awakened minds,⁶ seems to have as its final cause the resolution of the antithesis, the mingling of the sun and the hero, the realizing of a world in which the inner desire and the outward circumstance coincide. This is the same goal, of course, that the attempt to combine human and natural power in ritual has. The social function of the arts, therefore, seems to be closely connected with visualizing the goal of work in human life. So in terms of significance, the central myth of art must be the vision of the end of social effort, the innocent world of fulfilled desires, the free human society. Once this is understood, the integral place of criticism among the other social sciences, in interpreting and systematizing the vision of the artist, will be easier to see. It is at this point that we can see how religious conceptions of the final cause of human effort are as relevant as any others to criticism.

The importance of the god or hero in the myth lies in the fact that such characters, who are conceived in human likeness and yet have more power over nature, gradually build up the vision of an omnipotent personal community beyond an indifferent nature. It is this community which the hero regularly enters in his apotheosis. The world of this apotheosis thus begins to pull away from the rotary cycle of the quest in which all triumph is temporary. Hence if we look at the quest-myth as a pattern of imagery, we see the hero's quest first of all in terms of its fulfillment. This gives us our central pattern of archetypal images, the vision of innocence which sees the world in terms of total human intelligibility. It corresponds to, and is usually found in the form of, the vision of the unfallen world or heaven in religion. We may call it the comic vision of life, in contrast to the tragic vision, which sees the quest only in the form of its ordained cycle.

We conclude with a second table of contents, in which we shall attempt to set forth the central pattern of the comic and tragic visions. One essential principle of archetypal criticism is that the individual and the universal forms of an image are identical, the reasons being too complicated for us just now. We proceed according to the general plan of the game of Twenty Questions, or, if we prefer, of the Great Chain of Being:⁷

6. See Plato, *Sophist* 266c.

7. The notion of the universe as a hierarchical order consisting of an enormous (or even infinite) number of links; Frye probably has in mind the

American philosopher and intellectual historian Arthur O. Lovejoy's *The Great Chain of Being* (1936).

1.

In the comic vision the *human* world is a community, or a hero who represents the wish-fulfillment of the reader. The archetype of images of symposium, communion, order, friendship and love. In the tragic vision the human world is a tyranny or anarchy, or an individual or isolated man, the leader with his back to his followers, the bullying giant of romance, the deserted or betrayed hero. Marriage or some equivalent consummation belongs to the comic vision; the harlot, witch and other varieties of Jung's "terrible mother" belong to the tragic one. All divine, heroic, angelic or other superhuman communities follow the human pattern.

2.

In the comic vision the *animal* world is a community of domesticated animals, usually a flock of sheep, or a lamb, or one of the gentler birds, usually a dove. The archetype of pastoral images. In the tragic vision the animal world is seen in terms of beasts and birds of prey, wolves, vultures, serpents, dragons and the like.

3.

In the comic vision the *vegetable* world is a garden, grove or park, or a tree of life, or a rose or lotus. The archetype of Arcadian images, such as that of Marvell's green world or of Shakespeare's forest comedies.⁸ In the tragic vision it is a sinister forest like the one in *Comus* or at the opening of the *Inferno*,⁹ or a heath or wilderness, or a tree of death.

4.

In the comic vision the *mineral* world is a city, or one building or temple, or one stone, normally a glowing precious stone—in fact the whole comic series, especially the tree, can be conceived as luminous or fiery. The archetype of geometrical images: the "starlit dome"¹ belongs here. In the tragic vision the mineral world is seen in terms of deserts, rocks and ruins, or of sinister geometrical images like the cross.

5.

In the comic vision the *unformed* world is a river, traditionally fourfold, which influenced the Renaissance image of the temperate body with its four humors.² In the tragic vision this world usually becomes the sea, as the narrative myth of dissolution is so often a flood myth. The combination of the sea and beast images gives us the leviathan and similar water-monsters.

8. Shakespeare's forest (that is, pastoral) comedies include *As You Like It* (ca. 1599). For the "green world" of Andrew Marvell (1621–1678), English metaphysical poet, see especially "The Garden" (1681).

9. The first book of DANTE ALIGHIERI'S *Divine Comedy* (1321). *Comus* (1634), a religious masque by Milton.

1. See, for example, Coleridge's poem "Kubla Khan" (written 1797; pub. 1816), which refers to Kubla Khan's "stately pleasure-dome."

2. The four fluids of the body—blood, phlegm, choler, and black bile—whose relative proportions were thought to determine a person's disposition and general health.

Obvious as this table looks, a great variety of poetic images and forms will be found to fit it. Yeats's "Sailing to Byzantium,"³ to take a famous example of the comic vision at random, has the city, the tree, the bird, the community of sages, the geometrical gyre and the detachment from the cyclic world. It is, of course, only the general comic or tragic context that determines the interpretation of any symbol: this is obvious with relatively neutral archetypes like the island, which may be Prospero's island or Circe's.⁴

Our tables are, of course, not only elementary but grossly over-simplified, just as our inductive approach to the archetype was a mere hunch. The important point is not the deficiencies of either procedure, taken by itself, but the fact that, somewhere and somehow, the two are clearly going to meet in the middle. And if they do meet, the ground plan of a systematic and comprehensive development of criticism has been established.

1951

3. Poem (1927) by the Irish poet William Butler Yeats (1865–1939).

4. In Greek mythology, a sorceress who lived on the island of Acaea (where Odysseus and his

men land in Homer's *Odyssey*). Prospero's island: the setting of Shakespeare's play *The Tempest* (1611).

ROLAND BARTHES

1915–1980

Generally considered one of the leading figures in French structuralism, Roland Barthes is, as Jonathan Culler puts it, "famous for contradictory reasons." On the one hand, there is the scientific Barthes: the one who sought a universal grammar of narrative in his influential essay "Introduction to the Structural Study of Narrative" (1966), or who explored FERDINAND DE SAUSSURE's notion of semiology—a broad science of signs in human culture, of which linguistics would provide a model—in such works as *Elements of Semiology* (1965) and *The Fashion System* (1967). But on the other hand, there is the hedonist and connoisseur: the Barthes who wrote playfully and allusively about pleasure in *The Pleasure of the Text* (1973) and in *A Lover's Discourse* (1977). Even his literary tastes seemed contradictory: he promoted avant-garde writers (Robbe-Grillet, Brecht, Sollers), but he also loved and wrote about the most traditional of French authors (La Bruyère, Racine, Chateaubriand, Balzac, Proust). And he who questioned the importance of the author was himself preeminently an author—indeed, the only author to have written his own volume in a series of "perennial masters" (*Roland Barthes by Roland Barthes*, 1975). A quintessential "man of letters" in the traditional sense, he was also a man of letters in an idiosyncratic, literal sense, organizing three of his books alphabetically so as to avoid thematic or logical organization, and highlighting the material form of letters in one of his book titles, *S/Z* (1970). He was less a path breaker than a habit breaker, resolutely committed to unlearning the routines of intelligibility, even those he himself had helped promote.

Roland Barthes was born in Cherbourg, France. His father, a naval officer, was killed a year later, and Barthes's mother moved to the paternal family home in Bayonne in southern France. The theorist of the death of the author thus grew up without a father, living with or near his mother until her death in 1977, three years before

his own. In 1924 mother and son moved to Paris, where Barthes progressed to the *baccalauréat* in the Parisian schools and began studying for entrance into the prestigious École Normale, until his promising academic trajectory was interrupted by the first of several attacks of tuberculosis. Meanwhile, his mother's already strained relations with her Parisian family worsened in 1927 when she gave birth to an illegitimate child—Roland's half-brother, Michel Salzado. Although Barthes's grandparents were well-off, they refused Henriette Binger Barthes and her two sons any financial support, with the result that Henriette had to scrape by on what she earned as a bookbinder.

From 1934 to 1950 Barthes's life alternated between tuberculosis sanatoria (he was exempted from military duty and spent the years of the Occupation in a sanatorium in the Isère), academic institutions where he studied, and, when his health permitted, teaching jobs in Biarritz and abroad in Bucharest and Alexandria. Despite—or perhaps because of—his forced convalescences, he read avidly, founded a theatrical troupe, and began to write. From the first Barthes's writings reflect both his idiosyncratic creativity and his attunement to the intellectual milieu in which he found himself. His first book, *Writing Degree Zero* (1953), initially published as articles in Albert Camus's journal, *Combat*, analyzes the history of literary styles in terms derived from MARX and from Sartre. In this book Barthes looks at the relations between Literature with a capital L and the various modern forms of its demystification, from Stéphane Mallarmé's "vibratory near-disappearance" to Camus's "blank" style (the "zero degree" of the title).

A second, quite different, project Barthes undertook at the same time was an extensive study of the imagery used by the nineteenth-century historian Jules Michelet. Scribbling passages on index cards, Barthes organized Michelet's "imagination" in ways that did not correspond to the explicit intentions of his writing. Like the work of the phenomenological critics Jean-Pierre Richard and Georges Poulet, Barthes's analysis was a way of structuring Michelet's writing around its unconscious "obsessions." This research was published as a book titled *Michelet* (1954) in the same writers' series in which Barthes himself later appeared.

Barthes's third project in the mid-1950s, different yet again, was a series of short occasional pieces later published as *Mythologies* (1957). In these essays, of which we give one example, Barthes does a kind of Marxian semiology of mass culture and everyday life. His object is to show how mass culture is saturated with ideological propositions ("myths") presented as if they were natural and self-evident; the result in many ways anticipates what is today called "cultural studies." Barthes combines a sharp eye for the social life of signs with a subtle critique of the naturalizations of the ethnocentric, patriarchal, petit-bourgeois French worldview. Critical of the covert functions of *what-goes-without-saying*, Barthes nevertheless enjoys the exhibitions, advertisements, photographs, articles, films, wrestling matches, and commodities that provide the occasion for his little feats of writing.

As a researcher in Paris for ten years at the CNRS (National Center for Scientific Research), Barthes—like many others in Paris at that time, including CLAUDE LÉVI-STRAUSS in anthropology, JACQUES LACAN in psychoanalysis, and TZVETAN TODOROV and Gérard Genette in literary studies—continued his exploration of the possibilities of extending Saussure's synchronic linguistic analysis to larger cultural structures. In 1962 Barthes was appointed to a tenured post in "the sociology of signs, symbols, and representations" at the École des Hautes Études (School for Advanced Study), where his seminar became legendary. His book *On Racine* (1963) raised hackles in the traditional academic community for its concentration on the structures of Racine's *textual* world rather than his biographical or historical world. Raymond Picard, a Racine scholar at the Sorbonne, countered with *New Criticism or New Fraud?* (1965). Barthes responded to Picard by arguing that traditional critics' recourse to the values of clarity, nobility, and humanity, which they treat as neutral and self-evident, actually exerts a coercive, censoring force on other interpretive possibilities.

The Picard affair is the backdrop for one of Barthes's most notorious essays, "The Death of the Author." Written at the height of the antiestablishment uprisings of May 1968, it assails academic criticism's typical focus on "the man and his work" (which is in many ways the organizing principle of the present anthology). Indeed, Barthes was surprised to find himself caught in 1968 between generations: while he was attacking the generation of Picard, the students—brandishing the anti-structuralist slogan "Structures don't take to the streets!"—were rebelling against the generation of Barthes himself.

"The Death of the Author" begins with an example taken from Balzac's novella *Sarrasine*—the tale of a sculptor who falls in love with an Italian diva subsequently revealed to be not a woman but a castrato (*Sarrasine* was the text analyzed that year in his seminar, and Barthes went on to publish a full-length study of it in his book *S/Z*). Barthes focuses on a sentence in the text in which a series of exclamations about femininity cannot be clearly attributed to the conscious intentions of any one person, whether that be the author, the narrator, a character, or even "universal wisdom." Barthes argues that the effective, productive, and engaged reading of a text depends on the suspension of preconceived ideas about the character of the particular author—or even about human psychology in general. The text itself is feigning a set of assumptions it will subsequently reveal to be misguided. From the moment that writing detaches itself from an immediate context, "It is language which speaks, not the author." The author, the text, and the reader are each composed of a universe of quotations without origin or end. In its celebration of the birth of the reader, "The Death of the Author" explores the consequences of freeing the reading process from the constraints of fidelity to an origin, a unified meaning, an identity, or any other pregiven exterior or interior reality.

The publication of *S/Z* marks a turning point in Barthes's relation to structuralism. It is a multilevel analysis that refuses to structure the text otherwise than by cutting it into hundreds of little pieces of varying lengths (called *lexias*) and also by identifying five broad functions (called *codes*) at work in the text. Written as if it were meant to constitute a methodological exemplar, it exaggerates the performance of methodology to such an extent that it becomes inimitable and perhaps parodic. When commentators look for a break between structuralism and poststructuralism, *S/Z* stands as a revealing hinge. In it Barthes pursues not so much a *critique* of structuralism (as does JACQUES DERRIDA, for example) as an *explosion* of it. The hints of larger structures at work are fragmentary and multiple, not sustained, and the theoretical comments are printed as digressions, numbering almost a hundred. Boredom with the structuralist project of reducing all narratives to a common grammar combines with delight in the foretaste of a multitude of grammars and rhetorics hinted at but not developed in *S/Z*.

Also originally published in 1968 was Barthes's seminal essay "The Reality Effect," translated and reprinted in *The Rustle of Language* (1986). For Barthes, a better understanding of narrative, character, and history requires structural analysis to engage seemingly inconsequential details. Barthes begins with two sentences: one from "A Simple Heart" (1877), by the realist writer Gustave Flaubert, and the other from the recounting of the execution of Charlotte Corday by Jules Michelet. He then launches into theorizing on the importance of what may appear "superfluous" or as "insignificant notations," which, in point of fact, actually reinforce literary and historical realism, as their representations themselves effect reality. Near the close of his essay, Barthes proposes a new verisimilitude and representation to replace the old classical realist concept. At issue is a contemporary linguistic turn in which the signifier (a word) replaces the referent (a thing): that is, language defers and supplants reality, thereby challenging the long-standing claim that literature represents reality. Reality is instead an effect of language.

Barthes's subsequent essay reprinted here, "From Work to Text" (1971), is one of the clearest available summaries (including the obligatory disavowal of such a summary) of the poststructuralist theory of the "text" as it was developed not only by Barthes but by all the writers associated with the vanguard journal *Tel Quel*, including Philippe Sollers, JULIA KRISTEVA, Derrida, and others. This description of "textuality" can be seen as one way of marking the transition between structuralism and poststructuralism. Whereas culture and language for Lévi-Strauss and Saussure were structured like a game (chess is the favorite example), the text is structured like *play*—children's play, musical performance, or the excess motion in a machine. But both structuralists and poststructuralists would contrast their analyses to the classical study of literary and other cultural objects ("work"). The *text* is a process; the *work* is a product. *Works* can be found on library shelves; *texts* are signifying fields into which one enters. (The development of the Internet has perhaps made this distinction seem less radical than it did in the 1970s.) Their point is not that literature can be divided into works and texts but that the reader can activate either the closure of the signified (the coherence of a meaning) or the "play" of the signifier (the dissemination and disruption of meanings). The text deserves no vital "respect"—it is not alive and can thus be "broken" or "manhandled" in ways that would violate organic forms. The death of the author turns out to be based not on a murder but on an elimination of the metaphor of life in the first place. The work is "consumed"; the text is "produced" (in *S/Z*, Barthes called these the *readerly* and the *writerly* aspects of a text). Barthes ends the essay by opening onto pleasure, a topic that would engage him more and more from then on.

In later writings (*The Empire of Signs*, 1970; *The Pleasure of the Text*, 1973; *Roland Barthes by Roland Barthes*, 1975; *Camera Lucida*, 1980; and the posthumously published *Incidents*, 1987), Roland Barthes seems to resurrect precisely the author he had killed off. But the contradiction is more apparent than real. While the disembodied, abstract author of the network of signs does indeed become an embodied and particular author, the body and biography are both seen as historical, and both are structured like a text. The author is still not an extratextual *identity* determining meaning. The body can be read like a text, just as the text can be read like a body. Gaps in meaning, like the gaps in a garment, are equivalent sites of pleasure. *Roland Barthes by Roland Barthes* does not create a person retrospectively but gives an alphabetically arranged mosaic of the preoccupations of someone who is just like a character in a novel. Indeed, in an interview Barthes called autobiography a "novel that dares not speak its name." He thus subtly alludes to Wildean homosexuality ("The Love That Dares Not Speak Its Name") in a context in which Barthes's own homosexuality is being, by that very expression, *detached* from any real person. This sophisticated relation to homosexuality (neither hidden nor claimed) is readable throughout Barthes's work.

In 1976 this critic of academic criticism was elected to the Chair in Literary Semiology at France's most prestigious institution, the Collège de France. In his inaugural lecture, published as *Leçon* (1978), he explains why he is an unlikely choice for such a post and then goes on to recapitulate many of his thoughts about semiology and literature. Barthes thus ended up as one of the most established of antiestablishment academics.

Barthes's last book published during his lifetime, *Camera Lucida*, is both a meditation on photography and an act of mourning for his mother. Whereas in *Mythologies* he had revealed the contrived nature of the "reality" inherent in the campaign photograph, in *Camera Lucida*, on the contrary, he finds something in a photograph, particularly a snapshot, that is real. Neither a rhetorical sleight-of-hand nor an arbitrary contrivance, the photograph has a way of telling us "This has been." Although Barthes was only sixty-four years old at the time of its publication, the book reads in many ways like a voice from beyond the grave. That

same year Roland Barthes was hit by a laundry truck in the street; his injuries proved fatal.

Writing on the cusp of structuralism and poststructuralism, Barthes was a master of the provocative essay, weaving together science and pleasure, critique and eloquence, and never simply choosing between them. For him, specialized vocabularies were delicious in themselves, and ordinary language already multidimensional.

*From Mythologies*¹

Photography and Electoral Appeal

Some candidates for Parliament adorn their electoral prospectus with a portrait. This presupposes that photography has a power to convert which must be analysed. To start with, the effigy of a candidate establishes a personal link between him and the voters; the candidate does not only offer a programme for judgment, he suggests a physical climate, a set of daily choices expressed in a morphology, a way of dressing, a posture. Photography thus tends to restore the paternalistic nature of elections, whose elitist essence has been disrupted by proportional representation and the rule of parties (the Right seems to use it more than the Left). Inasmuch as photography is an ellipse² of language and a condensation of an 'ineffable' social whole, it constitutes an anti-intellectual weapon and tends to spirit away 'politics' (that is to say a body of problems and solutions) to the advantage of a 'manner of being', a socio-moral status. It is well known that this antithesis is one of the major myths of Poujadism (Poujade³ on television saying: '*Look at me: I am like you*').

Electoral photography is therefore above all the acknowledgment of something deep and irrational co-extensive with politics. What is transmitted through the photograph of the candidate are not his plans, but his deep motives, all his family, mental, even erotic circumstances, all this style of life of which he is at once the product, the example and the bait. It is obvious that what most of our candidates offer us through their likeness is a type of social setting, the spectacular comfort of family, legal and religious norms, the suggestion of innately owning such items of bourgeois property as Sunday Mass, xenophobia, steak and chips, cuckold jokes, in short, what we call an ideology. Needless to say the use of electoral photography presupposes a kind of complicity: a photograph is a mirror, what we are asked to

1. Translated by Annette Lavers.

2. Ellipsis.

3. Pierre-Marie Poujade (1920–2003), French

politician; leader of a right-wing movement in the 1950s.

read is the familiar, the known; it offers to the voter his own likeness, but clarified, exalted, superbly elevated into a type. This glorification is in fact the very definition of the photogenic: the voter is at once expressed and heroized, he is invited to elect himself, to weigh the mandate which he is about to give with a veritable physical transference: he is delegating his 'race'.

The types which are thus delegated are not very varied. First there is that which stands for social status, respectability, whether sanguine and well-fed (lists of 'National' parties), or genteel and insipid (lists of the M.R.P.⁴—the Christian Democrats). Then, the type of the intellectual (let it be repeated that we are dealing here with 'signified' types, not actual ones): whether sanctimonious like the candidate of centre right parties like the Rassemblement National, or 'searching' like that of the Communists. In the last two cases, the iconography is meant to signify the exceptional conjunction of thought and will, reflection and action: the slightly narrowed eyes allow a sharp look to filter through, which seems to find its strength in a beautiful inner dream without however ceasing to alight on real obstacles, as if the ideal candidate had in this case magnificently to unite social idealism with bourgeois empiricism. The last type is quite simply that of the 'good-looking chap', whose obvious credentials are his health and virility. Some candidates, incidentally, beautifully manage to win on both counts, appearing for instance as a handsome hero (in uniform) on one side of the handout, and as a mature and virile citizen on the other, displaying his little family. For in most cases, the morphological type is assisted by very obvious attributes: one candidate is surrounded by his kids (curled and dolled-up like all children photographed in France), another is a young parachutist with rolled-up sleeves, or an officer with his chest covered with decorations. Photography constitutes here a veritable blackmail by means of moral values: country, army, family, honour, reckless heroism.

The conventions of photography, moreover, are themselves replete with signs. A full-face photograph underlines the realistic outlook of the candidate, especially if he is provided with scrutinizing glasses. Everything there expresses penetration, gravity, frankness: the future deputy is looking squarely at the enemy, the obstacle, the 'problem'. A three-quarter face photograph, which is more common, suggests the tyranny of an ideal: the gaze is lost nobly in the future, it does not confront, it soars, and fertilizes some other domain, which is chastely left undefined. Almost all three-quarter face photos are ascensional, the face is lifted towards a supernatural light which draws it up and elevates it to the realm of a higher humanity; the candidate reaches the Olympus of elevated feelings, where all political contradictions are solved: peace and war in Algeria,⁵ social progress and employers' profits, so-called 'free' religious schools and subsidies from the sugar-beet lobby, the Right and the Left (an opposition always 'superseded!'): all these coexist peacefully in this thoughtful gaze, nobly fixed on the hidden interests of Order.

The Death of the Author¹

In his story *Sarrasine*² Balzac, describing a castrato disguised as a woman, writes the following sentence: '*This was woman herself, with her sudden fears, her irrational whims, her instinctive worries, her impetuous boldness, her fussings, and her delicious sensibility.*' Who is speaking thus? Is it the hero of the story bent on remaining ignorant of the castrato hidden beneath the woman? Is it Balzac the individual, furnished by his personal experience with a philosophy of Woman? Is it Balzac the author professing 'literary' ideas on femininity? Is it universal wisdom? Romantic psychology? We shall never know, for the good reason that writing is the destruction of every voice, of every point of origin. Writing is that neutral, composite, oblique space where our subject slips away, the negative where all identity is lost, starting with the very identity of the body writing.

No doubt it has always been that way. As soon as a fact is *narrated* no longer with a view to acting directly on reality but intransitively, that is to say, finally outside of any function other than that of the very practice of the symbol itself, this disconnection occurs, the voice loses its origin, the author enters into his own death, writing begins. The sense of this phenomenon, however, has varied; in ethnographic societies the responsibility for a narrative is never assumed by a person but by a mediator, shaman or relator whose 'performance'—the mastery of the narrative code—may possibly be admired but never his 'genius'. The author is a modern figure, a product of our society insofar as, emerging from the Middle Ages with English empiricism, French rationalism and the personal faith of the Reformation, it discovered the prestige of the individual, of, as it is more nobly put, the 'human person'. It is thus logical that in literature it should be this positivism, the epitome and culmination of capitalist ideology, which has attached the greatest importance to the 'person' of the author. The *author* still reigns in histories of literature, biographies of writers, interviews, magazines, as in the very consciousness of men of letters anxious to unite their person and their work through diaries and memoirs. The image of literature to be found in ordinary culture is tyrannically centred on the author, his person, his life, his tastes, his passions, while criticism still consists for the most part in saying that Baudelaire's work is the failure of Baudelaire the man, Van Gogh's his madness, Tchaikovsky's his vice.³ The *explanation* of a work is always sought in the man or woman who produced it, as if it were always in the end, through the more or less transparent allegory of the fiction, the voice of a single person, the *author* 'confiding' in us.

Though the sway of the Author remains powerful (the new criticism⁴ has often done no more than consolidate it), it goes without saying that certain

writers have long since attempted to loosen it. In France, Mallarmé⁵ was doubtless the first to see and to foresee in its full extent the necessity to substitute language itself for the person who until then had been supposed to be its owner. For him, for us too, it is language which speaks, not the author; to write is, through a prerequisite impersonality (not at all to be confused with the castrating objectivity of the realist novelist), to reach that point where only language acts, 'performs', and not 'me'. Mallarmé's entire poetics consists in suppressing the author in the interests of writing (which is, as will be seen, to restore the place of the reader). Valéry,⁶ encumbered by a psychology of the Ego, considerably diluted Mallarmé's theory but, his taste for classicism leading him to turn to the lessons of rhetoric, he never stopped calling into question and deriding the Author; he stressed the linguistic and, as it were, 'hazardous' nature of his activity, and throughout his prose works he militated in favour of the essentially verbal condition of literature, in the face of which all recourse to the writer's interiority seemed to him pure superstition. Proust⁷ himself, despite the apparently psychological character of what are called his *analyses*, was visibly concerned with the task of inexorably blurring, by an extreme subtilization, the relation between the writer and his characters; by making of the narrator not he who has seen and felt nor even he who is writing, but he who is *going to write* (the young man in the novel—but, in fact, how old is he and who is he?—wants to write but cannot; the novel ends when writing at last becomes possible), Proust gave modern writing its epic. By a radical reversal, instead of putting his life into his novel, as is so often maintained, he made of his very life a work for which his own book was the model; so that it is clear to us that Charlus⁸ does not imitate Montesquiou but that Montesquiou—in his anecdotal, historical reality—is no more than a secondary fragment, derived from Charlus. Lastly, to go no further than this prehistory of modernity, Surrealism, though unable to accord language a supreme place (language being system and the aim of the movement being, romantically, a direct subversion of codes—itself moreover illusory: a code cannot be destroyed, only 'played off'), contributed to the desacralization of the image of the Author by ceaselessly recommending the abrupt disappointment of expectations of meaning (the famous surrealist 'jolt'), by entrusting the hand with the task of writing as quickly as possible what the head itself is unaware of (automatic writing), by accepting the principle and the experience of several people writing together. Leaving aside literature itself (such distinctions really becoming invalid), linguistics has recently provided the destruction of the Author with a valuable analytical tool by showing that the whole of the enunciation is an empty process, functioning perfectly without there being any need for it to be filled with the person of the interlocutors. Linguistically, the author is never more than the instance writing, just as *I* is nothing other than the instance saying *I*: language knows a 'subject', not a 'person', and this subject, empty outside of the very enunciation which defines it, suffices to make language 'hold together', suffices, that is to say, to exhaust it.

5. Stéphane Mallarmé (1842–1898), French poet.

6. Paul Valéry (1871–1945), French poet and critic.

7. Marcel Proust (1871–1922), French novelist.

8. Le baron de Charlus, a character in Proust's *In Search of Lost Time* (7 vols., 1913–27), said to have been modeled on the aesthete Robert, comte de Montesquiou-Fézensac (1855–1921).

The removal of the Author (one could talk here with Brecht⁹ of a veritable 'distancing', the Author diminishing like a figurine at the far end of the literary stage) is not merely an historical fact or an act of writing; it utterly transforms the modern text (or—which is the same thing—the text is henceforth made and read in such a way that at all its levels the author is absent). The temporality is different. The Author, when believed in, is always conceived of as the past of his own book: book and author stand automatically on a single line divided into a *before* and an *after*. The Author is thought to *nourish* the book, which is to say that he exists before it, thinks, suffers, lives for it, is in the same relation of antecedence to his work as a father to his child. In complete contrast, the modern scriptor is born simultaneously with the text, is in no way equipped with a being preceding or exceeding the writing, is not the subject with the book as predicate; there is no other time than that of the enunciation and every text is eternally written *here* and *now*. The fact is (or, it follows) that *writing* can no longer designate an operation of recording, notation, representation, 'depiction' (as the Classics would say); rather, it designates exactly what linguists, referring to Oxford philosophy,¹ call a performative, a rare verbal form (exclusively given in the first person and in the present tense) in which the enunciation has no other content (contains no other proposition) than the act by which it is uttered—something like the *I declare* of kings or the *I sing* of very ancient poets. Having buried the Author, the modern scriptor can thus no longer believe, as according to the pathetic view of his predecessors, that this hand is too slow for his thought or passion and that consequently, making a law of necessity, he must emphasize this delay and indefinitely 'polish' his form. For him, on the contrary, the hand, cut off from any voice, borne by a pure gesture of inscription (and not of expression), traces a field without origin—or which, at least, has no other origin than language itself, language which ceaselessly calls into question all origins.

We know now that a text is not a line of words releasing a single 'theological' meaning (the 'message' of the Author-God) but a multi-dimensional space in which a variety of writings, none of them original, blend and clash. The text is a tissue of quotations drawn from the innumerable centres of culture. Similar to Bouvard and Pécuchet,² those eternal copyists, at once sublime and comic and whose profound ridiculousness indicates precisely the truth of writing, the writer can only imitate a gesture that is always anterior, never original. His only power is to mix writings, to counter the ones with the others, in such a way as never to rest on any one of them. Did he wish to *express himself*, he ought at least to know that the inner 'thing' he thinks to 'translate' is itself only a ready-formed dictionary, its words only explainable through other words, and so on indefinitely; something experienced in exemplary fashion by the young Thomas de Quincey,³ he who was so good at Greek that in order to translate absolutely modern ideas and images into that dead language, he had, so Baudelaire tells us (in *Paradis Artificiels*),⁴ 'created for himself an unfailing dictionary, vastly more extensive and complex than those resulting

9. Bertolt Brecht (1898–1956), German poet and dramatist, whose "epic theater" was intended to distance and alienate the audience from traditional theatrical illusion.

1. That is, philosophy of language; see especially J. L. AUSTIN, *How to Do Things with Words* (1962).

2. The title characters in Gustave Flaubert's unfinished novel *Bouvard and Pécuchet* (1881), who leave their jobs as copyists and unsuccessfully attempt to master all knowledge.

3. English essayist and critic (1785–1859).

4. *Artificial Paradises* (1869).

from the ordinary patience of purely literary themes'. Succeeding the Author, the scriptor no longer bears within him passions, humours, feelings, impressions, but rather this immense dictionary from which he draws a writing that can know no halt: life never does more than imitate the book, and the book itself is only a tissue of signs, an imitation that is lost, infinitely deferred.

Once the Author is removed, the claim to decipher a text becomes quite futile. To give a text an Author is to impose a limit on that text, to furnish it with a final signified, to close the writing. Such a conception suits criticism very well, the latter then allotting itself the important task of discovering the Author (or its hypostases:⁵ society, history, psyche, liberty) beneath the work: when the Author has been found, the text is 'explained'—victory to the critic. Hence there is no surprise in the fact that, historically, the reign of the Author has also been that of the Critic, nor again in the fact that criticism (be it new) is today undermined along with the Author. In the multiplicity of writing, everything is to be *disentangled*, nothing *deciphered*; the structure can be followed, 'run' (like the thread of a stocking) at every point and at every level, but there is nothing beneath: the space of writing is to be ranged over, not pierced; writing ceaselessly posits meaning ceaselessly to evaporate it, carrying out a systematic exemption of meaning. In precisely this way literature (it would be better from now on to say *writing*), by refusing to assign a 'secret', an ultimate meaning, to the text (and to the world as text), liberates what may be called an anti-theological activity, an activity that is truly revolutionary since to refuse to fix meaning is, in the end, to refuse God and his hypostases—reason, science, law.

Let us come back to the Balzac sentence. No one, no 'person', says it: its source, its voice, is not the true place of the writing, which is reading. Another—very precise—example will help to make this clear: recent research (J.-P. Vernant)⁶ has demonstrated the constitutively ambiguous nature of Greek tragedy, its texts being woven from words with double meanings that each character understands unilaterally (this perpetual misunderstanding is exactly the 'tragic'); there is, however, someone who understands each word in its duplicity and who, in addition, hears the very deafness of the characters speaking in front of him—this someone being precisely the reader (or here, the listener). Thus is revealed the total existence of writing: a text is made of multiple writings, drawn from many cultures and entering into mutual relations of dialogue, parody, contestation, but there is one place where this multiplicity is focused and that place is the reader, not, as was hitherto said, the author. The reader is the space on which all the quotations that make up a writing are inscribed without any of them being lost; a text's unity lies not in its origin but in its destination. Yet this destination cannot any longer be personal: the reader is without history, biography, psychology; he is simply that *someone* who holds together in a single field all the traces by which the written text is constituted. Which is why it is derisory to condemn the new writing in the name of a humanism hypocritically turned champion of the reader's rights. Classic criticism has never paid any attention to the reader; for it, the writer is the only person in literature. We are now beginning to let ourselves

5. Stand-ins (the concrete forms of abstractions).

6. Cf. Jean-Pierre Vernant (with Pierre Vidal-Naquet), *Mythe et tragédie en Grèce ancienne*

(Paris, 1972), esp. pp. 19–40, 99–131 [translator's note]. Vernant (1914–2007), French scholar of ancient Greece.

be fooled no longer by the arrogant antiphrastical⁷ recriminations of good society in favour of the very thing it sets aside, ignores, smothers, or destroys; we know that to give writing its future, it is necessary to overthrow the myth: the birth of the reader must be at the cost of the death of the Author.

1968

The Reality Effect¹

When Flaubert,² describing the room occupied by Mme Aubain, Félicité's employer, tells us that "an old piano supported, under a barometer, a pyramidal heap of boxes and cartons" ("A Simple Heart," from *Three Tales*); when Michelet,³ recounting the death of Charlotte Corday⁴ and reporting that, before the executioner's arrival, she was visited in prison by an artist who painted her portrait, includes the detail that "after an hour and a half, there was a gentle knock at a little door behind her" (*Histoire de France: La Révolution*)—these authors (among many others) are producing notations which structural analysis, concerned with identifying and systematizing the major articulations of narrative, usually and heretofore has left out, either because its inventory omits all details that are "superfluous" (in relation to structure) or because these same details are treated as "filling" (catalyses), assigned an indirect functional value insofar as, cumulatively, they constitute some index of character or atmosphere and so can ultimately be recuperated by structure.

It would seem, however, that if analysis seeks to be exhaustive (and what would any method be worth which did not account for the totality of its object, i.e., in this case, of the entire surface of the narrative fabric?), if it seeks to encompass the absolute detail, the indivisible unit, the fugitive transition, in order to assign them a place in the structure, it inevitably encounters notations which no function (not even the most indirect) can justify: such notations are scandalous (from the point of view of structure), or, what is even more disturbing, they seem to correspond to a kind of narrative *luxury*, lavish to the point of offering many "futile" details and thereby increasing the cost of narrative information. For if, in Flaubert's description, it is just possible to see in the notation of the piano an indication of its owner's bourgeois standing and in that of the cartons a sign of disorder and a kind of lapse in status likely to connote the atmosphere of the Aubain household, no purpose seems to justify reference to the barometer, an object neither incongruous nor significant, and therefore not participating, at first glance, in the order of the *notable*; and in Michelet's sentence, we have the same difficulty in accounting structurally for all the details: that the executioner came after the painter is all that is necessary to the account; how long the sitting lasted, the dimension and location of the door are useless (but the theme of the door, the softness of death's knock have an indisputable symbolic value). Even if they are not numerous, the "useless details"

7. Characterized by using a word to intend its opposite.

1. Translated by Richard Howard.

2. Gustave Flaubert (1821–1880), French author; Barthes refers here to a story published in 1877 and later to his masterpiece, the novel *Madame Bovary* (1856).

3. Jules Michelet (1798–1874), French historian

best known for his monumental *History of France* (17 vols., 1833–67).

4. Marie-Anne Charlotte de Corday d'Armont (1768–1793), minor French aristocrat guillotined for assassinating Jean-Paul Marat, a journalist and leader of a radical faction in the French Revolution.

therefore seem inevitable: every narrative, at least every Western narrative of the ordinary sort nowadays, possesses a certain number.

Insignificant notation⁵ (taking this word in its strong sense: apparently detached from the narrative's semiotic structure) is related to description, even if the object seems to be denoted only by a single word (in reality, the "pure" word does not exist: Flaubert's barometer is not cited in isolation; it is located, placed in a syntagm⁶ at once referential and syntactic); thus is underlined the enigmatic character of all description, about which a word is necessary: the general structure of narrative, at least as it has been occasionally analyzed till now, appears as essentially *predictive*; schematizing to the extreme, and without taking into account numerous detours, delays, reversals, and disappointments which narrative institutionally imposes upon this schema, we can say that, at each articulation of the narrative syntagm, someone says to the hero (or to the reader, it does not matter which): if you act in this way, if you choose this alternative, this is what will happen (the *reported* character of these predictions does not call into question their practical nature). Description is entirely different: it has no predictive mark; "analogical," its structure is purely summatory and does not contain that trajectory of choices and alternatives which gives narration the appearance of a huge traffic-control center, furnished with a referential (and not merely discursive) temporality. This is an opposition which, anthropologically, has its importance: when, under the influence of von Frisch's⁷ experiments, it was assumed that bees had a language, it had to be realized that, while these insects possessed a predictive system of dances (in order to collect their food), nothing in it approached a *description*. Thus, description appears as a kind of characteristic of the so-called higher languages, to the apparently paradoxical degree that it is justified by no finality of action or of communication. The singularity of description (or of the "useless detail") in narrative fabric, its isolated situation, designates a question which has the greatest importance for the structural analysis of narrative. This question is the following: Is everything in narrative significant, and if not, if insignificant stretches subsist in the narrative syntagm, what is ultimately, so to speak, the significance of this insignificance?

First of all, we must recall that Western culture, in one of its major currents, has certainly not left description outside meaning, and has furnished it with a finality quite "recognized" by the literary institution. This current is Rhetoric, and this finality is that of the "beautiful": description has long had an aesthetic function. Very early in antiquity, to the two expressly functional genres of discourse, legal and political, was added a third, the epideictic, a ceremonial discourse intended to excite the admiration of the audience (and no longer to persuade it); this discourse contained in germ—whatever the ritual rules of its use: eulogy or obituary—the very idea of an aesthetic finality of language; in the Alexandrian neo-rhetoric of the second century A.D., there was a craze for ecphrasis, the detachable set piece (thus having its end in itself, independent of any general function), whose object was to describe places, times, people, or works of art, a tradition which was maintained throughout the Middle Ages. As

5. In this brief account, we shall not give examples of "insignificant" notations, for the insignificant can be revealed only on the level of an immense structure: once cited, a notion is neither significant nor insignificant; it requires an already analyzed context [Barthes's note].

6. An element of discourse or narrative that is arranged with others in a linear sequence; the term is derived from the work of the Swiss linguist FERDINAND DE SAUSSURE (1857–1913).

7. Karl von Frisch (1886–1982), Austrian zoologist who studied communication among bees.

Curtius⁸ has emphasized, description in this period is constrained by no realism; its truth is unimportant (or even its verisimilitude); there is no hesitation to put lions or olive trees in a northern country; only the constraint of the descriptive genre counts; plausibility is not referential here but openly discursive: it is the generic rules of discourse which lay down the law.

Moving ahead to Flaubert, we see that the aesthetic purpose of description is still very strong. In *Madame Bovary*, the description of Rouen (a real referent if ever there was one) is subject to the tyrannical constraints of what we must call aesthetic verisimilitude, as is attested by the corrections made in this passage in the course of six successive rewritings. Here we see, first of all, that the corrections do not in any way issue from a closer consideration of the model: Rouen, perceived by Flaubert, remains just the same, or more precisely, if it changes somewhat from one version to the next, it is solely because he finds it necessary to focus an image or avoid a phonic redundancy condemned by the rules of *le beau style*,⁹ or again to “arrange” a quite contingent felicity of expression;¹ next we see that the descriptive fabric, which at first glance seems to grant a major importance (by its dimension, by the concern for its detail) to the object *Rouen*, is in fact only a sort of setting meant to receive the jewels of a number of rare metaphors, the neutral, prosaic excipient which swathes the precious symbolic substance, as if, in Rouen, all that mattered were the figures of rhetoric to which the sight of the city lends itself—as if Rouen were notable only by its substitutions (*the masts like a forest of needles, the islands like huge motionless black fish, the clouds like aerial waves silently breaking against a cliff*); last, we see that the whole description is *constructed* so as to connect Rouen to a painting: it is a painted scene which the language takes up (“Thus, seen from above, the whole landscape had the motionless look of a painting”); the writer here fulfills Plato’s² definition of the artist as a maker in the third degree, since he imitates what is already the simulation of an essence. Thus, although the description of Rouen is quite irrelevant to the narrative structure of *Madame Bovary* (we can attach it to no functional sequence nor to any characterial, atmospheric, or sapiential³ signified), it is not in the least scandalous, it is justified, if not by the work’s logic, at least by the laws of literature: its “meaning” exists, it depends on conformity not to the model but to the cultural rules of representation.

All the same, the aesthetic goal of Flaubertian description is thoroughly mixed with “realistic” imperatives, as if the referent’s exactitude, superior or indifferent to any other function, governed and alone justified its description, or—in the case of descriptions reduced to a single word—its denotation: here aesthetic constraints are steeped—at least as an alibi—in referential constraints: it is likely that, if one came to Rouen in a diligence,⁴ the view one would have coming down the slope leading to the town would not be “objectively” different from the panorama Flaubert describes. This mixture—this

9. The beautiful style (French).

1. A mechanism distinguished by Valéry, in *Littérature* [1929], commenting on Baudelaire’s line “*La servante au grand Coeur . . .*”: “This line came to Baudelaire . . . And Baudelaire continued. He buried the cook out on the lawn, which goes against the custom, but goes with the rhyme,” etc. [Barthes’s note]. Paul Valéry (1871–1945), French critic and poet. Charles Baude-

laire (1821–1867), French poet; the line (“The kind-hearted servant . . .”) begins one of the poems in his collection *Fleurs du Mal* (1861 ed., *Flowers of Evil*).

2. Greek philosopher (ca. 427–ca. 347 B.C.E.); he makes this argument about art simply imitating appearance in *Republic* 10.596–602 (see above).

3. Specific to wisdom.

4. A large public horse-drawn carriage, used in 18th- and 19th-century France.

interweaving—of constraints has a double advantage: on the one hand, aesthetic function, giving a meaning to “the fragment,” halts what we might call the vertigo of notation; for once, discourse is no longer guided and limited by structural imperatives of the anecdote (functions and indices), nothing could indicate why we should halt the details of the description here and not there; if it were not subject to an aesthetic or rhetorical choice, any “view” would be inexhaustible by discourse: there would always be a corner, a detail, an inflection of space or color to report; on the other hand, by positing the referential as real, by pretending to follow it in a submissive fashion, realistic description avoids being reduced to fantasmatic activity (a precaution which was supposed necessary to the “objectivity” of the account); classical rhetoric had in a sense institutionalized the fantasmatic as a specific figure, *hypotyposis*, whose function was to “put things before the hearer’s eyes,” not in a neutral, constative manner, but by imparting to representation all the luster of desire (this was the vividly illuminated sector of discourse, with prismatic outlines: *illustris oratio*⁵); declaratively renouncing the constraints of the rhetorical code, realism must seek a new reason to describe.

The irreducible residues of functional analysis have this in common: they denote what is ordinarily called “concrete reality” (insignificant gestures, transitory attitudes, insignificant objects, redundant words). The pure and simple “representation” of the “real,” the naked relation of “what is” (or has been) thus appears as a resistance to meaning; this resistance confirms the great mythic opposition of the *true-to-life* (the lifelike) and the *intelligible*; it suffices to recall that, in the ideology of our time, obsessive reference to the “concrete” (in what is rhetorically demanded of the human sciences, of literature, of behavior) is always brandished like a weapon against meaning, as if, by some statutory exclusion, what is alive cannot not signify—and vice versa. Resistance of the “real” (in its written form, of course) to structure is very limited in the fictive account, constructed by definition on a model which, for its main outlines, has no other constraints than those of intelligibility; but this same “reality” becomes the essential reference in historical narrative, which is supposed to report “what really happened”: what does the non-functionality of a detail matter then, once it denotes “what took place”; “concrete reality” becomes the sufficient justification for speaking. History (historical discourse: *historia rerum gestarum*⁶) is in fact the model of those narratives which consent to fill in the interstices of their functions by structurally superfluous notations, and it is logical that literary realism should have been—give or take a few decades—contemporary with the regnum of “objective” history, to which must be added the contemporary development of techniques, of works, and institutions based on the incessant need to authenticate the “real”: the photograph (immediate witness of “what was here”), reportage, exhibitions of ancient objects (the success of the Tutankhamen⁷ show makes this quite clear), the tourism of monuments and historical sites. All this shows that the “real” is supposed to be self-sufficient, that it is strong enough to belie any notion of “function,” that its “speech-act”⁸ has no need to be integrated into a structure and that the *having-been-there* of things is a sufficient principle of speech.

5. Clear speech (Latin).

6. Narrative of things done (Latin).

7. King of Egypt (reigned 1333–1323 B.C.E.), 18th dynasty; artifacts from his largely intact tomb, discovered in 1922, were shown in several countries (including France) in a traveling exhibi-

tion from 1961 to 1967.

8. For the idea of a “speech-act,” or performative (an utterance that does something), see especially the writings of the English philosopher J. L. AUSTIN (1911–1960).

Since antiquity, the “real” has been on History’s side; but this was to help it oppose the “lifelike,” the “plausible,” to oppose the very order of narrative (of imitation or “poetry”). All classical culture lived for centuries on the notion that reality could in no way contaminate verisimilitude; first of all, because verisimilitude is never anything but *opinable*: it is entirely subject to (public) opinion; as Nicole⁹ said: “One must not consider things as they are in themselves, nor as they are known to be by one who speaks or writes, but only in relation to what is known of them by those who read or hear”; then, because History was thought to be general, not particular (whence the propensity, in classical texts, to functionalize all details, to produce strong structures and to justify no notation by the mere guarantee of “reality”); finally, because, in verisimilitude, the contrary is never impossible, since notation rests on a majority, but not an absolute, opinion. The motto implicit on the threshold of all classical discourse (subject to the ancient idea of verisimilitude) is: *Esto* (*Let there be, suppose . . .*). “Real,” fragmented, interstitial notation, the kind we are dealing with here, renounces this implicit introduction, and it is free of any such postulation that occurs in the structural fabric. Hence, there is a break between the ancient mode of verisimilitude and modern realism; but hence, too, a new verisimilitude is born, which is precisely *realism* (by which we mean any discourse which accepts “speech-acts” justified by their referent alone).

Semiotically, the “concrete detail” is constituted by the *direct* collusion of a referent and a signifier; the signified is expelled from the sign, and with it, of course, the possibility of developing a *form of the signified*, i.e., narrative structure itself. (Realistic literature is narrative, of course, but that is because its realism is only fragmentary, erratic, confined to “details,” and because the most realistic narrative imaginable develops along unrealistic lines.) This is what we might call the *referential illusion*.¹ The truth of this illusion is this: eliminated from the realist speech-act as a signified of denotation, the “real” returns to it as a signified of connotation; for just when these details are reputed to *denote* the real directly, all that they do—without saying so—is *signify* it; Flaubert’s barometer, Michelet’s little door finally say nothing but this: *we are the real*; it is the category of “the real” (and not its contingent contents) which is then signified; in other words, the very absence of the signified, to the advantage of the referent alone, becomes the very signifier of realism: the *reality effect* is produced, the basis of that unavowed verisimilitude which forms the aesthetic of all the standard works of modernity.

This new verisimilitude is very different from the old one, for it is neither a respect for the “laws of the genre” nor even their mask, but proceeds from the intention to degrade the sign’s tripartite nature² in order to make notation the pure encounter of an object and its expression. The disintegration of the sign—which seems indeed to be modernity’s grand affair—is of course present in the realistic enterprise, but in a somewhat regressive manner, since it occurs in the name of a referential plenitude, whereas the goal today is to

9. Pierre Nicole (1625–1695), French theologian; Barthes quotes from his *Treatise on True and False Beauty* (1683).

1. An illusion clearly illustrated by the program Thiers assigned to the historian: “To be simply true, to be what things are and nothing more than that, and nothing except that” [Barthes’s note]. Adolphe Thiers (1787–1877), French historian

and the first president of the Third Republic (1871–73); the quotation is from vol. 12 of his *Histoire du Consulat et de l’Empire* (21 vols., 1845–62; *History of the Consulate and the Empire*).

2. That is, the sign’s composition as signified (the concept conveyed), signifier (word or words conveying the concept), and referent (thing referred to).

empty the sign and infinitely to postpone its object so as to challenge, in a radical fashion, the age-old aesthetic of "representation."

1968

From Work to Text¹

It is a fact that over the last few years a certain change has taken place (or is taking place) in our conception of language and, consequently, of the literary work which owes at least its phenomenal existence to this same language. The change is clearly connected with the current development of (amongst other disciplines) linguistics, anthropology, Marxism and psychoanalysis (the term 'connection' is used here in a deliberately neutral way: one does not decide a determination, be it multiple and dialectical). What is new and which affects the idea of the work comes not necessarily from the internal recasting of each of these disciplines, but rather from their encounter in relation to an object which traditionally is the province of none of them. It is indeed as though the *interdisciplinarity* which is today held up as a prime value in research cannot be accomplished by the simple confrontation of specialist branches of knowledge. Interdisciplinarity is not the calm of an easy security; it begins *effectively* (as opposed to the mere expression of a pious wish) when the solidarity of the old disciplines breaks down—perhaps even violently, via the jolts of fashion—in the interests of a new object and a new language neither of which has a place in the field of the sciences that were to be brought peacefully together, this unease in classification being precisely the point from which it is possible to diagnose a certain mutation. The mutation in which the idea of the work seems to be gripped must not, however, be over-estimated: it is more in the nature of an epistemological slide than of a real break. The break, as is frequently stressed, is seen to have taken place in the last century with the appearance of Marxism and Freudianism;² since then there has been no further break, so that in a way it can be said that for the last hundred years we have been living in repetition. What History, our History, allows us today is merely to slide, to vary, to exceed, to repudiate. Just as Einsteinian science³ demands that *the relativity of the frames of reference* be included in the object studied, so the combined action of Marxism, Freudianism and structuralism demands, in literature, the relativization of the relations of writer, reader and observer (critic). Over against the traditional notion of the *work*, for long—and still—conceived of in a, so to speak, Newtonian way, there is now the requirement of a new object, obtained by the sliding or overturning of former categories. That object is the *Text*. I know the word is fashionable (I am myself often led to use it) and therefore regarded by some with suspicion, but that is exactly why I should like to remind myself of the principal propositions at the intersection of which I see the Text as standing. The word 'proposition' is to be understood more in a grammatical than in a logical sense: the following are

1. Translated by Stephen Heath.

2. On the economic and political theorist KARL MARX (1818–1883) and the founder of psychoanalysis SIGMUND FREUD (1856–1939), see above.

3. That is, the theory of special relativity devel-

oped by Albert Einstein (1879–1955), which explains what the mechanical worldview associated with Sir Isaac Newton (1642–1727) could not: the interactions of radiation and matter viewed from different inertial frames of reference.

not argumentations but enunciations, 'touches', approaches that consent to remain metaphorical. Here then are these propositions; they concern method, genres, signs, plurality, filiation, reading and pleasure.

1. The Text is not to be thought of as an object that can be computed. It would be futile to try to separate out materially works from texts. In particular, the tendency must be avoided to say that the work is classic, the text avant-garde; it is not a question of drawing up a crude honours list in the name of modernity and declaring certain literary productions 'in' and others 'out' by virtue of their chronological situation: there may be 'text' in a very ancient work, while many products of contemporary literature are in no way texts. The difference is this: the work is a fragment of substance, occupying a part of the space of books (in a library for example), the Text is a methodological field. The opposition may recall (without at all reproducing term for term) Lacan's⁴ distinction between 'reality' and 'the real': the one is displayed, the other demonstrated; likewise, the work can be seen (in bookshops, in catalogues, in exam syllabuses), the text is a process of demonstration, speaks according to certain rules (or against certain rules); the work can be held in the hand, the text is held in language, only exists in the movement of a discourse (or rather, it is Text for the very reason that it knows itself as text); the Text is not the decomposition of the work, it is the work that is the imaginary tail of the Text; or again, *the Text is experienced only in an activity of production*. It follows that the Text cannot stop (for example on a library shelf); its constitutive movement is that of cutting across (in particular, it can cut across the work, several works).

2. In the same way, the Text does not stop at (good) Literature; it cannot be contained in a hierarchy, even in a simple division of genres. What constitutes the Text is, on the contrary (or precisely), its subversive force in respect of the old classifications. How do you classify a writer like Georges Bataille?⁵ Novelist, poet, essayist, economist, philosopher, mystic? The answer is so difficult that the literary manuals generally prefer to forget about Bataille who, in fact, wrote texts, perhaps continuously one single text. If the Text poses problems of classification (which is furthermore one of its 'social' functions), this is because it always involves a certain experience of limits (to take up an expression from Philippe Sollers). Thibaudet⁶ used already to talk—but in a very restricted sense—of limit-works (such as Chateaubriand's⁷ *Vie de Rancé*, which does indeed come through to us today as a 'text'); the Text is that which goes to the limit of the rules of enunciation (rationality, readability, etc.). Nor is this a rhetorical idea, resorted to for some 'heroic' effect: the Text tries to place itself very exactly *behind* the limit of the *doxa*⁸ (is not general opinion—constitutive of our democratic societies and powerfully aided by mass communications—defined by its limits, the energy with which it excludes, its *censorship*?). Taking the word literally, it may be said that the Text is always *paradoxical*.⁹

3. The Text can be approached, experienced, in reaction to the sign. The work closes on a signified.¹ There are two modes of signification which can

4. JACQUES LACAN (1901–1981), French psychoanalyst.

5. French writer (1897–1962).

6. Albert Thibaudet (1874–1936), French critic. Sollers (b. 1936), French writer.

7. François-René, vicomte de Chateaubriand (1768–1848), French writer and statesman. In 1980 a new edition of his *Life of Rancé* (1844)

was published with a preface by Barthes.

8. Received opinion (Greek).

9. That is, contrary to received opinion.

1. The sign was divided into *signified* (the meaning conveyed) and *signifier* (the symbol or sound that conveys that meaning) by the Swiss linguist FERDINAND DE SAUSSURE (1857–1913).

be attributed to this signified: either it is claimed to be evident and the work is then the object of a literal science, of philology, or else it is considered to be secret, ultimate, something to be sought out, and the work then falls under the scope of a hermeneutics, of an interpretation (Marxist, psychoanalytic, thematic, etc.); in short, the work itself functions as a general sign and it is normal that it should represent an institutional category of the civilization of the Sign. The Text, on the contrary, practises the infinite deferment of the signified, is dilatory; its field is that of the signifier and the signifier must not be conceived of as 'the first stage of meaning', its material vestibule, but, in complete opposition to this, as its *deferred action*. Similarly, the *infinity* of the signifier refers not to some idea of the ineffable (the unnameable signified) but to that of a *playing*; the generation of the perpetual signifier (after the fashion of a perpetual calendar) in the field of the text (better, of which the text is the field) is realized not according to an organic progress of maturation or a hermeneutic course of deepening investigation, but, rather, according to a serial movement of disconnections, overlappings, variations. The logic regulating the Text is not comprehensive (define 'what the work means') but metonymic; the activity of associations, contiguities, carryings-over coincides with a liberation of symbolic energy (lacking it, man would die); the work—in the best of cases—is *moderately* symbolic (its symbolic runs out, comes to a halt); the Text is *radically* symbolic: *a work conceived, perceived and received in its integrally symbolic nature is a text*. Thus is the Text restored to language; like language, it is structured but off-centred, without closure (note, in reply to the contemptuous suspicion of the 'fashionable' sometimes directed at structuralism, that the epistemological privilege currently accorded to language stems precisely from the discovery there of a paradoxical idea of structure: a system with neither close nor centre).

4. The Text is plural. Which is not simply to say that it has several meanings, but that it accomplishes the very plural of meaning: an *irreducible* (and not merely an acceptable) plural. The Text is not a co-existence of meanings but a passage, an overcrossing; thus it answers not to an interpretation, even a liberal one, but to an explosion, a dissemination. The plural of the Text depends, that is, not on the ambiguity of its contents but on what might be called the *stereographic plurality* of its weave of signifiers (etymologically, the text is a tissue, a woven fabric). The reader of the Text may be compared to someone at a loose end (someone slackened off from any imaginary); this passably empty subject strolls—it is what happened to the author of these lines, then it was that he had a vivid idea of the Text—on the side of a valley, a *oued*² flowing down below (*oued* is there to bear witness to a certain feeling of unfamiliarity); what he perceives is multiple, irreducible, coming from a disconnected, heterogeneous variety of substances and perspectives: lights, colours, vegetation, heat, air, slender explosions of noises, scant cries of birds, children's voices from over on the other side, passages, gestures, clothes of inhabitants near or far away. All these *incidents* are half-identifiable: they come from codes which are known but their combination is unique, founds the stroll in a difference repeatable only as difference. So the Text: it can be it only in its difference (which does not mean its individuality), its reading is semelfactive³ (this rendering illusory any inductive-deductive science of

2. Wadi (Arabic); a streambed that is usually dry, except during the rainy season.

3. A term from linguistics used to describe a verb

form that expresses a single, noncontinuous, no repeating action.

texts—no ‘grammar’ of the text) and nevertheless woven entirely with citations, references, echoes, cultural languages (what language is not?), antecedent or contemporary, which cut across it through and through in a vast stereophony. The intertextual in which every text is held, it itself being the text-between of another text, is not to be confused with some origin of the text: to try to find the ‘sources’, the ‘influences’ of a work, is to fall in with the myth of filiation; the citations which go to make up a text are anonymous, untraceable, and yet *already read*: they are quotations without inverted commas. The work has nothing disturbing for any monistic philosophy (we know that there are opposing examples of these); for such a philosophy, plural is the Evil. Against the work, therefore, the text could well take as its motto the words of the man possessed by demons (*Mark* 5: 9): ‘My name is Legion: for we are many.’ The plural of demoniacal texture which opposes text to work can bring with it fundamental changes in reading, and precisely in areas where monologism appears to be the Law: certain of the ‘texts’ of Holy Scripture traditionally recuperated by theological monism (historical or anagogical) will perhaps offer themselves to a diffraction of meanings (finally, that is to say, to a materialist reading), while the Marxist interpretation of works, so far resolutely monistic, will be able to materialize itself more by pluralizing itself (if, however, the Marxist ‘institutions’ allow it).

5. The work is caught up in a process of filiation. Are postulated: a *determination* of the work by the world (by race, then by History), a *consecution* of works amongst themselves, and a *conformity* of the work to the author. The author is reputed the father and the owner of his work: literary science therefore teaches *respect* for the manuscript and the author’s declared intentions, while society asserts the legality of the relation of author to work (the ‘*droit d’auteur*’⁴ or ‘copyright’, in fact of recent date since it was only really legalized at the time of the French Revolution). As for the Text, it reads without the inscription of the Father. Here again, the metaphor of the Text separates from that of the work: the latter refers to the image of an *organism* which grows by vital expansion, by ‘development’ (a word which is significantly ambiguous, at once biological and rhetorical); the metaphor of the Text is that of the *network*; if the Text extends itself, it is as a result of a combinatory systematic (an image, moreover, close to current biological conceptions of the living being). Hence no vital ‘respect’ is due to the Text: it can be *broken* (which is just what the Middle Ages did with two nevertheless authoritative texts—Holy Scripture and Aristotle⁵); it can be read without the guarantee of its father, the restitution of the inter-text paradoxically abolishing any legacy. It is not that the Author may not ‘come back’ in the Text, in his text, but he then does so as a ‘guest’. If he is a novelist, he is inscribed in the novel like one of his characters, figured in the carpet; no longer privileged, paternal, aletheological,⁶ his inscription is ludic. He becomes, as it were, a paper-author: his life is no longer the origin of his fictions but a fiction contributing to his work; there is a reversion of the work on to the life (and no longer the contrary); it is the work of Proust, of Genet⁷ which allows their lives to be read as a text. The word ‘bio-graphy’ re-acquires a strong, etymological sense,

4. Right of the author (French).

5. Greek philosopher (384–322 B.C.E.; see above), whose writings for centuries provided the main framework for Western thought.

6. A neologism—*alētheia* (Greek) = the self-presentation of Truth; *theological* = relating to

the study of religious faith—meaning that the author’s writing no longer operates in a theological realm of truth.

7. Jean Genet (1910–1986), French dramatist. Marcel Proust (1871–1922), French novelist.

at the same time as the sincerity of the enunciation—veritable ‘cross’ borne by literary morality—becomes a false problem: the *I* which writes the text, it too, is never more than a paper-*I*.

6. The work is normally the object of a consumption; no demagogy is intended here in referring to the so-called consumer culture but it has to be recognized that today it is the ‘quality’ of the work (which supposes finally an appreciation of ‘taste’) and not the operation of reading itself which can differentiate between books: structurally, there is no difference between ‘cultured’ reading and casual reading in trains. The Text (if only by its frequent ‘unreadability’) decants the work (the work permitting) from its consumption and gathers it up as play, activity, production, practice. This means that the Text requires that one try to abolish (or at the very least to diminish) the distance between writing and reading, in no way by intensifying the projection of the reader into the work but by joining them in a single signifying practice. The distance separating reading from writing is historical. In the times of the greatest social division (before the setting up of democratic cultures), reading and writing were equally privileges of class. Rhetoric, the great literary code of those times, taught one to *write* (even if what was then normally produced were speeches, not texts). Significantly, the coming of democracy reversed the word of command: what the (secondary) School prides itself on is teaching to *read* (well) and no longer to write (consciousness of the deficiency is becoming fashionable again today: the teacher is called upon to teach pupils to ‘express themselves’, which is a little like replacing a form of repression by a misconception). In fact, *reading*, in the sense of consuming, is far from *playing* with the text. ‘Playing’ must be understood here in all its polysemy: the text itself *plays* (like a door, like a machine with ‘play’) and the reader plays twice over, playing the Text as one plays a game, looking for a practice which re-produces it, but, in order that that practice not be reduced to a passive, inner *mimesis*⁸ (the Text is precisely that which resists such a reduction), also playing the Text in the musical sense of the term. The history of music (as a practice, not as an ‘art’) does indeed parallel that of the Text fairly closely: there was a period when practising amateurs⁹ were numerous (at least within the confines of a certain class) and ‘playing’ and ‘listening’ formed a scarcely differentiated activity; then two roles appeared in succession, first that of the performer, the interpreter to whom the bourgeois public (though still itself able to play a little—the whole history of the piano) delegated its playing, then that of the (passive) amateur, who listens to music without being able to play (the gramophone record takes the place of the piano). We know that today post-serial music¹ has radically altered the role of the ‘interpreter’, who is called on to be in some sort the co-author of the score, completing it rather than giving it ‘expression’. The Text is very much a score of this new kind: it asks of the reader a practical collaboration. Which is an important change, for who executes the work? (Mallarmé² posed the question, wanting the audience to *produce* the book). Nowadays only the critic executes the work (accepting the play on words). The reduction of reading to a consumption is clearly responsible for the ‘boredom’ experienced by many in the face of the modern (‘unreadable’)

8. Representation, imitation (Greek).

9. Barthes was an avid amateur pianist.

1. Music that was a reaction against serialism, the total mathematization of all musical variables in the atonal compositions of Pierre Boulez (1925–

2016) and others; in some cases the interpreter shapes a deliberately “open” work, still viewed as a network of variables.

2. Stéphane Mallarmé (1842–1898), French poet.

text, the avant-garde film or painting: to be bored means that one cannot produce the text, open it out, *set it going*.

7. This leads us to pose (to propose) a final approach to the Text, that of pleasure. I do not know whether there has ever been a hedonistic aesthetics (eudæmonist philosophies are themselves rare). Certainly there exists a pleasure of the work (of certain works); I can delight in reading and re-reading Proust, Flaubert, Balzac, even—why not?—Alexandre Dumas.³ But this pleasure, no matter how keen and even when free from all prejudice, remains in part (unless by some exceptional critical effort) a pleasure of consumption; for if I can read these authors, I also know that I cannot *re-write* them (that it is impossible today to write ‘like that’) and this knowledge, depressing enough, suffices to cut me off from the production of these works, in the very moment their remoteness establishes my modernity (is not to be modern to know clearly what cannot be started over again?). As for the Text, it is bound to *jouissance*,⁴ that is to a pleasure without separation. Order of the signifier, the Text participates in its own way in a social utopia; before History (supposing the latter does not opt for barbarism), the Text achieves, if not the transparency of social relations, that at least of language relations: the Text is that space where no language has a hold over any other, where languages circulate (keeping the circular sense of the term).

These few propositions, inevitably, do not constitute the articulations of a Theory of the Text and this is not simply the result of the failings of the person here presenting them (who in many respects has anyway done no more than pick up what is being developed round about him). It stems from the fact that a Theory of the Text cannot be satisfied by a metalinguistic exposition: the destruction of meta-language, or at least (since it may be necessary provisionally to resort to meta-language) its calling into doubt, is part of the theory itself: the discourse on the Text should itself be nothing other than text, research, textual activity, since the Text is that *social* space which leaves no language safe, outside, nor any subject of the enunciation in position as judge, master, analyst, confessor, decoder. The theory of the Text can coincide only with a practice of writing.

1971

3. Popular French novelist and dramatist (1802–1870). Gustave Flaubert (1821–1880) and Honoré de Balzac (1799–1850), French novelists.

4. In French, *jouissance* (the surprise of orgasm, bliss, ecstasy) is distinguished from *plaisir* (pleasure).

LOUIS ALTHUSSER

1918–1990

Louis Althusser exposed a ghost in the machine of capitalism: ideology. One of the most influential Marxist thinkers of the second half of the twentieth century, Althusser explained how capitalism perpetuated itself through “ideological state apparatuses.” In Marxist thought, the concept of ideology was usually considered

secondary, but Althusser placed it front and center. His landmark essay, "Ideology and Ideological State Apparatuses (Notes towards an Investigation)" (1970), our selection, analyzes how dominant social systems and institutions subtly mold human subjects through ideology, in turn reproducing the system. To traditional Marxist analysis Althusser grafted the methods of structuralism, developed by CLAUDE LÉVI-STRAUSS, and psychoanalysis, notably of JACQUES LACAN, to explain how people consented to a society in which many were oppressed.

Born in French-held Algeria, Louis Althusser was educated in Marseilles and in Lyons. In 1939 he was admitted to the prestigious École Normale Supérieure in Paris, but his academic career was delayed when he was drafted into the military during the early days of World War II. Captured in 1940 and held for five years in a German prisoner-of-war camp, he returned to the École Normale after the war, completing a master's thesis on the philosopher G. W. F. HEGEL (1770–1831) in 1948. He then joined the faculty at the school, also doing doctoral work under the supervision of the celebrated Hegelian philosopher Jean Hyppolite. His membership in the French Communist Party from 1948 on was also decisive for his future work. His relations with the Party hierarchy were never easy, and his writings were often attacked by official Communist philosophers—he was almost expelled in 1966 in a dispute over China's Cultural Revolution—but Althusser remained a lifelong member.

Publishing little beforehand, Althusser burst onto the intellectual world in the turbulent 1960s with a series of important texts, gathered in *For Marx* (1965; trans. 1969) and *Reading Capital* (coauthored with his student Étienne Balibar, 1968; trans. 1970). Both quickly captured the attention of French and later British intellectuals, changing the face of Western Marxist theory by shattering the pieties of Stalinist dogmatism and the newer Marxist humanism, which, influenced by Hegel and the twentieth-century philosophers GYÖRGY LUKÁCS and Jean-Paul Sartre, saw Marxism as an effort to recover an alienated humanity. Elevating the individual as its center of concern, humanism generally stresses human freedom and self-determination; in contrast, many structuralist thinkers argue that freedom of thought and action is limited by linguistic, psychological, or socioeconomic systems. Propounding an "antihumanism," Althusser emphasizes how societal structures determine lived experience. His critique of humanism continues to help shape post-modern and poststructuralist theory.

Following KARL MARX and FRIEDRICH ENGELS's central claim in *The Communist Manifesto* (1848; see above) that "the history of all hitherto existing society is the history of class struggles," Althusser held that the task of the philosopher was to "represent the class struggle in theory," taking the side of the oppressed in ongoing ideological struggles with representatives of the ruling class. His injunction inspired the participants in the May 1968 student and worker uprising in France; but Althusser himself was absent during the turbulent events of May, recuperating in a sanatorium from a recurrence of the clinical depression that had plagued him following his experiences in World War II. After recovering he embarked on an ambitious new theoretical project addressing two questions: how a society achieves stability over time by reproducing its dominant relations of production and what conditions make social revolution possible. "Ideology and Ideological State Apparatuses" stems from this larger project, which was never completed. Althusser would continue to teach and to write throughout the 1970s, but his illness worsened, and in 1980 he murdered his wife in a manic fit of rage. Declared mentally incompetent, he was sentenced to house arrest under psychiatric care and isolated from all but a few friends. At the time of his death a decade later, Althusser's reputation had reached a low point.

Althusser's major concepts—"ideological state apparatuses," "interpellation," "imaginary relations," and "overdetermination"—permeate the discourse of contemporary literary and cultural theory, and his theory of ideology has influenced virtually all subsequent serious work on the topic. The problem that Althusser sets out to solve in "Ideology and Ideological State Apparatuses"—to determine how a society reproduces

its basic social relations, thereby ensuring its continuing existence—is a perennial one in social theory, raised as early as PLATO's *Republic* (ca. 373 B.C.E.). Plato thought that the key to sustaining a just state was controlling the education of its citizens, particularly its ruling class. Althusser concurs, while emphasizing that the dominant values in a society are for the most part endorsed by the majority of its members. Winning their endorsement is the work of ideology, and Althusser employs a structuralist account of the societal mechanisms that inculcate such consent, as well as a psychoanalytic account of how ideology makes individuals “subjects” of the dominant social order. Contrary to its colloquial sense, which suggests a set of ideas or beliefs that one chooses to espouse or reject, ideology for Althusser is not voluntary but the result of structural factors in society; he thus dispenses with the standard humanist notion of free will.

Althusser famously terms the societal mechanisms for creating pliant, obedient citizens who practice dominant values “ideological state apparatuses” (ISAs). Complex, numerous, and differing from one society to another, they are civil institutions that have legal standing (hence their designation as “state” apparatuses), including churches, schools, the family, courts, political parties, unions, the media, sports, and the arts. ISAs differ from “repressive state apparatuses” (RSAs), such as the police, the military, the prison system, and government, in several key ways: they are not unified, they operate primarily in the private sphere, and they attain their power not by means of explicit coercion or force but through implicit consent realized in accepted “practices.” One tacitly learns the practice of obedience to authority, for example, in church, in school, at home, or on sports teams. As Althusser notes, a dominant social order would not survive if it relied only on force, and he traces the rising influence of schools as the dominant ISA in modern society. Schools have supplanted the church in this role, instilling in students the habits that will make them productive workers in modern capitalist societies, so that they show up at the factory or office day after day without question.

Althusser's theory revises the standard Marxist definition of ideology as “false consciousness,” the explanation of why people willingly participate in the capitalist exploitation seen to undergird modern society. Many Marxists argue that we simply misunderstand what is really going on: believing that the economic system is fair and offers equal opportunity, rather than favoring those who control the means of production and capital, we identify with and emulate the owners and capitalists. Althusser retains the classical Marxist stress on economic causes, which he says are decisive “in the last instance,” but his concept of the ISAs presents a fuller explanation of the diverse societal processes of ideology. It also allows for more complexity: ISAs operate with “relative autonomy,” sometimes for different and contradictory ends (they are “overdetermined”). His theory thus has affinities with the thought a generation earlier of the Italian Marxist ANTONIO GRAMSCI, whose concept of hegemony explains the flexibility of social dominance and its operation through cultural institutions.

Althusser defines ideology as “the imaginary relationship of individuals to their real conditions of existence.” It is here that he turns to a subtle psychoanalytic account, adopting Jacques Lacan's concepts of the imaginary, mirroring, and subject formation. Revising SIGMUND FREUD's concepts of the unconscious, ego, and superego, Lacan posits a three-part structure—the Imaginary, the Real, and the Symbolic—that forms the individual subject. The Imaginary constitutes the preverbal realm in which human beings exist from earliest years; it is not a false but a primordial structure of consciousness. For Althusser, ideology substitutes for the Imaginary, which one is “born into” and which, like the Freudian unconscious, deeply influences how one acts. But unlike Lacan, he sees an individual's subjectivity as generated through social forces. Using Lacan's ideas of mirroring and recognition, Althusser describes how ISAs “interpellate or hail individuals as subjects.” A pivotal stage in character development for Lacan is “the mirror stage,” when an infant recognizes him- or herself in a mirror. For Althusser, ideology works through our tacit recognition of being hailed, as when we turn around to answer the call, “Hey, you there!”

Provoking sharp reaction as well as a devoted following, Althusser's work has had wide-ranging influence. Some have found his reliance on a structural account of society too deterministic; others, most notably E. P. Thompson, the English historian usually considered a founding father of cultural studies, have criticized his lack of attention to empirical history. Despite Thompson's disavowal, Althusser's concept of ideology has been crucial to cultural studies, as recounted in STUART HALL's "Cultural Studies and Its Theoretical Legacies" (1992; see below) and as evidenced in DICK HEBDIGE's *Subculture: The Meaning of Style* (1979; see below). Althusser's concept of ideology has also been foundational for the leading contemporary Marxist literary critics in Britain and in America, TERRY EAGLETON and FREDRIC JAMESON. Eagleton's *Criticism and Ideology* (1976), for instance, draws heavily on Althusser, though focusing on how art produces ideology rather than how ideology informs art. Jameson's *The Political Unconscious: Narrative as a Socially Symbolic Act* (1981; see below), perhaps the most sustained consideration of the ideological implications of the modern novel, both elaborates on and critiques Althusser. Less faithfully, the French sociologist PIERRE BOURDIEU shows the influence of Althusser in his focus on education and its formative effect in producing social "distinction" and creating "cultural capital"; Bourdieu swerves, however, from traditional Marxist analyses by stressing the cultural over the economic. Although the breadth of his influence has dissipated some of the Marxist political charge of his social criticism, Althusser's theory of ideology remains a touchstone in contemporary criticism.

"Ideology and Ideological State Apparatuses" Keywords: Hegemony, Ideology, Marxism, Structuralism, Subjectivity

From Ideology and Ideological State Apparatuses (Notes towards an Investigation)¹

From On the Reproduction of the Conditions of Production

* * *

As Marx said, every child knows that a social formation which did not reproduce the conditions of production at the same time as it produced would not last a year.² The ultimate condition of production is therefore the reproduction of the conditions of production. This may be 'simple' (reproducing exactly the previous conditions of production) or 'on an extended scale' (expanding them). Let us ignore this last distinction for the moment.

What, then, is *the reproduction of the conditions of production*?

* * *

To simplify my exposition, and assuming that every social formation arises from a dominant mode of production,³ I can say that the process of production sets to work the existing productive forces in and under definite relations of production.

1. Translated by Ben Brewster, who sometimes retains the French word or phrase in parentheses.

2. Marx to Kugelmann, July 11, 1868, *Selected Correspondence* (Moscow, 1955), p. 209 [Althusser's note]. KARL MARX (1818–1883), German social, economic, and political theorist. Some of

the author's notes have been edited, and some omitted.

3. Now capitalism, which superseded the feudal mode of production of the medieval period, and which will be supplanted, according to Marx, by socialism.

It follows that, in order to exist, every social formation must reproduce the conditions of its production at the same time as it produces, and in order to be able to produce. It must therefore reproduce:

1. the productive forces,
2. the existing relations of production.

* * *

REPRODUCTION OF LABOUR-POWER

* * *

How is the reproduction of labour power ensured?

It is ensured by giving labour power the material means with which to reproduce itself: by wages. Wages feature in the accounting of each enterprise, but as 'wage capital', not at all as a condition of the material reproduction of labour power.

However, that is in fact how it 'works', since wages represent only that part of the value produced by the expenditure of labour power which is indispensable for its reproduction: sc.⁴ indispensable to the reconstitution of the labour power of the wage-earner (the wherewithal to pay for housing, food and clothing, in short to enable the wage-earner to present himself again at the factory gate the next day—and every further day God grants him); and we should add: indispensable for raising and educating the children in whom the proletarian reproduces himself (in n models where $n = 0, 1, 2$, etc. . . .) as labour power.

Remember that this quantity of value (wages) necessary for the reproduction of labour power is determined not by the needs of a 'biological' Guaranteed Minimum Wage (*Salaire Minimum Interprofessionnel Garanti*) alone, but by the needs of a historical minimum (Marx noted that English workers need beer while French proletarians need wine)—i.e. a historically variable minimum.

I should also like to point out that this minimum is doubly historical in that it is not defined by the historical needs of the working class 'recognized' by the capitalist class, but by the historical needs imposed by the proletarian class struggle (a double class struggle: against the lengthening of the working day and against the reduction of wages).

However, it is not enough to ensure for labour power the material conditions of its reproduction if it is to be reproduced as labour power. I have said that the available labour power must be 'competent', i.e. suitable to be set to work in the complex system of the process of production. The development of the productive forces and the type of unity historically constitutive of the productive forces at a given moment produce the result that the labour power has to be (diversely) skilled and therefore reproduced as such. Diversely: according to the requirements of the socio-technical division of labour, its different 'jobs' and 'posts'.

How is this reproduction of the (diversified) skills of labour power provided for in a capitalist regime? Here, unlike social formations characterized by slavery or serfdom, this reproduction of the skills of labour power tends (this is a tendential law) decreasingly to be provided for 'on the spot' (apprenticeship

4. Scilicet; namely.

within production itself), but is achieved more and more outside production: by the capitalist education system, and by other instances and institutions.

What do children learn at school? They go varying distances in their studies, but at any rate they learn to read, to write and to add—i.e. a number of techniques, and a number of other things as well, including elements (which may be rudimentary or on the contrary thoroughgoing) of 'scientific' or 'literary culture', which are directly useful in the different jobs in production (one instruction for manual workers, another for technicians, a third for engineers, a final one for higher management, etc.). Thus they learn 'know-how'.

But besides these techniques and knowledges, and in learning them, children at school also learn the 'rules' of good behaviour, i.e. the attitude that should be observed by every agent in the division of labour, according to the job he is 'destined' for: rules of morality, civic and professional conscience, which actually means rules of respect for the socio-technical division of labour and ultimately the rules of the order established by class domination. They also learn to 'speak proper French', to 'handle' the workers correctly, i.e. actually (for the future capitalists and their servants) to 'order them about' properly, i.e. (ideally) to 'speak to them' in the right way, etc.

To put this more scientifically, I shall say that the reproduction of labour power requires not only a reproduction of its skills, but also, at the same time, a reproduction of its submission to the rules of the established order, i.e. a reproduction of submission to the ruling ideology for the workers, and a reproduction of the ability to manipulate the ruling ideology correctly for the agents of exploitation and repression, so that they, too, will provide for the domination of the ruling class 'in words'.

In other words, the school (but also other State institutions like the Church, or other apparatuses like the Army) teaches 'know-how', but in forms which ensure *subjection to the ruling ideology* or the mastery of its 'practice'. All the agents of production, exploitation and repression, not to speak of the 'professionals of ideology' (Marx), must in one way or another be 'steeped' in this ideology in order to perform their tasks 'conscientiously'—the tasks of the exploited (the proletarians), of the exploiters (the capitalists), of the exploiters' auxiliaries (the managers), or of the high priests of the ruling ideology (its 'functionaries'), etc.

The reproduction of labour power thus reveals as its *sine qua non* not only the reproduction of its 'skills' but also the reproduction of its subjection to the ruling ideology or of the 'practice' of that ideology, with the proviso that it is not enough to say 'not only but also', for it is clear that *it is in the forms and under the forms of ideological subjection that provision is made for the reproduction of the skills of labour power*.

But this is to recognize the effective presence of a new reality: *ideology*.

* * *

From *Infrastructure and Superstructure*

On a number of occasions I have insisted on the revolutionary character of the Marxist conception of the 'social whole' insofar as it is distinct from the Hegelian⁵ 'totality'. I said (and this thesis only repeats famous propositions of historical materialism) that Marx conceived the structure of every society as

5. Of GEORG FRIEDRICH WILHELM HEGEL (1770–1831), German idealist philosopher.

constituted by 'levels' or 'instances' articulated by a specific determination: the *infrastructure*, or economic base (the 'unity' of the productive forces and the relations of production) and the *superstructure*, which itself contains two 'levels' or 'instances': the politico-legal (law and the State) and ideology (the different ideologies, religious, ethical, legal, political, etc.).

Besides its theoretico-didactic interest (it reveals the difference between Marx and Hegel), this representation has the following crucial theoretical advantage: it makes it possible to inscribe in the theoretical apparatus of its essential concepts what I have called their *respective indices of effectivity*. What does this mean?

It is easy to see that this representation of the structure of every society as an edifice containing a base (infrastructure) on which are erected the two 'floors' of the superstructure, is a metaphor, to be quite precise, a spatial metaphor: the metaphor of a topography (*topique*).⁶ Like every metaphor, this metaphor suggests something, makes something visible. What? Precisely this: that the upper floors could not 'stay up' (in the air) alone, if they did not rest precisely on their base.

Thus the object of the metaphor of the edifice is to represent above all the 'determination in the last instance' by the economic base. The effect of this spatial metaphor is to endow the base with an index of effectivity known by the famous terms: the determination in the last instance of what happens in the upper 'floors' (of the superstructure) by what happens in the economic base.

Given this index of effectivity 'in the last instance', the 'floors' of the superstructure are clearly endowed with different indices of effectivity. What kind of indices?

It is possible to say that the floors of the superstructure are not determinant in the last instance, but that they are determined by the effectivity of the base; that if they are determinant in their own (as yet undefined) ways, this is true only insofar as they are determined by the base.

Their index of effectivity (or determination), as determined by the determination in the last instance of the base, is thought by the Marxist tradition in two ways: (1) there is a 'relative autonomy' of the superstructure with respect to the base; (2) there is a 'reciprocal action' of the superstructure on the base.

We can therefore say that the great theoretical advantage of the Marxist topography, i.e. of the spatial metaphor of the edifice (base and superstructure) is simultaneously that it reveals that questions of determination (or of index of effectivity) are crucial; that it reveals that it is the base which in the last instance determines the whole edifice; and that, as a consequence, it obliges us to pose the theoretical problem of the types of 'derivatory' effectivity peculiar to the superstructure, i.e. it obliges us to think what the Marxist tradition calls conjointly the relative autonomy of the superstructure and the reciprocal action of the superstructure on the base.

* * *

I shall give a short analysis of Law, the State and Ideology *from this point of view*. And I shall reveal what happens both from the point of view of practice and production on the one hand, and from that of reproduction on the other.

6. *Topography* from the Greek *topos*: place. A topography represents in a definite space the respective *sites* occupied by several realities: thus

the economic is *at the bottom* (the base), the superstructure *above it* [Althusser's note].

From *The State*

The Marxist tradition is strict, here: in the *Communist Manifesto* and the *Eighteenth Brumaire* (and in all the later classical texts, above all in Marx's writings on the Paris Commune and Lenin's⁷ on *State and Revolution*), the State is explicitly conceived as a repressive apparatus. The State is a 'machine' of repression, which enables the ruling classes (in the nineteenth century the bourgeois class and the 'class' of big landowners) to ensure their domination over the working class, thus enabling the former to subject the latter to the process of surplus-value extortion (i.e. to capitalist exploitation).

The State is thus first of all what the Marxist classics have called *the State apparatus*. This term means: not only the specialized apparatus (in the narrow sense) whose existence and necessity I have recognized in relation to the requirements of legal practice, i.e. the police, the courts, the prisons; but also the army, which (the proletariat has paid for this experience with its blood) intervenes directly as a supplementary repressive force in the last instance, when the police and its specialized auxiliary corps are 'outrun by events'; and above this ensemble, the head of State, the government and the administration.

Presented in this form, the Marxist-Leninist 'theory' of the State has its finger on the essential point, and not for one moment can there be any question of rejecting the fact that this really is the essential point. The State apparatus, which defines the State as a force of repressive execution and intervention 'in the interests of the ruling classes' in the class struggle conducted by the bourgeoisie and its allies against the proletariat, is quite certainly the State, and quite certainly defines its basic 'function'.

* * *

THE ESSENTIALS OF THE MARXIST THEORY OF THE STATE

Let me first clarify one important point: the State (and its existence in its apparatus) has no meaning except as a function of *State power*. The whole of the political class struggle revolves around the State. By which I mean around the possession, i.e. the seizure and conservation of State power by a certain class or by an alliance between classes or class fractions. This first clarification obliges me to distinguish between State power (conservation of State power or seizure of State power), the objective of the political class struggle on the one hand, and the State apparatus on the other.

We know that the State apparatus may survive, as is proved by bourgeois 'revolutions' in nineteenth-century France (1830, 1848), by *coups d'état* (2 December, May 1958), by collapses of the State (the fall of the Empire in 1870, of the Third Republic in 1940), or by the political rise of the petty bourgeoisie (1890–95 in France), etc., without the State apparatus being affected or modified:⁸ it may survive political events which affect the possession of State power.

7. V. I. Lenin (1870–1924), leader of the Russian Revolution of 1917 and author of many works on revolutionary politics, including *The State and Revolution: The Marxist Theory of the State and the Tasks of the Proletariat in the Revolution* (1917). Marx's famous *Communist Manifesto* (co-written with FRIEDRICH ENGELS) dates from 1848, and his *Eighteenth Brumaire of Louis Bonaparte* from 1852. The latter, along with his *Class Struggles in France, 1848–1850* (1850) and

The Civil War in France (1871), deals with political struggles in France; the Paris Commune was a revolutionary government briefly established in Paris in the spring of 1871.

8. After the French Revolution (1789–99) and through the 19th century, France became a modern bureaucratic state dominated by the bourgeoisie (rather than a feudal aristocracy). Althusser refers to the overthrow of the restored Bourbon monarchy in 1830; the "February Revolution" of

Even after a social revolution like that of 1917,⁹ a large part of the State apparatus survived after the seizure of State power by the alliance of the proletariat and the small peasantry: Lenin repeated the fact again and again.

It is possible to describe the distinction between State power and State apparatus as part of the 'Marxist theory' of the State, explicitly present since Marx's *Eighteenth Brumaire* and *Class Struggles in France*.

To summarize the 'Marxist theory of the State' on this point, it can be said that the Marxist classics have always claimed that (1) the State is the repressive State apparatus, (2) State power and State apparatus must be distinguished, (3) the objective of the class struggle concerns State power, and in consequence the use of the State apparatus by the classes (or alliance of classes or of fractions of classes) holding State power as a function of their class objectives, and (4) the proletariat must seize State power in order to destroy the existing bourgeois State apparatus and, in a first phase, replace it with a quite different, proletarian, State apparatus, then in later phases set in motion a radical process, that of the destruction of the State (the end of State power, the end of every State apparatus).

In this perspective, therefore, what I would propose to add to the 'Marxist theory' of the State is already there in so many words. But it seems to me that even with this supplement, this theory is still in part descriptive, although it does now contain complex and differential elements whose functioning and action cannot be understood without recourse to further supplementary theoretical development.

THE STATE IDEOLOGICAL APPARATUSES

* * *

In order to advance the theory of the State it is indispensable to take into account not only the distinction between *State power* and *State apparatus*, but also another reality which is clearly on the side of the (repressive) State apparatus, but must not be confused with it. I shall call this reality by its concept: *the ideological State apparatuses*.¹

What are the ideological State apparatuses (ISAs)?

They must not be confused with the (repressive) State apparatus. Remember that in Marxist theory, the State Apparatus (SA) contains: the Government, the Administration, the Army, the Police, the Courts, the Prisons, etc., which constitute what I shall in future call the Repressive State Apparatus. Repressive suggests that the State Apparatus in question

1848 after which Napoleon III became president and in 1852 emperor, establishing the Second Empire, which fell in 1870; and the Paris Commune and the establishment of the Third Republic, which ended with the German Occupation of France in 1940. In 1958, during a political crisis caused by France's colonial war in Algeria, Charles de Gaulle (1890–1970), the leader of the French Resistance during World War II, became Prime Minister with broad powers and then president (1959–69) of the Fifth Republic.

9. That is, in Russia.

1. To my knowledge, Gramsci is the only one who

went any distance in the road I am taking. He had the "remarkable" idea that the State could not be reduced to the (Repressive) State Apparatus, but included, as he put it, a certain number of institutions from "*civil society*": the Church, the Schools, the trade unions, etc. Unfortunately, Gramsci did not systematize his institutions, which remained in the state of acute but fragmentary notes (cf. Gramsci, *Selections from the Prison Notebooks* [International Publishers, 1971], pp. 12, 259, 260–63) [Althusser's note]. ANTONIO GRAMSCI (1891–1937), Italian Marxist philosopher.

'functions by violence'—at least ultimately (since repression, e.g. administrative repression, may take non-physical forms).

I shall call Ideological State Apparatuses a certain number of realities which present themselves to the immediate observer in the form of distinct and specialized institutions. I propose an empirical list of these which will obviously have to be examined in detail, tested, corrected and reorganized. With all the reservations implied by this requirement, we can for the moment regard the following institutions as Ideological State Apparatuses (the order in which I have listed them has no particular significance):

- the religious ISA (the system of the different Churches),
- the educational ISA (the system of the different public and private 'Schools'),
- the family ISA,²
- the legal ISA,³
- the political ISA (the political system, including the different Parties),
- the trade-union ISA,
- the communications ISA (press, radio and television, etc.),
- the cultural ISA (Literature, the Arts, sports, etc.).

I have said that the ISAs must not be confused with the (Repressive) State Apparatus. What constitutes the difference?

As a first moment, it is clear that while there is *one* (Repressive) State Apparatus, there is a *plurality* of Ideological State Apparatuses. Even presupposing that it exists, the unity that constitutes this plurality of ISAs as a body is not immediately visible.

As a second moment, it is clear that whereas the—unified—(Repressive) State Apparatus belongs entirely to the *public* domain, much the larger part of the Ideological State Apparatuses (in their apparent dispersion) are part, on the contrary, of the *private* domain. Churches, Parties, Trade Unions, families, some schools, most newspapers, cultural ventures, etc., etc., are private.

We can ignore the first observation for the moment. But someone is bound to question the second, asking me by what right I regard as Ideological *State* Apparatuses, institutions which for the most part do not possess public status, but are quite simply *private* institutions. As a conscious Marxist, Gramsci already forestalled this objection in one sentence. The distinction between the public and the private is a distinction internal to bourgeois law, and valid in the (subordinate) domains in which bourgeois law exercises its 'authority'. The domain of the State escapes it because the latter is 'above the law': the State, which is the State *of* the ruling class, is neither public nor private; on the contrary, it is the precondition for any distinction between public and private. The same thing can be said from the starting-point of our State Ideological Apparatuses. It is unimportant whether the institutions in which they are realized are 'public' or 'private'. What matters is how they function. Private institutions can perfectly well 'function' as Ideological State Apparatuses. A reasonably thorough analysis of any one of the ISAs proves it.

2. The family obviously has other "functions" than that of an ISA. It intervenes in the reproduction of labour power. In different modes of production it is the unit of production and/or the unit

of consumption [Althusser's note].

3. The "Law" belongs both to the (Repressive) State Apparatus and to the system of the ISAs [Althusser's note].

But now for what is essential. What distinguishes the ISAs from the (Repressive) State Apparatus is the following basic difference: the Repressive State Apparatus functions 'by violence', whereas the Ideological State Apparatuses function 'by ideology'.

I can clarify matters by correcting this distinction. I shall say rather that every State Apparatus, whether Repressive or Ideological, 'functions' both by violence and ideology, but with one very important distinction which makes it imperative not to confuse the Ideological State Apparatus with the (Repressive) State Apparatus.

This is the fact that the (Repressive) State Apparatus functions massively and predominantly *by repression* (including physical repression), while functioning secondarily by ideology. (There is no such thing as a purely repressive apparatus.) For example, the Army and the Police also function by ideology both to ensure their own cohesion and reproduction, and in the 'values' they propound externally.

In the same way, but inversely, it is essential to say that for their part the Ideological State Apparatuses function massively and predominantly *by ideology*, but they also function secondarily by repression, even if ultimately, but only ultimately, this is very attenuated and concealed, even symbolic. (There is no such thing as a purely ideological apparatus.) Thus Schools and Churches use suitable methods of punishment, expulsion, selection, etc., to 'discipline' not only their shepherds, but also their flocks. The same is true of the Family. . . . The same is true of the cultural IS Apparatus (censorship, among other things), etc.

Is it necessary to add that this determination of the double 'functioning' (predominantly, secondarily) by repression and by ideology, according to whether it is a matter of the (Repressive) State Apparatus or the Ideological State Apparatus, makes it clear that very subtle explicit or tacit combinations may be woven from the interplay of the (Repressive) State Apparatus and the Ideological State Apparatuses? Everyday life provides us with innumerable examples of this, but they must be studied in detail if we are to go further than this mere observation.

Nevertheless, this remark leads us towards an understanding of what constitutes the unity of the apparently disparate body of the ISAs. If the ISAs 'function' massively and predominantly by ideology, what unifies their diversity is precisely this functioning, insofar as the ideology by which they function is always in fact unified, despite its diversity and its contradictions, *beneath the ruling ideology*, which is the ideology of 'the ruling class'. Given the fact that the 'ruling class' in principle holds State power (openly or more often by means of alliances between classes or class fractions), and therefore has at its disposal the (Repressive) State Apparatus, we can accept the fact that this same ruling class is active in the Ideological State Apparatuses insofar as it is ultimately the ruling ideology which is realized in the Ideological State Apparatuses, precisely in its contradictions. Of course, it is a quite different thing to act by laws and decrees in the (Repressive) State Apparatus and to 'act' through the intermediary of the ruling ideology in the Ideological State Apparatuses. We must go into the details of this difference—but it cannot mask the reality of a profound identity. To my knowledge, *no class can hold State power over a long period without at the same time exercising its hegemony over and in the State Ideological Appara-*

tuses. I only need one example and proof of this: Lenin's anguished concern to revolutionize the educational Ideological State Apparatus (among others), simply to make it possible for the Soviet proletariat, who had seized State power, to secure the future of the dictatorship of the proletariat and the transition of socialism.

This last comment puts us in a position to understand that the Ideological State Apparatuses may be not only the *stake*, but also the *site* of class struggle, and often of bitter forms of class struggle. The class (or class alliance) in power cannot lay down the law in the ISAs as easily as it can in the (repressive) State apparatus, not only because the former ruling classes are able to retain strong positions there for a long time, but also because the resistance of the exploited classes is able to find means and occasions to express itself there, either by the utilization of their contradictions, or by conquering combat positions in them in struggle.⁴

* * *

From *On the Reproduction of the Relations of Production*

I can now answer the central question which I have left in suspense for many long pages: *how is the reproduction of the relations of production secured?*

In the topographical language (Infrastructure, Superstructure), I can say: for the most part, it is secured by the legal-political and ideological superstructure.

But as I have argued that it is essential to go beyond this still descriptive language, I shall say: for the most part, it is secured by the exercise of State power in the State Apparatuses, on the one hand the (Repressive) State Apparatus, on the other the Ideological State Apparatuses.

What I have just said must also be taken into account, and it can be assembled in the form of the following three features:

1. All the State Apparatuses function both by repression and by ideology, with the difference that the (Repressive) State Apparatus functions massively and predominantly by repression, whereas the Ideological State Apparatuses function massively and predominantly by ideology.

2. Whereas the (Repressive) State Apparatus constitutes an organized whole whose different parts are centralized beneath a commanding unity, that of the politics of class struggle applied by the political representatives of the ruling classes in possession of State power, the Ideological State Apparatuses are multiple, distinct, 'relatively autonomous' and capable of providing an objective field to contradictions which express, in forms which

4. What I have said in these few brief words about the class struggle in the ISAs is obviously far from exhausting the question of the class struggle.

To approach this question, two principles must be borne in mind:

The first principle was formulated by Marx in the preface to *A Contribution to the Critique of Political Economy* [1859]: "In considering such transformations [a social revolution] a distinction should always be made between the material transformation of the economic conditions of production, which can be determined with the precision of natural science, and the legal, political, religious, aesthetic or philosophic—in short, ideological forms in which men become conscious of this con-

flict and fight it out." The class struggle is thus expressed and exercised in ideological forms, thus also in the ideological forms of the ISAs. But the class struggle *extends far beyond* these forms, and it is because it extends beyond them that the struggle of the exploited classes may also be exercised in the forms of the ISAs, and thus turn the weapon of ideology against the classes in power.

This is by virtue of the *second principle*: the class struggle extends beyond the ISAs because it is rooted elsewhere than in ideology, in the Infrastructure, in the relations of production, which are relations of exploitation and constitute the base for class relations [Althusser's note].

may be limited or extreme, the effects of the clashes between the capitalist class struggle and the proletarian class struggle, as well as their subordinate forms.

3. Whereas the unity of the (Repressive) State Apparatus is secured by its unified and centralized organization under the leadership of the representatives of the classes in power executing the politics of the class struggle of the classes in power, the unity of the different Ideological State Apparatuses is secured, usually in contradictory forms, by the ruling ideology, the ideology of the ruling class.

Taking these features into account, it is possible to represent the reproduction of the relations of production in the following way, according to a kind of 'division of labour'.

The role of the repressive State apparatus, insofar as it is a repressive apparatus, consists essentially in securing by force (physical or otherwise) the political conditions of the reproduction of relations of production which are in the last resort *relations of exploitation*. Not only does the State apparatus contribute generously to its own reproduction (the capitalist State contains political dynasties, military dynasties, etc.), but also and above all, the State apparatus secures by repression (from the most brutal physical force, via mere administrative commands and interdictions, to open and tacit censorship) the political conditions for the action of the Ideological State Apparatuses.

In fact, it is the latter which largely secure the reproduction specifically of the relations of production, behind a 'shield' provided by the repressive State apparatus. It is here that the role of the ruling ideology is heavily concentrated, the ideology of the ruling class, which holds State power. It is the intermediation of the ruling ideology that ensures a (sometimes teeth-gritting) 'harmony' between the repressive State apparatus and the Ideological State Apparatuses, and between the different State Ideological Apparatuses.

We are thus led to envisage the following hypothesis, as a function precisely of the diversity of ideological State Apparatuses in their single, because shared, role of the reproduction of the relations of production.

Indeed we have listed a relatively large number of ideological State apparatuses in contemporary capitalist social formations: the educational apparatus, the religious apparatus, the family apparatus, the political apparatus, the trade-union apparatus, the communications apparatus, the 'cultural' apparatus, etc.

But in the social formations of that mode of production characterized by 'serfdom' (usually called the feudal mode of production), we observe that although there is a single repressive State apparatus which, since the earliest known Ancient States, let alone the Absolute Monarchies, has been formally very similar to the one we know today, the number of Ideological State Apparatuses is smaller and their individual types are different. For example, we observe that during the Middle Ages, the Church (the religious ideological State apparatus) accumulated a number of functions which have today devolved on to several distinct ideological State apparatuses, new ones in relation to the past I am invoking, in particular educational and cultural functions. Alongside the Church there was the family Ideological State Apparatus, which played a considerable part, incommensurable with its

role in capitalist social formations. Despite appearances, the Church and the Family were not the only Ideological State Apparatuses. There was also a political Ideological State Apparatus (the Estates General, the *Parlement*, the different political factions and Leagues, the ancestors of the modern political parties, and the whole political system of the free Communes and then of the *Villes*⁵). There was also a powerful 'proto-trade-union' Ideological State Apparatus, if I may venture such an anachronistic term (the powerful merchants' and bankers' guilds and the journeymen's associations, etc.). Publishing and Communications, even, saw an indisputable development, as did the theatre; initially both were integral parts of the Church, then they became more and more independent of it.

In the pre-capitalist historical period which I have examined extremely broadly, it is absolutely clear that *there was one dominant Ideological State Apparatus, the Church*, which concentrated within it not only religious functions, but also educational ones, and a large proportion of the functions of communications and 'culture'. It is no accident that all ideological struggle, from the sixteenth to the eighteenth century, starting with the first shocks of the Reformation, was *concentrated* in an anti-clerical and anti-religious struggle; rather this is a function precisely of the dominant position of the religious ideological State apparatus.

The foremost objective and achievement of the French Revolution was not just to transfer State power from the feudal aristocracy to the merchant-capitalist bourgeoisie, to break part of the former repressive State apparatus and replace it with a new one (e.g., the national popular Army)—but also to attack the number-one Ideological State Apparatus: the Church. Hence the civil constitution of the clergy, the confiscation of ecclesiastical wealth, and the creation of new ideological State apparatuses to replace the religious ideological State apparatus in its dominant role.

* * *

I believe that the ideological State apparatus which has been installed in the *dominant* position in mature capitalist social formations as a result of a violent political and ideological class struggle against the old dominant ideological State apparatus, is the *educational ideological apparatus*.

* * *

Why is the educational apparatus in fact the dominant ideological State apparatus in capitalist social formations, and how does it function?

For the moment it must suffice to say:

1. All ideological State apparatuses, whatever they are, contribute to the same result: the reproduction of the relations of production, i.e. of capitalist relations of exploitation.

2. Each of them contributes towards this single result in the way proper to it. The political apparatus by subjecting individuals to the political State ideology, the 'indirect' (parliamentary) or 'direct' (plebiscitary or fascist)

5. The *Villes*: a system instituted under Napoleon in 1799 that divided the country into districts administered by a central government. The Estates General: the three groups holding distinct political powers in France: the clergy, nobility,

and commoners. When convened by Louis XVI to stave off social unrest in 1789, they instead created their own assembly, the *Parlement*, which was overthrown in 1792 during the French Revolution and replaced briefly by a radical commune.

'democratic' ideology. The communications apparatus by cramming every 'citizen' with daily doses of nationalism, chauvinism, liberalism, moralism, etc., by means of the press, the radio and television. The same goes for the cultural apparatus (the role of sport in chauvinism is of the first importance), etc. The religious apparatus by recalling in sermons and the other great ceremonies of Birth, Marriage and Death, that man is only ashes, unless he loves his neighbour to the extent of turning the other cheek to whoever strikes first. The family apparatus . . . but there is no need to go on.

3. This concert is dominated by a single score, occasionally disturbed by contradictions (those of the remnants of former ruling classes, those of the proletarians and their organizations): the score of the Ideology of the current ruling class which integrates into its music the great themes of the Humanism of the Great Forefathers,⁶ who produced the Greek Miracle even before Christianity, and afterwards the Glory of Rome, the Eternal City, and the themes of Interest, particular and general, etc. nationalism, moralism and economism.

4. Nevertheless, in this concert, one ideological State apparatus certainly has the dominant role, although hardly anyone lends an ear to its music: it is so silent! This is the School.

It takes children from every class at infant-school age, and then for years, the years in which the child is most 'vulnerable', squeezed between the family State apparatus and the educational State apparatus, it drums into them, whether it uses new or old methods, a certain amount of 'know-how' wrapped in the ruling ideology (French, arithmetic, natural history, the sciences, literature) or simply the ruling ideology in its pure state (ethics, civic instruction, philosophy). Somewhere around the age of sixteen, a huge mass of children are ejected 'into production': these are the workers or small peasants. Another portion of scholastically adapted youth carries on: and, for better or worse, it goes somewhat further, until it falls by the wayside and fills the posts of small and middle technicians, white-collar workers, small and middle executives, petty bourgeois of all kinds. A last portion reaches the summit, either to fall into intellectual semi-employment, or to provide, as well as the 'intellectuals of the collective labourer', the agents of exploitation (capitalists, managers), the agents of repression (soldiers, policemen, politicians, administrators, etc.) and the professional ideologists (priests of all sorts, most of whom are convinced 'laymen').

Each mass ejected *en route* is practically provided with the ideology which suits the role it has to fulfil in class society: the role of the exploited (with a 'highly-developed' 'professional', 'ethical', 'civic', 'national' and a-political consciousness); the role of the agent of exploitation (ability to give the workers orders and speak to them: 'human relations'), of the agent of repression (ability to give orders and enforce obedience 'without discussion', or ability to manipulate the demagoguery of a political leader's rhetoric), or of the professional ideologist (ability to treat consciousnesses with the respect, i.e. with the contempt, blackmail, and demagoguery they deserve, adapted to the

6. That is, privileging the concept of "Man" and idealizing the achievements of the ancient Greeks as well as Christianity and the Catholic Church.

accents of Morality, of Virtue, of 'Transcendence', of the Nation, of France's World Role, etc.).

Of course, many of these contrasting Virtues (modesty, resignation, submissiveness on the one hand, cynicism, contempt, arrogance, confidence, self-importance, even smooth talk and cunning on the other) are also taught in the Family, in the Church, in the Army, in Good Books, in films and even in the football⁷ stadium. But no other ideological State apparatus has the obligatory (and not least, free) audience of the totality of the children in the capitalist social formation, eight hours a day for five or six days out of seven.

But it is by an apprenticeship in a variety of know-how wrapped up in the massive inculcation of the ideology of the ruling class that the *relations of production* in a capitalist social formation, i.e. the relations of exploited to exploiters and exploiters to exploited, are largely reproduced. The mechanisms which produce this vital result for the capitalist regime are naturally covered up and concealed by a universally reigning ideology of the School, universally reigning because it is one of the essential forms of the ruling bourgeois ideology: an ideology which represents the School as a neutral environment purged of ideology (because it is . . . lay), where teachers respectful of the 'conscience' and 'freedom' of the children who are entrusted to them (in complete confidence) by their 'parents' (who are free, too, i.e. the owners of their children) open up for them the path to the freedom, morality and responsibility of adults by their own example, by knowledge, literature and their 'liberating' virtues.

I ask the pardon of those teachers who, in dreadful conditions, attempt to turn the few weapons they can find in the history and learning they 'teach' against the ideology, the system and the practices in which they are trapped. They are a kind of hero. But they are rare and how many (the majority) do not even begin to suspect the 'work' the system (which is bigger than they are and crushes them) forces them to do, or worse, put all their heart and ingenuity into performing it with the most advanced awareness (the famous new methods!). So little do they suspect it that their own devotion contributes to the maintenance and nourishment of this ideological representation of the School, which makes the School today as 'natural', indispensable-useful and even beneficial for our contemporaries as the Church was 'natural', indispensable and generous for our ancestors a few centuries ago.

In fact, the Church has been replaced today *in its role as the dominant Ideological State Apparatus* by the School. It is coupled with the Family just as the Church was once coupled with the Family. We can now claim that the unprecedentedly deep crisis which is now shaking the education system of so many States across the globe, often in conjunction with a crisis (already proclaimed in the *Communist Manifesto*) shaking the family system, takes on a political meaning, given that the School (and the School-Family couple) constitutes the dominant Ideological State Apparatus, the Apparatus playing a determinant part in the reproduction of the relations of production of a mode of production threatened in its existence by the world class struggle.

7. Soccer.

From *On Ideology*

When I put forward the concept of an Ideological State Apparatus, when I said that the ISAs 'function by ideology', I invoked a reality which needs a little discussion: ideology.

* * *

IDEOLOGY HAS NO HISTORY

One word first of all to expound the reason in principle which seems to me to found, or at least to justify, the project of a theory of ideology *in general*, and not a theory of particular ideologies, which, whatever their form (religious, ethical, legal, political), always express *class positions*.

It is quite obvious that it is necessary to proceed towards a theory of ideologies in the two respects I have just suggested. It will then be clear that a theory of ideologies depends in the last resort on the history of social formations, and thus of the modes of production combined in social formations, and of the class struggles which develop in them. In this sense it is clear that there can be no question of a theory of ideologies *in general*, since ideologies (defined in the double respect suggested above: regional and class) have a history, whose determination in the last instance is clearly situated outside ideologies alone, although it involves them.

On the contrary, if I am able to put forward the project of a theory of ideology *in general*, and if this theory really is one of the elements on which theories of ideologies depend, that entails an apparently paradoxical proposition which I shall express in the following terms: *ideology has no history*.

As we know, this formulation appears in so many words in a passage from *The German Ideology*.⁸ Marx utters it with respect to metaphysics, which, he says, has no more history than ethics (meaning also the other forms of ideology).

In *The German Ideology*, this formulation appears in a plainly positivist⁹ context. Ideology is conceived as a pure illusion, a pure dream, i.e. as nothingness. All its reality is external to it. Ideology is thus thought as an imaginary construction whose status is exactly like the theoretical status of the dream among writers before Freud.¹ For these writers, the dream was the purely imaginary, i.e. null, result of 'day's residues', presented in an arbitrary arrangement and order, sometimes even 'inverted', in other words, in 'disorder'. For them, the dream was the imaginary, it was empty, null and arbitrarily 'stuck together' (*bricolé*), once the eyes had closed, from the residues of the only full and positive reality, the reality of the day. This is

8. "The phantoms formed in the human brain are also, necessarily, sublimates of their material life-processes, which is empirically verifiable and bound to material premises. Morality, religion, metaphysics, all the rest of ideology and their corresponding forms of consciousness, thus no longer retain the semblance of independence. They have no history, no development; but men, developing their material production and their material intercourse, alter, along with their real

existence, their thinking and the products of their thinking." *The German Ideology* (1846), in *The Marx-Engels Reader*, ed. Robert C. Tucker, 2d ed. (New York: Norton, 1978), pp. 154–55.

9. Taking knowledge and meaning to derive solely from what can be empirically observed.

1. SIGMUND FREUD (1856–1939), Austrian founder of psychoanalysis; *The Interpretation of Dreams* (1900) was his seminal work.

exactly the status of philosophy and ideology (since in this book philosophy is ideology *par excellence*) in *The German Ideology*.

Ideology, then, is for Marx an imaginary assemblage (*bricolage*),² a pure dream, empty and vain, constituted by the 'day's residues' from the only full and positive reality, that of the concrete history of concrete material individuals materially producing their existence. It is on this basis that ideology has no history in *The German Ideology*, since its history is outside it, where the only existing history is the history of concrete individuals, etc. In *The German Ideology*, the thesis that ideology has no history is therefore a purely negative thesis, since it means both:

1. ideology is nothing insofar as it is a pure dream (manufactured by who knows what power: if not by the alienation of the division of labour, but that, too, is a *negative* determination);

2. ideology has no history, which emphatically does not mean that there is no history in it (on the contrary, for it is merely the pale, empty and inverted reflection of real history) but that it has no history *of its own*.

Now, while the thesis I wish to defend formally speaking adopts the terms of *The German Ideology* ('ideology has no history'), it is radically different from the positivist and historicist thesis of *The German Ideology*.

For on the one hand, I think it is possible to hold that ideologies *have a history of their own* (although it is determined in the last instance by the class struggle); and on the other, I think it is possible to hold that ideology *in general has no history*, not in a negative sense (its history is external to it), but in an absolutely positive sense.

This sense is a positive one if it is true that the peculiarity of ideology is that it is endowed with a structure and a functioning such as to make it a non-historical reality, i.e. an *omni-historical* reality, in the sense in which that structure and functioning are immutable, present in the same form throughout what we can call history, in the sense in which the *Communist Manifesto* defines history as the history of class struggles, i.e. the history of class societies.

To give a theoretical reference-point here, I might say that, to return to our example of the dream, in its Freudian conception this time, our proposition: ideology has no history, can and must (and in a way which has absolutely nothing arbitrary about it, but, quite the reverse, is theoretically necessary, for there is an organic link between the two propositions) be related directly to Freud's proposition that the *unconscious is eternal*, i.e. that it has no history.

If eternal means, not transcendent to all (temporal) history, but omnipresent, trans-historical and therefore immutable in form throughout the extent of history, I shall adopt Freud's expression word for word, and write *ideology is eternal*, exactly like the unconscious. And I add that I find this comparison theoretically justified by the fact that the eternity of the unconscious is not unrelated to the eternity of ideology in general.

That is why I believe I am justified, hypothetically at least, in proposing a theory of ideology *in general*, in the sense that Freud presented a theory of the unconscious *in general*.

2. A term associated with the French anthropologist CLAUDE LÉVI-STRAUSS (1908–2009), who employed it to describe the patchwork of tools used in his structuralist methodology.

To simplify the phrase, it is convenient, taking into account what has been said about ideologies, to use the plain term ideology to designate ideology in general, which I have just said has no history, or, what comes to the same thing, is eternal, i.e. omnipresent in its immutable form throughout history (= the history of social formations containing social classes). For the moment I shall restrict myself to 'class societies' and their history.

IDEOLOGY IS A 'REPRESENTATION' OF THE IMAGINARY RELATIONSHIP
OF INDIVIDUALS TO THEIR REAL CONDITIONS OF EXISTENCE

In order to approach my central thesis on the structure and functioning of ideology, I shall first present two theses, one negative, the other positive. The first concerns the object which is 'represented' in the imaginary form of ideology, the second concerns the materiality of ideology.

THESES 1: Ideology represents the imaginary relationship of individuals to their real conditions of existence.

We commonly call religious ideology, ethical ideology, legal ideology, political ideology, etc., so many 'world outlooks'. Of course, assuming that we do not live one of these ideologies as the truth (e.g. 'believe' in God, Duty, Justice, etc. . . .), we admit that the ideology we are discussing from a critical point of view, examining it as the ethnologist examines the myths of a 'primitive society', that these 'world outlooks' are largely imaginary, i.e. do not 'correspond to reality.'

However, while admitting that they do not correspond to reality, i.e. that they constitute an illusion, we admit that they do make allusion to reality, and that they need only be 'interpreted' to discover the reality of the world behind their imaginary representation of that world (ideology = *illusion/allusion*).

There are different types of interpretation, the most famous of which are the *mechanistic* type, current in the eighteenth century (God is the imaginary representation of the real King), and the '*hermeneutic*' interpretation, inaugurated by the earliest Church Fathers, and revived by Feuerbach and the theologico-philosophical school which descends from him, e.g. the theologian Barth³ (to Feuerbach, for example, God is the essence of real Man). The essential point is that on condition that we interpret the imaginary transposition (and inversion) of ideology we arrive at the conclusion that in ideology 'men represent their real conditions of existence to themselves in an imaginary form'.

Unfortunately, this interpretation leaves one small problem unsettled: why do men 'need' this imaginary transposition of their real conditions of existence in order to 'represent to themselves' their real conditions of existence?

The first answer (that of the eighteenth century) proposes a simple solution: Priests or Despots are responsible. They 'forged' the Beautiful Lies so that, in the belief that they were obeying God, men would in fact obey the Priests and Despots, who are usually in alliance in their imposture, the

3. Karl Barth (1886–1968), Swiss theologian. Ludwig Feuerbach (1804–1872), German philosopher to whom Marx responded in "Theses on

Feuerbach" (1845), *The German Ideology*, and *The Jewish Question* (1843).

Priests acting in the interests of the Despots or *vice versa*, according to the political positions of the 'theoreticians' concerned. There is therefore a cause for the imaginary transposition of the real conditions of existence: that cause is the existence of a small number of cynical men who base their domination and exploitation of the 'people' on a falsified representation of the world which they have imagined in order to enslave other minds by dominating their imaginations.

The second answer (that of Feuerbach, taken over word for word by Marx in his Early Works) is more 'profound', i.e. just as false. It, too, seeks and finds a cause for the imaginary transposition and distortion of men's real conditions of existence, in short, for the alienation in the imaginary of the representation of men's conditions of existence. This cause is no longer Priests or Despots, nor their active imagination and the passive imagination of their victims. This cause is the material alienation which reigns in the conditions of existence of men themselves. This is how, in *The Jewish Question* and elsewhere, Marx defends the Feuerbachian idea that men make themselves an alienated (= imaginary) representation of their conditions of existence because these conditions of existence are themselves alienating (in the 1844 *Manuscripts*:⁴ because these conditions are dominated by the essence of alienated society—'*alienated labour*').

All these interpretations thus take literally the thesis which they presuppose, and on which they depend, i.e. that what is reflected in the imaginary representation of the world found in an ideology is the conditions of existence of men, i.e. their real world.

Now I can return to a thesis which I have already advanced: it is not their real conditions of existence, their real world, that 'men' 'represent to themselves' in ideology, but above all it is their relation to those conditions of existence which is represented to them there. It is this relation which is at the centre of every ideological, i.e. imaginary, representation of the real world. It is this relation that contains the 'cause' which has to explain the imaginary distortion of the ideological representation of the real world. Or rather, to leave aside the language of causality it is necessary to advance the thesis that it is the *imaginary nature of this relation* which underlies all the imaginary distortion that we can observe (if we do not live in its truth) in all ideology.

To speak in a Marxist language, if it is true that the representation of the real conditions of existence of the individuals occupying the posts of agents of production, exploitation, repression, ideologization and scientific practice, does in the last analysis arise from the relations of production, and from relations deriving from the relations of production, we can say the following: all ideology represents in its necessarily imaginary distortion not the existing relations of production (and the other relations that derive from them), but above all the (imaginary) relationship of individuals to the relations of production and the relations that derive from them. What is represented in ideology is therefore not the system of the real relations which govern the existence of individuals, but the imaginary relation of those individuals to the real relations in which they live.

4. Marx's *Economic and Philosophic Manuscripts of 1844* was not published until 1932.

If this is the case, the question of the 'cause' of the imaginary distortion of the real relations in ideology disappears and must be replaced by a different question: why is the representation given to individuals of their (individual) relation to the social relations which govern their conditions of existence and their collective and individual life necessarily an imaginary relation? And what is the nature of this imaginarity? Posed in this way, the question explodes the solution by a 'clique',⁵ by a group of individuals (Priests or Despots) who are the authors of the great ideological mystification, just as it explodes the solution by the alienated character of the real world. We shall see why later in my exposition. For the moment I shall go no further.

THESIS II: Ideology has a material existence.

I have already touched on this thesis by saying that the 'ideas' or 'representations', etc., which seem to make up ideology do not have an ideal (*idéale* or *idéelle*)⁶ or spiritual existence, but a material existence. I even suggested that the ideal (*idéale*, *idéelle*) and spiritual existence of 'ideas' arises exclusively in an ideology of the 'idea' and of ideology, and let me add, in an ideology of what seems to have 'founded' this conception since the emergence of the sciences, i.e. what the practitioners of the sciences represent to themselves in their spontaneous ideology as 'ideas', true or false. Of course, presented in affirmative form, this thesis is unproven. I simply ask that the reader be favourably disposed towards it, say, in the name of materialism. A long series of arguments would be necessary to prove it.

This hypothetical thesis of the not spiritual but material existence of 'ideas' or other 'representations' is indeed necessary if we are to advance in our analysis of the nature of ideology. Or rather, it is merely useful to us in order the better to reveal what every at all serious analysis of any ideology will immediately and empirically show to every observer, however critical.

While discussing the ideological State apparatuses and their practices, I said that each of them was the realization of an ideology (the unity of these different regional ideologies—religious, ethical, legal, political, aesthetic, etc.—being assured by their subjection to the ruling ideology). I now return to this thesis: an ideology always exists in an apparatus, and its practice, or practices. This existence is material.

Of course, the material existence of the ideology in an apparatus and its practices does not have the same modality as the material existence of a paving-stone or a rifle. But, at the risk of being taken for a Neo-Aristotelian (NB Marx had a very high regard for Aristotle),⁷ I shall say that 'matter is discussed in many senses', or rather that it exists in different modalities, all rooted in the last instance in 'physical' matter.

Having said this, let me move straight on and see what happens to the 'individuals' who live in ideology, i.e. in a determinate (religious, ethical, etc.) representation of the world whose imaginary distortion depends on their imaginary relation to their conditions of existence, in other words, in the last instance, to the relations of production and to class relations (ideology = an

5. I use this very modern term deliberately. For even in Communist circles, unfortunately, it is a commonplace to "explain" some political deviation by the action of a "clique" [Althusser's note].
6. Though the words sound similar in French, *idé-*

ale means "ideal" and *idéelle* means "ideational" or "conceptual."

7. The Greek philosopher ARISTOTLE (384–322 B.C.E.) emphasized the direct observation of nature and insisted on rigorous scientific procedure.

imaginary relation to real relations). I shall say that this imaginary relation is itself endowed with a material existence.

Now I observe the following.

An individual believes in God, or Duty, or Justice, etc. This belief derives (for everyone, i.e. for all those who live in an ideological representation of ideology, which reduces ideology to ideas endowed by definition with a spiritual existence) from the ideas of the individual concerned, i.e. from him as a subject with a consciousness which contains the ideas of his belief. In this way, i.e. by means of the absolutely ideological 'conceptual' device (*dispositif*) thus set up (a subject endowed with a consciousness in which he freely forms or freely recognizes ideas in which he believes), the (material) attitude of the subject concerned naturally follows.

The individual in question behaves in such and such a way, adopts such and such a practical attitude, and, what is more, participates in certain regular practices which are those of the ideological apparatus on which 'depend' the ideas which he has in all consciousness freely chosen as a subject. If he believes in God, he goes to Church to attend Mass, kneels, prays, confesses, does penance (once it was material in the ordinary sense of the term) and naturally repents and so on. If he believes in Duty, he will have the corresponding attitudes, inscribed in ritual practices 'according to the correct principles'. If he believes in Justice, he will submit unconditionally to the rules of the Law, and may even protest when they are violated, sign petitions, take part in a demonstration, etc.

Throughout this schema we observe that the ideological representation of ideology is itself forced to recognize that every 'subject' endowed with a 'consciousness' and believing in the 'ideas' that his 'consciousness' inspires in him and freely accepts, must 'act according to his ideas', must therefore inscribe his own ideas as a free subject in the actions of his material practice. If he does not do so, 'that is wicked'.

Indeed, if he does not do what he ought to do as a function of what he believes, it is because he does something else, which, still as a function of the same idealist scheme, implies that he has other ideas in his head as well as those he proclaims, and that he acts according to these other ideas, as a man who is either 'inconsistent' ('no one is willingly evil') or cynical, or perverse.

In every case, the ideology of ideology thus recognizes, despite its imaginary distortion, that the 'ideas' of a human subject exist in his actions, or ought to exist in his actions, and if that is not the case, it lends him other ideas corresponding to the actions (however perverse) that he does perform. This ideology talks of actions: I shall talk of actions inserted into *practices*. And I shall point out that these practices are governed by the *rituals* in which these practices are inscribed, within the *material existence of an ideological apparatus*, be it only a small part of that apparatus: a small mass in a small church, a funeral, a minor match at a sports' club, a school day, a political party meeting, etc.

Besides, we are indebted to Pascal's⁸ defensive 'dialectic' for the wonderful formula which will enable us to invert the order of the notional

8. Blaise Pascal (1623–1662), French theologian and mathematician; he was influenced by the religious thinking of Bishop Cornelius Jansen

(1585–1638), whose posthumously published writings fostered a movement condemned as heretical by the Roman Catholic Church.

schema of ideology. Pascal says more or less: 'Kneel down, move your lips in prayer, and you will believe.' He thus scandalously inverts the order of things, bringing, like Christ, not peace but strife, and in addition something hardly Christian (for woe to him who brings scandal into the world!)—scandal itself. A fortunate scandal which makes him stick with Jansenist defiance to a language that directly names the reality.

I will be allowed to leave Pascal to the arguments of his ideological struggle with the religious ideological State apparatus of his day. And I shall be expected to use a more directly Marxist vocabulary, if that is possible, for we are advancing in still poorly explored domains.

I shall therefore say that, where only a single subject (such and such an individual) is concerned, the existence of the ideas of his belief is material in that *his ideas are his material actions inserted into material practices governed by material rituals which are themselves defined by the material ideological apparatus from which derive the ideas of that subject*. Naturally, the four inscriptions of the adjective 'material' in my proposition must be affected by different modalities: the materialities of a displacement for going to mass, of kneeling down, of the gesture of the sign of the cross, or of the *mea culpa*, of a sentence, of a prayer, of an act of contrition, of a penitence, of a gaze, of a hand-shake, of an external verbal discourse or an 'internal' verbal discourse (consciousness), are not one and the same materiality. I shall leave on one side the problem of a theory of the differences between the modalities of materiality.

It remains that in this inverted presentation of things, we are not dealing with an 'inversion' at all, since it is clear that certain notions have purely and simply disappeared from our presentation, whereas others on the contrary survive, and new terms appear.

Disappeared: the term *ideas*.

Survive: the terms *subject, consciousness, belief, actions*.

Appear: the terms *practices, rituals, ideological apparatus*.

* * *

But this very presentation reveals that we have retained the following notions: subject, consciousness, belief, actions. From this series I shall immediately extract the decisive central term on which everything else depends: the notion of the *subject*.

And I shall immediately set down two conjoint theses:

1. there is no practice except by and in an ideology;
2. there is no ideology except by the subject and for subjects.

I can now come to my central thesis.

IDEOLOGY INTERPELLATES INDIVIDUALS AS SUBJECTS

This thesis is simply a matter of making my last proposition explicit: there is no ideology except by the subject and for subjects. Meaning, there is no ideology except for concrete subjects, and this destination for ideology is only made possible by the subject: meaning, *by the category of the subject* and its functioning.

By this I mean that, even if it only appears under this name (the subject) with the rise of bourgeois ideology, above all with the rise of legal ideology,⁹ the category of the subject (which may function under other names: e.g., as the soul in Plato,¹ as God, etc.) is the constitutive category of all ideology, whatever its determination (regional or class) and whatever its historical date—since ideology has no history.

I say: the category of the subject is constitutive of all ideology, but at the same time and immediately I add that *the category of the subject is only constitutive of all ideology insofar as all ideology has the function (which defines it) of 'constituting' concrete individuals as subjects*. In the interaction of this double constitution exists the functioning of all ideology, ideology being nothing but its functioning in the material forms of existence of that functioning.

* * *

At work in this reaction is the ideological *recognition* function which is one of the two functions of ideology as such (its inverse being the function of *misrecognition*—*méconnaissance*).

To take a highly 'concrete' example, we all have friends who, when they knock on our door and we ask, through the door, the question 'Who's there?', answer (since 'it's obvious') 'It's me'. And we recognize that 'it is him', or 'her'. We open the door, and 'it's true, it really was she who was there'. To take another example, when we recognize somebody of our (previous) acquaintance ((*re*)-*connaissance*) in the street, we show him that we have recognized him (and have recognized that he has recognized us) by saying to him 'Hello, my friend', and shaking his hand (a material ritual practice of ideological recognition in everyday life—in France, at least; elsewhere, there are other rituals).

In this preliminary remark and these concrete illustrations, I only wish to point out that you and I are *always already* subjects, and as such constantly practice the rituals of ideological recognition, which guarantee for us that we are indeed concrete, individual, distinguishable and (naturally) irreplaceable subjects. The writing I am currently executing and the reading you are currently² performing are also in this respect rituals of ideological recognition, including the 'obviousness' with which the 'truth' or 'error' of my reflections may impose itself on you.

But to recognize that we are subjects and that we function in the practical rituals of the most elementary everyday life (the hand-shake, the fact of calling you by your name, the fact of knowing, even if I do not know what it is, that you 'have' a name of your own, which means that you are recognized as a unique subject, etc.)—this recognition only gives us the 'consciousness' of our incessant (eternal) practice of ideological recognition—its consciousness,

9. Which borrowed the legal category of "subject in law" to make an ideological notion: man is by nature a subject [Althusser's note].

1. In discussing the structure of the ideal city in his *Republic*, the Greek philosopher PLATO (ca. 427—ca. 347 B.C.E.) analyzed the structure of the inhabitants' souls.

2. NB: this double "currently" is one more proof of the fact that ideology is "eternal," since these two "currentlys" are separated by an indefinite interval; I am writing these lines on April 6, 1969, you may read them at any subsequent time [Althusser's note].

i.e. its *recognition*—but in no sense does it give us the (scientific) *knowledge* of the mechanism of this recognition. Now it is this knowledge that we have to reach, if you will, while speaking in ideology, and from within ideology we have to outline a discourse which tries to break with ideology, in order to dare to be the beginning of a scientific (i.e. subjectless) discourse on ideology.

Thus in order to represent why the category of the ‘subject’ is constitutive of ideology, which only exists by constituting concrete subjects as subjects, I shall employ a special mode of exposition: ‘concrete’ enough to be recognized, but abstract enough to be thinkable and thought, giving rise to a knowledge.

As a first formulation I shall say: *all ideology hails or interpellates concrete individuals as concrete subjects*, by the functioning of the category of the subject.

This is a proposition which entails that we distinguish for the moment between concrete individuals on the one hand and concrete subjects on the other, although at this level concrete subjects only exist insofar as they are supported by a concrete individual.

I shall then suggest that ideology ‘acts’ or ‘functions’ in such a way that it ‘recruits’ subjects among the individuals (it recruits them all), or ‘transforms’ the individuals into subjects (it transforms them all) by that very precise operation which I have called *interpellation* or hailing, and which can be imagined along the lines of the most commonplace everyday police (or other) hailing: ‘Hey, you there!’³

Assuming that the theoretical scene I have imagined takes place in the street, the hailed individual will turn round. By this mere one-hundred-and-eighty-degree physical conversion, he becomes a *subject*. Why? Because he has recognized that the hail was ‘really’ addressed to him, and that ‘it was *really him* who was hailed’ (and not someone else). Experience shows that the practical telecommunication of hailings is such that they hardly ever miss their man: verbal call or whistle, the one hailed always recognizes that it is really him who is being hailed. And yet it is a strange phenomenon, and one which cannot be explained solely by ‘guilt feelings’, despite the large numbers who ‘have something on their consciences’.

Naturally for the convenience and clarity of my little theoretical theatre I have had to present things in the form of a sequence, with a before and an after, and thus in the form of a temporal succession. There are individuals walking along. Somewhere (usually behind them) the hail rings out: ‘Hey, you there!’ One individual (nine times out of ten it is the right one) turns round, believing/suspecting/knowing that it is for him, i.e. recognizing that ‘it really is he’ who is meant by the hailing. But in reality these things happen without any succession. The existence of ideology and the hailing or interpellation of individuals as subjects are one and the same thing.

* * *

Thus ideology hails or interpellates individuals as subjects. As ideology is eternal, I must now suppress the temporal form in which I have presented the functioning of ideology, and say: ideology has always-already interpellated

3. Hailing as an everyday practice subject to a precise ritual takes a quite “special” form in the policeman’s practice of “hailing” which concerns the hailing of “suspects” [Althusser’s note].

individuals as subjects, which amounts to making it clear that individuals are always-already interpellated by ideology as subjects, which necessarily leads us to one last proposition: *individuals are always-already subjects*. Hence individuals are 'abstract' with respect to the subjects which they always-already are. This proposition might seem paradoxical.

That an individual is always-already a subject, even before he is born, is nevertheless the plain reality, accessible to everyone and not a paradox at all. Freud shows that individuals are always 'abstract' with respect to the subjects they always-already are, simply by noting the ideological ritual that surrounds the expectation of a 'birth', that 'happy event'. Everyone knows how much and in what way an unborn child is expected. Which amounts to saying, very prosaically, if we agree to drop the 'sentiments', i.e. the forms of family ideology (paternal/maternal/conjugal/fraternal) in which the unborn child is expected: it is certain in advance that it will bear its Father's Name, and will therefore have an identity and be irreplaceable. Before its birth, the child is therefore always-already a subject, appointed as a subject in and by the specific familial ideological configuration in which it is 'expected' once it has been conceived. I hardly need add that this familial ideological configuration is, in its uniqueness, highly structured, and that it is in this implacable and more or less 'pathological' (presupposing that any meaning can be assigned to that term) structure that the former subject-to-be will have to 'find' 'its' place, i.e. 'become' the sexual subject (boy or girl) which it already is in advance. It is clear that this ideological constraint and pre-appointment, and all the rituals of rearing and then education in the family, have some relationship with what Freud studied in the forms of the pre-genital and genital 'stages' of sexuality, i.e. in the 'grip' of what Freud registered by its effects as being the unconscious. But let us leave this point, too, on one side.

Let me go one step further. What I shall now turn my attention to is the way the 'actors' in this *mise en scène* of interpellation, and their respective roles, are reflected in the very structure of all ideology.

AN EXAMPLE: THE CHRISTIAN RELIGIOUS IDEOLOGY

As the formal structure of all ideology is always the same, I shall restrict my analysis to a single example, one accessible to everyone, that of religious ideology, with the proviso that the same demonstration can be produced for ethical, legal, political, aesthetic ideology, etc.

Let us therefore consider the Christian religious ideology. I shall use a rhetorical figure and 'make it speak', i.e. collect into a fictional discourse what it 'says' not only in its two Testaments, its Theologians, Sermons, but also in its practices, its rituals, its ceremonies and its sacraments. The Christian religious ideology says something like this:

It says: I address myself to you, a human individual called Peter (every individual is called by his name, in the passive sense, it is never he who provides his own name), in order to tell you that God exists and that you are answerable to Him. It adds: God addresses himself to you through my voice (Scripture having collected the Word of God, Tradition having transmitted it, Papal Infallibility fixing it for ever on 'nice' points). It says: this is who you are: you are Peter! This is your origin, you were created by God for all

eternity, although you were born in the 1920th year of Our Lord! This is your place in the world! This is what you must do! By these means, if you observe the 'law of love' you will be saved, you, Peter, and will become part of the Glorious Body of Christ! Etc. . . .

Now this is quite a familiar and banal discourse, but at the same time quite a surprising one.

Surprising because if we consider that religious ideology is indeed addressed to individuals, in order to 'transform them into subjects', by interpellating the individual, Peter, in order to make him a subject, free to obey or disobey the appeal, i.e. God's commandments; if it calls these individuals by their names, thus recognizing that they are always-already interpellated as subjects with a personal identity (to the extent that Pascal's Christ says: 'It is for you that I have shed this drop of my blood!'); if it interpellates them in such a way that the subject responds: '*Yes, it really is me!*' if it obtains from them the *recognition* that they really do occupy the place it designates for them as theirs in the world, a fixed residence: 'It really is me, I am here, a worker, a boss or a soldier!' in this vale of tears; if it obtains from them the recognition of a destination (eternal life or damnation) according to the respect or contempt they show to 'God's Commandments', Law become Love;—if everything does happen in this way (in the practices of the well-known rituals of baptism, confirmation, communion, confession and extreme unction, etc. . . .), we should note that all this 'procedure' to set up Christian religious subjects is dominated by a strange phenomenon: the fact that there can only be such a multitude of possible religious subjects on the absolute condition that there is a Unique, Absolute, *Other Subject*, i.e. God.

It is convenient to designate this new and remarkable Subject by writing Subject with a capital S to distinguish it from ordinary subjects, with a small s.

It then emerges that the interpellation of individuals as subjects presupposes the 'existence' of a Unique and central Other Subject, in whose Name the religious ideology interpellates all individuals as subjects. All this is clearly written in what is rightly called the Scriptures. 'And it came to pass at that time that God the Lord (Yahweh) spoke to Moses in the cloud. And the Lord cried to Moses, "Moses!" And Moses replied "It is (really) I! I am Moses thy servant, speak and I shall listen!" And the Lord spoke to Moses and said to him, "*I am that I am*"'.⁴

God thus defines himself as the Subject *par excellence*, he who is through himself and for himself ('I am that I am'), and he who interpellates his subject, the individual subjected to him by his very interpellation, i.e. the individual named Moses. And Moses, interpellated-called by his Name, having recognized that it 'really' was he who was called by God, recognizes that he is a subject, a subject of God, a subject subjected to God, *a subject through the Subject and subjected to the Subject*. The proof: he obeys him, and makes his people obey God's Commandments.

God is thus the Subject, and Moses and the innumerable subjects of God's people, the Subject's interlocutors-interpellates: his *mirrors*, his *reflections*. Were not men made *in the image* of God? As all theological reflection proves,

4. See Exodus 3.4, 14 (spoken from a burning bush, not a cloud).

whereas He 'could' perfectly well have done without men, God needs them, the Subject needs the subjects, just as men need God, the subjects need the Subject. Better: God needs men, the great Subject needs subjects, even in the terrible inversion of his image in them (when the subjects wallow in debauchery, i.e. sin).

* * *

Let us decipher into theoretical language this wonderful necessity for the duplication of *the Subject into subjects* and of *the Subject itself into a subject-Subject*.

We observe that the structure of all ideology, interpellating individuals as subjects in the name of a Unique and Absolute Subject is *speculary*, i.e. a mirror-structure, and *doubly* specular: this mirror duplication is constitutive of ideology and ensures its functioning. Which means that all ideology is *centred*, that the Absolute Subject occupies the unique place of the Centre, and interpellates around it the infinity of individuals into subjects in a double mirror-connexion such that it *subjects* the subjects to the Subject, while giving them in the Subject in which each subject can contemplate its own image (present and future) the *guarantee* that this really concerns them and Him, and that since everything takes place in the Family (the Holy Family: the Family is in essence Holy), 'God will *recognize* his own in it', i.e. those who have recognized God, and have recognized themselves in Him, will be saved.

Let me summarize what we have discovered about ideology in general.

The duplicate mirror-structure of ideology ensures simultaneously:

1. the interpellation of 'individuals' as subjects;
2. their subjection to the Subject;
3. the mutual recognition of subjects and Subject, the subjects' recognition of each other, and finally the subject's recognition of himself;
4. the absolute guarantee that everything really is so, and that on condition that the subjects recognize what they are and behave accordingly, everything will be all right: Amen—'*So be it*'.

Result: caught in this quadruple system of interpellation as subjects, of subjection to the Subject, of universal recognition and of absolute guarantee, the subjects 'work', they 'work by themselves' in the vast majority of cases, with the exception of the 'bad subjects' who on occasion provoke the intervention of one of the detachments of the (repressive) State apparatus. But the vast majority of (good) subjects work all right 'all by themselves', i.e. by ideology (whose concrete forms are realized in the Ideological State Apparatuses). They are inserted into practices governed by the rituals of the ISAs. They 'recognize' the existing state of affairs, that 'it really is true that it is so and not otherwise', and that they must be obedient to God, to their conscience, to the priest, to de Gaulle, to the boss, to the engineer, that thou shalt 'love thy neighbour as thyself', etc. Their concrete, material behaviour is simply the inscription in life of the admirable words of the prayer: '*Amen—So be it*'.

Yes, the subjects 'work by themselves'. The whole mystery of this effect lies in the first two moments of the quadruple system I have just discussed, or, if you prefer, in the ambiguity of the term *subject*. In the ordinary use of the term, subject in fact means: (1) a free subjectivity, a centre of initiatives,

author of and responsible for its actions; (2) a subjected being, who submits to a higher authority, and is therefore stripped of all freedom except that of freely accepting his submission. This last note gives us the meaning of this ambiguity, which is merely a reflection of the effect which produces it: the individual *is interpellated as a (free) subject in order that he shall submit freely to the commandments of the Subject, i.e. in order that he shall (freely) accept his subjection*, i.e. in order that he shall make the gestures and actions of his subjection 'all by himself'. *There are no subjects except by and for their subjection.* That is why they 'work all by themselves'.

'So be it! . . .' This phrase which registers the effect to be obtained proves that it is not 'naturally' so ('naturally': outside the prayer, i.e. outside the ideological intervention). This phrase proves that it *has* to be so if things are to be what they must be, and let us let the words slip: if the reproduction of the relations of production is to be assured, even in the processes of production and circulation, every day, in the 'consciousness', i.e. in the attitudes of the individual-subjects occupying the posts which the socio-technical division of labour assigns to them in production, exploitation, repression, ideologization, scientific practice, etc. Indeed, what is really in question in this mechanism of the mirror recognition of the Subject and of the individuals interpellated as subjects, and of the guarantee given by the Subject to the subjects if they freely accept their subjection to the Subject's 'commandments'? The reality in question in this mechanism, the reality which is necessarily *ignored (méconnue)* in the very forms of recognition (ideology = misrecognition/ignorance) is indeed, in the last resort, the reproduction of the relations of production and of the relations deriving from them.

January–April 1969

P.S.

* * *

I have suggested that the ideologies were *realized* in institutions, in their rituals and their practices, in the ISAs. We have seen that on this basis they contribute to that form of class struggle, vital for the ruling class, the reproduction of the relations of production. But the point of view itself, however real, is still an abstract one.

In fact, the State and its Apparatuses only have meaning from the point of view of the class struggle, as an apparatus of class struggle ensuring class oppression and guaranteeing the conditions of exploitation and its reproduction. But there is no class struggle without antagonistic classes. Whoever says class struggle of the ruling class says resistance, revolt and class struggle of the ruled class.

* * *

It is only from the point of view of the classes, i.e. of the class struggle, that it is possible to explain the ideologies existing in a social formation. Not only is it from this starting-point that it is possible to explain the realization of the ruling ideology in the ISAs and of the forms of class struggle for which the ISAs are the seat and the stake. But it is also and above all from this starting-point that it is possible to understand the provenance of

the ideologies which are realized in the ISAs and confront one another there. For if it is true that the ISAs represent the *form* in which the ideology of the ruling class must *necessarily* be realized, and the form in which the ideology of the ruled class must *necessarily* be measured and confronted, ideologies are not 'born' in the ISAs but from the social classes at grips in the class struggle: from their conditions of existence, their practices, their experience of the struggle, etc.

1970

PAUL DE MAN

1919–1983

Spurred by the expansion of research universities, American academic literary criticism flourished from the late 1960s through the 1980s. New ideas from Continental philosophy, linguistics, psychoanalysis, and criticism surged into its comparatively narrow confines, which had been dominated by the model of close reading practiced by New Critics like CLEANTH BROOKS. Central to these new and avowedly theoretical stances toward literature was the group of critics then at Yale University, including Paul de Man, HAROLD BLOOM, JACQUES DERRIDA, Geoffrey Hartman, J. Hillis Miller, Shoshana Felman, and de Man's student Barbara Johnson. Called the "Yale School," they revitalized—or, according to antagonists, ruined—American literary criticism by importing Continental theory and, to varying degrees, by espousing deconstruction. An erudite and wide-ranging critic of critics as well as a sophisticated reader of literary texts, de Man was the most influential literary theorist of the Yale School, and perhaps of his generation. Complementing Derrida's broader philosophical project, de Man promulgated deconstruction in literary criticism. His essay "Semiology and Rhetoric" (1973) programmatically outlines his model of deconstructive reading, arguing that rhetoric and figural language ultimately undermine determinate interpretation and that texts become allegories of their own interpretive difficulties.

De Man was a prominent academic figure in the United States in his later life, but his early life in Europe was marked by the experience of World War II, the decisive historical event of his generation. He was born and schooled in Antwerp, Belgium, where his father was a manufacturer of medical equipment and his uncle, Hendrik de Man, was a leading figure in the Socialist Party. In 1937 he entered the University of Brussels, first studying engineering and eventually taking degrees in chemistry (1940) and then philosophy (1942). While he was a student, Belgium was invaded by German forces, and it was under German military occupation from 1940 to 1944. De Man tried to flee to Spain in the summer of 1940 but was denied permission to immigrate; he returned to Belgium in the fall. During this period, he published journalism on literature and music; in 1939 he wrote for a democratic, antifascist student paper, and from 1940 to 1942 he regularly wrote for a Belgian newspaper, *Le Soir* (*The Evening*), then under German control.

After the war de Man tried his hand at publishing and translating, but in 1948 he emigrated to the United States, where he worked at Doubleday Bookstore in New York and was introduced to prominent New York intellectuals. With the help of the writer Mary McCarthy, in 1949 he took a job as an instructor of French at Bard College, and in 1951 he moved to Boston to teach at the Berlitz language school. In 1952

he entered the graduate program in comparative literature at Harvard University, attaining a prestigious appointment at the Harvard Society of Fellows (1955–58) and working with the New Critic Reuben Brower, for whom he was a teaching assistant. While a lecturer at Harvard, he received his M.A. in 1958 and his Ph.D. in 1960. Though he began his academic career relatively late in life, he quickly rose to prominence, teaching at Cornell University from 1960 to 1967, intermittently at the University of Zurich from 1963 to 1970, and at Johns Hopkins University from 1968 to 1970. In 1970 he moved to Yale University, where he was appointed Sterling Professor of Comparative Literature in 1979. In 1983, at the height of his influence, de Man died of cancer.

It was not until four years after his death that a Belgian researcher rediscovered his wartime journalism. Although most of it consisted of cerebral literary reviews, one article contained explicitly anti-Semitic statements, to the effect that European literature would not be diminished if there were no Jewish writers; a few other articles were also troubling. These writings were met with shock, for they suggested that de Man had been complicit with Nazi policies. Though de Man had been cleared of charges of collaboration by the Belgian postwar military prosecutor investigating those who had worked for *Le Soir*, his wartime writings became a focal point of debate thereafter, diminishing his influence in literary theory.

De Man was ever attuned to the figural contradictions of language, and his own career took many ironic turns. A debunker of the figure of personification in literary and critical language, he came for many to personify both deconstruction and literary theory. Despite eschewing personality in teaching—as he sternly remarks in “The Resistance to Theory” (1982), pedagogy is not show business—he had a large following of students and colleagues who carried out his line of deconstruction. While he was persistently skeptical that any method could yield determinable results, his manner of reading became a model for others’ critical practice, fulfilling his prediction, in “Semiology and Rhetoric,” that “The whole of literature would respond in similar fashion.” And although he advocated the priority of linguistic indeterminacy in interpreting historical events, his work was put into question by the discovery of the historical fact of his wartime writings.

Trained both in the European tradition of philosophy, especially phenomenology, at Brussels and in the American New Criticism during his time at Harvard, de Man was well positioned to adapt the developing discourses of Continental theory to American literary criticism. He showed a consistent affinity with the New Critics in his assiduous practice of close reading. As he remarked in an interview, he worked not from larger ideas but “one inch over the text.” He also shared the New Critics’ disdain for paraphrase, which reductively glosses texts rather than teasing out their complications. However, de Man departed from the New Critics in several key ways: in denying the determinate meaning that they assumed, in stressing allegory as a primary literary mode, and in continually investigating the theoretical bases of reading.

A foundational statement of deconstructive literary analysis, “Semiology and Rhetoric” takes aim at the semiological approaches characteristic of French structuralism, which attempt to develop a grammar of literary structure on the scientific model of linguistics. Using William Butler Yeats’s poem “Among School Children” (1927) as a test case, de Man shows how meaning cannot be determined by grammar but is exceeded by the figural properties of language. Focusing on the poem’s famous last line, “How can we know the dancer from the dance?” he adduces two different readings, taking it first as a rhetorical question reinforcing the images of unity in the poem (the standard interpretation) and then as a serious question that culminates in an image of dramatic uncertainty rather than unity. These yield “two entirely coherent but entirely incompatible readings,” and thus “the entire scheme set up by the first reading can be undermined, or deconstructed, in terms of the second.” Bringing home his point about the limitations of structuralism as well as

of hermeneutic approaches, de Man shows how the poem's rhetoric renders interpretation undecidable. He calls this the "rhetorization of grammar."

As a complement to this rhetorical move, de Man also analyzes what he calls the "grammatization of rhetoric." Taking an example from Marcel Proust's *In Search of Lost Time* (7 vols., 1913–27), de Man traces the sequence of figures in a passage describing the coolness of a room during summer, which seem necessarily linked and unified in "semi-automatic grammatical patterns." However, de Man argues that this link is deceptive and works only associatively, by contiguity; as he points out, a fly's buzz is no more necessarily connected to summer than the man Henry Ford is connected to an automobile. The figural nature of language again undoes the stable pattern that we assume to determine meaning. Although de Man claims that the indeterminacy generated by figuration applies to all linguistic acts, he specifies that it is explicitly foregrounded in literature. He thereby proposes one answer to the perennial question in literary theory of what distinguishes literature from other kinds of discourse, though he at the same time undercuts this distinction by analyzing how the literary occurs in presumably propositional discourses such as criticism and philosophy.

Generalizing from these examples, de Man finds that all literary texts become, in his trademark phrase, "allegories of reading," offering narratives of the problematic nature of language and interpretation. One of de Man's most influential moves was to reconsider the place of allegory, usually associated with schematic forms of medieval literature, notably in his important early essay "The Rhetoric of Temporality" (1969), as well as in his masterwork, *Allegories of Reading* (1979; "Semiology and Rhetoric" was reprinted as its introduction). De Man stresses that his allegorical rendering is not something overlaid on texts as a theoretical template; as he puts it, "The deconstruction is not something we have added to the text but it constituted the text in the first place." Likewise, one does not "deconstruct" texts; rather, one unravels the ways in which language deconstructs its own assertions, a distinction that suggests the impersonality of language and its operation, beyond human control. For de Man, the workings of language have priority over historical or other considerations; in another essay he makes the startling but consistent claim that "the bases for historical knowledge are not empirical facts but written texts, even if these texts masquerade in the guise of wars and revolutions."

De Man's work has drawn an unparalleled amount of criticism from both traditionalists and fellow theorists within the academy, as well as from those outside. Although he studied a wide range of canonical literary texts, his advocacy of theory led to the accusation that he was an enemy of literature. And despite being an inveterate close reader, he was charged with threatening the foundations of literary criticism because he radically questioned the possibility of meaning. Within the domain of theory, in perhaps the central struggle of the 1980s, de Man—and deconstruction—was pitted against leftist calls that attention be paid to history, society, and politics. The Marxist critic TERRY EAGLETON claimed that de Man had "given up the world entirely for the aporias and unthinkable paradoxes of a text," and that deconstruction was "politically quietistic"; the postcolonial critic EDWARD W. SAID charged that deconstruction, by its use of overspecialized "camouflaging jargons" that "obscure the social realities," detracted from the social role and mission of criticism. Analyzing de Man's own rhetoric, the critic Frank Lentricchia quipped that de Man's authoritative pronouncements about language seemed the orders of a Mafia boss, contradicting his own theory of indeterminacy. Although de Man's influence waned somewhat after the 1980s, in part because of the discovery of his wartime writings and in part because of the resurgence of historical methods, he remains a pivotal figure in the assimilation of Continental theory, especially deconstruction, to the North American scene.

"Semiology and Rhetoric" Keywords: Deconstruction, Interpretation Theory, Language, Poststructuralism, Rhetoric, Semiotics

Semiology and Rhetoric

To judge from various recent publications, the spirit of the times is not blowing in the direction of formalist and intrinsic criticism.¹ We may no longer be hearing too much about relevance but we keep hearing a great deal about reference, about the nonverbal "outside" to which language refers, by which it is conditioned and upon which it acts. The stress falls not so much on the fictional status of literature—a property now perhaps somewhat too easily taken for granted—but on the interplay between these fictions and categories that are said to partake of reality, such as the self, man, society, "the artist, his culture and the human community,"² as one critic puts it. Hence the emphasis on hybrid texts considered to be partly literary and partly referential, on popular fictions deliberately aimed towards social and psychological gratification, on literary autobiography as a key to the understanding of the self, and so on. We speak as if, with the problems of literary form resolved once and forever, and with the techniques of structural analysis refined to near-perfection, we could now move "beyond formalism" towards the questions that really interest us and reap, at last, the fruits of the ascetic concentration on techniques that prepared us for this decisive step. With the internal law and order of literature well policed, we can now confidently devote ourselves to the foreign affairs, the external politics of literature. Not only do we feel able to do so, but we owe it to ourselves to take this step: our moral conscience would not allow us to do otherwise. Behind the assurance that valid interpretation is possible, behind the recent interest in writing and reading as potentially effective public speech acts, stands a highly respectable moral imperative that strives to reconcile the internal, formal, private structures of literary language with their external, referential, and public effects.

I want, for the moment, to consider briefly this tendency in itself, as an undeniable and recurrent historical fact, without regard for its truth or falseness or for its value as desirable or pernicious. It is a fact that this sort of thing happens, again and again, in literary studies. On the one hand, literature cannot merely be received as a definite unit of referential meaning that can be decoded without leaving a residue. The code is unusually conspicuous, complex, and enigmatic; it attracts an inordinate amount of attention to itself, and this attention has to acquire the rigor of a method. The structural moment of concentration on the code for its own sake cannot be avoided, and literature necessarily breeds its own formalism. Technical innovations in the methodical study of literature only occur when this kind of attention predominates. It can legitimately be said, for example, that, from a technical point of view, very little has happened in American criticism since the innovative works of New Criticism. There certainly have been numerous excellent books of criticism since, but in none of them have the techniques of description and interpretation evolved beyond the techniques of close reading established in the thirties and the forties. Formalism, it seems, is an

1. The New Critical distinction between "intrinsic" and "extrinsic" criticism derives from the influential handbook *Theory of Literature* (1949), by René Wellek and Austin Warren; they opposed criticism limited to internal, "formal" features of

a literary work to that focusing on external concerns such as the author, readers, or history.

2. Quoted from the preface to *Beyond Formalism: Literary Essays, 1958–1970* (1970), by Geoffrey Hartman, de Man's colleague at Yale University.

all-absorbing and tyrannical muse; the hope that one can be at the same time technically original and discursively eloquent is not borne out by the history of literary criticism.

On the other hand—and this is the real mystery—no literary formalism, no matter how accurate and enriching in its analytic powers, is ever allowed to come into being without seeming reductive. When form is considered to be the external trappings of literary meaning or content, it seems superficial and expendable. The development of intrinsic, formalist criticism in the twentieth century has changed this model: form is now a solipsistic category of self-reflection, and the referential meaning is said to be extrinsic. The polarities of inside and outside have been reversed, but they are still the same polarities that are at play: internal meaning has become outside reference, and the outer form has become the intrinsic structure. A new version of reductiveness at once follows this reversal: formalism nowadays is mostly described in an imagery of imprisonment and claustrophobia: the “prison house of language,” “the impasse of formalist criticism,”³ etc. Like the grandmother in Proust’s novel⁴ ceaselessly driving the young Marcel out into the garden, away from the unhealthy inwardness of his closeted reading, critics cry out for the fresh air of referential meaning. Thus, with the structure of the code so opaque, but the meaning so anxious to blot out the obstacle of form, no wonder that the reconciliation of form and meaning would be so attractive. The attraction of reconciliation is the elective breeding-ground of false models and metaphors; it accounts for the metaphorical model of literature as a kind of box that separates an inside from an outside, and the reader or critic as the person who opens the lid in order to release in the open what was secreted but inaccessible inside. It matters little whether we call the inside of the box the content or the form, the outside the meaning or the appearance. The recurrent debate opposing intrinsic to extrinsic criticism stands under the aegis of an inside/outside metaphor that is never being seriously questioned.

Metaphors are much more tenacious than facts, and I certainly don’t expect to dislodge this age-old model in one short try. I merely wish to speculate on a different set of terms, perhaps less simple in their differential relationships than the strictly polar, binary opposition between inside and outside and therefore less likely to enter into the easy play of chiasmic⁵ reversals. I derive these terms (which are as old as the hills) pragmatically from the observation of developments and debates in recent critical methodology.

One of the most controversial among these developments coincides with a new approach to poetics or, as it is called in Germany, poetology, as a branch of general semiotics. In France, a semiology of literature comes about as the outcome of the long-deferred but all the more explosive encounter of the nimble French literary mind with the category of form. Semiology, as opposed

3. The title of one of de Man’s own essays published in French in 1956, later translated as “The Dead-End of Formalist Criticism,” in his *Blindness and Insight* (2d ed., 1983). “The ‘prison house’”: an allusion to *The Prison-House of Language: A Critical Account of Structuralism and Russian Formalism* (1972), by the American Marxist critic FREDRIC JAMESON.

4. *À la recherche du temps perdu* (7 vols., 1913–27;

In Search of Lost Time), by the French novelist Marcel Proust (1871–1924). De Man uses this work as an example throughout the essay; its main character is the semi-autobiographical Marcel.

5. Of chiasmus, a rhetorical device in which the elements of the second of two parallel syntactic structures are inverted (e.g., “renowned for conquest, and in counsel skilled”).

to semantics, is the science or study of signs as signifiers; it does not ask what words mean but how they mean. Unlike American New Criticism, which derived the internalization of form from the practice of highly self-conscious modern writers, French semiology turned to linguistics for its model and adopted Saussure and Jakobson rather than Valéry⁶ or Proust for its masters. By an awareness of the arbitrariness of the sign (Saussure) and of literature as an autotelic statement “focused on the way it is expressed” (Jakobson) the entire question of meaning can be bracketed, thus freeing the critical discourse from the debilitating burden of paraphrase. The demystifying power of semiology, within the context of French historical and thematic criticism, has been considerable. It demonstrated that the perception of the literary dimensions of language is largely obscured if one submits uncritically to the authority of reference. It also revealed how tenaciously this authority continues to assert itself in a variety of disguises, ranging from the crudest ideology to the most refined forms of aesthetic and ethical judgment. It especially explodes the myth of semantic correspondence between sign and referent, the wishful hope of having it both ways, of being, to paraphrase Marx in the *German Ideology*, a formalist critic in the morning and a communal moralist in the afternoon,⁷ of serving both the technique of form and the substance of meaning. The results, in the practice of French criticism, have been as fruitful as they are irreversible. Perhaps for the first time since the late eighteenth century, French critics can come at least somewhat closer to the kind of linguistic awareness that never ceased to be operative in its poets and novelists and that forced all of them, including Sainte Beuve,⁸ to write their main works “contre Sainte Beuve.” The distance was never so considerable in England and the United States, which does not mean, however, that we may be able, in this country, to dispense altogether with some preventative semiological hygiene.

One of the most striking characteristics of literary semiology as it is practiced today, in France and elsewhere, is the use of grammatical (especially syntactical) structures conjointly with rhetorical structures, without apparent awareness of a possible discrepancy between them. In their literary analyses, Barthes, Genette, Todorov, Greimas,⁹ and their disciples all simplify and regress from Jakobson in letting grammar and rhetoric function in perfect continuity, and in passing from grammatical to rhetorical structures without difficulty or interruption. Indeed, as the study of grammatical structures is refined in contemporary theories of generative, transformational, and distributive grammar, the study of tropes and of figures (which is how the term *rhetoric* is used here, and not in the derived sense of comment or of eloquence or persuasion) becomes a mere extension of grammatical models, a particular subset of syntactical relations. In the recent *Dictionnaire encyclopédique des*

6. Paul Valéry (1871–1945), major modern French poet and essayist. FERDINAND DE SAUSSURE (1857–1913), Swiss linguist, the founder of structuralism and semiology. ROMAN JAKOBSON (1896–1982), Russian-born American linguist, literary theorist, and semiologist.

7. In his *German Ideology* (1845–46), the German economic and political theorist KARL MARX (1818–1883) notes that the goal of communist society would be to remove alienating regulations of work, so that one could “hunt in the morning, fish in the afternoon . . . [and] criticize after dinner.”

8. Charles-Augustin Sainte-Beuve (1804–1869),

the leading 19th-century French literary critic and historian. *Contre Sainte-Beuve* (*Against Saint-Beuve*) is the title of a critical response by Proust (published 1954).

9. All French critics: ROLAND BARTHES (1915–1980), major structuralist and poststructuralist; Gérard Genette (b. 1930), French literary critic and author of *Figures III* (1972; trans. 1980 as *Narrative Discourse: An Essay in Method*), mentioned later; TZVETAN TODOROV (1939–2017), Bulgarian-born structuralist; and A. J. Greimas (1917–1992), Lithuanian-born semiologist.

sciences du langage,¹ Ducrot and Todorov write that rhetoric has always been satisfied with a paradigmatic view over words (words substituting for each other), without questioning their syntagmatic relationship (the contiguity of words to each other). There ought to be another perspective, complementary to the first, in which metaphor, for example, would not be defined as a substitution but as a particular type of combination. Research inspired by linguistics or, more narrowly, by syntactical studies, has begun to reveal this possibility—but it remains to be explored. Todorov, who calls one of his books a *Grammar of the Decameron*,² rightly thinks of his own work and that of his associates as first explorations in the elaboration of a systematic grammar of literary modes, genres, and also of literary figures. Perhaps the most perceptive work to come out of this school, Genette's studies of figural modes, can be shown to be assimilations of rhetorical transformations or combinations to syntactical, grammatical patterns. Thus a recent study, now printed in *Figures III* and entitled *Metaphor and Metonymy in Proust*, shows the combined presence, in a wide and astute selection of passages, of paradigmatic, metaphorical figures with syntagmatic, metonymic structures. The combination of both is treated descriptively and nondialectically without considering the possibility of logical tensions.

One can ask whether this reduction of figure to grammar is legitimate. The existence of grammatical structures, within and beyond the unit of the sentence, in literary texts is undeniable, and their description and classification are indispensable. The question remains if and how figures of rhetoric can be included in such a taxonomy. This question is at the core of the debate going on, in a wide variety of apparently unrelated forms, in contemporary poetics. But the historical picture of contemporary criticism is too confused to make the mapping out of such a topography a useful exercise. Not only are these questions mixed in and mixed up within particular groups or local trends, but they are often co-present, without apparent contradiction, within the work of a single author.

Neither is the theory of the question suitable for quick expository treatment. To distinguish the epistemology of grammar from the epistemology of rhetoric is a redoubtable task. On an entirely naïve level, we tend to conceive of grammatical systems as tending towards universality and as simply generative, i.e., as capable of deriving an infinity of versions from a single model (that may govern transformations as well as derivations) without the intervention of another model that would upset the first. We therefore think of the relationship between grammar and logic, the passage from grammar to propositions, as being relatively unproblematic: no true propositions are conceivable in the absence of grammatical consistency or of controlled deviation from a system of consistency no matter how complex. Grammar and logic stand to each other in a dyadic relationship of unsubverted support. In a logic of acts rather than of statements, as in Austin's³ theory of speech acts, that has had such a

1. Published in 1972; translated as *Encyclopedic Dictionary of the Sciences of Language* (1979). Oswald Ducrot (b. 1930), French linguist. The distinction between *paradigmatic* and *syntagmatic* draws on Saussure.

2. *Grammaire du Décaméron* (1969). *The Decameron* (1348–53), a collection of 100 tales, is the best-known work of the Italian writer GIOVANNI BOCCACCIO.

3. J. L. AUSTIN (1911–1960), influential British philosopher of language, especially of speech acts (what we typically perform when we speak). He distinguishes between locutionary acts (saying something meaningful), illocutionary acts (saying something meaningful for some purpose), and perlocutionary acts (having an effect on those who hear what is said).

strong influence on recent American work in literary semiology, it is also possible to move between speech acts and grammar without difficulty. The performance of what is called illocutionary acts such as ordering, questioning, denying, assuming, etc., within the language is congruent with the grammatical structures of syntax in the corresponding imperative, interrogative, negative, optative sentences. "The rules for illocutionary acts," writes Richard Ohmann in a recent paper, "determine whether performance of a given act is well-executed, in just the same way as *grammatical* rules determine whether the product of a locutionary act—a sentence—is well formed. . . . But whereas the rules of grammar concern the relationships among sound, syntax, and meaning, the rules of illocutionary acts concern relationships among people."⁴ And since rhetoric is then conceived exclusively as persuasion, as actual action upon others (and not as an intralinguistic figure or trope), the continuity between the illocutionary realm of grammar and the perlocutionary realm of rhetoric is self-evident. It becomes the basis for a new rhetoric that, exactly as is the case for Todorov and Genette, would also be a new grammar.

Without engaging the substance of the question, it can be pointed out, without having to go beyond recent and American examples, and without calling upon the strength of an age-old tradition, that the continuity here assumed between grammar and rhetoric is not borne out by theoretical and philosophical speculation. Kenneth Burke⁵ mentions *deflection* (which he compares structurally to Freudian displacement), defined as "any slight bias or even unintended error," as the rhetorical basis of language, and deflection is then conceived as a dialectical subversion of the consistent link between sign and meaning that operates within grammatical patterns; hence Burke's well-known insistence on the distinction between grammar and rhetoric. Charles Sanders Peirce, who, with Nietzsche⁶ and Saussure, laid the philosophical foundation for modern semiology, stressed the distinction between grammar and rhetoric in his celebrated and so suggestively unfathomable definition of the sign. He insists, as is well known, on the necessary presence of a third element, called the interpretant, within any relationship that the sign entertains with its object. The sign is to be interpreted if we are to understand the idea it is to convey, and this is so because the sign is not the thing but a meaning derived from the thing by a process here called representation that is not simply generative, i.e., dependent on a univocal origin. The interpretation of the sign is not, for Peirce, a meaning but another sign; it is a reading, not a decoding, and this reading has, in its turn, to be interpreted into another sign, and so on *ad infinitum*. Peirce calls this process by means of which "one sign gives birth to another" pure rhetoric, as distinguished from pure grammar, which postulates the possibility of unproblematic, dyadic meaning, and pure logic, which postulates the possibility of the universal truth of meanings. Only if the sign engendered meaning in the same way that the object engenders the sign, that is, by representation, would there be no need to distinguish between grammar and rhetoric.

6. FRIEDRICH NIETZSCHE (1844–1900), German philosopher. Peirce (1839–1914), American pragmatist philosopher and linguist.

These remarks should indicate at least the existence and the difficulty of the question, a difficulty which puts its concise theoretical exposition beyond my powers. I must retreat therefore into a pragmatic discourse and try to illustrate the tension between grammar and rhetoric in a few specific textual examples. Let me begin by considering what is perhaps the most commonly known instance of an apparent symbiosis between a grammatical and a rhetorical structure, the so-called rhetorical question, in which the figure is conveyed directly by means of a syntactical device. I take the first example from the sub-literature of the mass media: asked by his wife whether he wants to have his bowling shoes laced over or laced under, Archie Bunker⁷ answers with a question: "What's the difference?" Being a reader of sublime simplicity, his wife replies by patiently explaining the difference between lacing over and lacing under, whatever this may be, but provokes only ire. "What's the difference" did not ask for difference but means instead "I don't give a damn what the difference is." The same grammatical pattern engenders two meanings that are mutually exclusive: the literal meaning asks for the concept (difference) whose existence is denied by the figurative meaning. As long as we are talking about bowling shoes, the consequences are relatively trivial; Archie Bunker, who is a great believer in the authority of origins (as long, of course, as they are the right origins) muddles along in a world where literal and figurative meanings get in each other's way, though not without discomforts. But suppose that it is a *de*-bunker rather than a "Bunker," and a *de*-bunker of the arche (or origin), an archie *De*-bunker such as Nietzsche or Jacques Derrida⁸ for instance, who asks the question "What is the Difference"—and we cannot even tell from his grammar whether he "really" wants to know "what" difference is or is just telling us that we shouldn't even try to find out. Confronted with the question of the difference between grammar and rhetoric, grammar allows us to ask the question, but the sentence by means of which we ask it may deny the very possibility of asking. For what is the use of asking, I ask, when we cannot even authoritatively decide whether a question asks or doesn't ask?

The point is as follows. A perfectly clear syntactical paradigm (the question) engenders a sentence that has at least two meanings, of which the one asserts and the other denies its own illocutionary mode. It is not so that there are simply two meanings, one literal and the other figural, and that we have to decide which one of these meanings is the right one in this particular situation. The confusion can only be cleared up by the intervention of an extra-textual intention, such as Archie Bunker putting his wife straight; but the very anger he displays is indicative of more than impatience; it reveals his despair when confronted with a structure of linguistic meaning that he cannot control and that holds the discouraging prospect of an infinity of similar future confusions, all of them potentially catastrophic in their consequences. Nor is this intervention really a part of the mini-text constituted by the figure which holds our attention only as long as it remains suspended and unresolved. I follow the usage of common speech in calling this semio-logical enigma "rhetorical." The grammatical model of the question becomes

8. Algerian-born French philosopher and progenitor of deconstruction (1930–2004; see below). "Arche" derives from the Greek *archē* (origin).

rhetorical not when we have, on the one hand, a literal meaning and on the other hand a figural meaning, but when it is impossible to decide by grammatical or other linguistic devices which of the two meanings (that can be entirely incompatible) prevails. Rhetoric radically suspends logic and opens up vertiginous possibilities of referential aberration. And although it would perhaps be somewhat more remote from common usage, I would not hesitate to equate the rhetorical, figural potentiality of language with literature itself. I could point to a great number of antecedents to this equation of literature with figure; the most recent reference would be to Monroe Beardsley's insistence in his contribution to the *Essays* to honor William Wimsatt, that literary language is characterized by being "distinctly above the norm in ratio of implicit [or, I would say rhetorical] to explicit meaning."⁹

Let me pursue the matter of the rhetorical question through one more example. Yeats's poem "Among School Children"¹ ends with the famous line: "How can we know the dancer from the dance?" Although there are some revealing inconsistencies within the commentaries, the line is usually interpreted as stating, with the increased emphasis of a rhetorical device, the potential unity between form and experience, between creator and creation. It could be said that it denies the discrepancy between the sign and the referent from which we started out. Many elements in the imagery and the dramatic development of the poem strengthen this traditional reading; without having to look any further than the immediately preceding lines, one finds powerful and consecrated images of the continuity from part to whole that makes synecdoche into the most seductive of metaphors: the organic beauty of the tree, stated in the parallel syntax of a similar rhetorical question, or the convergence, in the dance, of erotic desire with musical form:

O chestnut-tree, great-rooted blossomer,
Are you the leaf, the blossom or the bole?
O body swayed to music, O brightening glance,
How can we know the dancer from the dance?

A more extended reading, always assuming that the final line is to be read as a rhetorical question, reveals that the thematic and rhetorical grammar of the poem yields a consistent reading that extends from the first line to the last and that can account for all the details in the text. It is equally possible, however, to read the last line literally rather than figuratively, as asking with some urgency the question we asked earlier within the context of contemporary criticism: *not* that sign and referent are so exquisitely fitted to each other that all difference between them is at times blotted out but, rather, since the two essentially different elements, sign and meaning, are so intricately intertwined in the imagined "presence" that the poem addresses, how can we possibly make the distinctions that would shelter us from the error of identifying what cannot be identified? The clumsiness of the paraphrase reveals that it is not necessarily the literal reading which is simpler than the figurative one, as was the case in our first example; here, the figural reading,

which assumes the question to be rhetorical, is perhaps naïve, whereas the literal reading leads to greater complication of theme and statement. For it turns out that the entire scheme set up by the first reading can be undermined, or deconstructed, in the terms of the second, in which the final line is read literally as meaning that, since the dancer and the dance are not the same, it might be useful, perhaps even desperately necessary—for the question can be given a ring of urgency, “Please tell me, how *can* I know the dancer from the dance”—to tell them apart. But this will replace the reading of each symbolic detail by a divergent interpretation. The oneness of trunk, leaf, and blossom, for example, that would have appealed to Goethe, would find itself replaced by the much less reassuring Tree of Life from the *Mabinogion* that appears in the poem “Vacillation,” in which the fiery blossom and the earthly leaf are held together, as well as apart, by the crucified and castrated God Attis,² of whose body it can hardly be said that it is “not bruised to pleasure soul.”³ This hint should suffice to suggest that two entirely coherent but entirely incompatible readings can be made to hinge on one line, whose grammatical structure is devoid of ambiguity, but whose rhetorical mode turns the mood as well as the mode of the entire poem upside down. Neither can we say, as was already the case in the first example, that the poem simply has two meanings that exist side by side. The two readings have to engage each other in direct confrontation, for the one reading is precisely the error denounced by the other and has to be undone by it. Nor can we in any way make a valid decision as to which of the readings can be given priority over the other; none can exist in the other’s absence. There can be no dance without a dancer, no sign without a referent. On the other hand, the authority of the meaning engendered by the grammatical structure is fully obscured by the duplicity of a figure that cries out for the differentiation that it conceals.

Yeats’s poem is not explicitly “about” rhetorical questions but about images or metaphors, and about the possibility of convergence between experiences of consciousness such as memory or emotions—what the poem calls passion, piety, and affection—and entities accessible to the senses such as bodies, persons, or icons. We return to the inside/outside model from which we started out and which the poem puts into question by means of a syntactical device (the question) made to operate on a grammatical as well as on a rhetorical level. The couple grammar/rhetoric, certainly not a binary opposition since they in no way exclude each other, disrupts and confuses the neat antithesis of the inside/outside pattern. We can transfer this scheme to the act of reading and interpretation. By reading we get, as we say, *inside* a text that was first something alien to us and which we now make our own by an act of understanding. But this understanding becomes at once the representation of an extra-textual meaning; in Austin’s terms, the illocutionary speech act becomes a perlocutionary actual act—in Frege’s⁴ terms, *Bedeutung*

2. Greek god of fertility and vegetation (though not crucified, in Greek versions of his myth). Johann Wolfgang von Goethe (1749–1832), German poet, playwright, and novelist, whose works (including writings in botany) reflected an interest in the organic, developing whole. The *Mabinogion* (comp. 14th c.), a collection of medieval Welsh prose tales. “Vacillation” (1932), a poem by Yeats.

3. Earlier in the final stanza of “Among School Children,” Yeats wrote, “The body is not bruised to please the soul.”

4. Gottlob Frege (1848–1925), German philosopher of language, logic, and mathematics, who distinguishes between a word’s reference (in German, *Bedeutung*), or the object it represents, and its sense (*Sinn*), or the thought it expresses.

becomes *Sinn*. Our recurrent question is whether this transformation is semantically controlled along grammatical or along rhetorical lines. Does the metaphor of reading really unite outer meaning with inner understanding, action with reflection, into one single totality? The assertion is powerfully and suggestively made in a passage from Proust that describes the experience of reading as such a union. It describes the young Marcel, near the beginning of Combray,⁵ hiding in the closed space of his room in order to read. The example differs from the earlier ones in that we are not dealing with a grammatical structure that also functions rhetorically but have instead the representation, the dramatization, in terms of the experience of a subject, of a rhetorical structure—just as, in many other passages, Proust dramatizes tropes by means of landscapes or descriptions of objects. The figure here dramatized is that of metaphor, an inside/outside correspondence as represented by the act of reading. The reading scene is the culmination of a series of actions taking place in enclosed spaces and leading up to the “dark coolness” of Marcel’s room.

I had stretched out on my bed, with a book, in my room which sheltered, tremblingly, its transparent and fragile coolness from the afternoon sun, behind the almost closed blinds through which a glimmer of daylight had nevertheless managed to push its yellow wings, remaining motionless between the wood and the glass, in a corner, poised like a butterfly. It was hardly light enough to read, and the sensation of the light’s splendor was given me only by the noise of Camus⁶ . . . hammering dusty crates; resounding in the sonorous atmosphere that is peculiar to hot weather, they seemed to spark off scarlet stars; and also by the flies executing their little concert, the chamber music of summer: evocative not in the manner of a human tune that, heard perchance during the summer, afterwards reminds you of it but connected to summer by a more necessary link: born from beautiful days, resurrecting only when they return, containing some of their essence, it does not only awaken their image in our memory; it guarantees their return, their actual, persistent, unmediated presence.

The dark coolness of my room related to the full sunlight of the street as the shadow relates to the ray of light, that is to say it was just as luminous and it gave my imagination the total spectacle of the summer, whereas my senses, if I had been on a walk, could only have enjoyed it by fragments; it matched my repose which (thanks to the adventures told by my book and stirring my tranquility) supported, like the quiet of a motionless hand in the middle of a running brook the shock and the motion of a torrent of activity.⁷

For our present purpose, the most striking aspect of this passage is the juxtaposition of figural and metafigural language. It contains seductive metaphors that bring into play a variety of irresistible objects: chamber music, butterflies, stars, books, running brooks, etc., and it inscribes these objects within dazzling fire- and waterworks of figuration. But the passage also com-

ments normatively on the best way to achieve such effects; in this sense, it is metafigural: it writes figuratively about figures. It contrasts two ways of evoking the natural experience of summer and unambiguously states its preference for one of these ways over the other: the "necessary link" that unites the buzzing of the flies to the summer makes it a much more effective symbol than the tune heard "perchance" during the summer. The preference is expressed by means of a distinction that corresponds to the difference between metaphor and metonymy, necessity and chance being a legitimate way to distinguish between analogy and contiguity. The inference of identity and totality that is constitutive of metaphor is lacking in the purely relational metonymic contact: an element of truth is involved in taking Achilles for a lion but none in taking Mr. Ford⁸ for a motor car. The passage is *about* the aesthetic superiority of metaphor over metonymy, but this aesthetic claim is made by means of categories that are the ontological ground of the metaphysical system that allows for the aesthetic to come into being as a category. The metaphor for summer (in this case, the synesthesia⁹ set off by the "chamber music" of the flies) guarantees a presence which, far from being contingent, is said to be essential, permanently recurrent and unmediated by linguistic representations or figurations. Finally, in the second part of the passage, the metaphor of presence not only appears as the ground of cognition but as the performance of an action, thus promising the reconciliation of the most disruptive of contradictions. By then, the investment in the power of metaphor is such that it may seem sacrilegious to put it in question.

Yet, it takes little perspicacity to show that the text does not practice what it preaches. A rhetorical reading of the passage reveals that the figural praxis and the metafigural theory do not converge and that the assertion of the mastery of metaphor over metonymy owes its persuasive power to the use of metonymic structures. I have carried out such an analysis in a somewhat more extended context;¹ at this point, we are more concerned with the results than with the procedure. For the metaphysical categories of presence, essence, action, truth, and beauty do not remain unaffected by such a reading. This would become clear from an inclusive reading of Proust's novel or would become even more explicit in a language-conscious philosopher such as Nietzsche who, as a philosopher, has to be concerned with the epistemological consequences of the kind of rhetorical seductions exemplified by the Proust passage. It can be shown that the systematic critique of the main categories of metaphysics undertaken by Nietzsche in his late work, the critique of the concepts of causality, of the subject, of identity, of referential and revealed truth, etc., occurs along the same pattern of deconstruction that was operative in Proust's text; and it can also be shown that this pattern exactly corresponds to Nietzsche's description, in texts that precede *The Will to Power*² by more than fifteen years, of the structure of the

main rhetorical tropes. The key to this critique of metaphysics, which is itself a recurrent gesture throughout the history of thought, is the rhetorical model of the trope or, if one prefers to call it that, literature. It turns out that in these innocent-looking didactic exercises we are in fact playing for very sizeable stakes.

It is therefore all the more necessary to know what is linguistically involved in a rhetorically conscious reading of the type here undertaken on a brief fragment from a novel and extended by Nietzsche to the entire text of post-Hellenic thought. Our first examples dealing with the rhetorical questions were rhetorizations of grammar, figures generated by syntactical paradigms, whereas the Proust example could be better described as a grammatization of rhetoric. By passing from a paradigmatic structure based on substitution, such as metaphor, to a syntagmatic structure based on contingent association such as metonymy, the mechanical, repetitive aspect of grammatical forms is shown to be operative in a passage that seemed at first sight to celebrate the self-willed and autonomous inventiveness of a subject. Figures are assumed to be inventions, the products of a highly particularized individual talent, whereas no one can claim credit for the programmed pattern of grammar. Yet, our reading of the Proust passage shows that precisely when the highest claims are being made for the unifying power of metaphor, these very images rely in fact on the deceptive use of semi-automatic grammatical patterns. The deconstruction of metaphor and of all rhetorical patterns such as mimesis, paronomasia,³ or personification that use resemblance as a way to disguise differences, takes us back to the impersonal precision of grammar and of a semiology derived from grammatical patterns. Such a reading puts into question a whole series of concepts that underlie the value judgments of our critical discourse: the metaphors of primacy, of genetic history, and, most notably, of the autonomous power to will of the self.

There seems to be a difference, then, between what I called the rhetorization of grammar (as in the rhetorical question) and the grammatization of rhetoric, as in the readings of the type sketched out in the passage from Proust. The former end up in indetermination, in a suspended uncertainty that was unable to choose between two modes of reading, whereas the latter seems to reach a truth, albeit by the negative road of exposing an error, a false pretense. After the rhetorical reading of the Proust passage, we can no longer believe the assertion made in this passage about the intrinsic, metaphysical superiority of metaphor over metonymy. We seem to end up in a mood of negative assurance that is highly productive of critical discourse. The further text of Proust's novel, for example, responds perfectly to an extended application of this pattern: not only can similar gestures be repeated throughout the novel, at all the crucial articulations or all passages where large aesthetic and metaphysical claims are being made—the scenes of involuntary memory, the workshop of Elstir, the septette of Vinteuil,⁴ the convergence of author and narrator at the end of the novel—but a vast thematic and semiotic network is revealed that structures the entire narrative and that remained invisible to a reader caught in naïve metaphorical mysti-

3. Wordplay, especially a pun.

4. Vinteuil, a composer, and Elstir, a painter, are

characters in Proust's *Recherche*. "Septette": a septet, a musical composition for 7 performers.

fication. The whole of literature would respond in similar fashion, although the techniques and the patterns would have to vary considerably, of course, from author to author. But there is absolutely no reason why analyses of the kind here suggested for Proust would not be applicable, with proper modifications of technique, to Milton or to Dante or to Hölderlin.⁵ This will in fact be the task of literary criticism in the coming years.

It would seem that we are saying that criticism is the deconstruction of literature, the reduction to the rigors of grammar of rhetorical mystifications. And if we hold up Nietzsche as the philosopher of such a critical deconstruction, then the literary critic would become the philosopher's ally in his struggle with the poets. Criticism and literature would separate around the epistemological axis that distinguishes grammar from rhetoric. It is easy enough to see that this apparent glorification of the critic-philosopher in the name of truth is in fact a glorification of the poet as the primary source of this truth; if truth is the recognition of the systematic character of a certain kind of error, then it would be fully dependent on the prior existence of this error. Philosophers of science like Bachelard or Wittgenstein⁶ are notoriously dependent on the aberrations of the poets. We are back at our unanswered question: does the grammatization of rhetoric end up in negative certainty or does it, like the rhetorization of grammar, remain suspended in the ignorance of its own truth or falsehood?

Two concluding remarks should suffice to answer the question. First of all, it is not true that Proust's text can simply be reduced to the mystified assertion (the superiority of metaphor over metonymy) that our reading deconstructs. The reading is not "our" reading, since it uses only the linguistic elements provided by the text itself; the distinction between author and reader is one of the false distinctions that the reading makes evident. The deconstruction is not something we have added to the text but it constituted the text in the first place. A literary text simultaneously asserts and denies the authority of its own rhetorical mode, and by reading the text as we did we were only trying to come closer to being as rigorous a reader as the author had to be in order to write the sentence in the first place. Poetic writing is the most advanced and refined mode of deconstruction; it may differ from critical or discursive writing in the economy of its articulation, but not in kind.

But if we recognize the existence of such a moment as constitutive of all literary language, we have surreptitiously reintroduced the categories that this deconstruction was supposed to eliminate and that have merely been displaced. We have, for example, displaced the question of the self from the referent into the figure of the narrator, who then becomes the *signifié*⁷ of the passage. It becomes again possible to ask such naïve questions as what Proust's, or Marcel's, motives may have been in thus manipulating language: was he fooling himself, or was he represented as fooling himself and fooling us into believing that fiction and action are as easy to unite, by reading, as the passage asserts? The pathos of the entire section, which would have been more noticeable if the quotation had been a little more extended, the

5. Friedrich Hölderlin (1770–1843), German Romantic poet. John Milton (1608–1674), English poet whose works include *Paradise Lost* (1667). DANTE ALIGHIERI (1265–1321), Italian poet, best known for the *Divine Comedy* (1321).

6. Ludwig Wittgenstein (1889–1951), Austrian-

born philosopher. Gaston Bachelard (1884–1962), French philosopher.

7. Signified (French); a term used by Saussure, who divided the sign into the *signifié* (the meaning conveyed) and *signifier* (the symbol or word that conveys that meaning).

constant vacillation of the narrator between guilt and well-being, invites such questions. They are absurd questions, of course, since the reconciliation of fact and fiction occurs itself as a mere assertion made in a text, and is thus productive of more text at the moment when it asserts its decision to escape from textual confinement. But even if we free ourselves of all false questions of intent and rightfully reduce the narrator to the status of a mere grammatical pronoun, without which the narrative could not come into being, this subject remains endowed with a function that is not grammatical but rhetorical, in that it gives voice, so to speak, to a grammatical syntagm. The term *voice*, even when used in a grammatical terminology as when we speak of the passive or interrogative voice, is, of course, a metaphor inferring by analogy the intent of the subject from the structure of the predicate. In the case of the deconstructive discourse that we call literary, or rhetorical, or poetic, this creates a distinctive complication illustrated by the Proust passage. The reading revealed a first paradox: the passage valorizes metaphor as being the "right" literary figure, but then proceeds to constitute itself by means of the epistemologically incompatible figure of metonymy. The critical discourse reveals the presence of this delusion and affirms it as the irreversible mode of its truth. It cannot pause there however. For if we then ask the obvious and simple next question, whether the rhetorical mode of the text in question is that of metaphor or metonymy, it is impossible to give an answer. Individual metaphors, such as the chiaroscuro effect or the butterfly, are shown to be subordinate figures in a general clause whose syntax is metonymic; from this point of view, it seems that the rhetoric is superseded by a grammar that deconstructs it. But this metonymic clause has as its subject a voice whose relationship to this clause is again metaphorical. The narrator who tells us about the impossibility of metaphor is himself, or itself, a metaphor, the metaphor of a grammatical syntagm whose meaning is the denial of metaphor stated, by antiphrasis,⁸ as its priority. And this subject-metaphor is, in its turn, open to the kind of deconstruction to the second degree, the rhetorical deconstruction of psycholinguistics, in which the more advanced investigations of literature are presently engaged, against considerable resistance.

We end up therefore, in the case of the rhetorical grammaticalization of semiology, just as in the grammatical rhetorization of illocutionary phrases, in the same state of suspended ignorance. Any question about the rhetorical mode of a literary text is always a rhetorical question which does not even know whether it is really questioning. The resulting pathos is an anxiety (or bliss, depending on one's momentary mood or individual temperament) of ignorance, not an anxiety of reference—as becomes thematically clear in Proust's novel when reading is dramatized, in the relationship between Marcel and Albertine,⁹ not as an emotive reaction to what language does, but as an emotive reaction to the impossibility of knowing what it might be up to. Literature as well as criticism—the difference between them being delusive—is condemned (or privileged) to be forever the most rigorous and, consequently, the most unreliable language in terms of which man names and transforms himself.

8. Rhetorical device of using words in a sense opposite to their generally accepted meaning.

9. Marcel's love interest in the novel.

C. D. NARASIMHAIAH 1921–2005

Along with K. R. Srinivasa Iyengar, Closepet Dasappa Narasimhaiah helped create the field of Indian literatures in English in the twentieth century and pioneered its criticism. Largely rejecting Western approaches to Indian literatures written in English, he argued for the establishment of an Indian critical tradition relying on the centuries-old Sanskritist theories that locate the significance of a text in *rasa* (emotion and soul) and *dhvani* (meaning and suggestion). Narasimhaiah simultaneously promoted the ancient *rasa-dhvani* tradition of poetics and called for its modernization.

C. D. Narasimhaiah was born in Closepet, in the southern Indian state of Mysore (as was traditional, his first name indicated his birthplace), and lived virtually all of his life in Mysore. He studied at the University of Mysore and then at Cambridge University (1947–49); there he earned a degree in English and was strongly influenced by the major British literary critic F. R. LEAVIS, who taught at Downing College. In his book on Leavis, *Better Literary History and Better Literary Criticism* (1963), Narasimhaiah writes, “I hadn’t heard of Dr. Leavis until 1947 when by a lucky chance I went on a scholarship to Cambridge to read for the English tripos [honors examination]. I went to Christ’s [College]. But my other home was to be Downing.” Narasimhaiah was drawn into the community of intellectuals associated with *Scrutiny*, a leading journal of literary criticism founded by Leavis. When Narasimhaiah returned to India, he taught at Maharajah’s College in Mysore from 1950 to 1979. Later, he traveled widely and taught at Yale and the Universities of Wisconsin, Texas, and Hawaii in the United States; at the University of Leeds in the United Kingdom; and at Flinders University in Australia. His contribution to the study of Indian literatures in English and of British Commonwealth literatures lies not just in his works of literary criticism but also in the library and study center he founded, Dhvanyaloka—named after the celebrated Sanskrit treatise, which Narasimhaiah revered, and modeled on the famous Rockefeller Study Center at Bellagio, Italy. Its unique collection of Indian and Commonwealth literary materials is a magnet for scholars.

British merchants began trading in India early in the seventeenth century, and after the British Empire took control of the subcontinent in the eighteenth century the knowledge and use of English spread. When Thomas Babington Macaulay, in his “Minute on Indian Education” (1835) addressed to Parliament, argued that the “natives” should be instructed in English, he pointed out that many were already “quite competent to discuss political or scientific questions with fluency and precision in the English language.” Raja Rammohun Roy (1772–1833), among others, was writing literary works in English; and in the 1870s two precocious sisters, both writers—Aru and Toru Dutt—attended the “Higher Lectures for women” at Cambridge. Rabindranath Tagore, the first Indian writer to achieve worldwide fame, won the 1913 Nobel Prize in Literature largely on the strength of English translations of his Bengali verses. Three great writers of Indian literature in English—R. K. Narayan, Raja Rao, and Mulk Raj Anand—began publishing fiction in the 1930s, and literature in English continued to flourish in India after it gained independence from the United Kingdom in 1947.

With the rise of English-language Indian literature came distinctive problems for critics. In his landmark work *Indian Writing in English* (1962; 3d ed., 1983), which surveys the literature from its beginnings, Srinivasa Iyengar asked pointedly:

What critical criteria shall we apply? Should we judge it as English literature because it comes with an English skin . . . or shall we judge it as Indian literature because it is after all the creation of Indians? There is a continuous Western

critical tradition from Aristotle to T. S. Eliot, and more particularly an English tradition from Sidney and Ben Jonson and Dryden to the mentors of our own day, Eliot, Richards and Leavis. Likewise there is an Indian critical tradition with the emphasis on *rasa* and *dhwani*, the *bhavas* and the *alankaras*, and in the line of law givers like Bharata, Bhatta Nayaka, Mamta, Anandavardhana and Abhinava Gupta have come modern thinkers like Tagore and Sri Aurobindo.

The Indian critical tradition goes back to Sanskrit texts written from before the Common Era through medieval times, especially during the ninth to the thirteenth centuries; works by such writers as Bharata (3d c. B.C.E.?), Anandavardhana (820–890 C.E), and Abhinavagupta (950–1020) were retrieved by Narasimhaiah as he developed an Indian poetics and literary criticism from indigenous sources.

In a groundbreaking collection of essays, *The Swan and the Eagle* (1969), Narasimhaiah addresses the issues involved in creating a genuine Indian literature and criticism written in English. He observes: “Now what holds writers so divergent as those whose work is examined here, together? First and foremost, their writing is the expression of a distinct, identifiable sensibility which is Indian, and the language, foreign in the sense that it is not picked up on the mother’s lap but learnt assiduously by a most sensitive exposure to its practitioners in a wide-ranging variety of speech and writing in India and abroad.” Narasimhaiah goes on to dismiss as futile and fatuous such questions as whether Indians can write in English or whether English has a future as a medium of creative activity in India. He seeks to prevent the early Indian writers—Sarojini Naidu, Toru Dutt, and Aurobindo Ghose, among others—from being labeled “exiles in their own country,” and he is preoccupied with establishing writing in English that is both of high quality and innately Indian. He regards Western critical practice as an imposition and continuation of the yoke of imperialism.

Similar battles were being fought at the time over African postcolonial literatures in English. The Nigerian author CHINUA ACHEBE defended the English language against those questioning whether African writers could and should write in it: “If it failed to give them a song, it at least gave them a tongue for sighing.” In 1976, in an essay provocatively titled “The Future of Indian Literature in English Is Pretty Dim,” the Indian poet and critic Dom Moraes argued that standards in writing had fallen dramatically and blamed the lack of a “proper critic” (a phrase borrowed from Leavis). Narasimhaiah agreed that more and better criticism was needed: “I would like to think that responsible criticism might have made a tremendous difference to our literatures, and if it has not done so it may be that we have merely degenerated into cataloguing and classifying and wrangling over grammatical subtleties, allowing the song to slip through our fingers.”

But what criteria would these better critics employ? An emphasis on “universal” or Western standards or on the general belletristic quality that English language novels and poetry were held to embody was fostering an imitative tradition, in which modern Indian poets attempted to write like T. S. ELIOT and novelists emulated James Joyce. Narasimhaiah entered the debate and declared that Indian writing should be measured by the yardsticks supplied by Sanskritist criticism, particularly *rasa* and *dhwani*. He advocated studying the *Indianness* of Indian literature.

In our selection, “Towards the Formulation of a Common Poetic for Indian Literatures Today,” published as an appendix to a volume of conference proceedings, *A Common Poetic for Indian Literatures* (1984), Narasimhaiah lays out an account of critical principles that are both steeped in Sanskrit tradition and open to Western poetics. Although he presents this text as a consensus document arrived at by a small working group, its recommendations were clearly his own. The traditional purpose of Indian Literatures is enlightenment and detachment, rather than accurate representation or self-expression as in the West. The function of criticism is evaluation as well

as education. Ideally, the Indian critic is educated and informed, aware of ancient and current Indian and Western traditions. The ideal reader is open and sympathetic, and more knowledgeable and experienced than less adept readers and enthusiasts. The *rasas*—that is, eight primary emotions and experiences that flow through aesthetic transactions (between author, text, and audience)—resonate simultaneously as felt meaning, implication, and suggestion (*dhvani*). The ancient Sanskrit word *dhvani* includes in its broad range of connotations metaphysical as well as linguistic and physiological dimensions of sound. We are born into sound; it works in and through us continuously in the form of energy and is also a bodily foundation of existence. Like the classic Western theory of literature as mimetic-didactic, over more than a millennium the *rasa-dhvani* poetics of India has received much commentary and become highly nuanced. But, argues Narasimhaiah, it needs further revision and explication to incorporate modern discoveries such as the operations of the unconscious, the dynamics of symbolization, and the techniques of poetic suggestion (e.g., showing, not telling; deliberately omitting material; using ambiguous language). Narasimhaiah sees India's *rasa-dhvani* theory factoring both the future and the past into its poetics.

This notion of Indianness and the Sanskritic tradition has been rejected by others—perhaps most notably by Salman Rushdie, arguably the leading figure in the explosion of Indian English-language literature (largely by diaspora writers) that began in the 1980s and has continued to be published in the United States and Britain. In the introduction to *Imaginary Homelands* (1991), Rushdie recalls attending a conference on Indian literatures in English in London as a young writer at which “one distinguished novelist began his contribution by reciting a Sanskrit *sloka*.” Rushdie objects: “None of us had been raised in a Sanskritic tradition. We were all reasonably ‘educated,’ however; so what were we being told? Perhaps that we weren’t really ‘Indian?’” Although Rushdie is probably referring here not to Narasimhaiah but to Raja Rao (who often began his speeches with Sanskrit couplets), the two held similar positions. The greatest resistance to Narasimhaiah’s emphasis on Indianness has come from younger Indian writers raised or born overseas who want to be measured either by postcolonial criteria or by “universal” criteria of criticism.

Postcolonial theory, which often engages with writings in English by Indians, likewise frequently ignores or challenges the importance of this literature’s quintessential Indianness. Postcolonial critics such as GAYATRI CHAKRAVORTY SPIVAK and HOMI K. BHABHA have rejected the turn toward indigenous critical practices as nostalgia for lost origins, and they typically draw instead on the work of European theorists such as JACQUES DERRIDA and JACQUES LACAN. Not surprisingly, many in India criticize the use of European theories to gauge the success or failure of Indian literature as demonstrating a further colonization of the culture.

Younger Indian literary and social critics, particularly those who are non-Brahmin, often reject both “postcolonial” criticism and the earlier generation of critics such as Narasimhaiah for displaying excessive Western influence. While they praise Narasimhaiah for the recovery and resurgence of traditional Indian language theories, particularly Sanskrit ones, they criticize him for being “Brahmanical and feudal.” One representative blog posting declares that the “exclusive use of Sanskrit higher learning was in many ways instrumental in consolidating the hegemony of the Brahmins over Hindu society.”

The question of Indianness—its nature and degree—has not disappeared. It remains a defining issue in the criticism and reception of literature in English by still younger diasporic Indian writers such as Jhumpa Lahiri as well as in the reception of Bollywood films and other new Indian cultural productions targeted to an international market. Even as the world has become increasingly globalized, Indian critics and writers have turned to expressing themselves in uniquely Indian ways and demanding to be judged by Indian standards. Thus, Narasimhaiah’s emphasis on Indian intellectual traditions and the Sanskritist tradition continues to be relevant.

Towards the Formulation of a Common Poetic for Indian Literatures Today

The need for a common Poetic for Indian Literatures today is part of a larger realization since Independence,¹ of the need to forge forward. On the one hand, thanks to a long period of colonial rule we tended to look up to Western models—first English, then European—for our writing and look at Western literature exclusively through Western eyes, both of which led to a complacency which made us dependent on Western critical criteria and even values in dealing with our own literatures² and inhibited exploration of viable Indian alternatives. On the other hand, it was argued, perhaps rightly, that despite spells of resurgence since the turn of the first Millennium A.C. life in India had decayed, creativity dried up and decadence had set in making our art and literature repetitive. Both colonial rule and centuries of decadence had resulted in our loss of touch with the vital past of India. Understandably, we began to convince ourselves that traditional Indian poetic was inadequate in responding to literatures of the present day while, strangely, this fear did not seem to extend to Aristotelian Poetics.³

Interestingly, this period began to witness scattered but serious attempts by notable Western intellectuals themselves (for instance Spengler⁴ in his *Decline of the West*) to reassess the West thanks to a growing disenchantment with its world-view. Pointing to the staying power of Indian civilization Camus⁵ had occasion to remark that 'a civilization can endure in so far as its unity and greatness . . . stem from a spiritual principle'. Which reminded an Indian of the admonition of Ananda Coomaraswamy⁶ in his celebrated essay 'What Has India Contributed to Human Welfare?' 'Her great humiliation', said Coomaraswamy, 'would be to substitute a cosmopolitan veneer, for then indeed, she must come before the world empty-handed' and in answer to his own question 'What then can India give?' he said 'simply, her Indianness'. Aurobindo's *Future Poetry*,⁷ a rare volume of criticism, lost in the limbo of the great unread, contained valuable pointers to a new poetic.

It is against this background that a Seminar was held in January 1984 at Dhvanyaloka,⁸ Mysore to consider the possibility of reaching a consensus

1. Independence from the British Empire, which had ruled India from the 18th century until 1947.

2. That is, in the several dozen languages written and spoken in India (its constitution recognizes 15 regional languages).

3. For the *Poetics* of the Greek philosopher ARISTOTLE (384–322 B.C.E.), see above.

4. Oswald Spengler (1880–1936), German historian and philosopher; in *The Decline of the West* (1918–22), he argued that civilizations have life cycles and the West was in decline.

5. Albert Camus (1913–1960), Algerian-born French writer; the quotation is from his lecture

"The New Mediterranean Culture" (1937).

6. Ceylonese art historian (1877–1947), first curator of Indian art at Boston's Museum of Fine Art; the essay quoted was published in 1915.

7. A volume on the theory of poetry (1953) by Sri Aurobindo (1872–1950), Indian nationalist and mystic.

8. The center for literary studies established in 1979 by Narasimhaiah, named after the treatise by the philosopher Anandavardhana (820–890 C.E.) that set forth the principle of *rasa* (soul or essence) and *dhvani* (meaning and suggestion).

on the 'Formulation of a Common Poetic for Indian Literatures Today'. At the end of the three-day discussions which involved participants representing different regions and languages a small working party was set up with a view to preparing a draft on the subject to serve as a basis for wider debate in the country. It was suggested that in constructing a critical framework attention should be paid to critical problems, critical positions or approaches, critical criteria and tools as constituting a minimal equipment for those wanting to engage themselves in the business of criticism.

When the working party met in June 1984, although one of the members had reservations on how such a poetic could be constructed or how rewarding the new poetic could be in practice, it was decided by consensus that in constructing a new poetic it was advisable to make use of an existing framework of poetic which will suit the genius of India and (i) preserve our link with Tradition and foster a sense of continuity; (ii) assimilate the best elements in Western criticism; and (iii) be capable of facilitating a completeness of response to current works of literature.

The group started its deliberations by asking some of the seminal questions and formulating tentative answers:

Who is a Poet?

Traditionally, a poet is a seer (the Latin *Vates*)—*not* enough for him to look at life but look *into* it and write. His equipment is threefold: *Pratibha* (imagination), *Vyutpatti* (acquired knowledge) and *Abhyasa* (practice).⁹

How does the poet create?

The Western view is Mimesis or Imitation of life, while the Indian is summed up in Bharata's term *Bhāvānukīrtana* (as opposed to *anukarana*).¹ The traditional Indian view that Literature is imaginative experience rendered in words, whether it be verse, prose or drama, can be recognised in the inclusive term *kāvya*.² And *Rasa* (sap, juice, taste, flavour, experience which is supreme, disinterested, impersonal), the animating principle underlying all art and literature, is its soul (not 'plot' as to Aristotle). Interestingly Susan Langer, probably echoing a verse in Mahabharata,³ has affirmed that all the worldly pleasures and those promised in Heaven do not equal one tithe of what *Rasa* can offer.

While *Rasa* may be of different kinds Bharata recognized eight⁴ (corroborated by the list of primary emotions offered by the American psychologist McDougall⁵) and subsequently *sānta* was added as the ninth *rasa*. According to Bharata, *rasa* is evoked by a conjunction or fusion of *bhāva*, state of mind, *vibhāva*, its objective equivalent, *anubhāva*, concretization and *Vyabhicāribhāva* or *sancāribhāva*, fleeting states. (See Bharata's *Nāṭyaśāstra* and

9. Terms in Sanskrit, the language of ancient India and of Hindu scriptures; it was used in literary texts until the 11th century C.E. (All subsequent translations in this essay are from Sanskrit.)

1. That is, the equivalent of mimesis; *bhāvānukīrtana* corresponds to Aristotle's idea of catharsis. Bharata Muni (3d c. B.C.E.?), Indian sage to whom is attributed the treatise *Nāṭyaśāstra* (*The Science of Dance*), which describes the eight *rasas* (emotions).

2. Poetry, poetics.

3. Classic Sanskrit epic and major text of Hinduism, probably begun ca. 8th century B.C.E. and

codified ca. 4th century C.E. Susanne Langer (1895–1985), American philosopher and aesthetician.

4. Roughly translated as erotic, comic, pathetic, furious, heroic, horrific, odious, and wondrous: the emotional states connected with moods and gestures that link the author, text, and audience. The ninth (*sānta*) is associated with peace or serenity.

5. William McDougall (1871–1938), British-born American social psychologist; a chapter in his *Introduction to Social Psychology* (1908) discusses principal instincts and primary emotions.

subsequent expositions by Kuntaka, Anandavardhana, Abhinavagupta and Kshemendra⁶).

While each critic that came after Bharata made his own approach, Indian critics never forgot the end in view, namely the evocation of *Rasa*.

What is the purpose of Literature?

Delight and Instruction have been said to be the ends of literature in the West.⁷ In the Indian tradition, Literature has an immediate and an ultimate use: immediately, there is in the presence of a work of art a *prayōjana*, usefulness, such as sensitizing the mind, likened to cleansing of the dust-covered mirror and awakening, or unfolding, of the lotus of man's inner being; the ultimate use, *purushārtha* is in the nature of value which consists in cultivating an attitude so aptly described by Matthew Arnold⁸ as the Indian virtue of detachment.

What is the Function of Criticism?

Obviously, the function of criticism is to help the reader to realize these two ends of literature by means of elucidation and evaluation of the work in front of him.

What should be the Indian critic's equipment and training?

Primarily, he should be a Sahrdaya, responsive reader, actively collaborating with the writer and seeking corroboration from his fellows in what T. S. Eliot⁹ called "the common pursuit of true judgement." The critic of literature must have a keen sense of the Indian past—its essential continuity, despite its diversity in race, religion, language, philosophical outlook and its spirit of questioning. Since our concern is with Indian criticism it calls for a fair grounding in Indian Poetics as presented in the major critical texts, a familiarity with literary masterpieces in Sanskrit and Prakrit¹ as well as one's own language; an awareness of significant movements in contemporary Indian literatures; and an exposure to important Western critical approaches ranging from the Classical and Neo-classical to the Romantic and 20th century critical modes like New Criticism, Marxist, Anthropological, Psychological, Linguistic-Styletic.

What does a critic look for in a work of art?

He should recognize: *rasagati*, the dynamic flow or enactment of *rasa*; how the world of dry fact is suffused with *rasa* as embodied in language; *Vyangya-camatkriti*, which roughly means *dhvani*, insight into unstated meaning and all it entails; *aucitya*, congruity or propriety; and generally an awareness of the quintessential experience of life—"the horror, the boredom and the glory of existence"²—and its concretization reminding one of Gerard Manley Hopkins's *inscape* and *instress*.³

6. Indian literary critics, philosophers, and sages: Kuntaka (950–1000 C.E.), whose *Vakroktijivita* presents a theory of figurative expression; Anandavardhana, author of the *Dhvanyaloka*; Abhinava Gupta (950–1020), whose *Locana* is a commentary on it; and Kshemendra (active ca. 1150), whose treatise on poetry is titled *Kavikanthabhāna*.

7. See HORACE's declaration that "Poets aim either to do good or to give pleasure" (*Ars Poetica*, ca. 10 B.C.E.; see above).

8. English critic and poet (1822–1888); he discusses detachment (critical "disinterestedness") in "The Function of Criticism at the Present

Time" (1864; see above).

9. American-born English poet and critic (1888–1965; see above); the quotation is from "The Function of Criticism" (1923).

1. Vernacular languages.

2. An echo of Eliot's claim that the poet should see "the boredom, the horror, and the glory" of the world (*The Use of Poetry and the Use of Criticism*, 1933).

3. The force manifest in nature, art, and self—like "inscape" (divine design), a term invented by Hopkins (1844–1889), English poet and Jesuit priest.

Critical Problems

Certain critical problems will arise when the Indian critic trained in Western criticism proceeds to apply these concepts in the judgement of his literatures. For instance, Western critics have often pointed out that Indian life and literature lack in the vision of Evil. The Indian world-view has not been preoccupied with Good and Evil, but rather with *Vidya* and *avidya*,⁴ the door being ever open to the individual to pass from ignorance to knowledge, whereas the Christian view of Sin, Redemption, Grace points in a different direction. Hence, predictably, the absence of Tragedy in the Western sense of the term. It should however be possible for the Indian critic to redefine Tragedy in terms of *avidya-Kama-Karma*,⁵ the egocentric predicament, the transcending⁶ of which has been regarded as the supreme end of life. Art and literature are believed to aid in this process—art has been said to be the layman's *yoga*.⁷

Another problem before the Indian critic is the Western concern with the personality of the author *vis-à-vis* his art. The expression of personal emotion in art, except as transmuted into artistic terms, when it becomes impersonal, has not been of any interest to the Indian critic, because, traditionally, in India the individual artist has looked upon himself as *nimittamatra* or instrument, and many have preferred to remain anonymous, be it literature, architecture or sculpture.

This position is the opposite of Romantic poets who regarded poetry as expression of personal emotion. Consider in this connection T. S. Eliot's 'Tradition and the Individual Talent'⁸ in which it is a writer's tradition which expresses itself in art and the individual talent is but a catalyst. In India however, the work of art was held to be the expression of an unseen power, be it God, the Muse of Poetry or the grace of an exalted preceptor. This holds good even in cases where a poet chooses to assert his poetic identity, as the work never became a vehicle for his personal concerns—his vocation called for a surrender to the work in front of him. In contemporary literature, however, not all writers seem to conform to this view of art.

The focus of Indian aesthetic discussion is on the affective process, the way a work of art affects the reader. The reader enters into a dialogue, *hrdayasamvāda*, with the work of art before him and as the engagement with the work advances by stages variously described as *ahlāda*, *rasōllāsa*,⁹ *cittavistara*, it matures into an absorption, *tallinatha* in it: for the duration of this condition, the reader has achieved his detachment or release from his egocentric predicament. The greater the work of art, the stronger its power to return the reader to itself and promote endless chewing of the work in all its aspects, *akhandacarvana*. This approximates to 'close reading' in analysis which calls for what F. R. Leavis¹ describes as 'minute attention to particularities'.

4. Ignorance. *Vidya*: knowledge.

5. Ignorance—desire—action (akin to hubris); terms taken from the *Upanishads*, ancient Hindu scriptures.

6. Shakespeare's *King Lear* [1605] seems to fit into this view admirably as his other tragedies do not [Narasimhaiah's note].

7. Discipline or practice. The philosopher Patanjali (ca. 2d c. B.C.E.) compiled the *yoga sutras*, texts

that taught exercises to promote mental and physical discipline.

8. For this essay (1919), see above.

9. One of the "perfections" of literature that translates into *bhavas*, or feelings. The other two terms refer to the thrill that a reader experiences upon reading.

1. English literary critic (1895–1978; see above), a major influence on Narsimhaiah.

Indian theory was able to organize in hierarchical order the various levels of aesthetic response ranging from that of the *Ācārya*, the most-practised reader and the *pandita*, the scholar to the *bhakta*, the devotee or the mere enthusiast, the *sādhārana jana*, the average reader and *alpabuddhi jana* the unintelligent reader.

The *Rasa-Dhvani* theory of Abhinavagupta formed on the basis of Bharata's concept of *rasa* and Anandavardhana's concept of *dhvani* (which for Coomaraswamy means not sound, but sounding, indicating a lasting resonance in the heart of the reader) established itself as the most comprehensive literary theory in Sanskrit, assimilating all the earlier schools such as *Alankāra*, *Riti*, *Guna*, and *Vakrōkti*.² Its dominance as a poetic was further reinforced by the works of Mammata, Jagannatha and Viswanatha.³ Some of its principles have since found independent corroboration in other critical traditions, notably the American (i.e. Poe, Emerson, Whitman, the New Criticism⁴), the French (i.e. Baudelaire, Mallarmé, Valéry⁵) and the British (i.e. Eliot, Empson⁶). *Dhvani* or suggestion has in substance been upheld by 20th century literary theory and also by the general shift from statement to suggestion in European writing at the beginning of the century. By defining emotion in art as suggested or implied meaning and 'literariness' as suggestiveness, it has acquired great explanatory power capable of accounting for a wide range and variety of literary phenomena.

The *Rasa-Dhvani* theory needs, however, to be enlarged to incorporate the insights of subsequent aesthetic theories: (1) The symbol as a fountain of expanding meaning and as generative force in creative activity thus becomes an important principle to be added to the *Rasa-Dhvani* theory. (2) Modern psychology has shown that states of mind (*bhava-s*) are infinite in number, diversity, mutual overlap and wealth of nuance. (3) It has further pointed to the importance of the unconscious as the source of all creativity. Modernist writing has discovered many more new channels of suggestion—such as non-propositional imagery, indeterminate language with a wealth of associations and evocative power, or precise, delicate verbal effects generating specific meaning. (4) Post-modernist literature has demonstrated how suggestion can operate through brevity, omission, reticence. (5) Modern fiction has proved how 'showing' is superior to 'telling' or statement and how submerged levels of narration can develop beneath the surface action. (6) Above all, the *Dhvani* theory's view of literature as language generating meaning is shared by most twentieth-century literary theories (consider also Leavis's 'language creates what it conveys').

While the work of art provided for enactment of states of mind and the corresponding *rasa-s*, *Santa rasa*⁷ came to be eventually credited with the highest form of literary experience. (Interestingly though, the *pradhāna* or dominant

2. The science of speech, or poetics (also written *vakrōti*). *Alankāra*: literary embellishment. *Riti*: practice. *Guna*: descriptor associated with five elements, senses, body parts, and psychological states of being.

3. Vishwanatha (ca. 1378–ca. 1467), critic and dramatist, best known for his *Sahityadarpana* (*The Mirror of Literature*). Mammata or Mammata (ca. 11th c.) and Jagannatha (1620–1660) were also literary critics and dramatists.

4. The dominant Anglo-American school of criticism in the mid-20th century (promoted by

CLEANTH BROOKS, W. K. WIMSATT JR., and others), emphasizing close reading of the text as an autonomous whole. The poets and critics are EDGAR ALLAN POE (1809–1849), RALPH WALDO EMERSON (1803–1882), and Walt Whitman (1819–1892).

5. Poets and critics: Charles Baudelaire (1821–1867), Stéphane Mallarmé (1842–1898), and Paul Valéry (1871–1945).

6. Sir William Empson (1906–1984), poet and critic; his best-known work of criticism is *Seven Types of Ambiguity* (1930).

7. Satisfaction.

rasa of the Ramayana⁸ is *Karuna* (the compassionate) while that of the Mahabharata is *santa* (the poise, caused by what Keats⁹ calls the evaporation of opposites) both acknowledged to be great works of art.)

The *Rasa-Dhvani* theory is more widely known in Indian literatures than any other critical system and its concepts are in vogue in our arts and literatures. As an important component of our common cultural heritage, it has made its influence felt in our literatures in varying degrees. It is therefore more capable than any other existing theory of serving as the basis of a common poetic for Indian literatures.

It should be understood that whatever be the critical framework, it can't be said to inhibit the individual reader's response to the work before him. On the contrary, it is hoped the poetic will provide a framework within which the responsive reader will find signs and landmarks to aid his exploration, assessment and possibly disagreement, all of which can advance the cause of criticism.

In any case, what is offered here is not a readymade system with a prescriptiveness, but a tentative formulation designed to provoke thought and stimulate discussion, *samalocana*.

1984

8. The second great classic Sanskrit epic (probably composed 3d c. B.C.E.), the story of the adventures

of Rama (an incarnation of the god Vishnu).
9. John Keats (1795–1821), English poet.

RAYMOND WILLIAMS

1921–1988

Raymond Williams was the leading literary intellectual in Britain in the later twentieth century. A prolific writer, he was a literary journalist and novelist; a prominent critic of drama, the novel, culture, and media; and one of the founding figures of cultural studies, media studies, and communications. He was also a committed socialist, known for articulating Marxism and its relevance to literary studies. In our selection, "Base and Superstructure in Marxist Cultural Theory" (1973), Williams revises the traditional Marxist conception of culture, promoting ANTONIO GRAMSCI's more flexible concept of hegemony and developing a three-part account of historical change that notes emergent and residual forms alongside dominant ones.

The son of a railway worker, Williams grew up in a small farming village, Pandy, in Wales. A sense of class and place informs all his work, most visibly his novels, which depict working-class life and politics in Wales. In 1939 he entered Cambridge University on a state scholarship, where he became acutely aware of class distinctions; he was politically active in the Socialist Club and, for a short time, the Communist Party. In 1941 he left to serve in an artillery division of the British Army during World War II. He returned to Cambridge after the war, taking a degree in English in 1945. By that time he was married, with one small child and another on the way; so instead of accepting a postgraduate fellowship, he began teaching evening classes at Oxford in drama and fiction. His experience in adult education and

his involvement with the Workers Educational Association helped convince him of the importance of literature's social and political contexts and of the need for a democratic, "permanent education." In 1961 he returned to Cambridge as a lecturer, and in 1974 a professorship of drama was created for him, a position he held until retiring in 1983. At Cambridge Williams not only wrote prolifically but taught a number of students—among them, STUART HALL and TERRY EAGLETON—who would themselves become important figures in literary and cultural studies.

Literary studies in England after World War II were dominated by "Cambridge English," strongly influenced by F. R. LEAVIS, a longtime professor at Cambridge and the editor of the leading critical journal of its day, *Scrutiny*. Extolling, in his famous phrase, "the Great Tradition," Leavis privileged literature above all other disciplines, as offering a special morally edifying force. In so doing, he followed MATTHEW ARNOLD, who in *Culture and Anarchy* (1869) claimed that the literary canon could provide a civilizing "sweetness and light" to society, in effect assuming the redemptive power previously enjoyed by religion. Williams's answer was *Culture and Society, 1780–1950* (1958), which argued that "a culture is not only a body of intellectual and imaginative works; it is also a whole way of life," and that to study literature, high or low, one must also study society.

"Base and Superstructure in Marxist Cultural Theory" addresses a central issue in social theory: determinism. In building his theory of capitalism, KARL MARX used a spatial metaphor to describe how society works: the economic means of production form the foundation or base of human life, and other elements, such as politics and culture, form a superstructure arising from it. Early interpreters tended to see this relation in a rigid way, with the base fully determining the superstructure, whereas later interpreters have seen the relation between the two as more interactive. In particular, Gramsci examined the fluid ways in which the ruling class effected its domination through the consent of most citizens rather than through force or strict controls. For Williams, following Gramsci, culture plays a key role in gaining consent.

One of Williams's innovations was to show how culture has varied roles that can change over time. In addition to the dominant culture, there are also, he famously argues, residual and emergent forms, which are sometimes tolerated and sometimes not. For instance, in the 1970s punk culture was emergent and posed an anarchic challenge to dominant culture. However, as DICK HEBDIGE (see below) has shown, punk eventually became incorporated into capitalism as a style option. Another useful distinction Williams makes is between alternative and truly oppositional culture. As a style, it is questionable that punk holds real oppositional value. To take another example, a person living on an organic farm might present an alternative to industrial farming but have little political effect, whereas a person who organizes a group against industrial farming has more oppositional force against the dominant order. This question of resistance—of whether personal choices, group protests, or mass organizations have political effect—is portrayed by Williams as the problem of "incorporation," and it has incited much debate in contemporary cultural studies.

Williams also addresses a perennial issue in aesthetic theory about the relation of art and society. Early twentieth-century Marxist theorists, especially those advocating socialist realism, held that art directly reflects its society. In contrast, late twentieth-century theorists focused on mediation and what LOUIS ALTHUSSER and others deemed the "relative autonomy" of art. While Williams believes that the ruling class and its interests mold society, he sees the relation between art and society as interactive: society can be influenced by culture just as culture can be influenced by society. For this reason he is critical of formalism, which fetishizes the artwork as an object rather than a practice. Williams called his approach "cultural materialism," a label that encompasses both the Marxist concern with the material bases of society and the fluid ways that culture shapes society.

Although Marxist and radical thought played a significant role in Anglo-American criticism during the 1930s, such approaches were largely shunned during the cold war, particularly in the United States. The New York Intellectuals, for instance, as the title of Irving Howe's *Politics and the Novel* (1957) suggests, were like Williams in joining the literary and the social; but they were avowedly anticommunist and anti-Marxist. It was not until the 1970s and 1980s, in part through Williams's influence and example, that Marxist and socialist ideas once again became accepted in literary studies.

Williams's work, as he remarks in *Culture and Society*, "has been classified under headings as various as cultural history, historical semantics, history of ideas, social criticism, literary history and sociology." While some critics complain about Williams's style, which can be murky and ponderous, his disciplinary boundary crossing made him a model for cultural studies. Conversely, his stress on the political significance of literary works was criticized by more traditional scholars for falling outside the purview of literary studies proper. In a career extending the traditional boundaries of literary studies, Williams exemplifies the possibilities for combining literary work with committed politics, and literary criticism with social criticism.

"Base and Superstructure in Marxist Cultural Theory" Keywords: Cultural Studies, Hegemony, Ideology, Marxism

Base and Superstructure in Marxist Cultural Theory

Any modern approach to a Marxist theory of culture must begin by considering the proposition of a determining base and a determined superstructure.¹ From a strictly theoretical point of view this is not, in fact, where we might choose to begin. It would be in many ways preferable if we could begin from a proposition which originally was equally central, equally authentic: namely the proposition that social being determines consciousness.² It is not that the two propositions necessarily deny each other or are in contradiction. But the proposition of base and superstructure, with its figurative element, with its suggestion of a fixed and definite spatial relationship, constitutes, at least in certain hands, a very specialized and at times unacceptable version of the other proposition. Yet in the transition from Marx to Marxism, and in the development of mainstream Marxism itself, the proposition of the determining base and the determined superstructure has been commonly held to be the key to Marxist cultural analysis.

It is important, as we try to analyse this proposition, to be aware that the term of relationship which is involved, that is to say 'determines', is of great linguistic and theoretical complexity. The language of determination and even more of determinism was inherited from idealist and especially theological accounts of the world and man. It is significant that it is in one of his familiar inversions, his contradictions of received propositions, that Marx

1. In Marxist theory, the economic mode of production forms the base of society, determining the "superstructure"—its legal, political, and cultural aspects. Marxist theory is inspired by KARL MARX (1818–1883), German social, political, and economic philosopher.

2. In *A Contribution to the Critique of Political Economy* (1859; see above), Marx notes that "It is

not the consciousness of men that determines their being, but, on the contrary, their social being that determines their consciousness," and in *The German Ideology* (1845–46; see above), Marx and his frequent coauthor, FRIEDRICH ENGELS (1820–1895), declare that "Life is not determined by consciousness, but consciousness by life."

uses the word which becomes, in English translation, 'determines' (the usual but not invariable German word is *bestimmen*). He is opposing an ideology that had been insistent on the power of certain forces outside man, or, in its secular version, on an abstract determining consciousness. Marx's own proposition explicitly denies this, and puts the origin of determination in men's own activities. Nevertheless, the particular history and continuity of the term serves to remind us that there are, within ordinary use—and this is true of most of the major European languages—quite different possible meanings and implications of the word 'determine'. There is, on the one hand, from its theological inheritance, the notion of an external cause which totally predicts or prefigures, indeed totally controls a subsequent activity. But there is also, from the experience of social practice, a notion of determination as setting limits, exerting pressures.

Now there is clearly a difference between a process of setting limits and exerting pressures, whether by some external force or by the internal laws of a particular development, and that other process in which a subsequent content is essentially prefigured, predicted and controlled by a preexisting external force. Yet it is fair to say, looking at many applications of Marxist cultural analysis, that it is the second sense, the notion of prefiguration, prediction or control, which has often explicitly or implicitly been used.

Superstructure: Qualifications and Amendments

The term of relationship is then the first thing that we have to examine in this proposition, but we have to do this by going on to look at the related terms themselves. 'Superstructure' (*Überbau*) has had most attention. In common usage, after Marx, it acquired a main sense of a unitary 'area' within which all cultural and ideological activities could be placed. But already in Marx himself, in the later correspondence of Engels, and at many points in the subsequent Marxist tradition, qualifications were made about the determined character of certain superstructural activities. The first kind of qualification had to do with delays in time, with complications, and with certain indirect or relatively distant relationships. The simplest notion of a superstructure, which is still by no means entirely abandoned, had been the reflection, the imitation or the reproduction of the reality of the base in the superstructure in a more or less direct way. Positivist notions of reflection and reproduction of course directly supported this. But since in many real cultural activities this relationship cannot be found, or cannot be found without effort or even violence to the material or practice being studied, the notion was introduced of delays in time, the famous lags; of various technical complications; and of indirectness, in which certain kinds of activity in the cultural sphere—philosophy, for example—were situated at a greater distance from the primary economic activities. That was the first stage of qualification of the notion of superstructure: in effect, an operational qualification. The second stage was related but more fundamental, in that the process of the relationship itself was more substantially looked at. This was the kind of reconsideration which gave rise to the modern notion of 'mediation', in which something more than simple reflection or reproduction—indeed something radically different from either reflection or reproduction—actively occurs. In the later twentieth century there is the

notion of 'homologous structures', where there may be no direct or easily apparent similarity, and certainly nothing like reflection or reproduction, between the superstructural process and the reality of the base, but in which there is an essential homology or correspondence of structures, which can be discovered by analysis. This is not the same notion as 'mediation', but it is the same kind of amendment in that the relationship between the base and the superstructure is not supposed to be direct, nor simply operationally subject to lags and complications and indirectnesses, but that of its nature it is not direct reproduction.

These qualifications and amendments are important. But it seems to me that what has not been looked at with equal care is the received notion of the 'base' (*Basis, Grundlage*). And indeed I would argue that the base is the more important concept to look at if we are to understand the realities of cultural process. In many uses of the proposition of base and superstructure, as a matter of verbal habit, 'the base' has come to be considered virtually as an object, or in less crude cases, it has been considered in essentially uniform and usually static ways. 'The base' is the real social existence of man. 'The base' is the real relations of production corresponding to a stage of development of the material productive forces. 'The base' is a mode of production at a particular stage of its development. We make and repeat propositions of this kind, but the usage is then very different from Marx's emphasis on productive activities, in particular structural relations, constituting the foundation of all other activities. For while a particular stage of the development of production can be discovered and made precise by analysis, it is never in practice either uniform or static. It is indeed one of the central propositions of Marx's sense of history that there are deep contradictions in the relationships of production and in the consequent social relationships. There is therefore the continual possibility of the dynamic variation of these forces. Moreover, when these forces are considered, as Marx always considers them, as the specific activities and relationships of real men, they mean something very much more active, more complicated and more contradictory than the developed metaphorical notion of 'the base' could possibly allow us to realize.

The Base and the Productive Forces

So we have to say that when we talk of 'the base', we are talking of a process and not a state. And we cannot ascribe to that process certain fixed properties for subsequent translation to the variable processes of the superstructure. Most people who have wanted to make the ordinary proposition more reasonable have concentrated on refining the notion of superstructure. But I would say that each term of the proposition has to be revalued in a particular direction. We have to revalue 'determination' towards the setting of limits and the exertion of pressure, and away from a predicted, prefigured and controlled content. We have to revalue 'superstructure' towards a related range of cultural practices, and away from a reflected, reproduced or specifically dependent content. And, crucially, we have to revalue 'the base' away from the notion of a fixed economic or technological abstraction, and towards the specific activities of men in real social and economic relationships, containing fundamental contradictions and variations and therefore always in a state of dynamic process.

It is worth observing one further implication behind the customary definitions. 'The base' has come to include, especially in certain twentieth-century developments, a strong and limiting sense of basic industry. The emphasis on heavy industry, even, has played a certain cultural role. And this raises a more general problem, for we find ourselves forced to look again at the ordinary notion of 'productive forces'. Clearly what we are examining in the base is primary productive forces. Yet some very crucial distinctions have to be made here. It is true that in his analysis of capitalist production Marx considered 'productive work' in a very particular and specialized sense corresponding to that mode of production. There is a difficult passage in the *Grundrisse*³ in which he argues that while the man who makes a piano is a productive worker, there is a real question whether the man who distributes the piano is also a productive worker; but he probably is, since he contributes to the realization of surplus value. Yet when it comes to the man who plays the piano, whether to himself or to others, there is no question: he is not a productive worker at all. So piano-maker is base, but pianist superstructure. As a way of considering cultural activity, and incidentally the economics of modern cultural activity, this is very clearly a dead-end. But for any theoretical clarification it is crucial to recognize that Marx was there engaged in an analysis of a particular kind of production, that is capitalist commodity production. Within his analysis of this mode, he had to give to the notion of 'productive labour' and 'productive forces' a specialized sense of primary work on materials in a form which produced commodities. But this has narrowed remarkably, and in a cultural context very damagingly, from his more central notion of *productive forces*, in which, to give just brief reminders, the most important thing a worker ever produces is himself, himself in the fact of that kind of labour, or the broader historical emphasis of men producing themselves, themselves and their history. Now when we talk of the base, and of primary productive forces, it matters very much whether we are referring, as in one degenerate form of this proposition became habitual, to primary production within the terms of capitalist economic relationships, or to the primary production of society itself, and of men themselves, the material production and reproduction of real life. If we have the broad sense of productive forces, we look at the whole question of the base differently, and we are then less tempted to dismiss as superstructural, and in that sense as merely secondary, certain vital productive social forces, which are in the broad sense, from the beginning, basic.

Uses of Totality

Yet, because of the difficulties of the ordinary proposition of base and superstructure, there was an alternative and very important development, an emphasis primarily associated with Lukács,⁴ on a social 'totality'. The totality of social practices was opposed to this layered notion of base and a consequent superstructure. This concept of a totality of practices is compatible with the notion of social being determining consciousness, but it does not

3. "Foundations" or "Outlines" (German); an uncompleted work by Marx (written 1857–58; see above).

4. GYÖRGY LUKÁCS (1885–1971), Hungarian Marxist theorist.

necessarily interpret this process in terms of a base and a superstructure. Now the language of totality has become common, and it is indeed in many ways more acceptable than the notion of base and superstructure. But with one very important reservation. It is very easy for the notion of totality to empty of its essential content the original Marxist proposition. For if we come to say that society is composed of a large number of social practices which form a concrete social whole, and if we give to each practice a certain specific recognition, adding only that they interact, relate and combine in very complicated ways, we are at one level much more obviously talking about reality, but we are at another level withdrawing from the claim that there is any process of determination. And this I, for one, would be very unwilling to do. Indeed, the key question to ask about any notion of totality in cultural theory is this: whether the notion of totality includes the notion of intention.

If totality is simply concrete, if it is simply the recognition of a large variety of miscellaneous and contemporaneous practices, then it is essentially empty of any content that could be called Marxist. Intention, the notion of intention, restores the key question, or rather the key emphasis. For while it is true that any society is a complex whole of such practices, it is also true that any society has a specific organization, a specific structure, and that the principles of this organization and structure can be seen as directly related to certain social intentions, intentions by which we define the society, intentions which in all our experience have been the rule of a particular class. One of the unexpected consequences of the crudeness of the base/superstructure model has been the too easy acceptance of models which appear less crude—models of totality or of a complex whole—but which exclude the facts of social intention, the class character of a particular society and so on. And this reminds us of how much we lose if we abandon the superstructural emphasis altogether. Thus I have great difficulty in seeing processes of art and thought as superstructural in the sense of the formula as it is commonly used. But in many areas of social and political thought—certain kinds of ratifying theory, certain kinds of law, certain kinds of institution, which after all in Marx's original formulations were very much part of the superstructure—in all that kind of social apparatus, and in a decisive area of political and ideological activity and construction, if we fail to see a superstructural element we fail to recognize reality at all. These laws, constitutions, theories, ideologies, which are so often claimed as natural, or as having universal validity or significance, simply have to be seen as expressing and ratifying the domination of a particular class. Indeed the difficulty of revising the formula of base and superstructure has had much to do with the perception of many militants—who have to fight such institutions and notions as well as fighting economic battles—that if these institutions and their ideologies are not perceived as having that kind of dependent and ratifying relationship, if their claims to universal validity or legitimacy are not denied and fought, then the class character of the society can no longer be seen. And this has been the effect of some versions of totality as the description of cultural process. Indeed I think we can properly use the notion of totality only when we combine it with that other crucial Marxist concept of 'hegemony'.⁵

5. Key concept used by the Italian Marxist philosopher ANTONIO GRAMSCI (1891–1937) to describe the dynamics of domination by the ruling class.

The Complexity of Hegemony

It is Gramsci's great contribution to have emphasized hegemony, and also to have understood it at a depth which is, I think, rare. For hegemony supposes the existence of something which is truly total, which is not merely secondary or superstructural, like the weak sense of ideology, but which is lived at such a depth, which saturates the society to such an extent, and which, as Gramsci put it, even constitutes the substance and limit of common sense for most people under its sway, that it corresponds to the reality of social experience very much more clearly than any notions derived from the formula of base and superstructure. For if ideology were merely some abstract, imposed set of notions, if our social and political and cultural ideas and assumptions and habits were merely the result of specific manipulation, of a kind of overt training which might be simply ended or withdrawn, then the society would be very much easier to move and to change than in practice it has ever been or is. This notion of hegemony as deeply saturating the consciousness of a society seems to me to be fundamental. And hegemony has the advantage over general notions of totality, that it at the same time emphasizes the facts of domination.

Yet there are times when I hear discussions of hegemony and feel that it too, as a concept, is being dragged back to the relatively simple, uniform and static notion which 'superstructure' in ordinary use had become. Indeed I think that we have to give a very complex account of hegemony if we are talking about any real social formation. Above all we have to give an account which allows for its elements of real and constant change. We have to emphasize that hegemony is not singular; indeed that its own internal structures are highly complex, and have continually to be renewed, recreated and defended; and by the same token, that they can be continually challenged and in certain respects modified. That is why instead of speaking simply of 'the hegemony', 'a hegemony', I would propose a model which allows for this kind of variation and contradiction, its sets of alternatives and its processes of change.

For one thing that is evident in some of the best Marxist cultural analysis is that it is very much more at home in what one might call *epochal* questions than in what one has to call *historical* questions. That is to say, it is usually very much better at distinguishing the large features of different epochs of society, as commonly between feudal and bourgeois, than at distinguishing between different phases of bourgeois society, and different moments within these phases: that true historical process which demands a much greater precision and delicacy of analysis than the always striking epochal analysis which is concerned with main lineaments and features.

The theoretical model which I have been trying to work with is this. I would say first that in any society, in any particular period, there is a central system of practices, meanings and values, which we can properly call dominant and effective. This implies no presumption about its value. All I am saying is that it is central. Indeed I would call it a corporate system, but this might be confusing, since Gramsci uses 'corporate' to mean the subordinate as opposed to the general and dominant elements of hegemony. In any case what I have in mind is the central, effective and dominant system of meanings and values, which are not merely abstract but which are organized and

lived. That is why hegemony is not to be understood at the level of mere opinion or mere manipulation. It is a whole body of practices and expectations; our assignments of energy, our ordinary understanding of the nature of man and of his world. It is a set of meanings and values which as they are experienced as practices appear as reciprocally confirming. It thus constitutes a sense of reality for most people in the society, a sense of absolute because experienced reality beyond which it is very difficult for most members of the society to move, in most areas of their lives. But this is not, except in the operation of a moment of abstract analysis, in any sense a static system. On the contrary we can only understand an effective and dominant culture if we understand the real social process on which it depends: I mean the process of incorporation. The modes of incorporation are of great social significance. The educational institutions are usually the main agencies of the transmission of an effective dominant culture, and this is now a major economic as well as a cultural activity; indeed it is both in the same moment. Moreover, at a philosophical level, at the true level of theory and at the level of the history of various practices, there is a process which I call the *selective tradition*: that which, within the terms of an effective dominant culture, is always passed off as 'the tradition', 'the significant past'. But always the selectivity is the point; the way in which from a whole possible area of past and present, certain meanings and practices are chosen for emphasis, certain other meanings and practices are neglected and excluded. Even more crucially, some of these meanings and practices are reinterpreted, diluted, or put into forms which support or at least do not contradict other elements within the effective dominant culture. The processes of education; the processes of a much wider social training within institutions like the family; the practical definitions and organization of work; the selective tradition at an intellectual and theoretical level: all these forces are involved in a continual making and remaking of an effective dominant culture, and on them, as experienced, as built into our living, its reality depends. If what we learn there were merely an imposed ideology, or if it were only the isolable meanings and practices of the ruling class, or of a section of the ruling class, which gets imposed on others, occupying merely the top of our minds, it would be—and one would be glad—a very much easier thing to overthrow.

It is not only the depths to which this process reaches, selecting and organizing and interpreting our experience. It is also that it is continually active and adjusting; it isn't just the past, the dry husks of ideology which we can more easily discard. And this can only be so, in a complex society, if it is something more substantial and more flexible than any abstract imposed ideology. Thus we have to recognize the alternative meanings and values, the alternative opinions and attitudes, even some alternative senses of the world, which can be accommodated and tolerated within a particular effective and dominant culture. This has been much under-emphasized in our notions of a superstructure, and even in some notions of hegemony. And the under-emphasis opens the way for retreat to an indifferent complexity. In the practice of politics, for example, there are certain truly incorporated modes of what are nevertheless, within those terms, real oppositions, that are felt and fought out. Their existence within the incorporation is recognizable by the fact that, whatever the degree of internal conflict or internal variation, they do not in practice go beyond the limits of

the central effective and dominant definitions. This is true, for example, of the practice of parliamentary politics, though its internal oppositions are real. It is true about a whole range of practices and arguments, in any real society, which can by no means be reduced to an ideological cover, but which can nevertheless be properly analysed as in my sense corporate, if we find that, whatever the degree of internal controversy and variation, they do not in the end exceed the limits of the central corporate definitions.

But if we are to say this, we have to think again about the sources of that which is not corporate; of those practices, experiences, meanings, values which are not part of the effective dominant culture. We can express this in two ways. There is clearly something that we can call alternative to the effective dominant culture, and there is something else that we can call oppositional, in a true sense. The degree of existence of these alternative and oppositional forms is itself a matter of constant historical variation in real circumstances. In certain societies it is possible to find areas of social life in which quite real alternatives are at least left alone. (If they are made available, of course, they are part of the corporate organization.) The existence of the possibility of opposition, and of its articulation, its degree of openness, and so on, again depends on very precise social and political forces. The facts of alternative and oppositional forms of social life and culture, in relation to the effective and dominant culture, have then to be recognized as subject to historical variation, and as having sources which are very significant as a fact about the dominant culture itself.

Residual and Emergent Cultures

I have next to introduce a further distinction, between *residual* and *emergent* forms, both of alternative and of oppositional culture. By 'residual' I mean that some experiences, meanings and values, which cannot be verified or cannot be expressed in terms of the dominant culture, are nevertheless lived and practised on the basis of the residue—cultural as well as social—of some previous social formation. There is a real case of this in certain religious values, by contrast with the very evident incorporation of most religious meanings and values into the dominant system. The same is true, in a culture like Britain, of certain notions derived from a rural past, which have a very significant popularity. A residual culture is usually at some distance from the effective dominant culture, but one has to recognize that, in real cultural activities, it may get incorporated into it. This is because some part of it, some version of it—and especially if the residue is from some major area of the past—will in many cases have had to be incorporated if the effective dominant culture is to make sense in those areas. It is also because at certain points a dominant culture cannot allow too much of this kind of practice and experience outside itself, at least without risk. Thus the pressures are real, but certain genuinely residual meanings and practices in some important cases survive.

By 'emergent' I mean, first, that new meanings and values, new practices, new significances and experiences, are continually being created. But there is then a much earlier attempt to incorporate them, just because they are part—and yet not a defined part—of effective contemporary practice. Indeed

it is significant in our own period how very early this attempt is, how alert the dominant culture now is to anything that can be seen as emergent. We have then to see, first, as it were a temporal relation between a dominant culture and on the one hand a residual and on the other hand an emergent culture. But we can only understand this if we can make distinctions, that usually require very precise analysis, between residual-incorporated and residual not incorporated, and between emergent-incorporated and emergent not incorporated. It is an important fact about any particular society, how far it reaches into the whole range of human practices and experiences in an attempt at incorporation. It may be true of some earlier phases of bourgeois society, for example, that there were some areas of experience which it was willing to dispense with, which it was prepared to assign as the sphere of private or artistic life, and as being no particular business of society or the state. This went along with certain kinds of political tolerance, even if the reality of that tolerance was malign neglect. But I am sure it is true of the society that has come into existence since the last war,⁶ that progressively, because of developments in the social character of labour, in the social character of communications, and in the social character of decision, it extends much further than ever before in capitalist society into certain hitherto resigned areas of experience and practice and meaning. Thus the effective decision, as to whether a practice is alternative or oppositional, is often now made within a very much narrower scope. There is a simple theoretical distinction between alternative and oppositional, that is to say between someone who simply finds a different way to live and wishes to be left alone with it, and someone who finds a different way to live and wants to change the society in its light. This is usually the difference between individual and small-group solutions to social crisis and those solutions which properly belong to political and ultimately revolutionary practice. But it is often a very narrow line, in reality, between alternative and oppositional. A meaning or a practice may be tolerated as a deviation, and yet still be seen only as another particular way to live. But as the necessary area of effective dominance extends, the same meanings and practices can be seen by the dominant culture, not merely as disregarding or despising it, but as challenging it.

Now it is crucial to any Marxist theory of culture that it can give an adequate explanation of the sources of these practices and meanings. We can understand, from an ordinary historical approach, at least some of the sources of residual meanings and practices. These are the results of earlier social formations, in which certain real meanings and values were generated. In the subsequent default of a particular phase of a dominant culture, there is then a reaching back to those meanings and values which were created in real societies in the past, and which still seem to have some significance because they represent areas of human experience, aspiration and achievement, which the dominant culture under-values or opposes, or even cannot recognise. But our hardest task, theoretically, is to find a non-metaphysical and non-subjectivist explanation of emergent cultural practice. Moreover, part of our answer to this question bears on the process of persistence of residual practices.

6. That is, World War II, which was followed by far-reaching social reforms in Great Britain.

Class and Human Practice

We have indeed one source to hand from the central body of Marxist theory. We have the formation of a new class, the coming to consciousness of a new class. This remains, without doubt, quite centrally important. Of course, in itself, this process of formation complicates any simple model of base and superstructure. It also complicates some of the ordinary versions of hegemony, although it was Gramsci's whole purpose to see and to create by organization that hegemony of a proletarian kind which would be capable of challenging the bourgeois hegemony. We have then one central source of new practice, in the emergence of a new class. But we have also to recognize certain other kinds of source, and in cultural practice some of these are very important. I would say that we can recognize them on the basis of this proposition: that no mode of production, and therefore no dominant society or order of society, and therefore no dominant culture, in reality exhausts the full range of human practice, human energy, human intention (this range is not the inventory of some original 'human nature' but, on the contrary, is that extraordinary range of variations, both practised and imagined, of which human beings are and have shown themselves to be capable). Indeed it seems to me that this emphasis is not merely a negative proposition, allowing us to account for certain things which happen outside the dominant mode. On the contrary, it is a fact about the modes of domination that they select from and consequently exclude the full range of actual and possible human practice. The difficulties of human practice outside or against the dominant mode are, of course, real. It depends very much whether it is in an area in which the dominant class and the dominant culture have an interest and a stake. If the interest and the stake are explicit, many new practices will be reached for, and if possible incorporated, or else extirpated with extraordinary vigour. But in certain areas, there will be in certain periods practices and meanings which are not reached for. There will be areas of practice and meaning which, almost by definition from its own limited character, or in its profound deformation, the dominant culture is unable in any real terms to recognize. This gives us a bearing on the observable difference between, for example, the practices of a capitalist state and a state like the contemporary Soviet Union in relation to writers.⁷ Since from the whole Marxist tradition literature was seen as an important activity, indeed a crucial activity, the Soviet state is very much sharper in investigating areas where different versions of practice, different meanings and values, are being attempted and expressed. In capitalist practice, if the thing is not making a profit, or if it is not being widely circulated, then it can for some time be overlooked, at least while it remains alternative. When it becomes oppositional in an explicit way, it does, of course, get approached or attacked.

I am saying then that in relation to the full range of human practice at any one time, the dominant mode is a conscious selection and organization. At least in its fully formed state it is conscious. But there are always sources of actual human practice which it neglects or excludes. And these can be different in quality from the developing and articulate interests of a rising class. They can include, for example, alternative perceptions of others, in immedi-

7. In the Soviet Union, the Union of Soviet Writers exercised control over what writers could publish.

ate personal relationships, or new perceptions of material and media, in art and science, and within certain limits these new perceptions can be practised. The relations between the two kinds of source—the emerging class and either the dominatively excluded or the more generally new practices—are by no means necessarily contradictory. At times they can be very close, and on the relations between them much in political practice depends. But culturally and as a matter of theory the areas can be seen as distinct.

Now if we go back to the cultural question in its most usual form—what are the relations between art and society, or literature and society?—in the light of the preceding discussion, we have to say first that there are no relations between literature and society in that abstracted way. The literature is there from the beginning as a practice in the society. Indeed until it and all other practices are present, the society cannot be seen as fully formed. A society is not fully available for analysis until each of its practices is included. But if we make that emphasis we must make a corresponding emphasis: that we cannot separate literature and art from other kinds of social practice, in such a way as to make them subject to quite special and distinct laws. They may have quite specific features as practices, but they cannot be separated from the general social process. Indeed one way of emphasizing this is to say, to insist, that literature is not restricted to operating in any one of the sectors I have been seeking to describe in this model. It would be easy to say, it is a familiar rhetoric, that literature operates in the emergent cultural sector, that it represents the new feelings, the new meanings, the new values. We might persuade ourselves of this theoretically, by abstract argument, but when we read much literature, over the whole range, without the sleight-of-hand of calling Literature only that which we have already selected as embodying certain meanings and values at a certain scale of intensity, we are bound to recognize that the act of writing, the practices of discourse in writing and speech, the making of novels and poems and plays and theories, all this activity takes place in all areas of the culture.

Literature appears by no means only in the emergent sector, which is always, in fact, quite rare. A great deal of writing is of a residual kind, and this has been deeply true of much English literature in the last half-century. Some of its fundamental meanings and values have belonged to the cultural achievements of long-past stages of society. So widespread is this fact, and the habits of mind it supports, that in many minds 'literature' and 'the past' acquire a certain identity, and it is then said that there is now no literature: all that glory is over. Yet most writing, in any period, including our own, is a form of contribution to the effective dominant culture. Indeed many of the specific qualities of literature—its capacity to embody and enact and perform certain meanings and values, or to create in single particular ways what would be otherwise merely general truths—enable it to fulfil this effective function with great power. To literature, of course, we must add the visual arts and music, and in our own society the powerful arts of film and of broadcasting. But the general theoretical point should be clear. If we are looking for the relations between literature and society, we cannot either separate out this one practice from a formed body of other practices, nor when we have identified a particular practice can we give it a uniform, static and ahistorical relation to some abstract social formation. The arts of writing and the arts of creation and performance, over their whole range, are parts of the cultural

process in all the different ways, the different sectors, that I have been seeking to describe. They contribute to the effective dominant culture and are a central articulation of it. They embody residual meanings and values, not all of which are incorporated, though many are. They express also and significantly some emergent practices and meanings, yet some of these may eventually be incorporated, as they reach people and begin to move them. Thus it was very evident in the sixties, in some of the emergent arts of performance, that the dominant culture reached out to transform, or seek to transform, them. In this process, of course, the dominant culture itself changes, not in its central formation, but in many of its articulated features. But then in a modern society it must always change in this way, if it is to remain dominant, if it is still to be felt as in real ways central in all our many activities and interests.

Critical Theory as Consumption

What then are the implications of this general analysis for the analysis of particular works of art? This is the question towards which most discussion of cultural theory seems to be directed: the discovery of a method, perhaps even a methodology, through which particular works of art can be understood and described. I would not myself agree that this is the central use of cultural theory, but let us for a moment consider it. What seems to me very striking is that nearly all forms of contemporary critical theory are theories of *consumption*. That is to say, they are concerned with understanding an object in such a way that it can profitably or correctly be consumed. The earliest stage of consumption theory was the theory of 'taste', where the link between the practice and the theory was direct in the metaphor. From taste there came the more elevated notion of 'sensibility', in which it was the consumption by sensibility of elevated or insightful works that was held to be the essential practice of reading, and critical activity was then a function of this sensibility. There were then more developed theories, in the 1920s with I. A. Richards, and later in New Criticism,⁸ in which the effects of consumption were studied directly. The language of the work of art as object then became more overt. 'What effect does this work ("the poem" as it was ordinarily described) have on me?' Or, 'what impact does it have on me?', as it was later to be put in a much wider area of communication studies. Naturally enough, the notion of the work of art as *object*, as *text*, as an isolated artefact, became central in all these later consumption theories. It was not only that the practices of *production* were then overlooked, though this fused with the notion that most important literature anyway was from the past. The real social conditions of production were in any case neglected because they were believed to be at best secondary. The true relationship was seen always as between the taste, the sensibility or the training of the reader and this isolated work, this object 'as in itself it really is', as most people came to put it. But the notion of the work of art as object had a further large theoretical effect. If you ask questions about the work of art seen

8. Major movement in Anglo-American literary criticism during the mid-20th century, promoted by CLEANTH BROOKS, W. K. WIMSATT JR., and others, that focused on close reading of the text as an

autonomous whole. It was influenced by the "practical criticism" of the British critic I. A. Richards (1893–1979).

as object, they may include questions about the components of its production. Now, as it happened, there was a use of the formula of base and superstructure which was precisely in line with this. The components of a work of art were the real activities of the base, and you could study the object to discover these components. Sometimes you even studied the components and then projected the object. But in any case the relationship that was looked for was one between an object and its components. But this was not only true of Marxist suppositions of a base and a superstructure. It was true also of various kinds of psychological theory, whether in the form of archetypes, or the images of the collective unconscious, or the myths and symbols which were seen as the *components* of particular works of art. Or again there was biography, or psychobiography and its like, where the components were in the man's life and the work of art was an object in which components of this kind were discovered. Even in some of the more rigorous forms of New Criticism and of structuralist criticism, this essential procedure of regarding the work as an object which has to be reduced to its components, even if later it may be reconstituted, came to persist.

Objects and Practices

Now I think the true crisis in cultural theory, in our own time, is between this view of the work of art as object and the alternative view of art as a practice. Of course it is at once argued that the work of art is an object: that various works have survived from the past, particular sculptures, particular paintings, particular buildings, and these are objects. This is of course true, but the same way of thinking is applied to works which have no such singular existence. There is no *Hamlet*, no *Brothers Karamazov*, no *Wuthering Heights*, in the sense that there is a particular great painting. There is no *Fifth Symphony*,⁹ there is no work in the whole area of music and dance and performance, which is an object in any way comparable to those works in the visual arts which have survived. And yet the habit of treating all such works as objects has persisted because this is a basic theoretical and practical presupposition. But in literature (especially in drama), in music and in a very wide area of the performing arts, what we permanently have are not objects but *notations*. These notations have then to be interpreted in an active way, according to the particular conventions. But indeed this is true over an even wider field. The relationship between the making of a work of art and its reception is always active, and subject to conventions, which in themselves are forms of (changing) social organization and relationship, and this is radically different from the production and consumption of an object. It is indeed an activity and a practice, and in its accessible forms, although it may in some arts have the character of a singular object, it is still only accessible through active perception and interpretation. This makes the case of notation, in arts like drama and literature and music, only a special case of a much wider truth. What this can show us here about the practice of analysis is that we have to break from the common procedure of isolating the object

9. *Symphony* (1804–08) by Ludwig van Beethoven; *Hamlet* (ca. 1600), tragedy by William Shakespeare; *Brothers Karamazov* (1878–80), novel by

Fyodor Dostoyevsky; *Wuthering Heights* (1847), novel by Emily Brontë.

and then discovering its components. On the contrary we have to discover the nature of a practice and then its conditions.

Often these two procedures may in part resemble each other, but in many other cases they are of radically different kinds, and I would conclude with an observation on the way this distinction bears on the Marxist tradition of the relation between primary economic and social practices, and cultural practices. If we suppose that what is produced in cultural practice is a series of objects, we shall, as in most current forms of sociological-critical procedure, set about discovering their components. Within a Marxist emphasis these components will be from what we have been in the habit of calling the base. We then isolate certain features which we can so to say recognize *in component form*, or we ask what processes of transformation or mediation these components have gone through before they arrived in this accessible state.

But I am saying that we should look not for the components of a product but for the conditions of a practice. When we find ourselves looking at a particular work, or group of works, often realizing, as we do so, their essential community as well as their irreducible individuality, we should find ourselves attending first to the reality of their practice and the conditions of the practice as it was then executed. And from this I think we ask essentially different questions. Take for example the way in which an object—'a text'—is related to a genre, in orthodox criticism. We identify it by certain leading features, we then assign it to a larger category, the genre, and then we may find the components of the genre in a particular social history (although in some variants of criticism not even that is done, and the genre is supposed to be some permanent category of the mind).

It is not that way of proceeding that is now required. The recognition of the relation of a collective mode and an individual project—and these are the only categories that we can initially presume—is a recognition of related practices. That is to say, the irreducibly individual projects that particular works are, may come in experience and in analysis to show resemblances which allow us to group them into collective modes. These are by no means always genres. They may exist as resemblances within and across genres. They may be the practice of a group in a period, rather than the practice of a phase in a genre. But as we discover the nature of a particular practice, and the nature of the relation between an individual project and a collective mode, we find that we are analysing, as two forms of the same process, both its active composition and its conditions of composition, and in either direction this is a complex of extending active relationships. This means, of course, that we have no built-in procedure of the kind which is indicated by the fixed character of an object. We have the principles of the relations of practices, within a discoverably intentional organization, and we have the available hypotheses of dominant, residual and emergent. But what we are actively seeking is the true practice which has been alienated to an object, and the true conditions of practice—whether as literary conventions or as social relationships—which have been alienated to components or to mere background.

As a general proposition this is only an emphasis, but it seems to me to suggest at once the point of break and the point of departure, in practical and theoretical work, within an active and self-renewing Marxist cultural tradition.

1973, 1980

FRANTZ FANON

1925–1961

A leading third world intellectual whose work helped inspire the struggle against colonialism and ground theoretically the subsequent growth of postcolonial culture, Frantz Fanon was one of the most influential thinkers of the twentieth century. Though born in the French Antilles, he had particular impact in Africa, where his writings undergird the works of important anticolonial writers, such as Kenya's NGUGI WĂ THIONG'o and Senegal's Ousmane Sembène. During the 1950s and early 1960s, Fanon's various writings, especially *Les Damnés de la terre* (1961; trans. 1963, *The Wretched of the Earth*), elaborated with passion on the historical conditions of anticolonial struggle. Significantly, Fanon articulated the role to be played by intellectuals in this struggle, offering stern (and prescient, as it turned out) warnings of the difficulties that would face emerging African nations once independence had been won.

Born to a middle-class black family on the island of Martinique, then a French colony, Fanon grew up amid descendants of African slaves brought to the Caribbean to work on the island's sugar plantations. As a teenager, he became intellectually attuned to the problems of colonialism and racism. He was politically active, participating in the guerrilla struggle against the supporters of the pro-Nazi French Vichy government. After the Free French forces gained control of Martinique in 1943, Fanon volunteered to go to Europe to fight. He emerged a decorated war hero, and he stayed in France to complete his education and train as a psychiatrist in Paris and Lyons. There he found that his service to the French state made no difference to the whites around him, who regarded black French subjects like himself as the *Other*—as alien and inferior, yet frightening and dangerous. He came to understand that despite his intelligence, high level of education, and mastery of the French language, he was regarded not as a human being but as a specimen of an exotic and savage race, viewed through stereotypes developed over centuries of racial prejudice.

While in France, Fanon began his writing career, publishing his first book in 1952: *Peau noire, masques blancs* (trans. 1967, *Black Skin, White Masks*). This book includes the important chapter, and our first selection, "The Fact of Blackness" (in a later translation, "The Lived Experience of the Black Man"), which describes Fanon's growing awareness of racism in France. The work, personal and lyrical, shows the strong influence of Fanon's psychiatric training, as he concentrates primarily on the impact of racism and colonialism on the black and white psyches. It also engages in a critical dialogue with French Hegelian Marxism and existentialism, particularly that of Jean-Paul Sartre, and exhibits the influence of the *négritude* movement (which called in the 1940s and 1950s for a distinctive black cultural identity rather than complete assimilation into French culture). Indeed, one of the leaders of that movement, Aimé Césaire, had been Fanon's teacher and mentor back in Martinique and remained an important influence throughout his life. Fanon movingly describes, with anguish and anger, the various modes of accommodation and alienation that characterize black life in white societies. In particular, Fanon tells of his own struggle to make sense of the white world and to address it on its own rationalist terms, only to be rejected on the basis of his race and driven back by white prejudice to an antirational, primitivist stance. Then, realizing that such primitivism was taken by whites as simply verifying their own stereotypical attitudes toward blacks, Fanon began to explore the cultural achievements of African civilization, finally achieving a dialectical resolution between Western rationalism and Africanist primitivism. In the end, he finds black identity and strength not only in the long

history of African civilizations but also in the radical black poetry of Césaire, Léopold Senghor, and David Diop, in addition to the novels of the African American writers Richard Wright and Chester Himes.

After completing his medical training, in 1953 Fanon was appointed chief of staff of the Blida-Joinville psychiatric hospital in Algeria, a French colony in North Africa. In 1954 the Algerians, led by the National Liberation Front (FLN), revolted against French rule, initiating a period of violent revolutionary struggle that would last until full Algerian independence was gained in 1962. Sympathetic to the revolution from its inception, Fanon resigned his medical post in 1956 to become the editor of the FLN newspaper. He remained involved in the revolution until his death from leukemia five years later, at the age of thirty-six.

Much of Fanon's writing of that period concentrated on the Algerian revolution, including the essays published in *L'An cinq de la révolution algérienne* (1959; trans. 1965, *A Dying Colonialism*). Other essays were posthumously collected and published in 1964 as *Pour la révolution africaine* (trans. 1976, *Toward the African Revolution*). The culmination of his work, however, was the publication of *The Wretched of the Earth*, just weeks before his death. This volume, which featured an impassioned introduction by Sartre, gained widespread recognition and solidified Fanon's reputation as a leading revolutionary thinker of the twentieth century.

Fanon displays a distinctive political vision, centrally informed by the European tradition of Marxist thought in a version heavily modified to reflect third world, anticolonial perspectives. For example, in his conviction that colonialism would be ended only through violent anticolonial struggle, Fanon was very much in accord with the Marxist view of capitalism's inevitable end. However, Fanon's reasons differed; in particular, he stressed that the anticolonial struggle would counteract the long-term psychological effects of the violence of colonialism itself. In addition, whereas Marx envisioned the European working class, or proletariat, as the crux of the revolution, Fanon felt that in Africa and other colonial regions, the revolution would have to be led by a coalition of peasants and social outcasts, the so-called lumpenproletariat in whom Marx saw little revolutionary potential in Europe.

Perhaps the most important aspect of Fanon's political thought was his insight into the complex interaction in the colonies between class and race. Though he was intensely aware of the centrality of racism to European colonialism, Fanon as a Marxist argued that social, economic, and political oppression in the third world was equally a matter of class. He makes this point most forcefully in his influential argument in *The Wretched of the Earth* that postcolonial African nations court disaster if they simply replace their white colonial bourgeois leaders with a black African postcolonial bourgeoisie, while leaving the basic class structure of the societies in place.

In the chapter "On National Culture," our second selection (excerpted), Fanon examines nationalism, exploring the role played by culture in the development of viable postcolonial identities for emergent African nations. Here he particularly concentrates on the importance of intellectuals as well as the arts in helping to develop cultural identities for emerging postcolonial nations. He urges African intellectuals to join actively in the anticolonial struggle and to place the building of new postcolonial national identities at the very center of their work. At the same time, he warns these intellectuals to remain aware that the new nation must exist within an international community. As they pursue national culture, they should draw their strength from the African masses but eschew isolationist or traditionalist solutions; they must maintain an understanding of and sense of connection to the outside world.

Fanon's work was an inspiration to the black power movement in the United States during the 1960s. At the same time, he was a key theoretical resource for the generation of intellectuals and writers who struggled to create viable postcolonial cultural identities in Africa and elsewhere. Fanon's work was especially important to a number of radical African novelists (including Ngugi and Sembène), and it contin-

ues to provide a central framework within which to interpret their work. Indeed, Fanon is arguably the most important theoretical gloss on the work of some contemporary African novelists, such as Ghana's Ayi Kwei Armah, Nigeria's Chimamanda Ngozi Adichie, Senegal's Ken Bugul, and Zimbabwe's Tsitsi Dangarembga, who have been deeply influenced by his ideas. Ngugi has been among the most explicit in pointing to the importance of Fanon to his work, declaring in *Decolonising the Mind* (1992) that it is "impossible to understand what informs African writing" without first reading two books: Lenin's *Imperialism: The Highest Stage of Capitalism* (1917) and Fanon's *Wretched of the Earth*.

During the closing decades of the twentieth century, Fanon's work was joined by that of a new wave of scholars, such as EDWARD W. SAID and HOMI K. BHABHA, who often drew on poststructuralist theorists in describing the postcolonial condition. Nevertheless, Fanon's logical but passionate arguments, rooted in Sartrean existentialism and a Marxist humanist engagement with the material world, have remained a strong force in postcolonial studies.

And then the occasion arose when I had to meet the white man's eyes. An unfamiliar weight burdened me. The real world challenged my claims. In the white world the man of color encounters difficulties in the development of his bodily schema. Consciousness of the body is solely a negating activity. It is a third-person consciousness.

* * *

* * * I had the feeling that I was repeating a cycle. My originality had been torn out of me. I wept a long time, and then I began to live again. But I was haunted by a galaxy of erosive stereotypes: the Negro's *sui generis* odor . . . the Negro's *sui generis* good nature . . . the Negro's *sui generis* gullibility. . . .

I had tried to flee myself through my kind, but the whites had thrown themselves on me and hamstrung me. I tested the limits of my essence; beyond all doubt there was not much of it left. It was here that I made my most remarkable discovery. Properly speaking, this discovery was a rediscovery.

I rummaged frenetically through all the antiquity of the black man. What I found there took away my breath. In his book *L'abolition de l'esclavage*

1. Translated by Charles Lam Markmann. The title of Fanon's chapter is "L'expérience vécue du Noir" (literally, "The Lived Experience of the Black").

Schoelcher² presented us with compelling arguments. Since then, Frobenius, Westermann, Delafosse³—all of them white—had joined the chorus: Ségou, Djenné,⁴ cities of more than a hundred thousand people; accounts of learned blacks (doctors of theology who went to Mecca to interpret the Koran). All of that, exhumed from the past, spread with its insides out, made it possible for me to find a valid historic place. The white man was wrong, I was not a primitive, not even a half-man, I belonged to a race that had already been working in gold and silver two thousand years ago. And too there was something else, something else that the white man could not understand. Listen:

What sort of men were these, then, who had been torn away from their families, their countries, their religions, with a savagery unparalleled in history?

Gentle men, polite, considerate, unquestionably superior to those who tortured them—that collection of adventurers who slashed and violated and spat on Africa to make the stripping of her the easier.

The men they took away knew how to build houses, govern empires, erect cities, cultivate fields, mine for metals, weave cotton, forge steel.

Their religion had its own beauty, based on mystical connections with the founder of the city. Their customs were pleasing, built on unity, kindness, respect for age.

No coercion, only mutual assistance, the joy of living, a free acceptance of discipline.

Order—Earnestness—Poetry and Freedom.

From the untroubled private citizen to the almost fabulous leader there was an unbroken chain of understanding and trust. No science? Indeed yes; but also, to protect them from fear, they possessed great myths in which the most subtle observation and the most daring imagination were balanced and blended. No art? They had their magnificent sculpture, in which human feeling erupted so unrestrained yet always followed the obsessive laws of rhythm in its organization of the major elements of a material called upon to capture, in order to redistribute, the most secret forces of the universe. . . .⁵

Monuments in the very heart of Africa? Schools? Hospitals? Not a single good burgher of the twentieth century, no Durand, no Smith, no Brown even suspects that such things existed in Africa before the Europeans came. . . .

But Schoelcher reminds us of their presence, discovered by Caillé, Mollien, the Cander brothers.⁶ And, though he nowhere reminds us that when

3. Maurice Delafosse (1870–1926), French ethnographer who worked in Africa in the colonial service. Leo Frobenius (1873–1938), German ethnographer and Africanist historian. Diedrich Westermann (1875–1956), German scholar of African languages and culture.

4. An ancient center for Islamic scholarship in southern Mali, first settled in 200 B.C.E. Ségou, in

south-central Mali, established in the 11th century. 5. Aimé Césaire, Introduction to Victor Schoelcher, *Esclavage et colonisation* (Paris, Presses Universitaires de France, 1948), p. 7 [Fanon's note]. Césaire (1913–2008), French Martinican poet, author, and politician who coined the term *négritude* in his prose poem *Cahier d'un retour au pays natal* (1939, *Notebook of a Return to My Native Land*).

6. Césaire's error for "Lander brothers," the British explorers Richard (1804–1834) and John (1806–1839). René Caillié (1799–1838) and Gaspard-Théodore Mollien (1796–1872) were both French explorers of West Africa.

the Portuguese landed on the banks of the Congo in 1498, they found a rich and flourishing state there and that the courtiers of Ambas⁷ were dressed in robes of silk and brocade, at least he knows that Africa had brought itself up to a juridical concept of the state, and he is aware, living in the very flood of imperialism, that European civilization, after all, is only one more civilization among many—and not the most merciful.⁸

I put the white man back into his place; growing bolder, I jostled him and told him point-blank, “Get used to me, I am not getting used to anyone.” I shouted my laughter to the stars. The white man, I could see, was resentful. His reaction time lagged interminably. . . . I had won. I was jubilant.

“Lay aside your history, your investigations of the past, and try to feel yourself into our rhythm. In a society such as ours, industrialized to the highest degree, dominated by scientism, there is no longer room for your sensitivity. One must be tough if one is to be allowed to live. What matters now is no longer playing the game of the world but subjugating it with integers and atoms. Oh, certainly, I will be told, now and then when we are worn out by our lives in big buildings, we will turn to you as we do to our children—to the innocent, the ingenuous, the spontaneous. We will turn to you as to the childhood of the world. You are so real in your life—so funny, that is. Let us run away for a little while from our ritualized, polite civilization and let us relax, bend to those heads, those adorably expressive faces. In a way, you reconcile us with ourselves.”

Thus my unreason was countered with reason, my reason with “real reason.” Every hand was a losing hand for me. I analyzed my heredity. I made a complete audit of my ailment. I wanted to be typically Negro—it was no longer possible. I wanted to be white—that was a joke. And, when I tried, on the level of ideas and intellectual activity, to reclaim my negritude, it was snatched away from me. Proof was presented that my effort was only a term in the dialectic:

But there is something more important: The Negro, as we have said, creates an anti-racist racism for himself. In no sense does he wish to rule the world: He seeks the abolition of all ethnic privileges, wherever they come from; he asserts his solidarity with the oppressed of all colors. At once the subjective, existential, ethnic idea of *negritude* “passes,” as Hegel⁹ puts it, into the objective, positive, exact idea of *proletariat*. “For Césaire,” Senghor¹ says, “the white man is the symbol of capital as the Negro is that of labor. . . . Beyond the black-skinned men of his race it is the battle of the world proletariat that is his song.”

That is easy to say, but less easy to think out. And undoubtedly it is no coincidence that the most ardent poets of negritude are at the same time militant Marxists.

But that does not prevent the idea of race from mingling with that of class: The first is concrete and particular, the second is universal and

8. Césaire, Introduction to Schoelcher, *Esclavage et colonisation*, p. 8 [Fanon's note].

9. GEORG WILHELM FRIEDRICH HEGEL (1770–1831), German philosopher; his concept of the Master-Slave dialectic (see above) was derived

from his studies of the Haitian Revolution (1794–1804).

1. Léopold Senghor (1906–2001), Senegalese poet, politician, and one of the founders of the *négritude* movement. In 1960 he would become the first black African elected president in independent Senegal.

abstract; the one stems from what Jaspers² calls understanding and the other from intellection; the first is the result of a psychobiological syncretism and the second is a methodical construction based on experience. In fact, negritude appears as the minor term of a dialectical progression: The theoretical and practical assertion of the supremacy of the white man is its thesis; the position of negritude as an antithetical value is the moment of negativity. But this negative moment is insufficient by itself, and the Negroes who employ it know this very well; they know that it is intended to prepare the synthesis or realization of the human in a society without races. Thus negritude is the root of its own destruction, it is a transition and not a conclusion, a means and not an ultimate end.³

When I read that page, I felt that I had been robbed of my last change. I said to my friends, "The generation of the younger black poets has just suffered a blow that can never be forgiven." Help had been sought from a friend of the colored peoples, and that friend had found no better response than to point out the relativity of what they were doing. For once, that born Hegelian had forgotten that consciousness has to lose itself in the night of the absolute, the only condition to attain to consciousness of self. In opposition to rationalism, he summoned up the negative side, but he forgot that this negativity draws its worth from an almost substantive absoluteness. A consciousness committed to experience is ignorant, has to be ignorant, of the essences and the determinations of its being.

Orphée Noir is a date in the intellectualization of the *experience* of being black. And Sartre's mistake was not only to seek the source of the source but in a certain sense to block that source:

Will the source of Poetry be dried up? Or will the great black flood, in spite of everything, color the sea into which it pours itself? It does not matter: Every age has its own poetry; in every age the circumstances of history choose a nation, a race, a class to take up the torch by creating situations that can be expressed or transcended only through Poetry; sometimes the poetic impulse coincides with the revolutionary impulse, and sometimes they take different courses. Today let us hail the turn of history that will make it possible for the black men to utter "the great Negro cry with a force that will shake the pillars of the world" (Césaire).⁴

And so it is not I who make a meaning for myself, but it is the meaning that was already there, pre-existing, waiting for me. It is not out of my bad nigger's misery, my bad nigger's teeth, my bad nigger's hunger that I will shape a torch with which to burn down the world, but it is the torch that was already there, waiting for that turn of history.

In terms of consciousness, the black consciousness is held out as an absolute density, as filled with itself, a stage preceding any invasion, any abolition

2. Karl Jaspers (1883–1969), German philosopher.

3. Jean-Paul Sartre, *Orphée Noir*, preface to *Anthologie de la nouvelle poésie nègre et malgache* (Paris, Presses Universitaires de France, 1948), pp. xl ff. [Fanon's note]. "Black Orpheus" was the preface by the French philosopher and

novelist Sartre (1905–1980) to *Anthology of New Black and Malagasy Poetry*, edited by Léopold Senghor; it was the first collection of poetry by black French-speaking writers.

4. *Ibid.*, p. xlv [Fanon's note]. The quotation is from Césaire's *Les Armes miraculeuses* (1948, *Miraculous Weapons*).

of the ego by desire. Jean-Paul Sartre, in this work, has destroyed black zeal. In opposition to historical becoming, there had always been the unforeseeable. I needed to lose myself completely in negritude. One day, perhaps, in the depths of that unhappy romanticism. . . .

In any case I *needed* not to know. This struggle, this new decline had to take on an aspect of completeness. Nothing is more unwelcome than the commonplace: "You'll change, my boy; I was like that too when I was young . . . you'll see, it will all pass."

The dialectic that brings necessity into the foundation of my freedom drives me out of myself. It shatters my unreflected position. Still in terms of consciousness, black consciousness is immanent in its own eyes. I am not a potentiality of something, I am wholly what I am. I do not have to look for the universal. No probability has any place inside me. My Negro consciousness does not hold itself out as a lack. It is. It is its own follower.

But, I will be told, your statements show a misreading of the processes of history. Listen then:

Africa I have kept your memory Africa
 you are inside me
 Like the splinter in the wound
 like a guardian fetish in the center of the village
 make me the stone in your sling
 make my mouth the lips of your wound
 make my knees the broken pillars of your abasement
 AND YET
 I want to be of your race alone
 workers peasants of all lands . . .
 . . . white worker in Detroit black peon in Alabama
 uncountable nation in capitalist slavery
 destiny ranges us shoulder to shoulder
 repudiating the ancient maledictions of blood taboos
 we roll away the ruins of our solitudes
 If the flood is a frontier
 we will strip the gully of its endless
 covering flow
 If the Sierra is a frontier
 we will smash the jaws of the volcanoes
 upholding the Cordilleras⁵
 and the plain will be the parade ground of the dawn
 where we regroup our forces sundered
 by the deceptions of our masters
 As the contradiction among the features
 creates the harmony of the face
 we proclaim the oneness of the suffering
 and the revolt
 of all the peoples on all the face of the earth
 and we mix the mortar of the age of brotherhood
 out of the dust of idols.⁶

6. Jacques Roumain, "Bois-d'Ebène" ["Ebony Wood"], Prelude, in *Anthologie de la nouvelle*

poésie nègre et malgache, p. 113 [Fanon's note].
 Roumain (1907–1944), Haitian writer.

Exactly, we will reply, Negro experience is not a whole, for there is not merely *one* Negro, there are *Negroes*. What a difference, for instance, in this other poem:

The white man killed my father
 Because my father was proud
 The white man raped my mother
 Because my mother was beautiful
 The white man wore out my brother in the hot sun
 of the roads
 Because my brother was strong
 Then the white man came to me
 His hands red with blood
 Spat his contempt into my black face
 Out of his tyrant's voice:
 "Hey boy, a basin, a towel, water."⁷

Or this other one:

My brother with teeth that glisten at the compliments
 of hypocrites
 My brother with gold-rimmed spectacles
 Over eyes that turn blue at the sound of the Master's
 voice
 My poor brother in dinner jacket with its silk lapels
 Clucking and whispering and strutting through the
 drawing rooms of Condescension
 How pathetic you are
 The sun of your native country is nothing more now
 than a shadow
 On your composed civilized face
 And your grandmother's hut
 Brings blushes into cheeks made white by years of
 abasement and *Mea culpa*
 But when regurgitating the flood of lofty empty words
 Like the load that presses on your shoulders
 You walk again on the rough red earth of Africa
 These words of anguish will state the rhythm of your
 uneasy gait
 I feel so alone, so alone here!⁸

From time to time one would like to stop. To state reality is a wearing task. But, when one has taken it into one's head to try to express existence, one runs the risk of finding only the nonexistent. What is certain is that, at the very moment when I was trying to grasp my own being, Sartre, who remained The Other, gave me a name and thus shattered my last illusion. While I was saying to him:

My negritude is neither a tower nor a cathedral,
 it thrusts into the red flesh of the sun,

it thrusts into the burning flesh of the sky,
it hollows through the dense dismay of its own pillar
of patience . . .⁹

while I was shouting that, in the paroxysm of my being and my fury, he was reminding me that my blackness was only a minor term. In all truth, in all truth I tell you, my shoulders slipped out of the framework of the world, my feet could no longer feel the touch of the ground. Without a Negro past, without a Negro future, it was impossible for me to live my Negrohood. Not yet white, no longer wholly black, I was damned. Jean-Paul Sartre had forgotten that the Negro suffers in his body quite differently from the white man.¹ Between the white man and me the connection was irrevocably one of transcendence.²

But the constancy of my love had been forgotten. I defined myself as an absolute intensity of beginning. So I took up my negritude, and with tears in my eyes I put its machinery together again. What had been broken to pieces was rebuilt, reconstructed by the intuitive lianas³ of my hands.

My cry grew more violent: I am a Negro, I am a Negro, I am a Negro. . . .

And there was my poor brother—living out his neurosis to the extreme and finding himself paralyzed:

THE NEGRO: I can't, ma'am.

LIZZIE: Why not?

THE NEGRO: I can't shoot white folks.

LIZZIE: Really! That would bother them, wouldn't it?

THE NEGRO: They're white folks, ma'am.

LIZZIE: So what? Maybe they got a right to bleed you like a pig just because they're white?

THE NEGRO: But they're white folks.

A feeling of inferiority? No, a feeling of nonexistence. Sin is Negro as virtue is white. All those white men in a group, guns in their hands, cannot be wrong. I am guilty. I do not know of what, but I know that I am no good.

THE NEGRO: That's how it goes, ma'am. That's how it always goes with white folks.

LIZZIE: You too? You feel guilty?

THE NEGRO: Yes, ma'am.⁴

It is Bigger Thomas—he is afraid, he is terribly afraid. He is afraid, but of what is he afraid? Of himself. No one knows yet who he is, but he knows

9. From Césaire, *Notebook of a Return to My Native Land*.

1. Though Sartre's speculations on the existence of The Other may be correct (to the extent, we must remember, to which *Being and Nothingness* describes an alienated consciousness), their application to a black consciousness proves fallacious. That is because the white man is not only The Other but also the master, whether real or imaginary [Fanon's note]. *Being and Nothingness: An Essay on Phenomenological Ontology* (1943) is Sartre's central work of philosophy.

2. In the sense in which the word is used by Jean Wahl in *Existence humaine et transcendance*

4. Jean-Paul Sartre, *The Respectful Prostitute*, in *Three Plays* (New York, Knopf, 1949), pp. 189, 191. Originally, *La Putain respectueuse* (Paris, Gallimard, 1947). See also *Home of the Brave*, a film by Mark Robson [Fanon's note]. Robson (1913–1978), Canadian-born film director; the 1949 American film was based on a 1946 play by Arthur Laurent.

that fear will fill the world when the world finds out. And when the world knows, the world always expects something of the Negro. He is afraid lest the world know, he is afraid of the fear that the world would feel if the world knew. Like that old woman on her knees who begged me to tie her to her bed:

"I just know, Doctor: Any minute that thing will take hold of me."

"What thing?"

"The wanting to kill myself. Tie me down, I'm afraid."

In the end, Bigger Thomas acts. To put an end to his tension, he acts, he responds to the world's anticipation.⁵

So it is with the character in *If He Hollers Let Him Go*⁶—who does precisely what he did not want to do. That big blonde who was always in his way, weak, sensual, offered, open, fearing (desiring) rape, became his mistress in the end.

The Negro is a toy in the white man's hands; so, in order to shatter the hellish cycle, he explodes. I cannot go to a film without seeing myself. I wait for me. In the interval, just before the film starts, I wait for me. The people in the theater are watching me, examining me, waiting for me. A Negro groom is going to appear. My heart makes my head swim.

The crippled veteran of the Pacific war says to my brother, "Resign yourself to your color the way I got used to my stump; we're both victims."⁷

Nevertheless with all my strength I refuse to accept that amputation. I feel in myself a soul as immense as the world, truly a soul as deep as the deepest of rivers, my chest has the power to expand without limit. I am a master and I am advised to adopt the humility of the cripple. Yesterday, awakening to the world, I saw the sky turn upon itself utterly and wholly. I wanted to rise, but the disemboweled silence fell back upon me, its wings paralyzed. Without responsibility, straddling Nothingness and Infinity, I began to weep.

RECIPROCAL BASES OF NATIONAL CULTURE AND THE FIGHT FOR FREEDOM

Colonial domination, because it is total and tends to oversimplify, very soon manages to disrupt in spectacular fashion the cultural life of a conquered people. This cultural obliteration is made possible by the negation of national reality, by new legal relations introduced by the occupying power, by the banishment of the natives and their customs to outlying districts by colonial society, by expropriation, and by the systematic enslaving of men and women.

Three years ago at our first congress² I showed that, in the colonial situation, dynamism is replaced fairly quickly by a substantification of the attitudes of the colonizing power. The area of culture is then marked off by fences and signposts. These are in fact so many defense mechanisms of the most elementary type, comparable for more than one good reason to the simple instinct for preservation. The interest of this period for us is that the oppressor does not manage to convince himself of the objective non-existence of the oppressed nation and its culture. Every effort is made to bring the colonized person to admit the inferiority of his culture which has been transformed into instinctive patterns of behavior, to recognize the unreality of his "nation," and, in the last extreme, the confused and imperfect character of his own biological structure.

Vis-à-vis this state of affairs, the native's reactions are not unanimous. While the mass of the people maintain intact traditions which are completely different from those of the colonial situation, and the artisanal style solidifies into a formalism which is more and more stereotyped, the intellectual throws himself in frenzied fashion into the frantic acquisition of the culture of the occupying power and takes every opportunity of unfavorably criticizing his own national culture, or else takes refuge in setting out and substantiating the claims of that culture in a way that is passionate but rapidly becomes unproductive.

The common nature of these two reactions lies in the fact that they both lead to impossible contradictions. Whether a turncoat or a substantialist, the native is ineffectual precisely because the analysis of the colonial situation is not carried out on strict lines. The colonial situation calls a halt to national culture in almost every field. Within the framework of colonial domination there is not and there will never be such phenomena as new cultural departures or changes in the national culture. Here and there valiant attempts are sometimes made to reanimate the cultural dynamic and to give fresh impulses to its themes, its forms, and its tonalities. The immediate, palpable, and obvious interest of such leaps ahead is nil. But if we follow up the consequences to the very end we see that preparations are

ists (this chapter is derived from an address delivered in 1959 at the Second Congress, in Rome).

being thus made to brush the cobwebs off national consciousness, to question oppression, and to open up the struggle for freedom.

A national culture under colonial domination is a contested culture whose destruction is sought in systematic fashion. It very quickly becomes a culture condemned to secrecy. This idea of a clandestine culture is immediately seen in the reactions of the occupying power which interprets attachment to traditions as faithfulness to the spirit of the nation and as a refusal to submit. This persistence in following forms of cultures which are already condemned to extinction is already a demonstration of nationality; but it is a demonstration which is a throwback to the laws of inertia. There is no taking of the offensive and no redefining of relationships. There is simply a concentration on a hard core of culture which is becoming more and more shrivelled up, inert, and empty.

By the time a century or two of exploitation has passed there comes about a veritable emaciation of the stock of national culture. It becomes a set of automatic habits, some traditions of dress, and a few broken-down institutions. Little movement can be discerned in such remnants of culture; there is no real creativity and no overflowing life. The poverty of the people, national oppression, and the inhibition of culture are one and the same thing. After a century of colonial domination we find a culture which is rigid in the extreme, or rather what we find are the dregs of culture, its mineral strata. The withering away of the reality of the nation and the death pangs of the national culture are linked to each other in mutual dependence. This is why it is of capital importance to follow the evolution of these relations during the struggle for national freedom. The negation of the native's culture, the contempt for any manifestation of culture whether active or emotional, and the placing outside the pale of all specialized branches of organization contribute to breed aggressive patterns of conduct in the native. But these patterns of conduct are of the reflexive type; they are poorly differentiated, anarchic, and ineffective. Colonial exploitation, poverty, and endemic famine drive the native more and more to open, organized revolt. The necessity for an open and decisive breach is formed progressively and imperceptibly, and comes to be felt by the great majority of the people. Those tensions which hitherto were non-existent come into being. International events, the collapse of whole sections of colonial empires and the contradictions inherent in the colonial system strengthen and uphold the native's combativity while promoting and giving support to national consciousness.

These new-found tensions which are present at all stages in the real nature of colonialism have their repercussions on the cultural plane. In literature, for example, there is relative overproduction. From being a reply on a minor scale to the dominating power, the literature produced by natives becomes differentiated and makes itself into a will to particularism. The intelligentsia, which during the period of repression was essentially a consuming public, now themselves become producers. This literature at first chooses to confine itself to the tragic and poetic style; but later on novels, short stories, and essays are attempted. It is as if a kind of internal organization or law of expression existed which wills that poetic expression become less frequent in proportion as the objectives and the methods of the struggle for liberation become more precise. Themes are completely altered; in fact, we find less and less of bitter, hopeless recrimination and less also of that

violent, resounding, florid writing which on the whole serves to reassure the occupying power. The colonialists have in former times encouraged these modes of expression and made their existence possible. Stinging denunciations, the exposing of distressing conditions and passions which find their outlet in expression are in fact assimilated by the occupying power in a cathartic process. To aid such processes is in a certain sense to avoid their dramatization and to clear the atmosphere.

But such a situation can only be transitory. In fact, the progress of national consciousness among the people modifies and gives precision to the literary utterances of the native intellectual. The continued cohesion of the people constitutes for the intellectual an invitation to go further than his cry of protest. The lament first makes the indictment; and then it makes an appeal. In the period that follows, the words of command are heard. The crystallization of the national consciousness will both disrupt literary styles and themes, and also create a completely new public. While at the beginning the native intellectual used to produce his work to be read exclusively by the oppressor, whether with the intention of charming him or of denouncing him through ethnic or subjectivist means, now the native writer progressively takes on the habit of addressing his own people.

It is only from that moment that we can speak of a national literature. Here there is, at the level of literary creation, the taking up and clarification of themes which are typically nationalist. This may be properly called a literature of combat, in the sense that it calls on the whole people to fight for their existence as a nation. It is a literature of combat, because it molds the national consciousness, giving it form and contours and flinging open before it new and boundless horizons; it is a literature of combat because it assumes responsibility, and because it is the will to liberty expressed in terms of time and space.

On another level, the oral tradition—stories, epics, and songs of the people—which formerly were filed away as set pieces are now beginning to change. The storytellers who used to relate inert episodes now bring them alive and introduce into them modifications which are increasingly fundamental. There is a tendency to bring conflicts up to date and to modernize the kinds of struggle which the stories evoke, together with the names of heroes and the types of weapons. The method of allusion is more and more widely used. The formula “This all happened long ago” is substituted with that of “What we are going to speak of happened somewhere else, but it might well have happened here today, and it might happen tomorrow.” The example of Algeria³ is significant in this context. From 1952–53 on, the storytellers, who were before that time stereotyped and tedious to listen to, completely overturned their traditional methods of storytelling and the contents of their tales. Their public, which was formerly scattered, became compact. The epic, with its typified categories, reappeared; it became an authentic form of entertainment which took on once more a cultural value. Colonialism made no mistake when from 1955 on it proceeded to arrest these storytellers systematically.

The contact of the people with the new movement gives rise to a new rhythm of life and to forgotten muscular tensions, and develops the

3. Officially a part of France in North Africa; it began an armed revolt in 1954. Fanon actively participated in the revolution, which led to Algeria's independence from French rule in 1962.

imagination. Every time the storyteller relates a fresh episode to his public, he presides over a real invocation. The existence of a new type of man is revealed to the public. The present is no longer turned in upon itself but spread out for all to see. The storyteller once more gives free rein to his imagination; he makes innovations and he creates a work of art. It even happens that the characters, which are barely ready for such a transformation—highway robbers or more or less anti-social vagabonds—are taken up and remodeled. The emergence of the imagination and of the creative urge in the songs and epic stories of a colonized country is worth following. The storyteller replies to the expectant people by successive approximations, and makes his way, apparently alone but in fact helped on by his public, toward the seeking out of new patterns, that is to say national patterns. Comedy and farce disappear, or lose their attraction. As for dramatization, it is no longer placed on the plane of the troubled intellectual and his tormented conscience. By losing its characteristics of despair and revolt, the drama becomes part of the common lot of the people and forms part of an action in preparation or already in progress.

Where handicrafts are concerned, the forms of expression which formerly were the dregs of art, surviving as if in a daze, now begin to reach out. Woodwork, for example, which formerly turned out certain faces and attitudes by the million, begins to be differentiated. The inexpressive or overwrought mask comes to life and the arms tend to be raised from the body as if to sketch an action. Compositions containing two, three, or five figures appear. The traditional schools are led on to creative efforts by the rising avalanche of amateurs or of critics. This new vigor in this sector of cultural life very often passes unseen; and yet its contribution to the national effort is of capital importance. By carving figures and faces which are full of life, and by taking as his theme a group fixed on the same pedestal, the artist invites participation in an organized movement.

If we study the repercussions of the awakening of national consciousness in the domains of ceramics and pottery-making, the same observations may be drawn. Formalism is abandoned in the craftsman's work. Jugs, jars, and trays are modified, at first imperceptibly, then almost savagely. The colors, of which formerly there were but few and which obeyed the traditional rules of harmony, increase in number and are influenced by the repercussion of the rising revolution. Certain ochres and blues, which seemed forbidden to all eternity in a given cultural area, now assert themselves without giving rise to scandal. In the same way the stylization of the human face, which according to sociologists is typical of very clearly defined regions, becomes suddenly completely relative. The specialist coming from the home country and the ethnologist are quick to note these changes. On the whole such changes are condemned in the name of a rigid code of artistic style and of a cultural life which grows up at the heart of the colonial system. The colonialist specialists do not recognize these new forms and rush to the help of the traditions of the indigenous society. It is the colonialists who become the defenders of the native style. We remember perfectly, and the example took on a certain measure of importance since the real nature of colonialism was not involved, the reactions of the white jazz specialists when after the Second World War new styles such as the be-bop took definite shape. The fact is that in their eyes jazz should only be the despairing,

broken-down nostalgia of an old Negro who is trapped between five glasses of whiskey, the curse of his race, and the racial hatred of the white men. As soon as the Negro comes to an understanding of himself, and understands the rest of the world differently, when he gives birth to hope and forces back the racist universe, it is clear that his trumpet sounds more clearly and his voice less hoarsely. The new fashions in jazz are not simply born of economic competition. We must without any doubt see in them one of the consequences of the defeat, slow but sure, of the southern world of the United States. And it is not utopian to suppose that in fifty years' time the type of jazz howl hiccuped by a poor misfortunate Negro will be upheld only by the whites who believe in it as an expression of negritude, and who are faithful to this arrested image of a type of relationship.

We might in the same way seek and find in dancing, singing, and traditional rites and ceremonies the same upward-springing trend, and make out the same changes and the same impatience in this field. Well before the political or fighting phase of the national movement, an attentive spectator can thus feel and see the manifestation of new vigor and feel the approaching conflict. He will note unusual forms of expression and themes which are fresh and imbued with a power which is no longer that of invocation but rather of the assembling of the people, a summoning together for a precise purpose. Everything works together to awaken the native's sensibility and to make unreal and unacceptable the contemplative attitude, or the acceptance of defeat. The native rebuilds his perceptions because he renews the purpose and dynamism of the craftsmen, of dancing and music, and of literature and the oral tradition. His world comes to lose its accursed character. The conditions necessary for the inevitable conflict are brought together.

We have noted the appearance of the movement in cultural forms and we have seen that this movement and these new forms are linked to the state of maturity of the national consciousness. Now, this movement tends more and more to express itself objectively, in institutions. From thence comes the need for a national existence, whatever the cost.

A frequent mistake, and one which is moreover hardly justifiable, is to try to find cultural expressions for and to give new values to native culture within the framework of colonial domination. This is why we arrive at a proposition which at first sight seems paradoxical: the fact that in a colonized country the most elementary, most savage, and the most undifferentiated nationalism is the most fervent and efficient means of defending national culture. For culture is first the expression of a nation, the expression of its preferences, of its taboos and of its patterns. It is at every stage of the whole of society that other taboos, values, and patterns are formed. A national culture is the sum total of all these appraisals; it is the result of internal and external tensions exerted over society as a whole and also at every level of that society. In the colonial situation, culture, which is doubly deprived of the support of the nation and of the state, falls away and dies. The condition for its existence is therefore national liberation and the renaissance of the state.

The nation is not only the condition of culture, its fruitfulness, its continuous renewal, and its deepening. It is also a necessity. It is the fight for national existence which sets culture moving and opens to it the doors of creation. Later on it is the nation which will ensure the conditions and framework necessary to culture. The nation gathers together the various indispensable

elements necessary for the creation of a culture, those elements which alone can give it credibility, validity, life, and creative power. In the same way it is its national character that will make such a culture open to other cultures and which will enable it to influence and permeate other cultures. A non-existent culture can hardly be expected to have bearing on reality, or to influence reality. The first necessity is the re-establishment of the nation in order to give life to national culture in the strictly biological sense of the phrase.

Thus we have followed the breakup of the old strata of culture, a shattering which becomes increasingly fundamental; and we have noticed, on the eve of the decisive conflict for national freedom, the renewing of forms of expression and the rebirth of the imagination. There remains one essential question: what are the relations between the struggle—whether political or military—and culture? Is there a suspension of culture during the conflict? Is the national struggle an expression of a culture? Finally, ought one to say that the battle for freedom however fertile *a posteriori* with regard to culture is in itself a negation of culture? In short, is the struggle for liberation a cultural phenomenon or not?

We believe that the conscious and organized undertaking by a colonized people to re-establish the sovereignty of that nation constitutes the most complete and obvious cultural manifestation that exists. It is not alone the success of the struggle which afterward gives validity and vigor to culture; culture is not put into cold storage during the conflict. The struggle itself in its development and in its internal progression sends culture along different paths and traces out entirely new ones for it. The struggle for freedom does not give back to the national culture its former value and shapes; this struggle which aims at a fundamentally different set of relations between men cannot leave intact either the form or the content of the people's culture. After the conflict there is not only the disappearance of colonialism but also the disappearance of the colonized man.

This new humanity cannot do otherwise than define a new humanism both for itself and for others. It is prefigured in the objectives and methods of the conflict. A struggle which mobilizes all classes of the people and which expresses their aims and their impatience, which is not afraid to count almost exclusively on the people's support, will of necessity triumph. The value of this type of conflict is that it supplies the maximum of conditions necessary for the development and aims of culture. After national freedom has been obtained in these conditions, there is no such painful cultural indecision which is found in certain countries which are newly independent, because the nation by its manner of coming into being and in the terms of its existence exerts a fundamental influence over culture. A nation which is born of the people's concerted action and which embodies the real aspirations of the people while changing the state cannot exist save in the expression of exceptionally rich forms of culture.

The natives who are anxious for the culture of their country and who wish to give to it a universal dimension ought not therefore to place their confidence in the single principle of inevitable, undifferentiated independence written into the consciousness of the people in order to achieve their task. The liberation of the nation is one thing; the methods and popular content of the fight are another. It seems to us that the future of national culture

and its riches are equally also part and parcel of the values which have ordained the struggle for freedom.

And now it is time to denounce certain pharisees. National claims, it is here and there stated, are a phase that humanity has left behind. It is the day of great concerted actions, and retarded nationalists ought in consequence to set their mistakes aright. We however consider that the mistake, which may have very serious consequences, lies in wishing to skip the national period. If culture is the expression of national consciousness, I will not hesitate to affirm that in the case with which we are dealing it is the national consciousness which is the most elaborate form of culture.

The consciousness of self is not the closing of a door to communication. Philosophic thought teaches us, on the contrary, that it is its guarantee. National consciousness, which is not nationalism, is the only thing that will give us an international dimension. This problem of national consciousness and of national culture takes on in Africa a special dimension. The birth of national consciousness in Africa has a strictly contemporaneous connection with the African consciousness. The responsibility of the African as regards national culture is also a responsibility with regard to African Negro culture. This joint responsibility is not the fact of a metaphysical principle but the awareness of a simple rule which wills that every independent nation in an Africa where colonialism is still entrenched is an encircled nation, a nation which is fragile and in permanent danger.

If man is known by his acts, then we will say that the most urgent thing today for the intellectual is to build up his nation. If this building up is true, that is to say if it interprets the manifest will of the people and reveals the eager African peoples, then the building of a nation is of necessity accompanied by the discovery and encouragement of universalizing values. Far from keeping aloof from other nations, therefore, it is national liberation which leads the nation to play its part on the stage of history. It is at the heart of national consciousness that international consciousness lives and grows. And this two-fold emerging is ultimately only the source of all culture.

1961

GILLES DELEUZE
1925–1995

FÉLIX GUATTARI
1930–1992

Alternately hailed or dismissed in North America as the “enfants terribles” of post-structuralist philosophy and psychoanalysis following the publication of their *Anti-Oedipus: Capitalism and Schizophrenia* (1972), Gilles Deleuze and Félix Guattari are known for their antiestablishment thinking in many domains. Trained as a philosopher and a psychoanalyst, respectively, Deleuze and Guattari critique the patterns of knowledge that govern the disciplines in which they were schooled. In the process, they question the dominance of conceptual stability, organization, and unity as such. Their critique is well summed up in their pun on the word “General”:

knowledge functions like an operation of conquest and mastery, driven by “generality” as if it were a military “General.”

Born in Paris to a middle-class family, Deleuze was educated in the French university system and taught philosophy at the University of Paris at Vincennes (now St. Denis) from 1969 until his retirement in 1987. At the time of the 1968 student-worker revolts in France, Deleuze began to write books in his “own” voice, aiming to replace official philosophy with what he called “bastard” philosophy. Deleuze declared that his early writings, such as *Empiricism and Subjectivity: An Essay on Hume's Theory of Nature* (1953) and *Bergsonism* (1966), still too closely resembled those of an “academic bureaucrat.” In his *Nietzsche and Philosophy* (1962) but especially in *Difference and Repetition* (1968), *The Logic of Sense* (1969), and *Spinoza: Practical Philosophy* (1970), Deleuze developed a new philosophy of becoming and exteriority—joining an orphan line of metaphysical thinkers that includes Lucretius, BARUCH SPINOZA, Gottfried Leibniz, DAVID HUME, FRIEDRICH NIETZSCHE, and Henri Bergson—that his work combines with various other strands of contemporary theory.

In the interdisciplinary mix of French philosophy and theory of the 1960s and 1970s, he came in contact with the person who would become his “intercessor” for many years, Félix Guattari, a practicing psychoanalyst and political activist. Guattari, usually said to be the more “delirious” of the two, was born in the Paris suburb of Colombes and had received an erratic education; never having earned any official degrees, he had worked since the mid-1950s at La Borde, a psychiatric hospital outside Paris known for innovative practices in group therapy. One of JACQUES LACAN's earliest trainees, Guattari quickly took leave of the master. Lacan, he felt, had transformed structural psychoanalysis into a religion devoted to cultivating and initiating followers. Guattari's antihierarchical and anarchic tendencies drew him into an alliance with Deleuze. Together they wrote the polemical *Anti-Oedipus*.

Described by MICHEL FOUCAULT as “an introduction to non-fascist living,” *Anti-Oedipus* was an immediate sensation in France and soon thereafter in England, Canada, and the United States, where it became an academic bestseller when its translation appeared in 1983. It was hailed as a productive attack not only on state philosophy but also on the orthodox Marxism and institutional Freudianism that pervaded the postwar years. In the view of Deleuze and Guattari, psychoanalysis combines with capitalism to channel and control desire, not to liberate it. As a negative critique, the book is more interested in freeing the forces that have been constrained than in proposing alternatives.

After this moment of destruction, they experimented with a philosophy of becoming. In another of their books, *Kafka: Toward a Minor Literature* (1975; trans. 1986), from which we have taken our first selection, Deleuze and Guattari claim that Franz Kafka (1883–1924), although writing in a dominant language (German), introduces into it elements of his own Jewish, minoritarian culture. He thus recomposes dominant ways of thinking with elements of a minority culture to produce something entirely different—a minor literature—thereby undermining power. But Deleuze and Guattari make clear that it does not suffice to *be* Jewish. One has to *become* Jewish—or minoritarian—in an ongoing way. The “outside” is never a *given*. Consider SIGMUND FREUD, whose own relation to dominant German culture was similar to Kafka's. Freud considered himself an observer whose distance from the “compact majority” enabled him to explore the hidden forces underlying the culture around him. Yet over time, according to Deleuze and Guattari, those explorations had become hardened into doctrine.

A Thousand Plateaus: Capitalism and Schizophrenia, the sequel to *Anti-Oedipus*, appeared in 1980. The least well received of their books, as Deleuze and Guattari proudly admitted, its project is very different from that of its predecessor. It is more a work of art, a positive exercise in the productive desire and affirmative “nomad” thought that *Anti-Oedipus* called for. The book's introductory chapter (or “plateau”),

from which our second selection is taken, is titled "Rhizome" and is often cited as an exemplary text of postmodern philosophy.

Deleuze and Guattari claim that state philosophy as practiced in the academy is a form of the representational thought that has dominated the West since PLATO. Representation posits the self-identity of the thinking subject. The subject, the concepts, and the objects in the world are thus presumed to share a self-resemblance essential for maintaining their identity. Representational thought establishes a correspondence between two symmetrical domains. It is analogical: the success of a representation is derived from its accuracy, its closeness to an original, which nevertheless remains more "real." Deleuze and Guattari take the mimetic hierarchy described by Plato and turn it on its side. Whereas the traditional model for knowledge is drawn from plants with "roots" (the ground or origin that leads to the main growth through genealogy or evolution), Deleuze and Guattari draw their metaphor from fungal "rhizomes"—a network of threads that can send up new growths anywhere along their length, not subject to centralized control or structure. This logic (or rather, nonlogic) is exemplified by invasive species such as mushrooms and crabgrass that proliferate without a controlling structure. As Deleuze and Guattari suggest, the same antihierarchical perspective is what may have led Walt Whitman to choose *Leaves of Grass* (1855) as the title for his book of poems. They thus replace the rooted tree (the Western metaphor for knowledge par excellence) with the rhizome, conceived as an adventitious mode of thinking that grows between things and produces offshoots in unforeseen directions. It is striking that FERDINAND DE SAUSSURE (1857–1913) should choose "tree" as his example of a sign—his structural linguistics conform exactly to the static, binary logic that Deleuze and Guattari critique. (See also Lacan's tribute to the importance of the tree in Western culture, above.)

In their difficult yet rewarding texts, Deleuze and Guattari distinguish between the segment—that is, the official, "molar" line that occupies a given social or political position—and another, "molecular" line that begins to separate itself, and to disaggregate, from the first. Thus, for example, in *Anti-Oedipus* Deleuze and Guattari—both married—write: "We are heterosexuals statistically or in molar terms, but homosexuals personally, whether we know it or not, and finally transsexuals elementarily, molecularly." Sexuality for them is that experience of desire that breaks through any self-definition; requires a new, temporarily synthesized multiplicity; and yet does not provide a new identity. The de-Oedipalized body becomes a "Body without Organs," a "desiring-machine" not governed by "phases" of development and not organized into "bundles" or knowable "organs."

Rhizomatic thinking promotes becoming, not being. Deleuze and Guattari state—a statement for which they have been much criticized—that because of the special relation of women to the man-standard, all becomings (-child, -animal, -vegetal, -intense) begin with the "becoming-woman" of man. But the "becoming-woman" of man may involve the renunciation not only of sexuality as mastery but also of family trees as trees: "family trees" resemble trees only when the patriarchal name is followed, and when one particular generation or individual is the focus. A true map of all lines—male and female, legitimate and illegitimate—even in heterosexual reproduction would resemble a rhizome, not a tree. At the same time, the women who have been invisible in the family tree cannot simply become an alternative to it. Women, as well as homosexuals, Jews, and blacks, according to Deleuze and Guattari, must constantly reinvent themselves as "minoritarian" to avoid becoming a minority as a new state. This way of being in, and open to, the world is called "ethics" by Spinoza; Deleuze and Guattari call it pragmatics. And for them, books themselves are pragmatic assemblages or tool kits for becoming.

The rhizome replaces, or at least complements, history (the story people tell) with geography (the ground they inhabit). A "map," for Deleuze and Guattari, is a drawing that is and *transforms* the object it purportedly represents; a "tracing" merely tries to duplicate the object. Yet the rhizomatic process is not pure "dissemination": it is

structured, but not organized, by moments of synthesis. Always in movement, a rhizome has neither beginning nor end. Influenced by theories of chaos and complexity, Deleuze and Guattari claim to study subjectivity where it emerges, society where it mutates, and the world where it is re-created. With the development of the Internet and virtual reality, we have already in some ways entered the rhizomatic structures they describe; but there is no guarantee that the logics they critique have therefore disappeared.

In literature, Deleuze and Guattari do not look for meaning. When reading Heinrich von Kleist (1777–1811) or Franz Kafka against alleged state writers such as Johann Wolfgang von Goethe (1749–1832), or when reading HENRY JAMES (1843–1916) or the twentieth-century writers F. Scott Fitzgerald, VIRGINIA WOOLF, or Nathalie Sarraute, they look for the lines of flight by means of which these writers detach themselves—and their texts—from an immobilizing order. In becoming, these writers “deterritorialize” themselves from and within official culture before “reterritorializing” themselves elsewhere.

From the early 1980s up to his death, Deleuze continued to emphasize the need to mesh aesthetics and philosophy. After *A Thousand Plateaus*, he studied the affective potential of color and line in *Francis Bacon: The Logic of Sensation* (1981); in that work he notes the Irish-born British painter's capacity to affect and to be affected by chromatic vibration. Architecture, logic, and aesthetics are examined as events in *The Fold: Leibniz and the Baroque* (1988), where Deleuze further writes about the world as a set of lines in relations of movement and rest. His two-volume analysis of cinema invents a taxonomy to replace the one underlying linguistic theories of film. The first volume, *The Movement-Image* (1983), projects the lexicon of classical cinema (close-up, medium shot, long shot) into a philosophical field that associates bodily sensation with mobility, whose effect constitutes cinematic events in the first fifty years of cinema's history. In the second, *The Time-Image* (1985), Deleuze analyzes the effect of duration, invention, and the absence of mimesis in films that follow the aftermath of World War II.

Concurrently, Félix Guattari also published on his own. Developing long-standing relations with radical Italian social groups, he collaborated with the philosopher and political activist ANTONIO NEGRI. It was, for him, a line of flight away from a fashionable intellectual lassitude reigning in France. He loathed postmodern melancholia, which he excoriated repeatedly. In *The Three Ecologies* (1989), one of his most forceful essays, Guattari mobilizes concepts developed elsewhere with Deleuze. Discussing the relations between thought and politics, he clarifies his theoretical and political stance on many contemporary issues, ranging from the exploitation of women to problems of the third world to racism and environmental degradation. He also reemphasizes the importance of literary texts and broaches the difference between militancy and artistic invention in what he calls the converging of aesthetics, ethics, and politics. The slim volume serves as an indication of how Guattari's thought evolved after texts like “Rhizome.” Without reverting back to prestructuralism or to phenomenological analyses, Guattari pleaded for a philosophy of becoming (now renamed “ecosophy”) in more openly existential terms.

Deleuze's *Negotiations* (1990) records a series of interviews from 1972 to 1990. Emphasis is placed on the urgency of practicing philosophy in view of the controlling discourses of power—namely, religion, capitalism, science, law, television, and public opinion. He too makes a case for philosophy as guerrilla warfare not just in the streets but within subjects themselves. In the same vein, Deleuze and Guattari wrote their last joint work, the compelling *What Is Philosophy?* (1991), which had an impact similar to that of *Anti-Oedipus*. They reiterate their belief in the continued importance of philosophy as a way of thinking and a mode of action. The inseparability of thought from context informs the hybrid nature of all national philosophical and literary traditions.

Affirmation and *action* were key words in the lexicon and the lives of Deleuze and Guattari. In addition to writing on literature and the arts, Guattari unsuccessfully

ran for office in the French Green Party, shortly before his untimely death from a heart attack in 1992. In essays written for *Le Monde diplomatique* he stressed the necessity of restructuring social thought and action. In "The Exhausted," an afterword of sorts to Samuel Beckett's *Quad and Other Plays for Television* (1992), Deleuze reflects that the exhausted person—in contrast to the tired person—has exhausted all the possibilities. For the next three years, he nonetheless continued to teach and write while cancer ravaged his body. In 1995 he jumped to his death from the window of his Parisian apartment.

From Kafka: Toward a Minor Literature¹

From Chapter 3. What Is a Minor Literature?

* * *

A minor literature doesn't come from a minor language; it is rather that which a minority constructs within a major language. But the first characteristic of minor literature in any case is that in it language is affected with a high coefficient of deterritorialization. In this sense, Kafka² marks the impasse that bars access to writing for the Jews of Prague and turns their literature into something impossible—the impossibility of not writing, the impossibility of writing in German, the impossibility of writing otherwise.³ The impossibility of not writing because national consciousness, uncertain or oppressed, necessarily exists by means of literature ("The literary struggle has its real justification at the highest possible levels"). The impossibility of writing other than in German is for the Prague Jews the feeling of an irreducible distance from their primitive Czech territoriality. And the impossibility of writing in German is the deterritorialization of the German population itself, an oppressive minority that speaks a language cut off from the masses, like a "paper language" or an artificial language; this is all the more true for the Jews who are simultaneously a part of this minority and excluded from it, like "gypsies who have stolen a German child from its crib." In short, Prague German is a deterritorialized language, appropriate for strange and minor uses. (This can be compared in another context to what blacks in America today are able to do with the English language.)

The second characteristic of minor literatures is that everything in them is political. In major literatures, in contrast, the individual concern (familial, marital, and so on) joins with other no less individual concerns, the social milieu serving as a mere environment or a background; this is so much the

1. Translated by Dana Polan, who occasionally retains the original French in parentheses.

2. Franz Kafka (1883–1924), Jewish Austrian writer who lived much of his life in Prague and wrote in German; his work is here the focus of the process of "becoming-minor."

3. See letter to [Max] Brod, Kafka, *Letters*, June

1921, and commentaries in [Klaus] Wagenbach, *Franz Kafka: Années de jeunesse* [1958] [Deleuze and Guattari's note]. Some of the authors' notes have been omitted. Brod (1884–1968), a close friend and biographer of Kafka; he disobeyed the dying Kafka's request to destroy his papers.

case that none of these Oedipal intrigues are specifically indispensable or absolutely necessary but all become as one in a large space. Minor literature is completely different; its cramped space forces each individual intrigue to connect immediately to politics. The individual concern thus becomes all the more necessary, indispensable, magnified, because a whole other story is vibrating within it. In this way, the family triangle connects to other triangles—commercial, economic, bureaucratic, juridical—that determine its values. When Kafka indicates that one of the goals of a minor literature is the “purification of the conflict that opposes father and son and the possibility of discussing that conflict,” it isn’t a question of an Oedipal phantasm⁴ but of a political program. “Even though something is often thought through calmly, one still does not reach the boundary where it connects up with similar things, one reaches the boundary soonest in politics, indeed, one even strives to see it before it is there, and often sees this limiting boundary everywhere. . . . What in great literature goes on down below, constituting a not indispensable cellar of the structure, here takes place in the full light of day, what is there a matter of passing interest for a few, here absorbs everyone no less than as a matter of life and death.”⁵

The third characteristic of minor literature is that in it everything takes on a collective value. Indeed, precisely because talent isn’t abundant in a minor literature, there are no possibilities for an individuated enunciation that would belong to this or that “master” and that could be separated from a collective enunciation. Indeed, scarcity of talent is in fact beneficial and allows the conception of something other than a literature of masters; what each author says individually already constitutes a common action, and what he or she says or does is necessarily political, even if others aren’t in agreement. The political domain has contaminated every statement (*énoncé*).⁶ But above all else, because collective or national consciousness is “often inactive in external life and always in the process of break-down,” literature finds itself positively charged with the role and function of collective, and even revolutionary, enunciation. It is literature that produces an active solidarity in spite of skepticism; and if the writer is in the margins or completely outside his or her fragile community, this situation allows the writer all the more the possibility to express another possible community and to forge the means for another consciousness and another sensibility; just as the dog of “Investigations”⁷ calls out in his solitude to *another science*. The literary machine thus becomes the relay for a revolutionary machine-to-come, not at all for ideological reasons but because the literary machine alone is determined to fill the conditions of a collective enunciation that is lacking elsewhere in this milieu: *literature is the people’s concern*.⁸ It is certainly in these terms that Kafka sees the problem. The message doesn’t refer back to an enunciating subject who would be its cause, no more than to a subject of the statement (*sujet d’énoncé*) who would be its effect. Undoubtedly, for a while, Kafka thought according to these traditional categories of the two subjects, the author and the hero, the narrator and the

4. That is, the Oedipus complex—the desire of a young boy for his mother that makes him view his father as a competitor—described by SIGMUND FREUD (1856–1939).

5. Kafka, *Diaries*, December 25, 1911 [Deleuze and Guattari’s note].

6. *Énoncé* (French) is the statement or content of

an utterance; *énonciation* is the act of uttering it.

7. “Investigations of a Dog” is the title of a story by Kafka.

8. Kafka, *Diaries*, December 25, 1911: “[L]iterature is less a concern of literary history, than of the people” [Deleuze and Guattari’s note].

character, the dreamer and the one dreamed of. But he will quickly reject the role of the narrator, just as he will refuse an author's or master's literature, despite his admiration for Goethe. Josephine the mouse⁹ renounces the individual act of singing in order to melt into the collective enunciation of "the immense crowd of the heros of [her] people." A movement from the individuated animal to the pack or to a collective multiplicity—seven canine musicians. In "The Investigations of a Dog," the expressions of the solitary researcher tend toward the assemblage (*agencement*) of a collective enunciation of the canine species even if this collectivity is no longer or not yet given. There isn't a subject; *there are only collective assemblages of enunciation*, and literature expresses these acts insofar as they're not imposed from without and insofar as they exist only as diabolical powers to come or revolutionary forces to be constructed. Kafka's solitude opens him up to everything going on in history today. The letter K¹ no longer designates a narrator or a character but an assemblage that becomes all the more machine-like, an agent that becomes all the more collective because an individual is locked into it in his or her solitude (it is only in connection to a subject that something individual would be separable from the collective and would lead its own life).

The three characteristics of minor literature are the deterritorialization of language, the connection of the individual to a political immediacy, and the collective assemblage of enunciation. We might as well say that minor no longer designates specific literatures but the revolutionary conditions for every literature within the heart of what is called great (or established) literature. Even he who has the misfortune of being born in the country of a great literature must write in its language, just as a Czech Jew writes in German, or an Ouzbekian writes in Russian. Writing like a dog digging a hole, a rat digging its burrow.² And to do that, finding his own point of underdevelopment, his own *patois*, his own third world, his own desert. There has been much discussion of the questions "What is a marginal literature?" and "What is a popular literature, a proletarian literature?" The criteria are obviously difficult to establish if one doesn't start with a more objective concept—that of minor literature. Only the possibility of setting up a minor practice of major language from within allows one to define popular literature, marginal literature, and so on. Only in this way can literature really become a collective machine of expression and really be able to treat and develop its contents. Kafka emphatically declares that a minor literature is much more able to work over its material.³ Why this machine of expression, and what is it? We know that it is in a relation of multiple deterritorializations with language; it is the situation of the Jews who have dropped the Czech language at the same time as the rural environment, but it is also the situation of the German language as a "paper language." Well, one can go even farther; one can push this movement of deterritorialization of expression even farther. But there are only two ways to do this. One way is to artificially enrich this German, to swell it up through all the resources of symbolism, of oneirism,

9. Title character in "Josephine the Singer, or the Mouse Folk," the last story written by Kafka. Johann Wolfgang von Goethe (1749–1832), magisterial German poet, playwright, and novelist.

1. The hero of *The Castle* (1926), a posthumously published unfinished novel by Kafka, is known only as K.; the hero of *The Trial* (1925), another

posthumously published unfinished novel, is Joseph K.

2. "The Burrow" is a story by Kafka.

3. Kafka, *Diaries*, December 25, 1911: "A small nation's memory is not smaller than the memory of a large one and so can digest the existing material more thoroughly" [Deleuze and Guattari's note].

of esoteric sense, of a hidden signifier. This is the approach of the Prague school, Gustav Meyrink and many others, including Max Brod.⁴ But this attempt implies a desperate attempt at symbolic reterritorialization, based in archetypes, Kabbala, and alchemy, that accentuates its break from the people and will find its political result only in Zionism and such things as the “dream of Zion.”⁵ Kafka will quickly choose the other way, or, rather, he will invent another way. He will opt for the German language of Prague as it is and in its very poverty. Go always farther in the direction of deterritorialization, to the point of sobriety. Since the language is arid, make it vibrate with a new intensity. Oppose a purely intensive usage of language to all symbolic or even significant or simply signifying usages of it. Arrive at a perfect and unformed expression, a materially intense expression. (For these two possible paths, couldn’t we find the same alternatives, under other conditions, in Joyce and Beckett?⁶ As Irishmen, both of them live within the genial conditions of a minor literature. That is the glory of this sort of minor literature—to be the revolutionary force for all literature. The utilization of English and of every language in Joyce. The utilization of English and French in Beckett. But the former never stops operating by exhilaration and overdetermination and brings about all sorts of worldwide reterritorializations. The other proceeds by dryness and sobriety, a willed poverty, pushing deterritorialization to such an extreme that nothing remains but intensities.)

How many people today live in a language that is not their own? Or no longer, or not yet, even know their own and know poorly the major language that they are forced to serve? This is the problem of immigrants, and especially of their children, the problem of minorities, the problem of a minor literature, but also a problem for all of us: how to tear a minor literature away from its own language, allowing it to challenge the language and making it follow a sober revolutionary path? How to become a nomad and an immigrant and a gypsy in relation to one’s own language? Kafka answers: steal the baby from its crib, walk the tightrope.

*From A Thousand Plateaus: Capitalism and Schizophrenia*¹

From Introduction: Rhizome

The two of us wrote *Anti-Oedipus*² together. Since each of us was several, there was already quite a crowd. Here we have made use of everything that

4. See the excellent chapter “Prague at the Turn of the Century,” in Wagenbach, *Franz Kafka*, on the situation of the German language in Czechoslovakia and on the Prague School [Deleuze and Guattari’s note]. Meyrink (1868–1932), German author of occult fiction, including the novel *The Golem* (1915).

5. The Jewish homeland in Palestine, sought by Zionism and achieved in the establishment of the State of Israel in 1948. Kabbala: a system of Jewish mysticism, especially the esoteric theosophy of the 13th century and later (also spelled “Cabala”).

6. Samuel Beckett (1906–1989), Irish-born novelist and playwright who published in both French and English. James Joyce (1882–1941), Irish writer whose fiction is extraordinarily innovative in technique and language. Both wrote outside Ireland.

1. Translated by Brian Massumi, who occasionally retains the original French in parentheses.

2. *Anti-Oedipus: Capitalism and Schizophrenia*, to which this work is a sequel, was published in French in 1972.

came within range, what was closest as well as farthest away. We have assigned clever pseudonyms to prevent recognition. Why have we kept our own names? Out of habit, purely out of habit. To make ourselves unrecognizable in turn. To render imperceptible, not ourselves, but what makes us act, feel, and think. Also because it's nice to talk like everybody else, to say the sun rises, when everybody knows it's only a manner of speaking. To reach, not the point where one no longer says I, but the point where it is no longer of any importance whether one says I. We are no longer ourselves. Each will know his own. We have been aided, inspired, multiplied.

A book has neither object nor subject; it is made of variously formed matters, and very different dates and speeds. To attribute the book to a subject is to overlook this working of matters, and the exteriority of their relations. It is to fabricate a beneficent God to explain geological movements. In a book, as in all things, there are lines of articulation or segmentarity, strata and territories; but also lines of flight, movements of deterritorialization and destratification. Comparative rates of flow on these lines produce phenomena of relative slowness and viscosity, or, on the contrary, of acceleration and rupture. All this, lines and measurable speeds, constitutes an *assemblage*. A book is an assemblage of this kind, and as such is unattributable. It is a multiplicity—but we don't know yet what the multiple entails when it is no longer attributed, that is, after it has been elevated to the status of a substantive. One side of a machinic assemblage faces the strata, which doubtless make it a kind of organism, or signifying totality, or determination attributable to a subject; it also has a side facing a *body without organs*,³ which is continually dismantling the organism, causing asignifying particles or pure intensities to pass or circulate, and attributing to itself subjects that it leaves with nothing more than a name as the trace of an intensity. What is the body without organs of a book? There are several, depending on the nature of the lines considered, their particular grade or density, and the possibility of their converging on a "plane of consistency" assuring their selection. Here, as elsewhere, the units of measure are what is essential: *quantify writing*. There is no difference between what a book talks about and how it is made. Therefore a book also has no object. As an assemblage, a book has only itself, in connection with other assemblages and in relation to other bodies without organs. We will never ask what a book means, as signified or signifier;⁴ we will not look for anything to understand in it. We will ask what it functions with, in connection with what other things it does or does not transmit intensities, in which other multiplicities its own are inserted and metamorphosed, and with what bodies without organs it makes its own converge. A book exists only through the outside and on the outside. A book itself is a little machine; what is the relation (also measurable) of this literary machine to a war machine, love machine, revolutionary machine, etc.—and an *abstract machine* that sweeps them along? We have been criticized for overquoting literary authors. But when one writes, the only question is which other machine the literary

3. A way of thinking about bodily experience as an interconnected system of flows and forces rather than a structure of organs. Also referred to as *BwO*, it highlights the difference between the unpredictable live body and the dissectable dead body and sees the body as a ceaseless "desiring-machine."

4. The terms come from the structural theory of language developed by FERDINAND DE SAUSSURE (1857–1913). The division of the "sign" into "signifier" (the material of the sign) and "signified" (the meaning of the sign) mirrors the division between matter and meaning that Deleuze and Guattari aim to displace here.

machine can be plugged into, must be plugged into in order to work. Kleist and a mad war machine, Kafka⁵ and a most extraordinary bureaucratic machine . . . (What if one became animal or plant *through* literature, which certainly does not mean literarily? Is it not first through the voice that one becomes animal?) Literature is an assemblage. It has nothing to do with ideology. There is no ideology and never has been.

All we talk about are multiplicities, lines, strata and segmentarities, lines of flight and intensities, machinic assemblages and their various types, bodies without organs and their construction and selection, the plane of consistency, and in each case the units of measure. *Stratometers, deleometers*,⁶ *BwO units of density*, *BwO units of convergence*: Not only do these constitute a quantification of writing, but they define writing as always the measure of something else. Writing has nothing to do with signifying. It has to do with surveying, mapping, even realms that are yet to come.

A first type of book is the root-book. The tree is already the image of the world, or the root the image of the world-tree. This is the classical book, as noble, signifying, and subjective organic interiority (the strata of the book). The book imitates the world, as art imitates nature: by procedures specific to it that accomplish what nature cannot or can no longer do. The law of the book is the law of reflection, the One that becomes two. How could the law of the book reside in nature, when it is what presides over the very division between world and book, nature and art? One becomes two: whenever we encounter this formula, even stated strategically by Mao⁷ or understood in the most "dialectical" way possible, what we have before us is the most classical and well reflected, oldest, and weariest kind of thought. Nature doesn't work that way: in nature, roots are taproots with a more multiple, lateral, and circular system of ramification, rather than a dichotomous one. Thought lags behind nature. Even the book as a natural reality is a taproot, with its pivotal spine and surrounding leaves. But the book as a spiritual reality, the Tree or Root as an image, endlessly develops the law of the One that becomes two, then of the two that become four . . . Binary logic⁸ is the spiritual reality of the root-tree. Even a discipline as "advanced" as linguistics retains the root-tree as its fundamental image, and thus remains wedded to classical reflection (for example, Chomsky⁹ and his grammatical trees, which begin at a point S and proceed by dichotomy). This is as much as to say that this system of thought has never reached an understanding of multiplicity: in order to arrive at two following a spiritual method it must assume a strong principal unity. On the side of the object, it is no doubt possible, following the natural method, to go directly from One to three, four, or five, but only if

5. Franz Kafka (1883–1924), Austrian novelist and short story writer who lived much of his life in Prague; he memorably depicted the bureaucratic machine in his unfinished novel *The Castle* (1926). Heinrich von Kleist (1777–1811), German writer of plays and novellas; his play *Prince Friedrich von Homburg* (1811) is concerned with the "war machine."

6. Deleuze and Guattari's coinage: conversions into lines of death.

7. Mao Zedong (1893–1976), leader and principal Marxist theorist of China's communist revolution; the phrase "one becomes two" (applied to

the birth of children) appears in his *Examples of Dialectics* (1959).

8. The logic of either/or, in which all values come in pairs of opposition.

9. Noam Chomsky (b. 1928), American linguist who devised transformational-generative grammar, which attempts to relate sentences with different structures and account for all the acceptable sentences of a language by differentiating between "deep structures" (innate and unconscious forms that ensure competence) and "surface structures" (the particular sentences into which the deep structures are transformed in performance).

there is a strong principal unity available, that of the pivotal taproot supporting the secondary roots. That doesn't get us very far. The binary logic of dichotomy has simply been replaced by biunivocal¹ relationships between successive circles. The pivotal taproot provides no better understanding of multiplicity than the dichotomous root. One operates in the object, the other in the subject. Binary logic and biunivocal relationships still dominate psychoanalysis (the tree of delusion in the Freudian interpretation of Schreber's² case), linguistics, structuralism, and even information science.

The radicle-system, or fascicular root,³ is the second figure of the book, to which our modernity pays willing allegiance. This time, the principal root has aborted, or its tip has been destroyed; an immediate, indefinite multiplicity of secondary roots grafts onto it and undergoes a flourishing development. This time, natural reality is what aborts the principal root, but the root's unity subsists, as past or yet to come, as possible. We must ask if reflexive, spiritual reality does not compensate for this state of things by demanding an even more comprehensive secret unity, or a more extensive totality. Take William Burroughs's⁴ cut-up method: the folding of one text onto another, which constitutes multiple and even adventitious roots (like a cutting), implies a supplementary dimension to that of the texts under consideration. In this supplementary dimension of folding, unity continues its spiritual labor. That is why the most resolutely fragmented work can also be presented as the Total Work or Magnum Opus.⁵ Most modern methods for making series proliferate or a multiplicity grow are perfectly valid in one direction, for example, a linear direction, whereas a unity of totalization asserts itself even more firmly in another, circular or cyclic, dimension. Whenever a multiplicity is taken up in a structure, its growth is offset by a reduction in its laws of combination. The abortionists of unity are indeed angel makers, *doctores angelici*, because they affirm a properly angelic and superior unity. Joyce's⁶ words, accurately described as having "multiple roots," shatter the linear unity of the word, even of language, only to posit a cyclic unity of the sentence, text, or knowledge. Nietzsche's⁷ aphorisms shatter the linear unity of knowledge, only to invoke the cyclic unity of the eternal return, present as the nonknown in thought. This is as much as to say that the fascicular system does not really break with dualism, with the complementarity between a subject and an object, a natural reality and a spiritual reality: unity is consistently thwarted and obstructed in the object, while a new type of unity triumphs in the subject. The world has lost its pivot; the subject can no longer even dichotomize, but accedes to a higher unity, of ambivalence or overdetermination, in an always supplementary dimension to that of its object. The world has become

1. Turning to both sides, but only in a prescribed way.

2. Daniel Paul Schreber (1842–1911), German judge whose *Memoirs of My Nervous Illness* (1903) were analyzed by SIGMUND FREUD (1856–1939), Austrian founder of psychoanalysis, in an important 1911 study.

3. A small, secondary root (a *fascicle* is also a division of a book published in parts, and both words share their Latin root with *fascism*).

4. American writer of experimental novels (1914–1997); see "The Cut-Up Method of Brion Gysin" in *The Third Mind* (1978) by Burroughs and Gysin.

5. An allusion to the French poet Stéphane Mallarmé (1842–1898), who combined a notoriously fragmentary style with an alchemical dream of the Great Work.

6. James Joyce (1882–1941), Irish writer known for the innovations of technique and inventions of words in his fiction, especially in *Finnegans Wake* (1939), which ends in an unfinished sentence that is completed by the fragment with which the book begins. *Doctores angelici*: angelic teachers (Latin).

7. FRIEDRICH NIETZSCHE (1844–1900), German philosopher.

chaos, but the book remains the image of the world: radicle-chaosmos rather than root-cosmos. A strange mystification: a book all the more total for being fragmented. At any rate, what a vapid idea, the book as the image of the world. In truth, it is not enough to say, "Long live the multiple," difficult as it is to raise that cry. No typographical, lexical, or even syntactical cleverness is enough to make it heard. The multiple *must be made*, not by always adding a higher dimension, but rather in the simplest of ways, by dint of sobriety, with the number of dimensions one already has available—always $n - 1$ (the only way the one belongs to the multiple: always subtracted). Subtract the unique from the multiplicity to be constituted; write at $n - 1$ dimensions. A system of this kind could be called a rhizome. A rhizome as subterranean stem is absolutely different from roots and radicles. Bulbs and tubers are rhizomes. Plants with roots or radicles may be rhizomorphic in other respects altogether: the question is whether plant life in its specificity is not entirely rhizomatic. Even some animals are, in their pack form. Rats are rhizomes. Burrows are too, in all of their functions of shelter, supply, movement, evasion, and breakout. The rhizome itself assumes very diverse forms, from ramified surface extension in all directions to concretion into bulbs and tubers. When rats swarm over each other. The rhizome includes the best and the worst: potato and couchgrass, or the weed. Animal and plant, couchgrass is crabgrass.

* * *

Let us summarize the principal characteristics of a rhizome: unlike trees or their roots, the rhizome connects any point to any other point, and its traits are not necessarily linked to traits of the same nature; it brings into play very different regimes of signs, and even nonsign states. The rhizome is reducible neither to the One nor the multiple. It is not the One that becomes Two or even directly three, four, five, etc. It is not a multiple derived from the One, or to which One is added ($n + 1$). It is composed not of units but of dimensions, or rather directions in motion. It has neither beginning nor end, but always a middle (*milieu*) from which it grows and which it overflows. It constitutes linear multiplicities with n dimensions having neither subject nor object, which can be laid out on a plane of consistency, and from which the One is always subtracted ($n - 1$). When a multiplicity of this kind changes dimension, it necessarily changes in nature as well, undergoes a metamorphosis. Unlike a structure, which is defined by a set of points and positions, with binary relations between the points and biunivocal relationships between the positions, the rhizome is made only of lines: lines of segmentarity and stratification as its dimensions, and the line of flight or deterritorialization as the maximum dimension after which the multiplicity undergoes metamorphosis, changes in nature. These lines, or lineaments, should not be confused with lineages of the arborescent type, which are merely localizable linkages between points and positions. Unlike the tree, the rhizome is not the object of reproduction: neither external reproduction as image-tree nor internal reproduction as tree-structure. The rhizome is an antigenealogy. It is a short-term memory, or antimemory. The rhizome operates by variation, expansion, conquest, capture, offshoots. Unlike the graphic arts, drawing, or photography, unlike tracings, the rhizome pertains to a map that must be produced, constructed, a map that is always detachable, connectable,

reversible, modifiable, and has multiple entryways and exits and its own lines of flight. It is tracings that must be put on the map, not the opposite. In contrast to centered (even polycentric) systems with hierarchical modes of communication and preestablished paths, the rhizome is an acentered, non-hierarchical, nonsignifying system without a General and without an organizing memory or central automaton, defined solely by a circulation of states. What is at question in the rhizome is a relation to sexuality—but also to the animal, the vegetal, the world, politics, the book, things natural and artificial—that is totally different from the arborescent relation: all manner of “becomings.”

A plateau is always in the middle, not at the beginning or the end. A rhizome is made of plateaus. Gregory Bateson⁸ uses the word “plateau” to designate something very special: a continuous, self-vibrating region of intensities whose development avoids any orientation toward a culmination point or external end. Bateson cites Balinese culture as an example: mother-child sexual games, and even quarrels among men, undergo this bizarre intensive stabilization. “Some sort of continuing plateau of intensity is substituted for [sexual] climax,” war, or a culmination point. It is a regrettable characteristic of the Western mind to relate expressions and actions to exterior or transcendent ends, instead of evaluating them on a plane of consistency on the basis of their intrinsic value.⁹ For example, a book composed of chapters has culmination and termination points. What takes place in a book composed instead of plateaus that communicate with one another across microfissures, as in a brain? We call a “plateau” any multiplicity connected to other multiplicities by superficial underground stems in such a way as to form or extend a rhizome. We are writing this book as a rhizome. It is composed of plateaus. We have given it a circular form, but only for laughs. Each morning we would wake up, and each of us would ask himself what plateau he was going to tackle, writing five lines here, ten there. We had hallucinatory experiences, we watched lines leave one plateau and proceed to another like columns of tiny ants. We made circles of convergence. Each plateau can be read starting anywhere and can be related to any other plateau. To attain the multiple, one must have a method that effectively constructs it; no typographical cleverness, no lexical agility, no blending or creation of words, no syntactical boldness, can substitute for it. In fact, these are more often than not merely mimetic procedures used to disseminate or disperse a unity that is retained in a different dimension for an image-book. Technonarcissism. Typographical, lexical, or syntactic creations are necessary only when they no longer belong to the form of expression of a hidden unity, becoming themselves dimensions of the multiplicity under consideration; we only know of rare successes in this.¹ We ourselves were unable to do it. We just used words that in turn function for us as plateaus. RHIZOMATICS = SCHIZOANALYSIS = STRATOANALYSIS = PRAGMATICS = MICROPOLITICS. These words are concepts, but concepts

8. English anthropologist, biologist, ethnologist, and philosopher (1904–1980).

9. Gregory Bateson, *Steps to an Ecology of Mind* (New York: Ballantine Books, 1972), p. 113. It will be noted that the word “plateau” is used in classical studies of bulbs, tubers, and rhizomes: see the entry for “Bulb” in M. H. Baillon, *Dictionnaire de botanique* [*Dictionary of Botany*]

(Paris: Hachette, 1876–92) [Deleuze and Guattari’s note].

1. For example, Joëlle de La Casinière, *Absolument nécessaire* [*Absolutely Necessary*]: *The Emergency Book* (Paris: Minuit, 1973), a truly nomadic book. In the same vein, see the research in progress at the Montfaucon Research Center [Deleuze and Guattari’s note].

are lines, which is to say, number systems attached to a particular dimension of the multiplicities (strata, molecular chains, lines of flight or rupture, circles of convergence, etc.). Nowhere do we claim for our concepts the title of a science. We are no more familiar with scientificity than we are with ideology; all we know are assemblages. And the only assemblages are machinic assemblages of desire and collective assemblages of enunciation. No significance,² no subjectification: writing to the *n*th power (all individuated enunciation remains trapped within the dominant significations, all signifying desire is associated with dominated subjects). An assemblage, in its multiplicity, necessarily acts on semiotic flows, material flows, and social flows simultaneously (independently of any recapitulation that may be made of it in a scientific or theoretical corpus). There is no longer a tripartite division between a field of reality (the world) and a field of representation (the book) and a field of subjectivity (the author). Rather, an assemblage establishes connections between certain multiplicities drawn from each of these orders, so that a book has no sequel nor the world as its object nor one or several authors as its subject. In short, we think that one cannot write sufficiently in the name of an outside. The outside has no image, no signification, no subjectivity. The book as assemblage with the outside, against the book as image of the world. A rhizome-book, not a dichotomous, pivotal, or fascicular book. Never send down roots, or plant them, however difficult it may be to avoid reverting to the old procedures. "Those things which occur to me, occur to me not from the root up but rather only from somewhere about their middle. Let someone then attempt to seize them, let someone attempt to seize a blade of grass and hold fast to it when it begins to grow only from the middle."³ Why is this so difficult? The question is directly one of perceptual semiotics. It's not easy to see things in the middle, rather than looking down on them from above or up at them from below, or from left to right or right to left: try it, you'll see that everything changes. It's not easy to see the grass in things and in words (similarly, Nietzsche said that an aphorism had to be "ruminated";⁴ never is a plateau separable from the cows that populate it, which are also the clouds in the sky).

History is always written from the sedentary point of view and in the name of a unitary State apparatus, at least a possible one, even when the topic is nomads. What is lacking is a Nomadology, the opposite of a history. There are rare successes in this also, for example, on the subject of the Children's Crusades:⁵ Marcel Schwob's book multiplies narratives like so many plateaus with variable numbers of dimensions. Then there is Andrzejewski's book, *Les portes du paradis* (The gates of paradise), composed of a single uninterrupted sentence; a flow of children; a flow of walking with pauses, straggling, and forward rushes; the semiotic flow of the confessions of all the children who go up to the old monk at the head of the procession to make their declarations; a flow of desire and sexuality, each child having left out of love and more or less directly led by the dark posthumous pederastic desire of the count of Vendôme; all this with circles of convergence. What is

2. A term that emphasizes the process of producing meaning (in contrast to *significance*, which emphasizes the result).

3. *The Diaries of Franz Kafka*, ed. Max Brod, trans. Joseph Kresh (New York: Schocken, 1948), p. 12 [Deleuze and Guattari's note].

4. See the final paragraph of Nietzsche's preface to *Genealogy of Morals* (1888).

5. The attempt of thousands of children to make their way to the Holy Land to reclaim it from the Muslims; the first group set out from Vendôme in the summer of 1212.

important is not whether the flows are “One or multiple”—we’re past that point: there is a collective assemblage of enunciation, a machinic assemblage of desire, one inside the other and both plugged into an immense outside that is a multiplicity in any case. A more recent example is Armand Farrachi’s book on the Fourth Crusade,⁶ *La dislocation*, in which the sentences space themselves out and disperse, or else jostle together and coexist, and in which the letters, the typography begin to dance as the crusade grows more delirious.⁷ These are models of nomadic and rhizomatic writing. Writing weds a war machine and lines of flight, abandoning the strata, segmentarities, sedentariness, the State apparatus. But why is a model still necessary? Aren’t these books still “images” of the Crusades? Don’t they still retain a unity, in Schwob’s case a pivotal unity, in Farrachi’s an aborted unity, and in the most beautiful example, *Les portes du paradis*, the unity of the funereal count? Is there a need for a more profound nomadism than that of the Crusades, a nomadism of true nomads, or of those who no longer even move or imitate anything? The nomadism of those who only assemble (*agencent*). How can the book find an adequate outside with which to assemble in heterogeneity, rather than a world to reproduce? The cultural book is necessarily a tracing: already a tracing of itself, a tracing of the previous book by the same author, a tracing of other books however different they may be, an endless tracing of established concepts and words, a tracing of the world present, past, and future. Even the anticultural book may still be burdened by too heavy a cultural load: but it will use it actively, for forgetting instead of remembering, for underdevelopment instead of progress toward development, in nomadism rather than sedentariness, to make a map instead of a tracing. RHIZOMATICS=POP ANALYSIS, even if the people have other things to do besides read it, even if the blocks of academic culture or pseudoscientificity in it are still too painful or ponderous. For science would go completely mad if left to its own devices. Look at mathematics: it’s not a science, it’s a monster slang, it’s nomadic. Even in the realm of theory, especially in the realm of theory, any precarious and pragmatic framework is better than tracing concepts, with their breaks and progress changing nothing. Imperceptible rupture, not signifying break. The nomads invented a war machine in opposition to the State apparatus. History has never comprehended nomadism, the book has never comprehended the outside. The State as the model for the book and for thought has a long history: logos,⁸ the philosopher-king, the transcendence of the Idea, the interiority of the concept, the republic of minds, the court of reason, the functionaries of thought, man as legislator and subject. The State’s pretension to be a world order, and to root man. The war machine’s relation to an outside is not another “model”; it is an assemblage that makes thought itself nomadic, and the book a working part in

6. One of 8 European military expeditions (1095–1291) intended to drive the Muslims from Jerusalem and other Christian holy sites; the Fourth Crusade was putatively targeted at Egypt (a center of Muslim power) but was diverted to conquer the Christian cities of Zara (in Hungary) and Constantinople, which was sacked in 1203.

7. Marcel Schwob, *The Children’s Crusade*, trans. Henry Copley (Boston: Small, Maynard, 1898); Jerzy Andrzejewski, *Les Portes du paradis* [*The Gates of Paradise*] (Paris: Gallimard, 1949); Armand Farrachi, *La Dislocation* [*Dislocation*]

(Paris: Stock, 1974). It was in the context of Schwob’s book that Paul Alphandéry remarked that literature, in certain cases, could revitalize history and impose upon it “genuine research directions”; *La Chrétienté et l’idée de croisade* [*Christianity and the Idea of the Crusade*] (Paris: Albin Michel, 1959), vol. 2, p. 116 [Deleuze and Guattari’s note].

8. Word, speech; discourse, reason (Greek); in the New Testament, logos is often identified with Christ.

every mobile machine, a stem for a rhizome (Kleist and Kafka against Goethe⁹).

Write to the *n*th power, the *n*–1 power, write with slogans: Make rhizomes, not roots, never plant! Don't sow, grow offshoots! Don't be one or multiple, be multiplicities! Run lines, never plot a point! Speed turns the point into a line!¹ Be quick, even when standing still! Line of chance, line of hips, line of flight. Don't bring out the General in you! Don't have just ideas, just have an idea (Godard).² Have short-term ideas. Make maps, not photos or drawings. Be the Pink Panther and your loves will be like the wasp and the orchid, the cat and the baboon. As they say about old man river:

He don't plant 'tatos
Don't plant cotton
Them that plants them is soon forgotten
But old man river he just keeps rollin' along³

A rhizome has no beginning or end; it is always in the middle, between things, interbeing, *intermezzo*. The tree is filiation, but the rhizome is alliance, uniquely alliance. The tree imposes the verb "to be," but the fabric of the rhizome is the conjunction, "and . . . and . . . and . . ." This conjunction carries enough force to shake and uproot the verb "to be." Where are you going? Where are you coming from? What are you heading for?⁴ These are totally useless questions. Making a clean slate, starting or beginning again from ground zero, seeking a beginning or a foundation—all imply a false conception of voyage and movement (a conception that is methodical, pedagogical, initiatory, symbolic . . .). But Kleist, Lenz, and Büchner⁵ have another way of traveling and moving: proceeding from the middle, through the middle, coming and going rather than starting and finishing.⁶ American literature, and already English literature, manifest this rhizomatic direction to an even greater extent; they know how to move between things, establish a logic of the AND, overthrow ontology, do away with foundations, nullify endings and beginnings. They know how to practice pragmatics. The middle is by no means an average; on the contrary, it is where things pick up speed. *Between* things does not designate a localizable relation going from one thing to the other and back again, but a perpendicular direction, a transversal movement that sweeps one *and* the other away, a stream without beginning or end that undermines its banks and picks up speed in the middle.

1980

9. Johann Wolfgang von Goethe (1749–1832), magisterial German poet, playwright, and novelist.

1. See Paul Virilio, "Véhiculaire," in *Nomades et vagabonds* [Nomads and Vagabonds], ed. Jacques Bergue (Paris: Union Générale d'Éditions, 1975), on the appearance of linearity and the disruption of perception by speed [Deleuze and Guattari's note].

2. Jean-Luc Godard (b. 1930), French filmmaker and screenwriter best known for his work of the 1950s and 1960s during the New Wave in France.
3. From "Ol' Man River," an imitation of a Negro spiritual composed by Jerome Kern with lyrics (here slightly misquoted) by Oscar Hammerstein

for the musical *Show Boat* (1927).

4. Paul Gauguin (1848–1903), a French painter who became a "nomad" in Tahiti, gave one of his Tahitian paintings these three questions as a title.

5. Georg Büchner (1813–1837), German dramatist. Jakob Lenz (1751–1792), German poet.

6. See Jean-Christopher Bailly's description of movement in German Romanticism, in his introduction to *La Légende dispersée: Anthologie du romantisme allemand* [The Dispersed Legend: An Anthology of German Romanticism] (Paris: Union Générale d'Éditions, 1976), pp. 18ff. [Deleuze and Guattari's note].

JEAN-FRANÇOIS LYOTARD

1924–1998

Jean-François Lyotard was at the center of debates about postmodernism during the 1980s and 1990s. His celebrated announcement of the demise of “grand narratives” and of the “incommensurability” of local “language games” made his *Postmodern Condition* (1979; trans. 1984) the most succinct, accessible, and memorable manifesto of the postmodernist position. Lyotard, along with MICHEL FOUCAULT, was labeled a “young conservative” by the German philosopher JÜRGEN HABERMAS—and the battle was joined. The postmodernists contended that “general human emancipation” could not be gained through the universalist strategies characteristic of both liberalism (with its appeal to human rights) and communism (with its goal of a one-class society).

Born in Versailles, Lyotard received the equivalent of a master's degree in philosophy from the Sorbonne in 1949 and spent the 1950s teaching high school, including a two-year stint in Algeria. Following in the footsteps of the phenomenologist Maurice Merleau-Ponty (1908–1961), Lyotard attempts in his early work to reconcile Marxist politics and philosophy. Active in leftist agitation against the French colonial war in Algeria and in the student revolution of 1968, Lyotard, like many French intellectuals, was dismayed by the powerful French Communist Party's less than adequate responses to these two crises. Increasingly, Marxism appeared unable to understand or to support any political action that did not derive from the working class and address specifically economic grievances. Turning first to psychoanalysis (in *Des dispositifs pulsionnels*, 1973; and *Libidinal Economy*, 1974, trans. 1993) and then to the philosophy of Ludwig Wittgenstein (1889–1951) and IMMANUEL KANT (1724–1804), Lyotard tried to reevaluate the “emancipatory” narratives of Marxism and liberalism, and to consider new bases for aesthetic, moral, and political judgment as well as action. He taught philosophy at the University of Paris (1959–66), the University of Nanterre (1966–70), and the University of Paris VIII at Vincennes (1972–87) and held visiting positions at a number of American universities, most notably the University of California at Irvine. During the early 1980s, he was the first president of the prestigious but controversial International College of Philosophy in Paris, which he co-founded.

Our brief selection, “Defining the Postmodern” (1986), captures many of Lyotard's major themes. Modernism in the arts, he argues, partakes of the universal aims of modernity. Thus modernist architecture sought to make everything new, to transform the whole world, to effect a total revolution in how people live together by creating entirely new cities. But we have now—after Auschwitz and the Soviet gulags—come to recognize that such modern dreams of transforming humanity can be pursued only violently, and even then they will not succeed. Allegiance to one universal standard by which all are judged generates murderous hostility to the different, to whatever resists or simply does not desire to go along with the program. Modernist architects and city planners blithely razed old neighborhoods, confident that their plans for “urban renewal” would make for better lives. Instead, they created inhospitable concrete wastelands, unconnected to how people interact in lived space.

Postmodernism attempts to turn its back on this understanding of progress as the whole world marching in lockstep toward the same utopian future. Instead, Lyotard preaches an appreciation and respect for diversity, for local differences, for the plurality of ways in which humans choose to live. In *The Postmodern Condition*, he argues that there is no common measure by which such local differences (which, following Wittgenstein, he calls distinct “language games”) can be compared. We

cannot confidently declare one way of life or thought superior to another—one more progressive and modern, the other reactionary and residual. Such differences are “incommensurate,” like those between apples and oranges. The use of “progress” as a yardstick has been discredited by the unintended side effects (such as ecological damage and weapons of mass destruction) of increasing scientific knowledge and technological innovation. We would do better if we stopped trying to force the world and its inhabitants into one mold and stopped trying to make history move in one direction.

At times, Lyotard recognizes that belief in progress, the notion that “development” is necessarily a good thing, is still very prevalent and must be combated. At other times, he writes as if a general loss of faith in progress has taken over, as if we are all already postmodern and thus skeptical of the “grand narratives” of modernization and its attendant emancipation of the poor, the ignorant, the oppressed, or whomever.

The debates generated by Lyotard’s work certainly do not indicate that a postmodern vision prevails. The political objection voiced by Habermas and others focuses on the apparent passivity of Lyotard’s position. If we have no way to judge different ways of life, then whatever exists must be tolerated. Moreover, this absence of standards also seems to leave us unable to imagine a future that we can claim would be better than the status quo. Lyotard addresses some of these concerns in *Just Gaming* (1984), in which he argues that violation of another’s chosen way of life is a crime that can and should be halted by intervention (by the state or by other agencies). Thus, since the Nazis forcibly prevented people from living in their own chosen way, forceful intervention against the Nazis was justified.

In matters literary and artistic, Lyotard focuses on shifts in style and expression between modernism and postmodernism. Our selection highlights the extent to which he sees postmodernism in the arts manifesting the signs of what psychologists call post-traumatic stress disorder. The postmodern artist, he observes, is haunted by “the sanguinary last two centuries,” the massive crimes against humanity and increasingly vicious wars since the French Revolution. The often-noted use in contemporary art of pastiche (the citation or quoting of various previous moments in art or literary history) is a Freudian “working through” of past material in an effort to break the spell of the traumatic past that paralyzes the present moment. “Postmodernism,” as the name suggests, is perhaps not a period in its own right but instead is linked to the modernism it tries to shake. Having discovered that the modernist dream of utterly breaking with the past ensures “repeating” that past, postmodernist art strives instead to work through the tradition in order to overcome it.

Though Lyotard is not sure what lies on the other side of that overcoming, he is optimistic that ours is a healthy moment, implicitly critiquing FREDRIC JAMESON’s association of postmodern art with schizophrenia, with the fragmentation of the self. For Lyotard, we would be schizophrenic only if we did not reflect on and recast the various fragments from the tradition. But we should not expect that all the incommensurate pieces of our world and of our selves will fit together neatly. Complexity, he insists, cannot be sidestepped by simple visions of right and wrong or by simple models of all-encompassing systems. And he wants an art that is attentive to complexity, that grapples with the multiple meanings of our past and the plural realities of our present.

In *The Postmodern Condition* and subsequent works (especially *Lessons on the Analytic of the Sublime*, 1991), Lyotard links postmodernist art with the sublime. (See above LONGINUS, JOSEPH ADDISON, EDMUND BURKE, and Kant for traditional accounts of this concept.) Art, Lyotard suggests, is one place where that which resists being fully captured within any existing signifying system can make its existence felt. To avoid modernity’s persistent tendency to reduce everything back into known terms or (worse) to obliterate everything that resists such reduction, we must cultivate an appreciation of the sublime, of that which exceeds calculation and understanding. If

postmodern art can foster such a sensibility, a future where difference exists and even flourishes just might be possible. Only such a future, Lyotard insists, can do justice to the complexity and variety of the world we inhabit.

“Defining the Postmodern” Keywords: Aesthetics, Deconstruction, Modernity, Postmodernity, Poststructuralism

Defining the Postmodern

I should like to make only a small number of observations, in order to point to—and not at all to resolve—some problems surrounding the term ‘postmodern’. My aim is not to close the debate, but to open it, to allow it to develop by avoiding certain confusions and ambiguities, as far as this is possible.

There are many debates implied by, and implicated in, the term ‘postmodern’. I will distinguish three of them.

First, the opposition between postmodernism and modernism, or the Modern Movement (1910–45), in architectural theory. According to Paolo Portoghesi¹ (*Dopo architettura moderna*), there is a rupture or break, and this break would be the abrogation of the hegemony of Euclidean geometry,² which was sublimated in the plastic poetry of the movement known as De Stijl,³ for example. According to Vittorio Gregotti,⁴ another Italian architect, the difference between the two periods is characterized by what is possibly a more interesting fissure. There is no longer any close linkage between the architectural project and socio-historical progress in the realization of human emancipation on the larger scale. Postmodern architecture is condemned to generate a multiplicity of small transformations in the space it inherits, and to give up the project of a last rebuilding of the whole space occupied by humanity. In this sense, a perspective is opened in the larger landscape.

In this account there is no longer a horizon of universalization, of general emancipation before the eyes of postmodern man, or in particular, of the postmodern architect. The disappearance of this idea of progress within rationality and freedom would explain a certain tone, style or modus which are specific to postmodern architecture. I would say a sort of *bricolage*:⁵ the high frequency of quotations of elements from previous styles or periods (classical or modern), giving up the consideration of environment, and so on.

Just a remark about this aspect. The ‘post-’, in the term ‘postmodernist’ is in this case to be understood in the sense of a simple succession, of a diachrony⁶ of periods, each of them clearly identifiable. Something like a conversion, a new direction after the previous one. I should like to observe

1. Italian architect and critic (b. 1931), whose books *After Modern Architecture* (1981) and *Post-modern, the Architecture of the Post-Industrial Society* (1982) offer influential definitions of the distinction between modernist and postmodernist art.

2. Geometry based on ordinary 2- or 3-dimensional space. The reference here is apparently to modernist art’s break with perspectival painting, which tries to represent spatial depth realistically on the canvas.

3. A movement of Dutch painters and architects

formed in 1917; it called for purity of line and color in art, along with attention to technological progress in modern society.

4. Vittorio Gregotti (b. 1927).

5. Literally, “tinkering” (French). The anthropologist CLAUDE LÉVI-STRAUSS (1908–2009) uses the term to describe forms of thought or of work that combine elements taken from various sources.

6. Events strung out along a time line, as contrasted to synchrony (events happening at the same time); both terms are associated with structuralism.

that this idea of chronology is totally modern. It belongs to Christianity, Cartesianism, Jacobinism.⁷ Since we are beginning something completely new, we have to re-set the hands of the clock at zero. The idea of modernity is closely bound up with this principle that it is possible and necessary to break with tradition and to begin a new way of living and thinking. Today we can presume that this 'breaking' is, rather, a manner of forgetting or repressing the past. That's to say of repeating it. Not overcoming it.

I would say that the quotation of elements of past architectures in the new one seems to me to be the same procedure as the use of remains coming from past life in the dream-work as described by Freud, in the *Interpretation of Dreams*.⁸ This use of repetition or quotation, be it ironical or not, cynical or not, can be seen in the trends dominating contemporary painting, under the name of 'transavantgardism' (Achille Bonito Oliva) or under the name of neo-expressionism.⁹ I'll come back to this question in my third point.

The second point. A second connotation of the term 'postmodern', and I admit that I am at least partly responsible for the misunderstanding associated with this meaning.

The general idea is a trivial one. One can note a sort of decay in the confidence placed by the two last centuries in the idea of progress. This idea of progress as possible, probable or necessary was rooted in the certainty that the development of the arts, technology, knowledge and liberty would be profitable to mankind as a whole. To be sure, the question of knowing which was the subject truly victimized by the lack of development—whether it was the poor, the worker, the illiterate—remained open during the 19th and 20th centuries. There were disputes, even wars, between liberals, conservatives and leftists over the very name of the subject we are to help to become emancipated. Nevertheless, all the parties concurred in the same belief that enterprises, discoveries and institutions are legitimate only insofar as they contribute to the emancipation of mankind.

After two centuries, we are more sensitive to signs that signify the contrary. Neither economic nor political liberalism, nor the various Marxisms, emerge from the sanguinary last two centuries free from the suspicion of crimes against mankind. We can list a series of proper names (names of places, persons and dates) capable of illustrating and founding our suspicion. Following Theodor Adorno,¹ I use the name of Auschwitz to point out the irrelevance of empirical matter, the stuff of recent past history, in terms of the modern claim to help mankind to emancipate itself. What kind of thought is able to sublate (*Aufheben*)² Auschwitz in a general (either empiri-

7. The philosophy of the most radical group during the French Revolution, the one most determined to make an entirely new world. "Cartesianism": the philosophy of René Descartes (1596–1650), which breaks from the past by starting from a radical doubting of all received truths.

8. Published in 1900 (see above) by SIGMUND FREUD (1856–1939), Austrian founder of psychoanalysis. Throughout this essay, Lyotard sees the work done by postmodern artists as analogous to the psychic memory work that Freud claimed was done in dreams or done by the patient in psychoanalytic therapy.

9. The name given to the work of Julian Schnabel, Anselm Kiefer, and other painters in the early 1980s who returned to earlier abstract and

representational styles to "express" psychological and historical material. *Transavantgarde International* (1982), by the art critic Oliva (b. 1939), describes neo-expressionism as a break from the impersonal experimentation of the avant-gardes.

1. German philosopher and cultural critic (1903–1969). ADORNO famously declared that "To write poetry after Auschwitz"—the Nazis' largest concentration camp—"is barbaric."

2. A technical term from the philosophy of GEORG WILHELM FRIEDRICH HEGEL (1770–1831). In Hegel the thesis and its opposite, the antithesis, are "sublated" in the synthesis that joins them together. Here progress, the movement of humanity to its perfection, is met by an antithesis, the murderous acts of Auschwitz.

cal or speculative) process towards a universal emancipation? So there is a sort of sorrow in the *Zeitgeist*. This can express itself by reactive or reactionary attitudes or by utopias, but never by a positive orientation offering a new perspective.

The development of techno-sciences has become a means of increasing disease, not of fighting it. We can no longer call this development by the old name of progress. This development seems to be taking place by itself, by an autonomous force or 'motricity'.³ It doesn't respond to a demand coming from human needs. On the contrary, human entities (individual or social) seem always to be destabilized by the results of this development. The intellectual results as much as the material ones. I would say that mankind is in the condition of running after the process of accumulating new objects of practice and thought. In my view it is a real and obscure question to determine the reason of this process of complexification. It's something like a destiny towards a more and more complex condition. Our demands for security, identity and happiness, coming from our condition as living beings and even social beings appear today irrelevant in the face of this sort of obligation to complexify, mediate, memorize and synthesize every object, and to change its scale. We are in this techno-scientific world like Gulliver:⁴ sometimes too big, sometimes too small, never at the right scale. Consequently, the claim for simplicity, in general, appears today that of a barbarian.

From this point, it would be necessary to consider the division of mankind into two parts: one part confronted with the challenge of complexity; the other with the terrible ancient task of survival. This is a major aspect of the failure of the modern project (which was, in principle, valid for mankind as a whole).

The third argument is more complex, and I shall present it as briefly as possible. The question of postmodernity is also the question of the expressions of thought: art, literature, philosophy, politics. You know that in the field of art for example, and more especially the plastic arts, the dominant idea is that the big movement of avant-gardism is over. There seems to be general agreement about laughing at the avant-gardes,⁵ considered as the expression of an obsolete modernity. I don't like the term avant-garde any more than anyone else, because of its military connotations. Nevertheless I would like to observe that the very process of avant-gardism in painting was in reality a long, obstinate and highly responsible investigation of the presuppositions implied in modernity. The right approach, in order to understand the work of painters from, say, Manet to Duchamp or Barnett Newman⁶ is to compare their work with the anamnesis⁷ which takes place in psychoanalytical therapy. Just as the patient elaborates his present trouble by freely associating the more imaginary, immaterial, irrelevant bits with past situations, so discovering hidden meanings of his life, we can consider the work of Cézanne,

3. Lyotard's coinage, conveying the sense that the motor of history, its movement, is now out of human control.

4. The narrator-hero of Jonathan Swift's *Gulliver's Travels* (1726), who visits both an island whose inhabitants are 6 inches tall and an island inhabited by giants.

5. What today are designated the modernist or historical avant-gardes were the self-organized and self-named "cutting-edge" movements such as surrealism, dadaism, futurism, and constructivism of

the high modernist period (1914–30). The term originally meant the advance guard of an army.

6. American abstract expressionist painter (1905–1970). Édouard Manet (1832–1883), French artist sometimes called the first modern painter, a forerunner of the impressionists. Marcel Duchamp (1887–1968), French (later American) painter and conceptual artist, whose experiments foreshadowed much postmodern art.

7. Remembering.

Picasso, Delaunay, Kandinsky, Klee, Mondrian, Malevitch⁸ and finally Duchamp as a working through—what Freud called *Durcharbeitung*⁹—operated by modernity on itself. If we give up this responsibility, it is certain that we are condemned to repeat, without any displacement, the modern neurosis, the Western schizophrenia, paranoia, and so on. This being granted, the ‘post-’ of postmodernity does not mean a process of coming back or flashing back, feeding back, but of *ana*-lysing, *ana*-mnescing, of reflecting.¹

1986

8. All important modern artists: Paul Cézanne (1839–1906), French impressionist painter and forerunner of cubism; Pablo Picasso (1881–1973), Spanish painter who is the most celebrated modernist artist; Robert Delaunay (1885–1941), French modernist painter; Wassily Kandinsky (1866–1944), Russian abstract painter; Paul Klee (1879–1940), Swiss avant-garde painter; Piet Mondrian (1872–1944), Dutch abstract painter and member of De Stijl; Kazimir Malevich (1878–1935), Rus-

sian constructivist painter, active during the Russian Revolution and its immediate aftermath.

9. Working through (German), a technical term from Freudian theories of therapy. Only after “working through” various elements in the past not assimilated into self-understanding can the patient get rid of the symptomatic (and/or neurotic) behaviors that have grown out of the repression of the past.

1. *Ana*- literally means “again” or “back” (Greek).

MICHEL FOUCAULT

1926–1984

Michel Foucault is arguably the most influential European writer and thinker of the second half of the twentieth century. His unclassifiable work (is it history? philosophy? cultural theory?) is controversial and has attracted much criticism, but the questions he raised, the topics he addressed, and the positions he took have become central features of today’s intellectual landscape. In literary studies, Foucault stands as a major source for poststructuralism, New Historicism, cultural studies, and queer theory, while also fueling the growing interest in literature and medicine, the examination of the institutional bases from which writers and critics operate, and the interest in processes of identity formation.

Foucault was born in Poitiers, France. His father was a doctor, and he (unlike his brother) went against the family’s wishes that he study medicine; he eventually became a fierce critic of modern medical practices and institutions. Awkward, bookish, and brilliant, Foucault progressed easily through the elaborate French educational system, with its extremely competitive exams for gaining a place in the multitiered hierarchy. Foucault took his university degree at the nation’s top university, the *École Normale Supérieure*, where he specialized in the philosophy of psychology.

Under the influence of his teacher LOUIS ALTHUSSER, Foucault joined the Communist Party in 1950, quitting three years later. He spent the 1950s teaching in France (briefly) and then abroad—in Sweden, Poland, and Germany. Returning to France in 1960, he defended the graduate thesis that became his first book, *Folie et déraison* (1961; an abridged edition was translated into English as *Madness and Civilization*). A major theme of this book and its follow-up, *The Birth of the Clinic* (1963), is an attack on the institutions and procedures characteristic of modern medicine. They inaugurate Foucault’s lifelong preoccupation with the ways in which individuals are “administered” by the various bureaucratic institutions—hospitals, prisons, the military, schools—that increasingly render selves docile in the modern world.

Foucault's 1966 *Les Mots et les choses* (translated as *The Order of Things*) made his reputation. Recognizably a structuralist history, *The Order of Things* examines how the disciplines of economics, linguistics, and biology emerged, offering along the way a brilliant, if overly schematic, characterization of the three different "epistemes" (deep-rooted, unconscious structures for organizing knowledge) of the Middle Ages, the "classical period" (Foucault's term for the Enlightenment), and modernity. Foucault attempted to explicate and justify the methodology of *The Order of Things* in his next major book, *The Archaeology of Knowledge* (1969).

By 1969 Foucault's focus had shifted away from intellectual history and methodological meditations. The events of May 1968, when a student-led revolt almost toppled the French government before itself collapsing, together with his own involvement in student unrest in Tunisia (where he taught from 1966 to 1968), "radicalized" Foucault. He became politically active—and remained so to the end of his life. His book *Surveiller et punir: Naissance de la prison* (1975, *Discipline and Punish: The Birth of the Prison*) is a direct outgrowth of his work on prison reform. Foucault asks himself in the first chapter of the book why he has written a history of the prison: "Simply because I am interested in the past? No, if one means by that writing a history of the past in terms of the present. Yes, if one means writing the history of the present." He aims at describing the present through an analysis of the forces that created it, a historical and critical undertaking that he calls "genealogy" to mark its debt to the nineteenth-century philosopher FRIEDRICH NIETZSCHE. From the history of the prison, Foucault turned next to the history of sexuality. Three volumes of his work on that topic were published, although the entire project was incomplete when he died of complications from AIDS at the age of fifty-seven.

From 1970 on, Foucault spent longer and longer stints in North America as a lecturer or visiting professor at various universities—most notably at the University of California at Berkeley, where the New Historicists gathered around STEPHEN GREENBLATT brought Foucault-inspired work directly into literary studies. Tales of Foucault's experimentation with and explorations of drugs and sex were oral legend before being recorded in James Miller's notorious, yet mostly accurate, biography, *The Passion of Michel Foucault* (1993). The relevance of his personal life to the work is debatable, but Foucault's own growing interest in "the care of the self" in his later years suggests that separating private and public is no easy task.

Our selections present work particularly important to literary and cultural studies. The essay "What Is an Author?" (1969) directly questions some of the most fundamental assumptions of literary criticism. Foucault realizes that he had taken the author for granted in *The Order of Things*, and asks himself what it would mean to take seriously "the death of the author" (in ROLAND BARTHES's famous phrase). Foucault's approach to this question is characteristic of much of his work. We must consider, he says, what "functions" the category of "author" fulfills within the "discourse" the historian or critic deploys in the analysis of written texts. The concept *author*, he points out, is an organizing device, permitting us to group certain texts together. More crucially, the concept underwrites a number of interpretive conventions. We ascribe a certain unity and coherence to all the works written by a single author, or at least we feel that an author's drastic changes in style or opinion must be explained. And we assume, at the most fundamental level, that the author is the source of the text. Interpretation moves from the written text (which may be all we know of a writer) back toward the author, searching out an individual's biography, psychology, and intentions. The author thus functions both to organize the vast reservoir of materials that the past bequeaths us and to anchor a certain way of interpreting those materials.

Foucault's ultimate target here is "humanism," the postmedieval understanding of who and what individuals are. He highlights the historical contingency of the belief that we are "individuals" with unique natures, possessing coherent interior

identities, motives, desires, and conscious intentions that cause our actions. Humanism claims for each individual the capacities that literary criticism ascribes to authors.

Significantly, the “author function” has not always been deemed necessary to the apprehension and interpretation of texts. Prior to 1500 anonymous texts were the norm. Even today the importance of authors varies from field to field. A contract has no author, nor does the average poster. We barely note the authors of most newspaper articles. Generally speaking, Foucault opines, emphasis on the author is a mark of prestige. “Discourse that possesses an author’s name is not to be immediately consumed and forgotten. . . . Rather, its status and its manner of reception are regulated by the culture in which it circulates.”

Foucault’s essay, then, invites us to examine the ways in which literary criticism approaches its object—the text—and accords it the prestigious title of “literature” partly through the exaltation of the author (as talented, as worthy of honor and study). He also—and we see here his importance to New Historicism—shifts our focus away from the author and toward larger systematic social forces. What if the author is not the cause, the source, of the text? What if author and text are both effects? In that case, the critic’s inquiries and scrutiny need to be directed toward their common cause, toward cultural conventions and their inclusions and exclusions, not confined to formal analyses of texts or psychological investigations of writers’ lives.

Such questions reveal a persistent Foucauldian preoccupation: the social constitution of the “subject” (structuralism’s preferred term for the self or the individual). In “What Is an Author?” he writes that “the subject should not be entirely abandoned. It should be reconsidered, not to restore the theme of an originating subject, but to seize its functions, its intervention in discourse, and its system of dependencies. . . . [W]e should ask: under what conditions and through what forms can an entity like the subject appear in the order of discourse; what position does it occupy; what functions does it exhibit; and what rules does it follow in each type of discourse?” Though antihumanistic “deconstruction of the self” is characteristic of French poststructuralism, Foucault insists on keeping the category of the *subject* as a means to study the historical discourses of power and knowledge that constitute it.

Foucault uses the term *subject* for two reasons. First, he is thinking of the grammatical subject, the subject of a sentence. Following the structuralists, he is influenced by the idea of a “subject position” that exists as a slot in syntax and is then occupied by different actual selves at different times. That selves assume the subject position only tentatively and temporarily is highlighted by grammatical “shifters,” whose most dramatic example is the pronoun “I.” When I use “I,” it means me; when you use “I,” it means you. I become “I,” the first-person subject of the sentence, only when I am authorized to speak or when I seize that position. Shifters thus indicate that subject positions—created by language—preexist individual selves, and that power enables their use.

Second, Foucault draws on *subject* as a verb. Individuals get to occupy subject positions (the various roles existing within a discourse or an institution) only through a process in which they are “subjected” to power. Indeed, individuals are constituted by power as subjects prior to having any standing as individuals.

Foucault’s work from 1969 to 1980 focuses on the processes through which subjects are produced. In his late work (1980–84) he writes of *selves*, using a term that might allow individuals an existence apart from their relations to a constituting power. But in the works of his middle period from which our selections are drawn, Foucault turns the usually celebratory narrative of the rise of the individual in modern Western societies on its head by connecting that rise with a tremendous decrease in freedom. Our selection “The Carceral” (the final section of *Discipline and Punish*) presents Foucault’s sweeping, bleak, and all-too-convincing portrait of modern society since the 1740s as a series of increasingly prisonlike institutions that aim at “the accumulation and useful administration of men,” rendered docile

subjects by disciplinary power. The modern individual is produced by a power that individualizes precisely in order to better control. A panoptic (all-seeing) power keeps subjects under constant surveillance. (Foucault takes the term *panoptic* from the early nineteenth-century English reformer Jeremy Bentham, who designed a circular prison, the Panopticon, in which each inmate was always in view of a single guard in a central tower.)

Foucault argues that premodern power intervened in subjects' lives only intermittently. Unless they broke the law, most premodern persons lived in deep obscurity, unnoticed by various authorities. But modern societies intervene from day one to shape, train, and normalize individuals. Compulsory schooling, public health measures, passports, employment records, family counseling, and the like are all very recent social practices—none more than 250 years old. In each case, an institution molds behavior according to a norm, subordinates individuals to institutional demands, examines and watches over all subjects, and punishes deviants. Such a society, Foucault argues, not only needs prisons because it inevitably produces deviants but also is itself prisonlike, "carceral," from top to bottom. The institutions that administer individuals (schools, factories, the army) use the same strategies and techniques of control that prisons employ. The modern state focuses its energies on "governmentality"—that is, on rendering citizens governable.

Alongside this historical argument, Foucault developed—in both *Discipline and Punish* and *The History of Sexuality*, volume 1, *An Introduction* (1976)—an influential account of the interconnections between power, knowledge, and the subject. Two short phrases provide excellent points of entry to Foucault's revision of traditional notions of power. Famously, he writes that "power is exercised, rather than possessed," and he insists that power is not repressive but "productive."

Power in Foucault's account does not belong to anyone, nor does it all emanate from one specific location, such as the state. Rather, power is diffused throughout social institutions, as it is exercised by innumerable, replaceable functionaries. It operates through the daily disciplines and routines to which bodies are subjected. Thus, for example, the teacher exercises power over students, and schools have countless ways of governing students' behavior. But the teacher holds that power only as a function of his or her place in the institution, being subject as a teacher to various rules, incentives, and punishments. Both teacher and students are located (though differently) within the institution, and both go through their paces within a network that guides and oversees their conduct. Foucault stresses modern power's "microtechniques," its ubiquitous reinforcement of the norm at every step, its direct work upon "docile" bodies. Think of how much time is spent making schoolchildren sit still or develop the motor skills required for "good" handwriting. Foucault sees power as decentralized and depersonalized.

The insistence that "power is productive" underwrites Foucault's rejection of "the repressive hypothesis" in our selection from volume 1 of *The History of Sexuality*. Power is traditionally seen as repressing behaviors that it finds unproductive, threatening, or otherwise undesirable. For example, people have various sexual desires (to masturbate or to seek same-sex partners) that are deemed unacceptable, and social power is exerted to repress those desires and the behaviors that follow from them. Foucault argues, however, that modern power produces the very categories, desires, and actions it strives to regulate. Before an act is prohibited, it is not singled out as something separate and identifiable or perhaps even desirable. The enunciation of the category and the law both creates (identifies, designates) certain actions as crimes and affords them a heightened presence.

In keeping with his historical argument that modern power operates through continual classification, surveillance, and intervention, Foucault goes further, proposing that such power names actions as crimes and perversions precisely to increase its opportunities for intervention. This is why he insists that modern society "is in actual fact, and directly, perverse." It produces the very desires and behaviors it

claims to abhor, relying largely on discourse. Power can operate physically on bodies, but discursively it carves up the world. Through language various bodies are assigned to various categories (race, gender, IQ, etc.), and various actions are designated in relation to norms as praiseworthy, deviant, punishable, or criminal. A whole new array of identifiable "perverse" sexualities were named in the nineteenth century. Discourse disposes: it puts everything in its place. Modern power penetrates everywhere, giving a specific name to every possible variant of human action so as to master the world and leave nothing unexamined, unknown, uncatalogued. The nineteenth century (with its supposedly repressed Victorians) began this "explosion of discourse," which in the field of sexuality produced extensive new vocabularies and categories for naming desires and actions that could then become subjected to medical, legal, and other institutional and state interventions.

Along with producing subjects, modern power produces sexual (and other) categories that structure the world in certain ways. Here *Discipline and Punish* and volume 1 of *The History of Sexuality* are in accord. (In the later two volumes of *The History of Sexuality*, partly in response to criticism, Foucault examines how selves might act to produce themselves.) Consider Foucault's comment (one of the founding remarks of queer theory) on the medical categorization of homosexuality in 1870: "Homosexuality appeared as one of the forms of sexuality when it was transposed from the practice of sodomy to a kind of interior androgyny, a hermaphroditism of the soul. The sodomite had been a temporary aberration; the homosexual now was a species." Power acts discursively to produce homosexuality when it separates out and labels as *homosexual* certain actions that had previously been included in the grab-bag term *sodomy* (which also included bestiality and some nonreproductive heterosexual acts). The new attempt to be more precise, more "scientific," in categorizing human sexual behavior itself requires that behavior to be scrutinized more carefully than ever before.

Foucault further argues that the way that the courts and sociologists treat criminals and the medical profession and psychologists view homosexuals indicates a dramatic shift in the very form of subjecthood. In modern society, actions begin to be taken as evidence of a deep-rooted and persistent identity. In the premodern world, in contrast, sodomy and other crimes were seen as temporary aberrations, single acts that carried no particular relation to the self who committed them; they certainly were not seen as demonstrating a sexual identity or a criminal nature. The label *sodomite* says nothing beyond pointing to the commission of particular acts. But the homosexual carries his homosexuality within himself at every moment; the act comes to determine identity. Foucault's argument is that through this connection of actions to "being," of what I do to what I am, modern power produces subjects who have identities, thereby enabling its grip on us. Subjects whose identities must be figured out through an interpretation of their actions become "both an object of analysis and a target of intervention."

Foucault is exposing—and questioning—our era's most fundamental assumptions about who and what individuals are. And he argues that these assumptions have been produced by and are the foundational principles of the "social sciences"—what the French call "the human sciences." It is no coincidence that the modern academic disciplines arise during the same period that sees the shift toward disciplinary power. The knowledge produced in psychology, sociology, anthropology, criminology, and medicine is itself an integral part of the discursive ordering and physical management wielded by modern power.

Power/knowledge is the term Foucault uses to indicate how the production of knowledge is wedded to productive power. Modern power requires increasingly narrow categories through which it analyzes, differentiates, identifies, and administers individuals. The human sciences not only provide tools for this sorting process but also legitimate the actions that follow it. The psychological exam, for example, tells us what needs to be done: is this murderer a criminal who must be sent to prison, or an insane person who must be sent to a hospital?

Clearly, power/knowledge undercuts any lofty humanistic narrative of “the life of the mind” or “the disinterested pursuit of knowledge.” The intellectual comes to look like power’s dupe, or perhaps a privileged insider to power’s activities. The university, in particular, serves a dual function. As gatekeeper, it sorts students via grades, exams, course requirements, and so on, thereby limiting access to various cherished places in the social hierarchy, such as medical careers. At the same time the university undertakes funded research, thereby producing the knowledge through which populations are observed and managed.

Beginning in 2000, first in French and subsequently in English translation, Foucault’s thirteen yearly lecture courses of the 1970s and 1980s at the Collège de France were published. The lectures cover a wide range of topics and have proved immensely generative as theorists engage with them. In particular, the lectures collected under the titles “*Society Must Be Defended*,” 1975–1976 (2003), *Security, Territory, Population*, 1977–1978 (2007), and *The Birth of Biopolitics*, 1978–1979 (2008) have spawned a growing literature on biopolitics. Although he did not live to fully develop the ideas first broached in these lectures, Foucault, in the selection from them presented here, clearly felt that his theory of disciplinary power needed to be supplemented with a notion of biopolitical power. In particular, he was interested in how modern Western societies after 1700 increasingly accorded to the state a responsibility to protect, and even to enhance, the “life” of its citizens. Most obviously, this responsibility justifies the kinds of public health actions (inoculations, maintenance of clean water supplies, testing of food products) we now take for granted. But a focus on life can also justify various defensive measures against criminals and terrorists or even against the kinds of welfare provisions offered to the poor and disabled.

Among the many vital questions raised by the notion of biopolitics, two have especially interested subsequent theorists such as GIORGIO AGAMBEN, JUDITH BUTLER, Roberto Esposito, and Wendy Brown. The first is sovereignty. As Foucault notes in our selection, biopolitics suggests a fundamental shift in how sovereignty is understood, even as conditions in a globalized world today appear to undermine national sovereignty. The response of many nation-states to the threat of terrorism and to the mass migration of refugees from war-torn countries to Europe and the United States has been to reinforce the nation’s borders and the nation’s sovereignty through “security” legislation. Crucial to the attempt to consider what sovereignty means today and how it is deployed is Foucault’s notion that biopolitics is applied at the level of “populations,” not individual bodies. Hence he tells us that his concept of disciplinary power does not on its own offer an adequate account of how power works in the modern era. We must also think about the forms of power that are justified by actuarial tables and other ways to calculate the “general welfare.” And this issue brings the state back onstage after Foucault’s theory of disciplinary power had seemed to diminish direct state power.

Second, the Foucault lectures have inspired a robust examination of the very concept of life. At a time when the mantle of the most important science has passed from physics to biology, it has become increasingly important both theoretically and practically to understand what we mean by life. Just think of debates over abortion or end-of-life issues, not to mention concerns regarding “quality of life.” Questions of life are sites of political contestation and of state intervention. Biopower, as Foucault presents it, attends to all the techniques (at the level of the state or elsewhere) that aim to control or administer human beings “insofar as they are living beings. It is continuous, scientific, and it is the power to make live.”

We can justly say that questions of power remain central to Foucault’s work, even as his understandings of that complex term kept evolving. His bleak view of power’s omnipresence has sparked the most intense criticisms of his work, and in his work of the 1980s he did soften some of his most extreme statements.

In our selection from *Discipline and Punish*, Foucault writes that “there is no outside.” Nothing—whether selves, desires, or truth—is external to the productive

power/knowledge that creates the categories by which something is apprehended and thought. Disciplinary power and biopower are so all-pervasive and triumphant that meaningful resistance and independent agency appear to be impossible. Foucault insisted repeatedly that there was resistance everywhere throughout the world created by power, but his logic necessitates the view that such resistance, like everything else, is an offshoot of power. As a result, many activities that may seem to oppose power are, a Foucauldian analysis shows, “complicitous” with it, reinforcing rather than contesting its reign. (Analysis of this sort, preoccupied with trying to differentiate the truly oppositional from the apparently oppositional, abound within New Historicism and cultural studies, while “the problem of agency” everywhere haunts contemporary theory.) Foucault struggled to find ways to get out from under the compelling logic of “there is no outside” without returning to naive appeals to “truth” or “selves” or “life” that exist independently of the discursive and social networks in which they appear. His efforts in that direction focused on “the care of the self” (in the final two volumes of *The History of Sexuality*) and are suggestive, but are not fully worked through. Similarly, the work on biopower points toward a political care of the populace, but seems on the whole more ominous than not. Since his death, individuals and whole populations (such as migrants) have continued to be incorporated into the bureaucratic slots of a “globalized” world of transnational corporations, nation-states, international organizations such as the United Nations and the International Monetary Fund, and the increasingly prominent nongovernmental organizations (NGOs) responsible for “humanitarian” work, making Foucault’s accounts of a supervising, norm-enforcing, disciplinary power supplemented by a biopower that manages populations appear as pertinent as ever.

“What Is an Author?” Keywords: Authorship, The Canon/Tradition, Literary History, New Historicism, Poststructuralism, Subjectivity

Discipline and Punish: The Birth of the Prison Keywords: The Body, Cultural Studies, Identity, Institutional Studies, Modernity, New Historicism, Poststructuralism, Subjectivity

The History of Sexuality, Volume 1, An Introduction Keywords: The Body, Identity, New Historicism, Psychoanalysis, Queer Theory, Religion, Sexuality, Subjectivity

“Society Must Be Defended” Keywords: Institutional Studies, Modernity, Nationhood, Sexuality, Subjectivity

What Is an Author?¹

In proposing this slightly odd question, I am conscious of the need for an explanation. To this day, the “author” remains an open question both with respect to its general function within discourse and in my own writings; that is, this question permits me to return to certain aspects of my own work which now appear ill-advised and misleading. In this regard, I wish to propose a necessary criticism and reevaluation.

For instance, my objective in *The Order of Things*² had been to analyse verbal clusters as discursive layers which fall outside the familiar categories of a book, a work, or an author. But while I considered “natural history,” the “analysis of wealth,” and “political economy” in general terms, I neglected a

1. Translated by Donald F. Bouchard and Sherry Simon.

2. Published in 1966 as *Les Mots et les choses*; in it, Foucault uncovered the epistemic assump-

tions of the “classical” (Enlightenment) and modern periods by examining the work of natural scientists, political economists, and linguists.

similar analysis of the author and his works; it is perhaps due to this omission that I employed the names of authors throughout this book in a naive and often crude fashion. I spoke of Buffon, Cuvier, Ricardo,³ and others as well, but failed to realize that I had allowed their names to function ambiguously. This has proved an embarrassment to me in that my oversight has served to raise two pertinent objections.

It was argued that I had not properly described Buffon or his work and that my handling of Marx⁴ was pitifully inadequate in terms of the totality of his thought. Although these objections were obviously justified, they ignored the task I had set myself: I had no intention of describing Buffon or Marx or of reproducing their statements or implicit meanings, but, simply stated, I wanted to locate the rules that formed a certain number of concepts and theoretical relationships in their works. In addition, it was argued that I had created monstrous families by bringing together names as disparate as Buffon and Linnaeus or in placing Cuvier next to Darwin⁵ in defiance of the most readily observable family resemblances and natural ties. This objection also seems inappropriate since I had never tried to establish a genealogical table of exceptional individuals, nor was I concerned in forming an intellectual daguerreotype of the scholar or naturalist of the seventeenth and eighteenth century. In fact, I had no intention of forming any family, whether holy or perverse. On the contrary, I wanted to determine—a much more modest task—the functional conditions of specific discursive practices.

Then why did I use the names of authors in *The Order of Things*? Why not avoid their use altogether, or, short of that, why not define the manner in which they were used? These questions appear fully justified and I have tried to gauge their implications and consequences in a book that will appear shortly.⁶ These questions have determined my effort to situate comprehensive discursive units, such as “natural history” or “political economy,” and to establish the methods and instruments for delimiting, analyzing, and describing these unities. Nevertheless, as a privileged moment of individualization in the history of ideas, knowledge, and literature, or in the history of philosophy and science, the question of the author demands a more direct response. Even now, when we study the history of a concept, a literary genre, or a branch of philosophy, these concerns assume a relatively weak and secondary position in relation to the solid and fundamental role of an author and his works.

For the purposes of this paper, I will set aside a sociohistorical analysis of the author as an individual and the numerous questions that deserve attention in this context: how the author was individualized in a culture such as ours; the status we have given the author, for instance, when we began our research into authenticity and attribution; the systems of valorization in which he was included; or the moment when the stories of heroes gave way to an author's biography; the conditions that fostered the formulation of the fundamental critical category of “the man and his work.” For the time being, I wish to restrict myself to the singular relationship that holds between an

3. David Ricardo (1772–1823), English economist. Georges-Louis Leclerc, comte de Buffon (1707–1788), French naturalist. Georges Cuvier (1769–1832), French anatomist.

4. KARL MARX (1818–1883), German social, political, and economic philosopher.

5. Charles Darwin (1809–1882), English naturalist and theorist of evolution. Carolus Linnaeus: Carl von Linné (1707–1778), Swedish botanist who devised the modern scientific nomenclature of living things.

6. *The Archaeology of Knowledge* (1969).

author and a text, the manner in which a text apparently points to this figure who is outside and precedes it.

Beckett supplies a direction: "What matter who's speaking, someone said, what matter who's speaking."⁷ In an indifference such as this we must recognize one of the fundamental ethical principles of contemporary writing. It is not simply "ethical" because it characterizes our way of speaking and writing, but because it stands as an immanent rule, endlessly adopted and yet never fully applied. As a principle, it dominates writing as an ongoing practice and slights our customary attention to the finished product. For the sake of illustration, we need only consider two of its major themes. First, the writing of our day has freed itself from the necessity of "expression"; it only refers to itself, yet it is not restricted to the confines of interiority. On the contrary, we recognize it in its exterior deployment. This reversal transforms writing into an interplay of signs, regulated less by the content it signifies than by the very nature of the signifier. Moreover, it implies an action that is always testing the limits of its regularity, transgressing and reversing an order that it accepts and manipulates. Writing unfolds like a game that inevitably moves beyond its own rules and finally leaves them behind. Thus, the essential basis of this writing is not the exalted emotions related to the act of composition or the insertion of a subject into language. Rather, it is primarily concerned with creating an opening where the writing subject endlessly disappears.

The second theme is even more familiar: it is the kinship between writing and death. This relationship inverts the age-old conception of Greek narrative or epic, which was designed to guarantee the immortality of a hero. The hero accepted an early death because his life, consecrated and magnified by death, passed into immortality; and the narrative redeemed his acceptance of death. In a different sense, Arabic stories, and *The Arabian Nights* in particular, had as their motivation, their theme and pretext, this strategy for defeating death. Storytellers continued their narratives late into the night to forestall death and to delay the inevitable moment when everyone must fall silent. Scheherazade's story is a desperate inversion of murder; it is the effort, throughout all those nights, to exclude death from the circle of existence.⁸ This conception of a spoken or written narrative as a protection against death has been transformed by our culture. Writing is now linked to sacrifice and to the sacrifice of life itself; it is a voluntary obliteration of the self that does not require representation in books because it takes place in the everyday existence of the writer. Where a work had the duty of creating immortality, it now attains the right to kill, to become the murderer of its author. Flaubert, Proust, and Kafka⁹ are obvious examples of this reversal. In addition, we find the link between writing and death manifested in the total effacement of the individual characteristics of the writer; the quibbling and confrontations that a writer generates between himself and his text cancel out the signs of his particular individuality. If we wish to know the writer in our day, it will be through the singularity of his absence and in his link to

7. Samuel Beckett, *Texts for Nothing* (1974), p. 16 [translators' note]. Beckett (1906–1989), Irish-born novelist and playwright; he wrote in French.
8. Scheherazade, narrator of *The Arabian Nights* (a collection of traditional tales from several Middle Eastern cultures, codified ca. 1450), tells her sto-

ries to avoid the fate of the king's previous brides: execution on the morning after he marries them.

9. Franz Kafka (1883–1924), Austrian novelist, who lived much of his life in Prague. Gustave Flaubert (1821–1880), and Marcel Proust (1871–1922), French novelists.

death, which has transformed him into a victim of his own writing. While all of this is familiar in philosophy, as in literary criticism, I am not certain that the consequences derived from the disappearance or death of the author¹ have been fully explored or that the importance of this event has been appreciated. To be specific, it seems to me that the themes destined to replace the privileged position accorded the author have merely served to arrest the possibility of genuine change. Of these, I will examine two that seem particularly important.

To begin with, the thesis concerning a work. It has been understood that the task of criticism is not to reestablish the ties between an author and his work or to reconstitute an author's thought and experience through his works and, further, that criticism should concern itself with the structures of a work, its architectonic forms, which are studied for their intrinsic and internal relationships. Yet, what of a context that questions the concept of a work? What, in short, is the strange unit designated by the term, work? What is necessary to its composition, if a work is not something written by a person called an "author"? Difficulties arise on all sides if we raise the question in this way. If an individual is not an author, what are we to make of those things he has written or said, left among his papers or communicated to others? Is this not properly a work? What, for instance, were Sade's papers before he was consecrated as an author?² Little more, perhaps, than rolls of paper on which he endlessly unravelled his fantasies while in prison.

Assuming that we are dealing with an author, is everything he wrote and said, everything he left behind, to be included in his work? This problem is both theoretical and practical. If we wish to publish the complete works of Nietzsche,³ for example, where do we draw the line? Certainly, everything must be published, but can we agree on what "everything" means? We will, of course, include everything that Nietzsche himself published, along with the drafts of his works, his plans for aphorisms, his marginal notations and corrections. But what if, in a notebook filled with aphorisms, we find a reference, a reminder of an appointment, an address, or a laundry bill, should this be included in his works? Why not? These practical considerations are endless once we consider how a work can be extracted from the millions of traces left by an individual after his death. Plainly, we lack a theory to encompass the questions generated by a work and the empirical activity of those who naively undertake the publication of the complete works of an author often suffers from the absence of this framework. Yet more questions arise. Can we say that *The Arabian Nights*, and *Stromates* of Clement of Alexandria, or the *Lives* of Diogenes Laertes⁴ constitute works? Such questions only begin to suggest the range of our difficulties, and, if some have found it convenient to bypass the individuality of the writer or his status as an author to concentrate on a work, they have failed to appreciate the equally problematic nature of the word "work" and the unity it designates.

1. The phrase "death of the author" comes from the French literary critic ROLAND BARTHES (1915–1980).

2. The French author the marquis de Sade (1740–1814) began to write while in prison.

3. FRIEDRICH NIETZSCHE (1844–1900), the German philosopher, was insane the last ten years of his life and left many unpublished works, includ-

ing wild jottings from his later years.

4. Greek scholar (ca. early 3d c. C.E.) whose *Lives* is a compilation of the lives and doctrines of the philosophers. Clement of Alexandria (ca. 150–ca. 215 C.E.), early church father and theologian; the *Stromates* (*Miscellanies*) is a collection of notes, full of digressions, on Christian philosophy.

Another thesis has detained us from taking full measure of the author's disappearance. It avoids confronting the specific event that makes it possible and, in subtle ways, continues to preserve the existence of the author. This is the notion of *écriture*.⁵ Strictly speaking, it should allow us not only to circumvent references to an author, but to situate his recent absence. The conception of *écriture*, as currently employed, is concerned with neither the act of writing nor the indications, as symptoms or signs within a text, of an author's meaning; rather, it stands for a remarkably profound attempt to elaborate the conditions of any text, both the conditions of its spatial dispersion and its temporal deployment.

It appears, however, that this concept, as currently employed, has merely transposed the empirical characteristics of an author to a transcendental anonymity. The extremely visible signs of the author's empirical activity are effaced to allow the play, in parallel or opposition, of religious and critical modes of characterization. In granting a primordial status to writing, do we not, in effect, simply reinscribe in transcendental terms the theological affirmation of its sacred origin or a critical belief in its creative nature? To say that writing, in terms of the particular history it made possible, is subjected to forgetfulness and repression, is this not to reintroduce in transcendental terms the religious principle of hidden meanings (which require interpretation) and the critical assumption of implicit significations, silent purposes, and obscure contents (which give rise to commentary)?⁶ Finally, is not the conception of writing as absence a transposition into transcendental terms of the religious belief in a fixed and continuous tradition or the aesthetic principle that proclaims the survival of the work as a kind of enigmatic supplement of the author beyond his own death?

This conception of *écriture* sustains the privileges of the author through the safeguard of the *a priori*;⁷ the play of representations that formed a particular image of the author is extended within a gray neutrality. The disappearance of the author—since Mallarmé,⁸ an event of our time—is held in check by the transcendental. Is it not necessary to draw a line between those who believe that we can continue to situate our present discontinuities within the historical and transcendental tradition of the nineteenth century and those who are making a great effort to liberate themselves, once and for all, from this conceptual framework?

It is obviously insufficient to repeat empty slogans: the author has disappeared; God and man died a common death. Rather, we should reexamine the empty space left by the author's disappearance; we should attentively observe, along its gaps and fault lines, its new demarcations, and the reapportionment of this void; we should await the fluid functions released by this disappearance. In this context we can briefly consider the problems that arise in the use of an author's name. What is the name of an author?

5. Written language or writing (French). In post-structuralist thought, especially that of JACQUES DERRIDA (1930–2004), *écriture* designates that which is required for any particular speech act—whether spoken or written—to take place.

6. Here Foucault is criticizing the writings of Derrida.

7. That is, that which is derived from self-evident propositions (vs. from experience).

8. Stéphane Mallarmé (1842–1898), French symbolist poet; he was interested in writing techniques that diminished the author's role in the creation of the poem.

How does it function? Far from offering a solution, I will attempt to indicate some of the difficulties related to these questions.

The name of an author poses all the problems related to the category of the proper name. (Here, I am referring to the work of John Searle,⁹ among others.) Obviously not a pure and simple reference, the proper name (and the author's name as well) has other than indicative functions. It is more than a gesture, a finger pointed at someone; it is, to a certain extent, the equivalent of a description. When we say "Aristotle,"¹ we are using a word that means one or a series of definite descriptions of the type: "the author of the *Analytics*," or "the founder of ontology," and so forth. Furthermore, a proper name has other functions than that of signification: when we discover that Rimbaud² has not written *La Chasse spirituelle*, we cannot maintain that the meaning of the proper name or this author's name has been altered. The proper name and the name of an author oscillate between the poles of description and designation,³ and, granting that they are linked to what they name, they are not totally determined either by their descriptive or designative functions. Yet—and it is here that the specific difficulties attending an author's name appear—the link between a proper name and the individual being named and the link between an author's name and that which it names are not isomorphous and do not function in the same way; and these differences require clarification.

To learn, for example, that Pierre Dupont⁴ does not have blue eyes, does not live in Paris, and is not a doctor does not invalidate the fact that the name, Pierre Dupont, continues to refer to the same person; there has been no modification of the designation that links the name to the person. With the name of an author, however, the problems are far more complex. The disclosure that Shakespeare was not born in the house that tourists now visit would not modify the functioning of the author's name, but, if it were proved that he had not written the sonnets that we attribute to him, this would constitute a significant change and affect the manner in which the author's name functions. Moreover, if we establish that Shakespeare wrote Bacon's *Organon* and that the same author was responsible for both the works of Shakespeare and those of Bacon, we would have introduced a third type of alteration which completely modifies the functioning of the author's name.⁵ Consequently, the name of an author is not precisely a proper name among others.

Many other factors sustain this paradoxical singularity of the name of an author. It is altogether different to maintain that Pierre Dupont does not exist and that Homer or Hermes Trismegistes⁶ have never existed. While

9. See John Searle, *Speech Acts: An Essay in the Philosophy of Language* (1969), pp. 162–74 [translators' note]. Searle (b. 1932), American philosopher.

1. Greek philosopher (384–322 B.C.E.; see above).
2. Arthur Rimbaud (1854–1891), French poet. The prose poem "La Chasse spirituelle" was published in 1949 as a recovered "lost" work by Rimbaud; its actual authors revealed the hoax shortly after publication.

3. In the philosophy of language, a *description* is a meaningful set of words that refers to a particular object. Hence, "the author of *Great Expectations*" describes "Charles Dickens." In contrast, the name "Charles Dickens" is a *designation* of the person who bears that name.

4. The French equivalent of "John Doe," a random designation of a living person.

5. Some people have argued that the plays of William Shakespeare (1564–1616) were actually written by the English philosopher Francis Bacon (1561–1626), whose *New Organon* (1620) is often cited as the founding text of the scientific method.

6. The god of letters, to whom 42 philosophico-religious works and books on alchemy and astrology, presumed to be the ancient wisdom of Egypt, were attributed. Homer is the traditional author of the *Iliad* and the *Odyssey* (ca. 8th c. B.C.E.); but the question of whether these two poems, originally transmitted orally, were the work of any single author remains open.

the first negation merely implies that there is no one by the name of Pierre Dupont, the second indicates that several individuals have been referred to by one name or that the real author possessed none of the traits traditionally associated with Homer or Hermes. Neither is it the same thing to say that Jacques Durand, not Pierre Dupont, is the real name of X and that Stendhal's name was Henri Beyle.⁷ We could also examine the function and meaning of such statements as "Bourbaki is this or that person," and "Victor Eremita, Climacus, Anticlimacus, Frater Taciturnus, Constantin Constantius, all of these are Kierkegaard."⁸

These differences indicate that an author's name is not simply an element of speech (as a subject, a complement, or an element that could be replaced by a pronoun or other parts of speech). Its presence is functional in that it serves as a means of classification. A name can group together a number of texts and thus differentiate them from others. A name also establishes different forms of relationships among texts. Neither Hermes nor Hippocrates existed in the sense that we can say Balzac⁹ existed, but the fact that a number of texts were attached to a single name implies that relationships of homogeneity, filiation, reciprocal explanation, authentication, or of common utilization were established among them. Finally, the author's name characterizes a particular manner of existence of discourse. Discourse that possesses an author's name is not to be immediately consumed and forgotten; neither is it accorded the momentary attention given to ordinary, fleeting words. Rather, its status and its manner of reception are regulated by the culture in which it circulates.

We can conclude that, unlike a proper name, which moves from the interior of a discourse to the real person outside who produced it, the name of the author remains at the contours of texts—separating one from the other, defining their form, and characterizing their mode of existence. It points to the existence of certain groups of discourse and refers to the status of this discourse within a society and culture. The author's name is not a function of a man's civil status, nor is it fictional; it is situated in the breach, among the discontinuities, which gives rise to new groups of discourse and their singular mode of existence. Consequently, we can say that in our culture, the name of an author is a variable that accompanies only certain texts to the exclusion of others: a private letter may have a signatory, but it does not have an author; a contract can have an underwriter, but not an author; and, similarly, an anonymous poster attached to a wall may have a writer, but he cannot be an author. In this sense, the function of an author is to characterize the existence, circulation, and operation of certain discourses within a society.

In dealing with the "author" as a function of discourse, we must consider the characteristics of a discourse that support this use and determine its

7. The real name of the French novelist (1783–1842) who wrote under the pen name Stendhal.

8. Victor Eremita and the other names listed here were all pseudonyms used by the Danish philosopher Søren Kierkegaard (1813–1855) at various times during his career. Nicolas Bourbaki, the pseudonym shared by a group of 20th-

century algebraists.

9. Honoré de Balzac (1799–1850), French novelist. Hippocrates (ca. 460–ca. 377 B.C.E.), Greek physician usually considered the father of medicine; though it is unlikely that he wrote any of the books attributed to him, Hippocrates did exist.

difference from other discourses. If we limit our remarks to only those books or texts with authors, we can isolate four different features.

First, they are objects of appropriation; the form of property they have become is of a particular type whose legal codification was accomplished some years ago. It is important to notice, as well, that its status as property is historically secondary to the penal code controlling its appropriation. Speeches and books were assigned real authors, other than mythical or important religious figures, only when the author became subject to punishment and to the extent that his discourse was considered transgressive. In our culture—undoubtedly in others as well—discourse was not originally a thing, a product, or a possession, but an action situated in a bipolar field of sacred and profane, lawful and unlawful, religious and blasphemous. It was a gesture charged with risks long before it became a possession caught in a circuit of property values. But it was at the moment when a system of ownership and strict copyright rules were established (toward the end of the eighteenth and beginning of the nineteenth century) that the transgressive properties always intrinsic to the act of writing became the forceful imperative of literature. It is as if the author, at the moment he was accepted into the social order of property which governs our culture, was compensating for his new status by reviving the older bipolar field of discourse in a systematic practice of transgression and by restoring the danger of writing which, on another side, had been conferred the benefits of property.

Secondly, the “author-function” is not universal or constant in all discourse. Even within our civilization, the same types of texts have not always required authors; there was a time when those texts which we now call “literary” (stories, folk tales, epics, and tragedies) were accepted, circulated, and valorized without any question about the identity of their author. Their anonymity was ignored because their real or supposed age was a sufficient guarantee of their authenticity. Texts, however, that we now call “scientific” (dealing with cosmology and the heavens, medicine or illness, the natural sciences or geography) were only considered truthful during the Middle Ages if the name of the author was indicated. Statements on the order of “Hippocrates said . . .” or “Pliny¹ tells us that . . .” were not merely formulas for an argument based on authority; they marked a proven discourse. In the seventeenth and eighteenth centuries, a totally new conception was developed when scientific texts were accepted on their own merits and positioned within an anonymous and coherent conceptual system of established truths and methods of verification. Authentication no longer required reference to the individual who had produced them; the role of the author disappeared as an index of truthfulness and, where it remained as an inventor’s name, it was merely to denote a specific theorem or proposition, a strange effect, a property, a body, a group of elements, or pathological syndrome.

At the same time, however, “literary” discourse was acceptable only if it carried an author’s name; every text of poetry or fiction was obliged to state its author and the date, place, and circumstance of its writing. The meaning and value attributed to the text depended on this information. If by accident or design a text was presented anonymously, every effort was made

1. Roman writer (23/24–79 C.E.); only his 37-book *Natural History* survives.

to locate its author. Literary anonymity was of interest only as a puzzle to be solved as, in our day, literary works are totally dominated by the sovereignty of the author. (Undoubtedly, these remarks are far too categorical. Criticism has been concerned for some time now with aspects of a text not fully dependent on the notion of an individual creator; studies of genre or the analysis of recurring textual motifs and their variations from a norm other than the author. Furthermore, where in mathematics the author has become little more than a handy reference for a particular theorem or group of propositions, the reference to an author in biology and medicine, or to the date of his research has a substantially different bearing. This latter reference, more than simply indicating the source of information, attests to the "reliability" of the evidence, since it entails an appreciation of the techniques and experimental materials available at a given time and in a particular laboratory.)

The third point concerning this "author-function" is that it is not formed spontaneously through the simple attribution of a discourse to an individual. It results from a complex operation whose purpose is to construct the rational entity we call an author. Undoubtedly, this construction is assigned a "realistic" dimension as we speak of an individual's "profundity" or "creative" power, his intentions or the original inspiration manifested in writing. Nevertheless, these aspects of an individual, which we designate as an author (or which comprise an individual as an author), are projections, in terms always more or less psychological, of our way of handling texts: in the comparisons we make, the traits we extract as pertinent, the continuities we assign, or the exclusions we practice. In addition, all these operations vary according to the period and the form of discourse concerned. A "philosopher" and a "poet" are not constructed in the same manner; and the author of an eighteenth-century novel was formed differently from the modern novelist. There are, nevertheless, transhistorical constants in the rules that govern the construction of an author.

In literary criticism, for example, the traditional methods for defining an author—or, rather, for determining the configuration of the author from existing texts—derive in large part from those used in the Christian tradition to authenticate (or to reject) the particular texts in its possession. Modern criticism, in its desire to "recover" the author from a work, employs devices strongly reminiscent of Christian exegesis when it wished to prove the value of a text by ascertaining the holiness of its author. In *De Viris Illustribus*, Saint Jerome² maintains that homonymy is not proof of the common authorship of several works, since many individuals could have the same name or someone could have perversely appropriated another's name. The name, as an individual mark, is not sufficient as it relates to a textual tradition. How, then, can several texts be attributed to an individual author? What norms, related to the function of the author, will disclose the involvement of several authors? According to Saint Jerome, there are four criteria: the texts that must be eliminated from the list of works attributed to a single author are those inferior to the others (thus, the author is defined as a standard level of quality); those whose ideas conflict with the doctrine

2. Church father and scholar (ca. 347–420), the first to translate the complete Bible into Latin. *De Viris Illustribus* (392–93, *Of Illustrious Men*) is a collection of 130 biographies of Christian writers.

expressed in the others (here the author is defined as a certain field of conceptual or theoretical coherence); those written in a different style and containing words and phrases not ordinarily found in the other works (the author is seen as a stylistic uniformity); and those referring to events or historical figures subsequent to the death of the author (the author is thus a definite historical figure in which a series of events converge). Although modern criticism does not appear to have these same suspicions concerning authentication, its strategies for defining the author present striking similarities. The author explains the presence of certain events within a text, as well as their transformations, distortions, and their various modifications (and this through an author's biography or by reference to his particular point of view, in the analysis of his social preferences and his position within a class or by delineating his fundamental objectives). The author also constitutes a principle of unity in writing where any unevenness of production is ascribed to changes caused by evolution, maturation, or outside influence. In addition, the author serves to neutralize the contradictions that are found in a series of texts. Governing this function is the belief that there must be—at a particular level of an author's thought, of his conscious or unconscious desire—a point where contradictions are resolved, where the incompatible elements can be shown to relate to one another or to cohere around a fundamental and originating contradiction. Finally, the author is a particular source of expression who, in more or less finished forms, is manifested equally well, and with similar validity, in a text, in letters, fragments, drafts, and so forth. Thus, even while Saint Jerome's four principles of authenticity might seem largely inadequate to modern critics, they, nevertheless, define the critical modalities now used to display the function of the author.

However, it would be false to consider the function of the author as a pure and simple reconstruction after the fact of a text given as passive material, since a text always bears a number of signs that refer to the author. Well known to grammarians, these textual signs are personal pronouns, adverbs of time and place, and the conjugation of verbs. But it is important to note that these elements have a different bearing on texts with an author and on those without one. In the latter, these "shifters"³ refer to a real speaker and to an actual deictic situation, with certain exceptions such as the case of indirect speech in the first person. When discourse is linked to an author, however, the role of "shifters" is more complex and variable. It is well known that in a novel narrated in the first person, neither the first person pronoun, the present indicative tense, nor, for that matter, its signs of localization refer directly to the writer, either to the time when he wrote, or to the specific act of writing; rather, they stand for a "second self" whose similarity to the author is never fixed and undergoes considerable alteration within the course of a single book. It would be as false to seek the author in relation to the actual writer as to the fictional narrator; the "author-function" arises out of their scission—in the division and distance of the two. One might object that this phenomenon only applies to novels or poetry, to a context of "quasi-discourse," but, in fact, all discourse that supports this "author-function" is characterized by this plurality of egos. In a mathematical treatise, the ego who

3. Words whose referent changes according to the identity and context of the speaker, such as "I" (personal pronouns), "now" (adverbs of time), and

"here" (adverbs of place)—that is, according to the "deictic situation."

indicates the circumstances of composition in the preface is not identical, either in terms of his position or his function, to the "I" who concludes a demonstration within the body of the text. The former implies a unique individual who, at a given time and place, succeeded in completing a project, whereas the latter indicates an instance and plan of demonstration that anyone could perform provided the same set of axioms, preliminary operations, and an identical set of symbols were used. It is also possible to locate a third ego: one who speaks of the goals of his investigation, the obstacles encountered, its results, and the problems yet to be solved and this "I" would function in a field of existing or future mathematical discourses. We are not dealing with a system of dependencies where a first and essential use of the "I" is reduplicated, as a kind of fiction, by the other two. On the contrary, the "author-function" in such discourses operates so as to effect the simultaneous dispersion of the three egos.

Further elaboration would, of course, disclose other characteristics of the "author-function," but I have limited myself to the four that seemed the most obvious and important. They can be summarized in the following manner: the "author-function" is tied to the legal and institutional systems that circumscribe, determine, and articulate the realm of discourses; it does not operate in a uniform manner in all discourses, at all times, and in any given culture; it is not defined by the spontaneous attribution of a text to its creator, but through a series of precise and complex procedures; it does not refer, purely and simply, to an actual individual insofar as it simultaneously gives rise to a variety of egos and to a series of subjective positions that individuals of any class may come to occupy.

I am aware that until now I have kept my subject within unjustifiable limits; I should also have spoken of the "author-function" in painting, music, technical fields, and so forth. Admitting that my analysis is restricted to the domain of discourse, it seems that I have given the term "author" an excessively narrow meaning. I have discussed the author only in the limited sense of a person to whom the production of a text, a book, or a work can be legitimately attributed. However, it is obvious that even within the realm of discourse a person can be the author of much more than a book—of a theory, for instance, of a tradition or a discipline within which new books and authors can proliferate. For convenience, we could say that such authors occupy a "transdiscursive" position.

Homer, Aristotle,⁴ and the Church Fathers played this role, as did the first mathematicians and the originators of the Hippocratic tradition. This type of author is surely as old as our civilization. But I believe that the nineteenth century in Europe produced a singular type of author who should not be confused with "great" literary authors, or the authors of canonical religious texts, and the founders of sciences. Somewhat arbitrarily, we might call them "initiators of discursive practices."

The distinctive contribution of these authors is that they produced not only their own work, but the possibility and the rules of formation of other texts. In this sense, their role differs entirely from that of a novelist, for example, who is basically never more than the author of his own text.

4. Aristotle's encyclopedic writings enormously influenced medieval philosophy and science.

Freud⁵ is not simply the author of *The Interpretation of Dreams* or of *Wit and its Relation to the Unconscious* and Marx is not simply the author of the *Communist Manifesto* or *Capital*: they both established the endless possibility of discourse. Obviously, an easy objection can be made. The author of a novel may be responsible for more than his own text; if he acquires some “importance” in the literary world, his influence can have significant ramifications. To take a very simple example, one could say that Ann Radcliffe⁶ did not simply write *The Mysteries of Udolpho* and a few other novels, but also made possible the appearance of Gothic romances at the beginning of the nineteenth century. To this extent, her function as an author exceeds the limits of her work. However, this objection can be answered by the fact that the possibilities disclosed by the initiators of discursive practices (using the examples of Marx and Freud, whom I believe to be the first and the most important) are significantly different from those suggested by novelists. The novels of Ann Radcliffe put into circulation a certain number of resemblances and analogies patterned on her work—various characteristic signs, figures, relationships, and structures that could be integrated into other books. In short, to say that Ann Radcliffe created the Gothic Romance means that there are certain elements common to her works and to the nineteenth-century Gothic romance: the heroine ruined by her own innocence, the secret fortress that functions as a counter-city, the outlaw-hero who swears revenge on the world that has cursed him, etc. On the other hand, Marx and Freud, as “initiators of discursive practices,” not only made possible a certain number of analogies that could be adopted by future texts, but, as importantly, they also made possible a certain number of differences. They cleared a space for the introduction of elements other than their own, which, nevertheless, remain within the field of discourse they initiated. In saying that Freud founded psychoanalysis, we do not simply mean that the concept of libido or the techniques of dream analysis reappear in the writings of Karl Abraham or Melanie Klein,⁷ but that he made possible a certain number of differences with respect to his books, concepts, and hypotheses, which all arise out of psychoanalytic discourse.

Is this not the case, however, with the founder of any new science or of any author who successfully transforms an existing science? After all, Galileo⁸ is indirectly responsible for the texts of those who mechanically applied the laws he formulated, in addition to having paved the way for the production of statements far different from his own. If Cuvier is the founder of biology and Saussure⁹ of linguistics, it is not because they were imitated or that an organic concept or a theory of the sign was uncritically integrated into new texts, but because Cuvier, to a certain extent, made possible a theory of evolution diametrically opposed to his own system and because Saussure made possible a generative grammar radically different from his own structural analysis. Superficially, then, the initiation of discursive practices appears similar to the founding of any scientific endeavor, but I believe there is a fundamental difference.

5. SIGMUND FREUD (1856–1939), Austrian founder of psychoanalysis.

6. English novelist (1764–1823); her *Mysteries of Udolpho* (1794) was extremely popular.

7. Austrian-born English psychoanalyst (1882–1960). Abraham (1877–1925), German psycho-

analyst.

8. Galileo Galilei (1564–1642), Italian astronomer and physicist who formulated 3 laws of motion.

9. FERDINAND DE SAUSSURE (1857–1913), Swiss linguist.

In a scientific program, the founding act is on an equal footing with its future transformations: it is merely one among the many modifications that it makes possible. This interdependence can take several forms. In the future development of a science, the founding act may appear as little more than a single instance of a more general phenomenon that has been discovered. It might be questioned, in retrospect, for being too intuitive or empirical and submitted to the rigors of new theoretical operations in order to situate it in a formal domain. Finally, it might be thought a hasty generalization whose validity should be restricted. In other words, the founding act of a science can always be rechanneled through the machinery of transformations it has instituted.

On the other hand, the initiation of a discursive practice is heterogeneous to its ulterior transformations. To extend psychoanalytic practice, as initiated by Freud, is not to presume a formal generality that was not claimed at the outset; it is to explore a number of possible applications. To limit it is to isolate in the original texts a small set of propositions or statements that are recognized as having an inaugurative value and that mark other Freudian concepts or theories as derivative. Finally, there are no "false" statements in the work of these initiators; those statements considered inessential or "pre-historic," in that they are associated with another discourse, are simply neglected in favor of the more pertinent aspects of the work. The initiation of a discursive practice, unlike the founding of a science, overshadows and is necessarily detached from its later developments and transformations. As a consequence, we define the theoretical validity of a statement with respect to the work of the initiator, whereas in the case of Galileo or Newton,¹ it is based on the structural and intrinsic norms established in cosmology or physics. Stated schematically, the work of these initiators is not situated in relation to a science or in the space it defines; rather, it is science or discursive practice that relate to their works as the primary points of reference.

In keeping with this distinction, we can understand why it is inevitable that practitioners of such discourses must "return to the origin." Here, as well, it is necessary to distinguish a "return" from scientific "rediscoveries" or "reactivations." "Rediscoveries" are the effects of analogy or isomorphism with current forms of knowledge that allow the perception of forgotten or obscured figures. For instance, Chomsky in his book on Cartesian grammar² "rediscovered" a form of knowledge that had been in use from Cordemoy to Humboldt.³ It could only be understood from the perspective of generative grammar because this later manifestation held the key to its construction: in effect, a retrospective codification of an historical position. "Reactivation" refers to something quite different: the insertion of discourse into totally new domains of generalization, practice, and transformations. The history of mathematics abounds in examples of this phenomenon as the work of Michel Serres on mathematical anamnesis shows.⁴

2. Noam Chomsky, *Cartesian Linguistics* (1966) [translators' note]. Chomsky (b. 1928), American linguist.

3. Wilhelm von Humboldt (1767–1835), German statesman and philologist. Géraud de Cordemoy (1626–1684), French author of *A Philosophical*

Discourse Concerning Speech (1668).

4. Michel Serres, *La Communication: Hermes I* (1968), pp. 78–112 [translators' note]. "Mathematical anamnesis": the "recollection" (in Greek, *anamnēsis*) of innate concepts, as demonstrated by PLATO (ca. 427–ca. 347 B.C.E.) in *Meno* 80a–86c. Serres (b. 1930), French philosopher.

The phrase, “return to,” designates a movement with its proper specificity, which characterizes the initiation of discursive practices. If we return, it is because of a basic and constructive omission, an omission that is not the result of accident or incomprehension. In effect, the act of initiation is such, in its essence, that it is inevitably subjected to its own distortions; that which displays this act and derives from it is, at the same time, the root of its divergences and travesties. This nonaccidental omission must be regulated by precise operations that can be situated, analysed, and reduced in a return to the act of initiation. The barrier imposed by omission was not added from the outside; it arises from the discursive practice in question, which gives it its law. Both the cause of the barrier and the means for its removal, this omission—also responsible for the obstacles that prevent returning to the act of initiation—can only be resolved by a return. In addition, it is always a return to a text in itself, specifically, to a primary and unadorned text with particular attention to those things registered in the interstices of the text, its gaps and absences. We return to those empty spaces that have been masked by omission or concealed in a false and misleading plenitude. In these rediscoveries of an essential lack, we find the oscillation of two characteristic responses: “This point was made—you can’t help seeing it if you know how to read”; or, inversely, “No, that point is not made in any of the printed words in the text, but it is expressed through the words, in their relationships and in the distance that separates them.” It follows naturally that this return, which is a part of the discursive mechanism, constantly introduces modifications that would come to fix itself upon the primary discursivity and redouble it in the form of an ornament which, after all, is not essential. Rather, it is an effective and necessary means of transforming discursive practice. A study of Galileo’s works could alter our knowledge of the history, but not the science, of mechanics; whereas, a re-examination of the books of Freud or Marx can transform our understanding of psychoanalysis or Marxism.

A last feature of these returns is that they tend to reinforce the enigmatic link between an author and his works. A text has an inaugurative value precisely because it is the work of a particular author, and our returns are conditioned by this knowledge. The rediscovery of an unknown text by Newton or Cantor⁵ will not modify classical cosmology or group theory; at most, it will change our appreciation of their historical genesis. Bringing to light, however, *An Outline of Psychoanalysis*, to the extent that we recognize it as a book by Freud, can transform not only our historical knowledge, but the field of psychoanalytic theory—if only through a shift of accent or of the center of gravity. These returns, an important component of discursive practices, form a relationship between “fundamental” and mediate authors, which is not identical to that which links an ordinary text to its immediate author.

These remarks concerning the initiation of discursive practices have been extremely schematic, especially with regard to the opposition I have tried to trace between this initiation and the founding of sciences. The distinction between the two is not readily discernible; moreover, there is no proof that the two procedures are mutually exclusive. My only purpose in setting up

5. Georg Cantor (1845–1918), Russian-born German mathematician.

this opposition, however, was to show that the “author-function,” sufficiently complex at the level of a book or a series of texts that bear a definite signature, has other determining factors when analysed in terms of larger entities—groups of works or entire disciplines.

Unfortunately, there is a decided absence of positive propositions in this essay, as it applies to analytic procedures or directions for future research, but I ought at least to give the reasons why I attach such importance to a continuation of this work. Developing a similar analysis could provide the basis for a typology of discourse. A typology of this sort cannot be adequately understood in relation to the grammatical features, formal structures, and objects of discourse, because there undoubtedly exist specific discursive properties or relationships that are irreducible to the rules of grammar and logic and to the laws that govern objects. These properties require investigation if we hope to distinguish the larger categories of discourse. The different forms of relationships (or nonrelationships) that an author can assume are evidently one of these discursive properties.

This form of investigation might also permit the introduction of an historical analysis of discourse. Perhaps the time has come to study not only the expressive value and formal transformations of discourse, but its mode of existence: the modifications and variations, within any culture, of modes of circulation, valorization, attribution, and appropriation. Partially at the expense of themes and concepts that an author places in his work, the “author-function” could also reveal the manner in which discourse is articulated on the basis of social relationships.

Is it not possible to reexamine, as a legitimate extension of this kind of analysis, the privileges of the subject? Clearly, in undertaking an internal and architectonic analysis of a work (whether it be a literary text, a philosophical system, or a scientific work) and in delimiting psychological and biographical references, suspicions arise concerning the absolute nature and creative role of the subject. But the subject should not be entirely abandoned. It should be reconsidered, not to restore the theme of an originating subject, but to seize its functions, its intervention in discourse, and its system of dependencies. We should suspend the typical questions: how does a free subject penetrate the density of things and endow them with meaning; how does it accomplish its design by animating the rules of discourse from within? Rather, we should ask: under what conditions and through what forms can an entity like the subject appear in the order of discourse; what position does it occupy; what functions does it exhibit; and what rules does it follow in each type of discourse? In short, the subject (and its substitutes) must be stripped of its creative role and analysed as a complex and variable function of discourse.

The author—or what I have called the “author-function”—is undoubtedly only one of the possible specifications of the subject and, considering past historical transformations, it appears that the form, the complexity, and even the existence of this function are far from immutable. We can easily imagine a culture where discourse would circulate without any need for an author. Discourses, whatever their status, form, or value, and regardless of our manner of handling them, would unfold in a pervasive anonymity. No longer the tiresome repetitions:

"Who is the real author?"

"Have we proof of his authenticity and originality?"

"What has he revealed of his most profound self in his language?"

New questions will be heard:

"What are the modes of existence of this discourse?"

"Where does it come from; how is it circulated; who controls it?"

"What placements are determined for possible subjects?"

"Who can fulfill these diverse functions of the subject?"

Behind all these questions we would hear little more than the murmur of indifference:

"What matter who's speaking?"

1969

*From Discipline and Punish: The Birth of the Prison*¹

The Carceral

Were I to fix the date of completion of the carceral² system, I would choose not 1810 and the penal code, nor even 1844, when the law laying down the principle of cellular internment was passed; I might not even choose 1838, when books on prison reform by Charles Lucas, Moreau-Christophe and Faucher were published.³ The date I would choose would be 22 January 1840, the date of the official opening of Mettray.⁴ Or better still, perhaps, that glorious day, unremarked and unrecorded, when a child in Mettray remarked as he lay dying: 'What a pity I left the colony so soon'.⁵ This marked the death of the first penitentiary saint. Many of the blessed no doubt went to join him, if the former inmates of the penal colonies are to be believed when, in singing the praises of the new punitive policies of the body, they remarked: 'We preferred the blows, but the cell suits us better'.

Why Mettray? Because it is the disciplinary form at its most extreme, the model in which are concentrated all the coercive technologies of behaviour. In it were to be found 'cloister, prison, school, regiment'. The small, highly hierarchized groups, into which the inmates were divided, followed simultaneously five models: that of the family (each group was a 'family' composed of 'brothers' and two 'elder brothers'); that of the army (each family, commanded by a head, was divided into two sections, each of which had a second in command; each inmate had a number and was taught basic military exercises; there was a cleanliness inspection every day, an inspection of clothing every week; a roll-call was taken three times a day); that of the

workshop, with supervisors and foremen, who were responsible for the regularity of the work and for the apprenticeship of the younger inmates; that of the school (an hour or an hour and a half of lessons every day; the teaching was given by the instructor and by the deputy-heads); lastly, the judicial model (each day 'justice' was meted out in the parlour: 'The least act of disobedience is punished and the best way of avoiding serious offences is to punish the most minor offences very severely: at Mettray, a useless word is punishable'; the principal punishment inflicted was confinement to one's cell; for 'isolation is the best means of acting on the moral nature of children; it is there above all that the voice of religion, even if it has never spoken to their hearts, recovers all its emotional power'⁶); the entire parapenal⁷ institution, which is created in order not to be a prison, culminates in the cell, on the walls of which are written in black letters: 'God sees you'.

This superimposition of different models makes it possible to indicate, in its specific features, the function of 'training'. The chiefs and their deputies at Mettray had to be not exactly judges, or teachers, or foremen, or non-commissioned officers, or 'parents', but something of all these things in a quite specific mode of intervention. They were in a sense technicians of behaviour: engineers of conduct, orthopaedists⁸ of individuality. Their task was to produce bodies that were both docile and capable; they supervised the nine or ten working hours of every day (whether in a workshop or in the fields); they directed the orderly movements of groups of inmates, physical exercises, military exercises, rising in the morning, going to bed at night, walks to the accompaniment of bugle and whistle; they taught gymnastics;⁹ they checked cleanliness, supervised bathing. Training was accompanied by permanent observation; a body of knowledge was being constantly built up from the everyday behaviour of the inmates; it was organized as an instrument of perpetual assessment: 'On entering the colony, the child is subjected to a sort of interrogation as to his origins, the position of his family, the offence for which he was brought before the courts and all the other offences that make up his short and often very sad existence. This information is written down on a board on which everything concerning each inmate is noted in turn, his stay at the colony and the place to which he is sent when he leaves'.¹ The modelling of the body produces a knowledge of the individual, the apprenticeship of the techniques induces modes of behaviour and the acquisition of skills is inextricably linked with the establishment of power relations; strong, skilled agricultural workers are produced; in this very work, provided it is technically supervised, submissive subjects are produced and a dependable body of knowledge built up about them. This disciplinary technique exercised upon the body had a double effect: a 'soul' to be known and a subjection to be maintained. One result vindicated this work of training: in 1848, at a moment when 'the fever of revolution fired the imagination of all, when the schools at Angers, La

Flèche, Alfort, even the boarding schools, rose up in rebellion, the inmates of Mettray were calmer than ever'.²

Where Mettray was especially exemplary was in the specificity that it recognized in this operation of training. It was related to other forms of supervision, on which it was based: medicine, general education, religious direction. But it cannot be identified absolutely with them. Nor with administration in the strict sense. Heads or deputy-heads of 'families', monitors and foremen, had to live in close proximity to the inmates; their clothes were 'almost as humble' as those of the inmates themselves; they practically never left their side, observing them day and night; they constituted among them a network of permanent observation. And, in order to train them themselves, a specialized school had been organized in the colony. The essential element of its programme was to subject the future cadres to the same apprenticeships and to the same coercions as the inmates themselves: they were 'subjected as pupils to the discipline that, later, as instructors, they would themselves impose'. They were taught the art of power relations. It was the first training college in pure discipline: the 'penitentiary' was not simply a project that sought its justification in 'humanity' or its foundations in a 'science', but a technique that was learnt, transmitted and which obeyed general norms. The practice that normalized by compulsion the conduct of the undisciplined or dangerous could, in turn, by technical elaboration and rational reflection, be 'normalized'. The disciplinary technique became a 'discipline' which also had its school.

It so happens that historians of the human sciences date the birth of scientific psychology at this time: during these same years, it seems, Weber³ was manipulating his little compass for the measurement of sensations. What took place at Mettray (and in other European countries sooner or later) was obviously of a quite different order. It was the emergence or rather the institutional specification, the baptism as it were, of a new type of supervision—both knowledge and power—over individuals who resisted disciplinary normalization. And yet, in the formation and growth of psychology, the appearance of these professionals of discipline, normality and subjection surely marks the beginning of a new stage. It will be said that the quantitative assessment of sensorial responses could at least derive authority from the prestige of the emerging science of physiology and that for this alone it deserves to feature in the history of the sciences. But the supervision of normality was firmly encased in a medicine or a psychiatry that provided it with a sort of 'scientificity'; it was supported by a judicial apparatus which, directly or indirectly, gave it legal justification. Thus, in the shelter of these two considerable protectors, and, indeed, acting as a link between them, or a place of exchange, a carefully worked out technique for the supervision of norms has continued to develop right up to the present day. The specific, institutional supports of these methods have proliferated since the founding of the small school at Mettray; their apparatuses have increased in quantity and scope; their auxiliary services have

2. G. Ferrus, *Des prisonniers* (1850) [Foucault's note]. The Revolution of 1848, against Louis-Philippe, established the short-lived Second Republic (1848–52).

3. Ernst Weber (1795–1878), German physiologist who devised a method of measuring the sensitivity of the skin.

increased, with hospitals, schools, public administrations and private enterprises; their agents have proliferated in number, in power, in technical qualification; the technicians of indiscipline have founded a family. In the normalization of the power of normalization, in the arrangement of a power-knowledge over individuals, Mettray and its school marked a new era.

But why choose this moment as the point of emergence of the formation of an art of punishing that is still more or less our own? Precisely because this choice is somewhat 'unjust'. Because it situates the 'end' of the process in the lower reaches of criminal law. Because Mettray was a prison, but not entirely; a prison in that it contained young delinquents condemned by the courts; and yet something else, too, because it also contained minors who had been charged, but acquitted under article 66 of the code,⁴ and boarders held, as in the eighteenth century, as an alternative to paternal correction. Mettray, a punitive model, is at the limit of strict penalty. It was the most famous of a whole series of institutions which, well beyond the frontiers of criminal law, constituted what one might call the carceral archipelago.⁵

Yet the general principles, the great codes and subsequent legislation were quite clear on the matter: no imprisonment 'outside the law', no detention that had not been decided by a qualified judicial institution, no more of those arbitrary and yet widespread confinements. Yet the very principle of extra-penal incarceration was in fact never abandoned. (A whole study remains to be done of the debates that took place during the Revolution⁶ concerning family courts, paternal correction and the right of parents to lock up their children.) And, if the apparatus of the great classical form of confinement was partly (and only partly) dismantled, it was very soon reactivated, rearranged, developed in certain directions. But what is still more important is that it was homogenized, through the mediation of the prison, on the one hand with legal punishments and, on the other, with disciplinary mechanisms. The frontiers between confinement, judicial punishment and institutions of discipline, which were already blurred in the classical age,⁷ tended to disappear and to constitute a great carceral continuum that diffused penitentiary techniques into the most innocent disciplines, transmitting disciplinary norms into the very heart of the penal system and placing over the slightest illegality, the smallest irregularity, deviation or anomaly, the threat of delinquency. A subtle, graduated carceral net, with compact institutions, but also separate and diffused methods, assumed responsibility for the arbitrary, widespread, badly integrated confinement of the classical age.

I shall not attempt here to reconstitute the whole network that formed first the immediate surroundings of the prison, then spread farther and farther outwards. However, a few references and dates should give some idea of the breadth and precocity of the phenomenon.

4. An article in the French Penal Code that condemned children for acting "sans discernement" (without discretion).

5. An allusion to *The Gulag Archipelago* (1973–75), by the Russian novelist Aleksandr Solzhenitsyn, which dramatized for the West the

extensive chain of prison camps in the Soviet Union between 1918 and 1956.

6. That is, the French Revolution of 1789.

7. Foucault's term for (roughly) the period from 1650 to 1789.

There were agricultural sections in the *maisons centrales*⁸ (the first example of which was Gaillon in 1824, followed later by Fontevault, Les Douaires, Le Boulard); there were colonies for poor, abandoned vagrant children (Petit-Bourg⁹ in 1840, Ostwald in 1842); there were almshouses for young female offenders who 'recoiled before the idea of entering a life of disorder', for 'poor innocent girls whose mothers' immorality has exposed to precocious perversity', or for poor girls found on the doorsteps of hospitals and lodging houses. There were penal colonies envisaged by the law of 1850: minors, acquitted or condemned, were to be sent to these colonies and 'brought up in common, under strict discipline, and trained in agricultural work and in the principal industries related to it'; later, they were to be joined by minors sentenced to hard labour for life and 'vicious and insubordinate wards of the Public Assistance'.¹ And, moving still farther away from penalty in the strict sense, the carceral circles widen and the form of the prison slowly diminishes and finally disappears altogether: the institutions for abandoned or indigent children, the orphanages (like Neuhoef or Mesnil-Firmin), the establishments for apprentices (like the Bethléem de Reims or the Maison de Nancy); still farther away the factory-convents, such as La Sauvagère, Tarare and Jujurieu (where the girl workers entered about the age of thirteen, lived confined for years and were allowed out only under surveillance, received instead of wages pledged payment, which could be increased by bonuses for zeal and good behaviour, which they could use only on leaving). And then, still farther, there was a whole series of mechanisms that did not adopt the 'compact' prison model, but used some of the carceral methods: charitable societies, moral improvement associations, organizations that handed out assistance and also practised surveillance, workers' estates and lodging houses—the most primitive of which still bear the all too visible marks of the penitentiary system.² And, lastly, this great carceral network reaches all the disciplinary mechanisms that function throughout society.

We have seen that, in penal justice, the prison transformed the punitive procedure into a penitentiary technique; the carceral archipelago transported this technique from the penal institution to the entire social body. With several important results.

1. This vast mechanism established a slow, continuous, imperceptible gradation that made it possible to pass naturally from disorder to offence and back from a transgression of the law to a slight departure from a rule, an average, a demand, a norm. In the classical period, despite a certain common reference to offence in general,³ the order of the crime, the order of sin and

8. State prisons (French); the four named here began to use prisoners to do agricultural labor.

9. Town in Guadeloupe, a French colony in the Caribbean. The other places named are all in France.

1. On all these institutions, cf. H. Gaillac, *Les Maisons de correction* (1971) [Foucault's note].

2. Cf., for example, the following description of workers' accommodation built at Lille in the mid-19th century: 'Cleanliness is the order of the day. It is the heart of the regulations. There are a number of severe provisions against noise, drunkenness, disorders of all kinds. A serious offence brings expulsion. Brought back to regular habits of order and economy, the workers no

longer desert the workshops on Mondays. . . . The children are better supervised and are no longer a cause of scandal. . . . Prizes are given for the upkeep of the dwellings, for good behavior, for signs of devotion and each year these prizes are competed for by a large number of competitors' (Houzé de l'Aulnay, *Des logements ouvriers à Lille* [1863], pp. 13–15) [Foucault's note]. "Estates": public housing projects.

3. Crime was explicitly defined by certain jurists such as P. F. Muyart de Vouglans, *Refutation du Traité des délits et des peines* (1767), p. 108, and *Les Lois criminelles en France* (1780), p. 3; and G. Rousseaud de la Combe, *Traité des matières criminelles* (1741), pp. 1–2 [Foucault's note].

the order of bad conduct remained separate in so far as they related to separate criteria and authorities (court, penitence, confinement). Incarceration with its mechanisms of surveillance and punishment functioned, on the contrary, according to a principle of relative continuity. The continuity of the institutions themselves, which were linked to one another (public assistance with the orphanage, the reformatory, the penitentiary, the disciplinary battalion, the prison; the school with the charitable society, the workshop, the almshouse, the penitentiary convent; the workers' estate with the hospital and the prison). A continuity of the punitive criteria and mechanisms, which on the basis of a mere deviation gradually strengthened the rules and increased the punishment. A continuous gradation of the established, specialized and competent authorities (in the order of knowledge and in the order of power) which, without resort to arbitrariness, but strictly according to the regulations, by means of observation and assessment hierarchized, differentiated, judged, punished and moved gradually from the correction of irregularities to the punishment of crime. The 'carceral' with its many diffuse or compact forms, its institutions of supervision or constraint, of discreet surveillance and insistent coercion, assured the communication of punishments according to quality and quantity; it connected in series or disposed according to subtle divisions the minor and the serious penalties, the mild and the strict forms of treatment, bad marks and light sentences. You will end up in the convict-ship, the slightest indiscipline seems to say; and the harshest of prisons says to the prisoners condemned to life: I shall note the slightest irregularity in your conduct. The generality of the punitive function that the eighteenth century sought in the 'ideological' technique of representations and signs now had as its support the extension, the material framework, complex, dispersed, but coherent, of the various carceral mechanisms. As a result, a certain significant generality moved between the least irregularity and the greatest crime; it was no longer the offence, the attack on the common interest, it was the departure from the norm, the anomaly; it was this that haunted the school, the court, the asylum or the prison. It generalized in the sphere of meaning the function that the carceral generalized in the sphere of tactics. Replacing the adversary of the sovereign, the social enemy was transformed into a deviant, who brought with him the multiple danger of disorder, crime and madness. The carceral network linked, through innumerable relations, the two long, multiple series of the punitive and the abnormal.

2. The carceral, with its far-reaching networks, allows the recruitment of major 'delinquents'. It organizes what might be called 'disciplinary careers' in which, through various exclusions and rejections, a whole process is set in motion. In the classical period, there opened up in the confines or interstices of society the confused, tolerant, and dangerous domain of the 'out-law' or at least of that which eluded the direct hold of power: an uncertain space that was for criminality a training ground and a region of refuge; there poverty, unemployment, pursued innocence, cunning, the struggle against the powerful, the refusal of obligations and laws, and organized crime all came together as chance and fortune would dictate; it was the domain of adventure that Gil Blas, Sheppard or Mandrin,⁴ each in his own

Lesage. Jack Sheppard (1702–1724), famous English robber, the subject of several popular 18th-century plays, ballads, and books.

way, inhabited. Through the play of disciplinary differentiations and divisions, the nineteenth century constructed rigorous channels which, within the system, inculcated docility and produced delinquency by the same mechanisms. There was a sort of disciplinary 'training', continuous and compelling, that had something of the pedagogical curriculum and something of the professional network. Careers emerged from it, as secure, as predictable, as those of public life: assistance associations, residential apprenticeships, penal colonies, disciplinary battalions, prisons, hospitals, almshouses. These networks were already well mapped out at the beginning of the nineteenth century: 'Our benevolent establishments present an admirably coordinated whole by means of which the indigent does not remain a moment without help from the cradle to the grave. Follow the course of the unfortunate man: you will see him born among foundlings; from there he passes to the nursery, then to an orphanage; at the age of six he goes off to primary school and later to adult schools. If he cannot work, he is placed on the list of the charity offices of his district, and if he falls ill he may choose between twelve hospitals . . . Lastly, when the poor Parisian reaches the end of his career, seven almshouses await his age and often their salubrious régime has prolonged his useless days well beyond those of the rich man'.⁵

The carceral network does not cast the unassimilable into a confused hell; there is no outside. It takes back with one hand what it seems to exclude with the other. It saves everything, including what it punishes. It is unwilling to waste even what it has decided to disqualify. In this panoptic⁶ society of which incarceration is the omnipresent armature, the delinquent is not outside the law; he is, from the very outset, in the law, at the very heart of the law, or at least in the midst of those mechanisms that transfer the individual imperceptibly from discipline to the law, from deviation to offence. Although it is true that prison punishes delinquency, delinquency is for the most part produced in and by an incarceration which, ultimately, prison perpetuates in its turn. The prison is merely the natural consequence, no more than a higher degree, of that hierarchy laid down step by step. The delinquent is an institutional product. It is no use being surprised, therefore, that in a considerable proportion of cases the biography of convicts passes through all these mechanisms and establishments, whose purpose, it is widely believed, is to lead away from prison. That one should find in them what one might call the index of an irrepressibly delinquent 'character': the prisoner condemned to hard labour was meticulously produced by a childhood spent in a reformatory, according to the lines of force of the generalized carceral system. Conversely, the lyricism of marginality may find inspiration in the image of the 'outlaw', the great social nomad, who prowls on the confines of a docile, frightened order. But it is not on the fringes of society and through successive exiles that criminality is born, but by means of ever more closely placed insertions, under ever more insistent surveillance, by an accumulation of disciplinary coercion. In

5. Moreau de Jonnès, quoted in H. du Touquet, *De la condition des classes pauvres* (1846) [Foucault's note].

6. All-seeing. Jeremy Bentham (1748–1832), English philosopher and reformer, designed an ideal circular prison, which he called the Panop-

tion, in which the prisoners could be kept under constant surveillance by a single guard in a central tower. In an earlier section of *Discipline and Punish*, Foucault presents this prison as a model and summation of disciplinary power.

short, the carceral archipelago assures, in the depths of the social body, the formation of delinquency on the basis of subtle illegalities, the overlapping of the latter by the former and the establishment of a specified criminality.

3. But perhaps the most important effect of the carceral system and of its extension well beyond legal imprisonment is that it succeeds in making the power to punish natural and legitimate, in lowering at least the threshold of tolerance to penalty. It tends to efface what may be exorbitant in the exercise of punishment. It does this by playing the two registers in which it is deployed—the legal register of justice and the extra-legal register of discipline—against one another. In effect, the great continuity of the carceral system throughout the law and its sentences gives a sort of legal sanction to the disciplinary mechanisms, to the decisions and judgements that they enforce. Throughout this network, which comprises so many ‘regional’ institutions, relatively autonomous and independent, is transmitted, with the ‘prison-form’, the model of justice itself. The regulations of the disciplinary establishments may reproduce the law, the punishments imitate the verdicts and penalties, the surveillance repeat the police model; and, above all these multiple establishments, the prison, which in relation to them is a pure form, unadulterated and unmitigated, gives them a sort of official sanction. The carceral, with its long gradation stretching from the convict-ship or imprisonment with hard labour to diffuse, slight limitations, communicates a type of power that the law validates and that justice uses as its favourite weapon. How could the disciplines and the power that functions in them appear arbitrary, when they merely operate the mechanisms of justice itself, even with a view to mitigating their intensity? When, by generalizing its effects and transmitting it to every level, it makes it possible to avoid its full rigour? Carceral continuity and the fusion of the prison-form make it possible to legalize, or in any case to legitimate disciplinary power, which thus avoids any element of excess or abuse it may entail.

But, conversely, the carceral pyramid gives to the power to inflict legal punishment a context in which it appears to be free of all excess and all violence. In the subtle gradation of the apparatuses of discipline and of the successive ‘embeddings’ that they involve, the prison does not at all represent the unleashing of a different kind of power, but simply an additional degree in the intensity of a mechanism that has continued to operate since the earliest forms of legal punishment. Between the latest institution of ‘rehabilitation’, where one is taken in order to avoid prison, and the prison where one is sent after a definable offence, the difference is (and must be) scarcely perceptible. There is a strict economy that has the effect of rendering as discreet as possible the singular power to punish. There is nothing in it now that recalls the former excess of sovereign power when it revenged its authority on the tortured body of those about to be executed.⁷ Prison continues, on those who are entrusted to it, a work begun elsewhere, which the whole of the society pursues on each individual through innumerable mechanisms of discipline. By means of a carceral continuum, the authority that sentences infiltrates all those other authorities that supervise, trans-

7. In earlier sections of *Discipline and Punish*, Foucault argues that autocratic power prior to 1789 operated directly and theatrically on an offender's body for a short time, as contrasted to

the continuous discreet disciplinary work on bodies that is characteristic of modern carceral society.

form, correct, improve. It might even be said that nothing really distinguishes them any more except the singularly 'dangerous' character of the delinquents, the gravity of their departures from normal behaviour and the necessary solemnity of the ritual. But, in its function, the power to punish is not essentially different from that of curing or educating. It receives from them, and from their lesser, smaller task, a sanction from below; but one that is no less important for that, since it is the sanction of technique and rationality. The carceral 'naturalizes' the legal power to punish, as it 'legalizes' the technical power to discipline. In thus homogenizing them, effacing what may be violent in one and arbitrary in the other, attenuating the effects of revolt that they may both arouse, thus depriving excess in either of any purpose, circulating the same calculated, mechanical and discreet methods from one to the other, the carceral makes it possible to carry out that great 'economy' of power whose formula the eighteenth century had sought, when the problem of the accumulation and useful administration of men first emerged.

By operating at every level of the social body and by mingling ceaselessly the art of rectifying and the right to punish, the universality of the carceral lowers the level from which it becomes natural and acceptable to be punished. The question is often posed as to how, before and after the Revolution, a new foundation was given to the right to punish. And no doubt the answer is to be found in the theory of the contract.⁸ But it is perhaps more important to ask the reverse question: how were people made to accept the power to punish, or quite simply, when punished, tolerate being so. The theory of the contract can only answer this question by the fiction of a juridical subject giving to others the power to exercise over him the right that he himself possesses over them. It is highly probable that the great carceral continuum, which provides a communication between the power of discipline and the power of the law, and extends without interruption from the smallest coercions to the longest penal detention, constituted the technical and real, immediately material counterpart of that chimerical granting of the right to punish.

4. With this new economy of power, the carceral system, which is its basic instrument, permitted the emergence of a new form of 'law': a mixture of legality and nature, prescription and constitution, the norm. This had a whole series of effects: the internal dislocation of the judicial power or at least of its functioning; an increasing difficulty in judging, as if one were ashamed to pass sentence; a furious desire on the part of the judges to judge, assess, diagnose, recognize the normal and abnormal and claim the honour of curing or rehabilitating. In view of this, it is useless to believe in the good or bad consciences of judges, or even of their unconscious. Their immense 'appetite for medicine' which is constantly manifested—from their appeal to psychiatric experts, to their attention to the chatter of criminology—expresses the major fact that the power they exercise has been 'denatured'; that it is at a certain level governed by laws; that at another, more fundamental level it functions as a normative power; it is the economy of power

8. The "social contract" theory expounded by the political philosophers Thomas Hobbes (1588–1679), John Locke (1632–1704), and Jean-Jacques Rousseau (1712–1778); it explains

states' power over individuals by positing an original contract in which those individuals cede power to the state in return for protection.

that they exercise, and not that of their scruples or their humanism, that makes them pass 'therapeutic' sentences and recommend 'rehabilitating' periods of imprisonment. But, conversely, if the judges accept ever more reluctantly to condemn for the sake of condemning, the activity of judging has increased precisely to the extent that the normalizing power has spread. Borne along by the omnipresence of the mechanisms of discipline, basing itself on all the carceral apparatuses, it has become one of the major functions of our society. The judges of normality are present everywhere. We are in the society of the teacher-judge, the doctor-judge, the educator-judge, the 'social worker'-judge; it is on them that the universal reign of the normative is based; and each individual, wherever he may find himself, subjects to it his body, his gestures, his behaviour, his aptitudes, his achievements. The carceral network, in its compact or disseminated forms, with its systems of insertion, distribution, surveillance, observation, has been the greatest support, in modern society, of the normalizing power.

5. The carceral texture of society assures both the real capture of the body and its perpetual observation; it is, by its very nature, the apparatus of punishment that conforms most completely to the new economy of power and the instrument for the formation of knowledge that this very economy needs. Its panoptic functioning enables it to play this double role. By virtue of its methods of fixing, dividing, recording, it has been one of the simplest, crudest, also most concrete, but perhaps most indispensable conditions for the development of this immense activity of examination that has objectified human behaviour. If, after the age of 'inquisitorial' justice, we have entered the age of 'examinatory' justice,⁹ if, in an even more general way, the method of examination has been able to spread so widely throughout society, and to give rise in part to the sciences of man, one of the great instruments for this has been the multiplicity and close overlapping of the various mechanisms of incarceration. I am not saying that the human sciences emerged from the prison. But, if they have been able to be formed and to produce so many profound changes in the episteme,¹ it is because they have been conveyed by a specific and new modality of power: a certain policy of the body, a certain way of rendering the group of men docile and useful. This policy required the involvement of definite relations of knowledge in relations of power; it called for a technique of overlapping subjection and objectification; it brought with it new procedures of individualization. The carceral network constituted one of the armatures of this power-knowledge that has made the human sciences historically possible. Knowable man (soul, individuality, consciousness, conduct, whatever it is called) is the object-effect of this analytical investment, of this domination-observation.

6. This no doubt explains the extreme solidity of the prison, that slight invention that was nevertheless decried from the outset. If it had been no more than an instrument of rejection or repression in the service of a state apparatus, it would have been easier to alter its more overt forms or to find a more acceptable substitute for it. But, rooted as it was in mechanisms and

9. Earlier in *Discipline and Punish*, Foucault discusses the development of examination techniques in churches, schools, hospitals, the military, and other institutions.

1. Foucault's term for the unconscious deep structure that undergirds a historical period's conscious beliefs and knowledge.

strategies of power, it could meet any attempt to transform it with a great force of inertia. One fact is characteristic: when it is a question of altering the system of imprisonment, opposition does not come from the judicial institutions alone; resistance is to be found not in the prison as penal sanction, but in the prison with all its determinations, links and extra-judicial results; in the prison as the relay in a general network of disciplines and surveillances; in the prison as it functions in a panoptic régime. This does not mean that it cannot be altered, nor that it is once and for all indispensable to our kind of society. One may, on the contrary, cite the two processes which, in the very continuity of the processes that make the prison function, are capable of exercising considerable restraint on its use and of transforming its internal functioning. And no doubt these processes have already begun to a large degree. The first is that which reduces the utility (or increases its inconveniences) of a delinquency accommodated as a specific illegality, locked up and supervised; thus the growth of great national or international illegalities directly linked to the political and economic apparatuses (financial illegalities, information services, arms and drugs trafficking, property speculation) makes it clear that the somewhat rustic and conspicuous work force of delinquency is proving ineffective; or again, on a smaller scale, as soon as the economic levy on sexual pleasure is carried out more efficiently by the sale of contraceptives, or obliquely through publications, films or shows, the archaic hierarchy of prostitution loses much of its former usefulness. The second process is the growth of the disciplinary networks, the multiplication of their exchanges with the penal apparatus, the ever more important powers that are given them, the ever more massive transference to them of judicial functions; now, as medicine, psychology, education, public assistance, 'social work' assume an ever greater share of the powers of supervision and assessment, the penal apparatus will be able, in turn, to become medicalized, psychologized, educationalized; and by the same token that turning-point represented by the prison becomes less useful when, through the gap between its penitentiary discourse and its effect of consolidating delinquency, it articulates the penal power and the disciplinary power. In the midst of all these mechanisms of normalization, which are becoming ever more rigorous in their application, the specificity of the prison and its role as link are losing something of their purpose.

If there is an overall political issue around the prison, it is not therefore whether it is to be corrective or not; whether the judges, the psychiatrists or the sociologists are to exercise more power in it than the administrators or supervisors; it is not even whether we should have prison or something other than prison. At present, the problem lies rather in the steep rise in the use of these mechanisms of normalization and the wide-ranging powers which, through the proliferation of new disciplines, they bring with them.

In 1836, a correspondent wrote to *La Phalange*: 'Moralists, philosophers, legislators, flatterers of civilization, this is the plan of your Paris, neatly ordered and arranged, here is the improved plan in which all like things are gathered together. At the centre, and within a first enclosure: hospitals for all diseases, almshouses for all types of poverty, madhouses, prisons, convict-prisons for men, women and children. Around the first enclosure, barracks, courtrooms, police stations, houses for prison warders, scaffolds, houses for

the executioner and his assistants. At the four corners, the Chamber of Deputies, the Chamber of Peers, the Institute and the Royal Palace. Outside, there are the various services that supply the central enclosure, commerce, with its swindlers and its bankruptcies; industry and its furious struggles; the press, with its sophisms; the gambling dens; prostitution, the people dying of hunger or wallowing in debauchery, always ready to lend an ear to the voice of the Genius of Revolutions; the heartless rich . . . Lastly the ruthless war of all against all'.²

I shall stop with this anonymous text. We are now far away from the country of tortures, dotted with wheels, gibbets, gallows, pillories; we are far, too, from that dream of the reformers, less than fifty years before: the city of punishments in which a thousand small theatres would have provided an endless multicoloured representation of justice in which the punishments, meticulously produced on decorative scaffolds, would have constituted the permanent festival of the penal code. The carceral city, with its imaginary 'geo-politics', is governed by quite different principles. The extract from *La Phalange* reminds us of some of the more important ones: that at the centre of this city, and as if to hold it in place, there is, not the 'centre of power', not a network of forces, but a multiple network of diverse elements—walls, space, institution, rules, discourse; that the model of the carceral city is not, therefore, the body of the king,³ with the powers that emanate from it, nor the contractual meeting of wills from which a body that was both individual and collective was born, but a strategic distribution of elements of different natures and levels. That the prison is not the daughter of laws, codes or the judicial apparatus; that it is not subordinated to the court and the docile or clumsy instrument of the sentences that it hands out and of the results that it would like to achieve; that it is the court that is external and subordinate to the prison. That in the central position that it occupies, it is not alone, but linked to a whole series of 'carceral' mechanisms which seem distinct enough—since they are intended to alleviate pain, to cure, to comfort—but which all tend, like the prison, to exercise a power of normalization. That these mechanisms are applied not to transgressions against a 'central' law, but to the apparatus of production—'commerce' and 'industry'—to a whole multiplicity of illegalities, in all their diversity of nature and origin, their specific role in profit and the different ways in which they are dealt with by the punitive mechanisms. And that ultimately what presides over all these mechanisms is not the unitary functioning of an apparatus or an institution, but the necessity of combat and the rules of strategy. That, consequently, the notions of institutions of repression, rejection, exclusion, marginalization, are not adequate to describe, at the very centre of the carceral city, the formation of the insidious leniencies, unavowable petty cruelties, small acts of cunning, calculated methods, techniques, 'sciences' that permit the fabrication of the disciplinary individual. In this central and centralized humanity, the effect and instrument of complex power relations, bodies and forces subjected by multiple mechanisms of 'incarceration', objects for discourses

2. *La Phalange*, 10 August 1836 [Foucault's note]. "War of all against all": in *Leviathan* (1651), Hobbes described "the condition of man" as "a condition of war of everyone against everyone." *La Phalange* was a socialist journal.

3. The idea of modeling the city on the human body was common in the Renaissance (see especially the *Treatise* of Francesco di Giorgio, 1439–1501/2).

that are in themselves elements for this strategy, we must hear the distant roar of battle.

At this point I end a book that must serve as a historical background to various studies of the power of normalization and the formation of knowledge in modern society.

Part Two: The Repressive Hypothesis

CHAPTER 1.

THE INCITEMENT TO DISCOURSE

The seventeenth century, then, was the beginning of an age of repression emblematic of what we call the bourgeois societies, an age which perhaps we still have not completely left behind. Calling sex by its name thereafter became more difficult and more costly. As if in order to gain mastery over it in reality, it had first been necessary to subjugate it at the level of language, control its free circulation in speech, expunge it from the things that were said, and extinguish the words that rendered it too visibly present. And even these prohibitions, it seems, were afraid to name it. Without even having to pronounce the word, modern prudishness was able to ensure that one did not speak of sex, merely through the interplay of prohibitions that referred back to one another: instances of muteness which, by dint of saying nothing, imposed silence. Censorship.

Yet when one looks back over these last three centuries with their continual transformations, things appear in a very different light: around and apropos of sex, one sees a veritable discursive explosion. We must be clear on this point, however. It is quite possible that there was an expurgation—and a very rigorous one—of the authorized vocabulary. It may indeed be true that a whole rhetoric of allusion and metaphor was codified. Without question, new rules of propriety screened out some words: there was a policing of statements. A control over enunciations as well: where and when it was not possible to talk about such things became much more strictly defined; in which circumstances, among which speakers, and within which social relationships. Areas were thus established, if not of utter silence, at least of tact and discretion: between parents and children, for instance, or teachers and pupils, or masters and domestic servants. This almost certainly constituted a whole restrictive economy, one that was incorporated into that politics of language and speech—spontaneous on the one hand, concerted on the other—which accompanied the social redistributions of the classical period.²

At the level of discourses and their domains, however, practically the opposite phenomenon occurred. There was a steady proliferation of discourses concerned with sex—specific discourses, different from one another

2. Foucault's term for (roughly) the period from 1650 to 1789.

both by their form and by their object: a discursive ferment that gathered momentum from the eighteenth century onward. Here I am thinking not so much of the probable increase in "illicit" discourses, that is, discourses of infraction that crudely named sex by way of insult or mockery of the new code of decency; the tightening up of the rules of decorum likely did produce, as a countereffect, a valorization and intensification of indecent speech. But more important was the multiplication of discourses concerning sex in the field of exercise of power itself: an institutional incitement to speak about it, and to do so more and more; a determination on the part of the agencies of power to hear it spoken about, and to cause *it* to speak through explicit articulation and endlessly accumulated detail.

Consider the evolution of the Catholic pastoral and the sacrament of penance after the Council of Trent.³ Little by little, the nakedness of the questions formulated by the confession manuals of the Middle Ages, and a good number of those still in use in the seventeenth century, was veiled. One avoided entering into that degree of detail which some authors, such as Sanchez or Tamburini,⁴ had for a long time believed indispensable for the confession to be complete: description of the respective positions of the partners, the postures assumed, gestures, places touched, caresses, the precise moment of pleasure—an entire painstaking review of the sexual act in its very unfolding. Discretion was advised, with increasing emphasis. The greatest reserve was counseled when dealing with sins against purity: "This matter is similar to pitch, for, however one might handle it, even to cast it far from oneself, it sticks nonetheless, and always soils."⁵ And later, Alfonso de' Liguori prescribed starting—and possibly going no further, especially when dealing with children—with questions that were "roundabout and vague."⁶

But while the language may have been refined, the scope of the confession—the confession of the flesh—continually increased. This was partly because the Counter Reformation⁷ busied itself with stepping up the rhythm of the yearly confession in the Catholic countries, and because it tried to impose meticulous rules of self-examination; but above all, because it attributed more and more importance in penance—and perhaps at the expense of some other sins—to all the insinuations of the flesh: thoughts, desires, voluptuous imaginings, delectations, combined movements of the body and the soul; henceforth all this had to enter, in detail, into the process of confession and guidance. According to the new pastoral, sex must not be named imprudently, but its aspects, its correlations, and its effects must be pursued down to their slenderest ramifications: a shadow in a daydream, an image too slowly dispelled, a badly exorcised complicity between the body's mechanics and the mind's complacency: everything had to be told. A twofold evolution tended to make the flesh into the root of all evil, shifting the most important moment of transgression from the act itself to the stirrings—so difficult to perceive and formulate—of desire. For this was

an evil that afflicted the whole man, and in the most secret of forms: "Examine diligently, therefore, all the faculties of your soul: memory, understanding, and will. Examine with precision all your senses as well. . . . Examine, moreover, all your thoughts, every word you speak, and all your actions. Examine even unto your dreams, to know if, once awakened, you did not give them your consent. And finally, do not think that in so sensitive and perilous a matter as this, there is anything trivial or insignificant."⁸ Discourse, therefore, had to trace the meeting line of the body and the soul, following all its meanderings: beneath the surface of the sins, it would lay bare the unbroken nervure of the flesh. Under the authority of a language that had been carefully expurgated so that it was no longer directly named, sex was taken charge of, tracked down as it were, by a discourse that aimed to allow it no obscurity, no respite.

It was here, perhaps, that the injunction, so peculiar to the West, was laid down for the first time, in the form of a general constraint. I am not talking about the obligation to admit to violations of the laws of sex, as required by traditional penance; but of the nearly infinite task of telling—telling oneself and another, as often as possible, everything that might concern the interplay of innumerable pleasures, sensations, and thoughts which, through the body and the soul, had some affinity with sex. This scheme for transforming sex into discourse had been devised long before in an ascetic and monastic setting. The seventeenth century made it into a rule for everyone. It would seem in actual fact that it could scarcely have applied to any but a tiny elite; the great majority of the faithful who only went to confession on rare occasions in the course of the year escaped such complex prescriptions. But the important point no doubt is that this obligation was decreed, as an ideal at least, for every good Christian. An imperative was established: Not only will you confess to acts contravening the law, but you will seek to transform your desire, your every desire, into discourse. Insofar as possible, nothing was meant to elude this dictum, even if the words it employed had to be carefully neutralized. The Christian pastoral prescribed as a fundamental duty the task of passing everything having to do with sex through the endless mill of speech.⁹ The forbidding of certain words, the decency of expressions, all the censorings of vocabulary, might well have been only secondary devices compared to that great subjugation: ways of rendering it morally acceptable and technically useful.

One could plot a line going straight from the seventeenth-century pastoral to what became its projection in literature, "scandalous" literature at that. "Tell everything," the directors would say time and again: "not only consummated acts, but sensual touchings, all impure gazes, all obscene remarks . . . all consenting thoughts."¹ Sade takes up the injunction in words that seem to have been retranscribed from the treatises of spiritual direction: "Your narrations must be decorated with the most numerous and searching details; the precise way and extent to which we may judge how the passion you

8. Segneri, *L'Instruction du pénitent*, pp. 301–2 [Foucault's note].

9. The reformed pastor also laid down rules, albeit in a more discreet way, for putting sex into discourse. This notion will be developed in the next volume, *The Body and the Flesh* [Foucault's

note]. Foucault's plan later changed; the volumes he managed to complete deal instead with sexuality in the ancient world.

1. Alfonso de' Liguori, *Préceptes sur le sixième commandement* (French translation 1835), p. 5 [Foucault's note].

describe relates to human manners and man's character is determined by your willingness to disguise no circumstances; and what is more, the least circumstance is apt to have an immense influence upon the procuring of that kind of sensory irritation we expect from your stories."² And again at the end of the nineteenth century, the anonymous author of *My Secret Life* submitted to the same prescription; outwardly, at least, this man was doubtless a kind of traditional libertine; but he conceived the idea of complementing his life—which he had almost totally dedicated to sexual activity—with a scrupulous account of every one of its episodes. He sometimes excuses himself by stressing his concern to educate young people, this man who had eleven volumes published, in a printing of only a few copies, which were devoted to the least adventures, pleasures, and sensations of his sex. It is best to take him at his word when he lets into his text the voice of a pure imperative: "I recount the facts, just as they happened, insofar as I am able to recollect them; this is all that I can do"; "a secret life must not leave out anything; there is nothing to be ashamed of . . . one can never know too much concerning human nature."³ The solitary author of *My Secret Life* often says, in order to justify his describing them, that his strangest practices undoubtedly were shared by thousands of men on the surface of the earth. But the guiding principle for the strangest of these practices, which was the fact of recounting them all, and in detail, from day to day, had been lodged in the heart of modern man for over two centuries. Rather than seeing in this singular man a courageous fugitive from a "Victorianism" that would have compelled him to silence, I am inclined to think that, in an epoch dominated by (highly prolix) directives enjoining discretion and modesty, he was the most direct and in a way the most naïve representative of a plurisecular injunction⁴ to talk about sex. The historical accident would consist rather of the reticences of "Victorian puritanism"; at any rate, they were a digression, a refinement, a tactical diversion in the great process of transforming sex into discourse.

This nameless Englishman will serve better than his queen⁵ as the central figure for a sexuality whose main features were already taking shape with the Christian pastoral. Doubtless, in contrast to the latter, for him it was a matter of augmenting the sensations he experienced with the details of what he said about them; like Sade, he wrote "for his pleasure alone," in the strongest sense of the expression; he carefully mixed the editing and rereading of his text with erotic scenes which those writer's activities repeated, prolonged, and stimulated. But after all, the Christian pastoral also sought to produce specific effects on desire, by the mere fact of transforming it—fully and deliberately—into discourse: effects of mastery and detachment, to be sure, but also an effect of spiritual reconversion, of turning back to God, a physical effect of blissful suffering from feeling in one's body the pangs of temptation and the love that resists it. This is the essential thing: that Western man has been drawn for three centuries to the task

5. Victoria (1819–1901), whose long reign (1837–1901) delimits the age that bears her name.

of telling everything concerning his sex; that since the classical age there has been a constant optimization and an increasing valorization of the discourse on sex; and that this carefully analytical discourse was meant to yield multiple effects of displacement, intensification, reorientation, and modification of desire itself. Not only were the boundaries of what one could say about sex enlarged, and men compelled to hear it said; but more important, discourse was connected to sex by a complex organization with varying effects, by a deployment that cannot be adequately explained merely by referring it to a law of prohibition. A censorship of sex? There was installed rather an apparatus for producing an ever greater quantity of discourse about sex, capable of functioning and taking effect in its very economy.

This technique might have remained tied to the destiny of Christian spirituality if it had not been supported and relayed by other mechanisms. In the first place, by a "public interest." Not a collective curiosity or sensibility; not a new mentality; but power mechanisms that functioned in such a way that discourse on sex—for reasons that will have to be examined—became essential. Toward the beginning of the eighteenth century, there emerged a political, economic, and technical incitement to talk about sex. And not so much in the form of a general theory of sexuality as in the form of analysis, stocktaking, classification, and specification, of quantitative or causal studies. This need to take sex "into account," to pronounce a discourse on sex that would not derive from morality alone but from rationality as well, was sufficiently new that at first it wondered at itself and sought apologies for its own existence. How could a discourse based on reason speak of *that*? "Rarely have philosophers directed a steady gaze to these objects situated between disgust and ridicule, where one must avoid both hypocrisy and scandal."⁶ And nearly a century later, the medical establishment, which one might have expected to be less surprised by what it was about to formulate, still stumbled at the moment of speaking: "The darkness that envelops these facts, the shame and disgust they inspire, have always repelled the observer's gaze. . . . For a long time I hesitated to introduce the loathsome picture into this study."⁷ What is essential is not in all these scruples, in the "moralism" they betray, or in the hypocrisy one can suspect them of, but in the recognized necessity of overcoming this hesitation. One had to speak of sex; one had to speak publicly and in a manner that was not determined by the division between licit and illicit, even if the speaker maintained the distinction for himself (which is what these solemn and preliminary declarations were intended to show): one had to speak of it as of a thing to be not simply condemned or tolerated but managed, inserted into systems of utility, regulated for the greater good of all, made to function according to an optimum. Sex was not something one simply judged; it was a thing one administered. It was in the nature of a public potential; it called for management procedures; it had to be taken charge of by analytical discourses. In the eighteenth century, sex became a "police" matter—in the full and strict sense given the term at the time: not the repression of disorder, but an ordered maximization of collective and individual forces: "We must con-

6. Condorcet, cited by Jean-Louis Flandrin, *Familles: Parenté, maison, sexualité dans l'ancienne société* (Paris: Hachette, 1976) [Foucault's note]. Marquis de Condorcet (1743–

1794), French mathematician and philosopher.
7. Auguste Tardieu, *Étude médico-légale sur les attentats aux mœurs* (1857), p. 114 [Foucault's note].

solidate and augment, through the wisdom of its regulations, the internal power of the state; and since this power consists not only in the Republic in general, and in each of the members who constitute it, but also in the faculties and talents of those belonging to it, it follows that the police must concern themselves with these means and make them serve the public welfare. And they can only obtain this result through the knowledge they have of those different assets.”⁸ A policing of sex: that is, not the rigor of a taboo, but the necessity of regulating sex through useful and public discourses.

A few examples will suffice. One of the great innovations in the techniques of power in the eighteenth century was the emergence of “population” as an economic and political problem: population as wealth, population as manpower or labor capacity, population balanced between its own growth and the resources it commanded. Governments perceived that they were not dealing simply with subjects, or even with a “people,” but with a “population,” with its specific phenomena and its peculiar variables: birth and death rates, life expectancy, fertility, state of health, frequency of illnesses, patterns of diet and habitation. All these variables were situated at the point where the characteristic movements of life and the specific effects of institutions intersected: “States are not populated in accordance with the natural progression of propagation, but by virtue of their industry, their products, and their different institutions. . . . Men multiply like the yields from the ground and in proportion to the advantages and resources they find in their labors.”⁹ At the heart of this economic and political problem of population was sex: it was necessary to analyze the birthrate, the age of marriage, the legitimate and illegitimate births, the precocity and frequency of sexual relations, the ways of making them fertile or sterile, the effects of unmarried life or of the prohibitions, the impact of contraceptive practices—of those notorious “deadly secrets” which demographers on the eve of the Revolution knew were already familiar to the inhabitants of the countryside.

Of course, it had long been asserted that a country had to be populated if it hoped to be rich and powerful; but this was the first time that a society had affirmed, in a constant way, that its future and its fortune were tied not only to the number and the uprightness of its citizens, to their marriage rules and family organization, but to the manner in which each individual made use of his sex. Things went from ritual lamenting over the unfruitful debauchery of the rich, bachelors, and libertines to a discourse in which the sexual conduct of the population was taken both as an object of analysis and as a target of intervention; there was a progression from the crudely populationist arguments of the mercantilist epoch to the much more subtle and calculated attempts at regulation that tended to favor or discourage—according to the objectives and exigencies of the moment—an increasing birthrate. Through the political economy of population there was formed a whole grid of observations regarding sex. There emerged the analysis of the modes of sexual conduct, their determinations and their effects, at the boundary line of the biological and the economic domains. There also

appeared those systematic campaigns which, going beyond the traditional means—moral and religious exhortations, fiscal measures—tried to transform the sexual conduct of couples into a concerted economic and political behavior. In time these new measures would become anchorage points for the different varieties of racism of the nineteenth and twentieth centuries. It was essential that the state know what was happening with its citizens' sex, and the use they made of it, but also that each individual be capable of controlling the use he made of it. Between the state and the individual, sex became an issue, and a public issue no less; a whole web of discourses, special knowledges, analyses, and injunctions settled upon it.

The situation was similar in the case of children's sex. It is often said that the classical period consigned it to an obscurity from which it scarcely emerged before the *Three Essays* or the beneficent anxieties of Little Hans.¹ It is true that a longstanding "freedom" of language between children and adults, or pupils and teachers, may have disappeared. No seventeenth-century pedagogue would have publicly advised his disciple, as did Erasmus² in his *Dialogues*, on the choice of a good prostitute. And the boisterous laughter that had accompanied the precocious sexuality of children for so long—and in all social classes, it seems—was gradually stifled. But this was not a plain and simple imposition of silence. Rather, it was a new regime of discourses. Not any less was said about it; on the contrary. But things were said in a different way; it was different people who said them, from different points of view, and in order to obtain different results. Silence itself—the things one declines to say, or is forbidden to name, the discretion that is required between different speakers—is less the absolute limit of discourse, the other side from which it is separated by a strict boundary, than an element that functions alongside the things said, with them and in relation to them within over-all strategies. There is no binary division to be made between what one says and what one does not say; we must try to determine the different ways of not saying such things, how those who can and those who cannot speak of them are distributed, which type of discourse is authorized, or which form of discretion is required in either case. There is not one but many silences, and they are an integral part of the strategies that underlie and permeate discourses.

Take the secondary schools of the eighteenth century, for example. On the whole, one can have the impression that sex was hardly spoken of at all in these institutions. But one only has to glance over the architectural layout, the rules of discipline, and their whole internal organization: the question of sex was a constant preoccupation. The builders considered it explicitly. The organizers took it permanently into account. All who held a measure of authority were placed in a state of perpetual alert, which the fixtures, the precautions taken, the interplay of punishments and responsibilities, never ceased to reiterate. The space for classes, the shape of the tables, the planning of the recreation lessons, the distribution of the dormitories (with or without partitions, with or without curtains), the rules for monitoring bedtime and sleep periods—all this referred, in the most prolix manner, to

1. SIGMUND FREUD's *Three Essays on Sexuality* was published in 1905; his case study of Little Hans, titled "Analysis of a Phobia of a Five-Year-

Old Boy," dates from 1909.

2. Dutch humanist scholar (1466–1536); his *Dialogues* (1518) covers a wide variety of topics.

the sexuality of children.³ What one might call the internal discourse of the institution—the one it employed to address itself, and which circulated among those who made it function—was largely based on the assumption that this sexuality existed, that it was precocious, active, and ever present. But this was not all: the sex of the schoolboy became in the course of the eighteenth century—and quite apart from that of adolescents in general—a public problem. Doctors counseled the directors and professors of educational establishments, but they also gave their opinions to families; educators designed projects which they submitted to the authorities; schoolmasters turned to students, made recommendations to them, and drafted for their benefit books of exhortation, full of moral and medical examples. Around the schoolboy and his sex there proliferated a whole literature of precepts, opinions, observations, medical advice, clinical cases, outlines for reform, and plans for ideal institutions. With Basedow⁴ and the German “philanthropic” movement, this transformation of adolescent sex into discourse grew to considerable dimensions. Salzmann⁵ even organized an experimental school which owed its exceptional character to a supervision and education of sex so well thought out that youth’s universal sin would never need to be practiced there. And with all these measures taken, the child was not to be simply the mute and unconscious object of attentions prearranged between adults only; a certain reasonable, limited, canonical, and truthful discourse on sex was prescribed for him—a kind of discursive orthopedics.⁶ The great festival organized at the Philanthropinum in May of 1776 can serve as a vignette in this regard. Taking the form of an examination, mixed with floral games, the awarding of prizes, and a board of review, this was the first solemn communion of adolescent sex and reasonable discourse. In order to show the success of the sex education given the students, Basedow had invited all the dignitaries that Germany could muster (Goethe⁷ was one of the few to decline the invitation). Before the assembled public, one of the professors, a certain Wolke, asked the students selected questions concerning the mysteries of sex, birth, and procreation. He had them comment on engravings that depicted a pregnant woman, a couple, and a cradle. The replies were enlightened, offered without shame or embarrassment. No unseemly laughter intervened to disturb them—except from the very ranks of an adult audience more childish than the children themselves, and whom Wolke severely reprimanded. At the end, they all applauded these cherub-faced boys who, in front of adults, had skillfully woven the garlands of discourse and sex.⁸

3. *Règlement de police pour les lycées* (1809), art. 67: “There shall always be, during class and study hours, an instructor watching the exterior, so as to prevent students who have gone out to relieve themselves from stopping and congregating.

art. 68: “After the evening prayer, the students will be conducted back to the dormitory, where the schoolmasters will put them to bed at once.

art. 69: “The masters will not retire except after having made certain that every student is in bed.

art. 70: “The beds shall be separated by partitions two meters in height. The dormitories shall be illuminated during the night” [Foucault’s

note].

It would be less than exact to say that the pedagogical institution has imposed a ponderous silence on the sex of children and adolescents. On the contrary, since the eighteenth century it has multiplied the forms of discourse on the subject; it has established various points of implantation for sex; it has coded contents and qualified speakers. Speaking about children's sex, inducing educators, physicians, administrators, and parents to speak of it, or speaking to them about it, causing children themselves to talk about it, and enclosing them in a web of discourses which sometimes address them, sometimes speak about them, or impose canonical bits of knowledge on them, or use them as a basis for constructing a science that is beyond their grasp—all this together enables us to link an intensification of the intervention of power to a multiplication of discourse. The sex of children and adolescents has become, since the eighteenth century, an important area of contention around which innumerable institutional devices and discursive strategies have been deployed. It may well be true that adults and children themselves were deprived of a certain way of speaking about sex, a mode that was disallowed as being too direct, crude, or coarse. But this was only the counterpart of other discourses, and perhaps the condition necessary in order for them to function, discourses that were interlocking, hierarchized, and all highly articulated around a cluster of power relations.

One could mention many other centers which in the eighteenth or nineteenth century began to produce discourses on sex. First there was medicine, via the "nervous disorders"; next psychiatry, when it set out to discover the etiology of mental illnesses, focusing its gaze first on "excess," then onanism, then frustration, then "frauds against procreation," but especially when it annexed the whole of the sexual perversions as its own province; criminal justice, too, which had long been concerned with sexuality, particularly in the form of "heinous" crimes and crimes against nature, but which, toward the middle of the nineteenth century, broadened its jurisdiction to include petty offenses, minor indecencies, insignificant perversions; and lastly, all those social controls, cropping up at the end of the last century, which screened the sexuality of couples, parents and children, dangerous and endangered adolescents—undertaking to protect, separate, and forewarn, signaling perils everywhere, awakening people's attention, calling for diagnoses, piling up reports, organizing therapies. These sites radiated discourses aimed at sex, intensifying people's awareness of it as a constant danger, and this in turn created a further incentive to talk about it.

One day in 1867, a farm hand from the village of Lapcourt, who was somewhat simple-minded, employed here then there, depending on the season, living hand-to-mouth from a little charity or in exchange for the worst sort of labor, sleeping in barns and stables, was turned in to the authorities. At the border of a field, he had obtained a few caresses from a little girl, just as he had done before and seen done by the village urchins round about him; for, at the edge of the wood, or in the ditch by the road leading to Saint-Nicolas, they would play the familiar game called "curdled milk."⁹ So he was pointed out by the girl's parents to the mayor of the village, reported by the mayor to the gendarmes, led by the gendarmes to the judge, who indicted him and

9. She masturbated him.

turned him over first to a doctor, then to two other experts who not only wrote their report but also had it published.¹ What is the significant thing about this story? The pettiness of it all; the fact that this everyday occurrence in the life of village sexuality, these inconsequential bucolic pleasures, could become, from a certain time, the object not only of a collective intolerance but of a judicial action, a medical intervention, a careful clinical examination, and an entire theoretical elaboration. The thing to note is that they went so far as to measure the brainpan, study the facial bone structure, and inspect for possible signs of degenerescence the anatomy of this personage who up to that moment had been an integral part of village life; that they made him talk; that they questioned him concerning his thoughts, inclinations, habits, sensations, and opinions. And then, acquitting him of any crime, they decided finally to make him into a pure object of medicine and knowledge—an object to be shut away till the end of his life in the hospital at Maréville, but also one to be made known to the world of learning through a detailed analysis. One can be fairly certain that during this same period the Lapcourt schoolmaster was instructing the little villagers to mind their language and not to talk about all these things aloud. But this was undoubtedly one of the conditions enabling the institutions of knowledge and power to overlay this everyday bit of theater with their solemn discourse. So it was that our society—and it was doubtless the first in history to take such measures—assembled around these timeless gestures, these barely furtive pleasures between simple-minded adults and alert children, a whole machinery for speechifying, analyzing, and investigating.

Between the licentious Englishman, who earnestly recorded for his own purposes the singular episodes of his secret life, and his contemporary, this village halfwit who would give a few pennies to the little girls for favors the older ones refused him, there was without doubt a profound connection: in any case, from one extreme to the other, sex became something to say, and to say exhaustively in accordance with deployments that were varied, but all, in their own way, compelling. Whether in the form of a subtle confession in confidence or an authoritarian interrogation, sex—be it refined or rustic—had to be put into words. A great polymorphous injunction bound the Englishman and the poor Lorraine peasant alike. As history would have it, the latter was named Jouy.²

Since the eighteenth century, sex has not ceased to provoke a kind of generalized discursive erethism.³ And these discourses on sex did not multiply apart from or against power, but in the very space and as the means of its exercise. Incitements to speak were orchestrated from all quarters, apparatuses everywhere for listening and recording, procedures for observing, questioning, and formulating. Sex was driven out of hiding and constrained to lead a discursive existence. From the singular imperialism that compels everyone to transform their sexuality into a perpetual discourse, to the manifold mechanisms which, in the areas of economy, pedagogy, medicine, and justice, incite, extract, distribute, and institutionalize the sexual discourse,

1. H. Bonnet and J. Bulard, *Rapport médico-légal sur l'état mental de Ch.-J. Jouy*, January 4, 1868 [Foucault's note].

2. Jouy sounds like the past participle of *jouir*, the French verb meaning to enjoy, to delight in

(something), but also to have an orgasm, to come [translator's note].

3. Abnormal irritability or responsiveness to stimulation.

an immense verbosity is what our civilization has required and organized. Surely no other type of society has ever accumulated—and in such a relatively short span of time—a similar quantity of discourses concerned with sex. It may well be that we talk about sex more than anything else; we set our minds to the task; we convince ourselves that we have never said enough on the subject, that, through inertia or submissiveness, we conceal from ourselves the blinding evidence, and that what is essential always eludes us, so that we must always start out once again in search of it. It is possible that where sex is concerned, the most long-winded, the most impatient of societies is our own.

But as this first overview shows, we are dealing less with *a* discourse on sex than with a multiplicity of discourses produced by a whole series of mechanisms operating in different institutions. The Middle Ages had organized around the theme of the flesh and the practice of penance a discourse that was markedly unitary. In the course of recent centuries, this relative uniformity was broken apart, scattered, and multiplied in an explosion of distinct discursivities which took form in demography, biology, medicine, psychiatry, psychology, ethics, pedagogy, and political criticism. More precisely, the secure bond that held together the moral theology of concupiscence and the obligation of confession (equivalent to the theoretical discourse on sex and its first-person formulation) was, if not broken, at least loosened and diversified: between the objectification of sex in rational discourses, and the movement by which each individual was set to the task of recounting his own sex, there has occurred, since the eighteenth century, a whole series of tensions, conflicts, efforts at adjustment, and attempts at retranscription. So it is not simply in terms of a continual extension that we must speak of this discursive growth; it should be seen rather as a dispersion of centers from which discourses emanated, a diversification of their forms, and the complex deployment of the network connecting them. Rather than the uniform concern to hide sex, rather than a general prudishness of language, what distinguishes these last three centuries is the variety, the wide dispersion of devices that were invented for speaking about it, for having it be spoken about, for inducing it to speak of itself, for listening, recording, transcribing, and redistributing what is said about it: around sex, a whole network of varying, specific, and coercive transpositions into discourse. Rather than a massive censorship, beginning with the verbal proprieties imposed by the Age of Reason, what was involved was regulated and polymorphous incitement to discourse.

The objection will doubtless be raised that if so many stimulations and constraining mechanisms were necessary in order to speak of sex, this was because there reigned over everyone a certain fundamental prohibition; only definite necessities—economic pressures, political requirements—were able to lift this prohibition and open a few approaches to the discourse on sex, but these were limited and carefully coded; so much talk about sex, so many insistent devices contrived for causing it to be talked about—but under strict conditions: does this not prove that it was an object of secrecy, and more important, that there is still an attempt to keep it that way? But this often-stated theme, that sex is outside of discourse and that only the removing of an obstacle, the breaking of a secret, can clear the way leading to it, is precisely what needs to be examined. Does it not partake of the injunction by which discourse is provoked? Is it not with the aim of inciting people to speak of sex that it is made to mirror, at the outer limit of every

actual discourse, something akin to a secret whose discovery is imperative, a thing abusively reduced to silence, and at the same time difficult and necessary, dangerous and precious to divulge? We must not forget that by making sex into that which, above all else, had to be confessed, the Christian pastoral always presented it as the disquieting enigma: not a thing which stubbornly shows itself, but one which always hides, the insidious presence that speaks in a voice so muted and often disguised that one risks remaining deaf to it. Doubtless the secret does not reside in that basic reality in relation to which all the incitements to speak of sex are situated—whether they try to force the secret, or whether in some obscure way they reinforce it by the manner in which they speak of it. It is a question rather of a theme that forms part of the very mechanics of these incitements: a way of giving shape to the requirement to speak about the matter, a fable that is indispensable to the endlessly proliferating economy of the discourse on sex. What is peculiar to modern societies, in fact, is not that they consigned sex to a shadow existence, but that they dedicated themselves to speaking of it *ad infinitum*, while exploiting it as *the* secret.

CHAPTER 2.

THE PERVERSE IMPLANTATION

A possible objection: it would be a mistake to see in this proliferation of discourses merely a quantitative phenomenon, something like a pure increase, as if what was said in them were immaterial, as if the fact of speaking about sex were of itself more important than the forms of imperatives that were imposed on it by speaking about it. For was this transformation of sex into discourse not governed by the endeavor to expel from reality the forms of sexuality that were not amenable to the strict economy of reproduction: to say no to unproductive activities, to banish casual pleasures, to reduce or exclude practices whose object was not procreation? Through the various discourses, legal sanctions against minor perversions were multiplied; sexual irregularity was annexed to mental illness; from childhood to old age, a norm of sexual development was defined and all the possible deviations were carefully described; pedagogical controls and medical treatments were organized; around the least fantasies, moralists, but especially doctors, brandished the whole emphatic vocabulary of abomination. Were these anything more than means employed to absorb, for the benefit of a genitally centered sexuality, all the fruitless pleasures? All this garrulous attention which has us in a stew over sexuality, is it not motivated by one basic concern: to ensure population, to reproduce labor capacity, to perpetuate the form of social relations: in short, to constitute a sexuality that is economically useful and politically conservative?⁴

I still do not know whether this is the ultimate objective. But this much is certain: reduction has not been the means employed for trying to achieve it. The nineteenth century and our own have been rather the age of multiplication: a dispersion of sexualities, a strengthening of their disparate forms, a multiple implantation of “perversions.” Our epoch has initiated sexual heterogeneities.

4. This paragraph encapsulates the received view against which Foucault will argue.

Up to the end of the eighteenth century, three major explicit codes—apart from the customary regularities and constraints of opinion—governed sexual practices: canonical law, the Christian pastoral, and civil law. They determined, each in its own way, the division between licit and illicit. They were all centered on matrimonial relations: the marital obligation, the ability to fulfill it, the manner in which one complied with it, the requirements and violences that accompanied it, the useless or unwarranted caresses for which it was a pretext, its fecundity or the way one went about making it sterile, the moments when one demanded it (dangerous periods of pregnancy or breast-feeding, forbidden times of Lent or abstinence), its frequency or infrequency, and so on. It was this domain that was especially saturated with prescriptions. The sex of husband and wife was beset by rules and recommendations. The marriage relation was the most intense focus of constraints; it was spoken of more than anything else; more than any other relation, it was required to give a detailed accounting of itself. It was under constant surveillance: if it was found to be lacking, it had to come forward and plead its case before a witness. The “rest” remained a good deal more confused: one only has to think of the uncertain status of “sodomy,” or the indifference regarding the sexuality of children.

Moreover, these different codes did not make a clear distinction between violations of the rules of marriage and deviations with respect to genitality. Breaking the rules of marriage or seeking strange pleasures brought an equal measure of condemnation. On the list of grave sins, and separated only by their relative importance, there appeared debauchery (extramarital relations), adultery, rape, spiritual or carnal incest, but also sodomy, or the mutual “caress.” As to the courts, they could condemn homosexuality as well as infidelity, marriage without parental consent, or bestiality. What was taken into account in the civil and religious jurisdictions alike was a general unlawfulness. Doubtless acts “contrary to nature” were stamped as especially abominable, but they were perceived simply as an extreme form of acts “against the law”; they were infringements of decrees which were just as sacred as those of marriage, and which had been established for governing the order of things and the plan of beings. Prohibitions bearing on sex were essentially of a juridical nature. The “nature” on which they were based was still a kind of law. For a long time hermaphrodites were criminals, or crime’s offspring, since their anatomical disposition, their very being, confounded the law that distinguished the sexes and prescribed their union.

The discursive explosion of the eighteenth and nineteenth centuries caused this system centered on legitimate alliance to undergo two modifications. First, a centrifugal movement with respect to heterosexual monogamy. Of course, the array of practices and pleasures continued to be referred to it as their internal standard; but it was spoken of less and less, or in any case with a growing moderation. Efforts to find out its secrets were abandoned; nothing further was demanded of it than to define itself from day to day. The legitimate couple, with its regular sexuality, had a right to more discretion. It tended to function as a norm, one that was stricter, perhaps, but quieter. On the other hand, what came under scrutiny was the sexuality of children, mad men and women, and criminals; the sensuality of those who did not like the opposite sex; reveries, obsessions, petty manias, or great transports of rage. It was time for all these figures, scarcely noticed in the

past, to step forward and speak, to make the difficult confession of what they were. No doubt they were condemned all the same; but they were listened to; and if regular sexuality happened to be questioned once again, it was through a reflux movement, originating in these peripheral sexualities.

Whence the setting apart of the "unnatural" as a specific dimension in the field of sexuality. This kind of activity assumed an autonomy with regard to the other condemned forms such as adultery or rape (and the latter were condemned less and less): to marry a close relative or practice sodomy, to seduce a nun or engage in sadism, to deceive one's wife or violate cadavers, became things that were essentially different. The area covered by the Sixth Commandment⁵ began to fragment. Similarly, in the civil order, the confused category of "debauchery," which for more than a century had been one of the most frequent reasons for administrative confinement, came apart. From the debris, there appeared on the one hand infractions against the legislation (or morality) pertaining to marriage and the family, and on the other, offenses against the regularity of a natural function (offenses which, it must be added, the law was apt to punish). Here we have a likely reason, among others, for the prestige of Don Juan,⁶ which three centuries have not erased. Underneath the great violator of the rules of marriage—stealer of wives, seducer of virgins, the shame of families, and an insult to husbands and fathers—another personage can be glimpsed: the individual driven, in spite of himself, by the somber madness of sex. Underneath the libertine, the pervert. He deliberately breaks the law, but at the same time, something like a nature gone awry transports him far from all nature; his death is the moment when the supernatural return of the crime and its retribution thwarts the flight into counternature. There were two great systems conceived by the West for governing sex: the law of marriage and the order of desires—and the life of Don Juan overturned them both. We shall leave it to psychoanalysts to speculate whether he was homosexual, narcissistic, or impotent.

Although not without delay and equivocation, the natural laws of matrimony and the immanent rules of sexuality began to be recorded on two separate registers. There emerged a world of perversion which partook of that of legal or moral infraction, yet was not simply a variety of the latter. An entire sub-race race was born, different—despite certain kinship ties—from the libertines of the past. From the end of the eighteenth century to our own, they circulated through the pores of society; they were always hounded, but not always by laws; were often locked up, but not always in prisons; were sick perhaps, but scandalous, dangerous victims, prey to a strange evil that also bore the name of vice and sometimes crime. They were children wise beyond their years, precocious little girls, ambiguous school-boys, dubious servants and educators, cruel or maniacal husbands, solitary collectors, ramblers with bizarre impulses; they haunted the houses of correction, the penal colonies, the tribunals, and the asylums; they carried their infamy to the doctors and their sickness to the judges. This was the numberless family of perverts who were on friendly terms with delinquents and akin to madmen. In the course of the century they successively bore

5. "Thou shalt not commit adultery" (Exodus 20.14).

6. Legendary libertine, whose story is variously

told in Molière's play (1665), Mozart's opera (1787), Byron's poem (1819–24), and elsewhere.

the stamp of "moral folly," "genital neurosis," "aberration of the genetic instinct," "degenerescence," or "physical imbalance."

What does the appearance of all these peripheral sexualities signify? Is the fact that they could appear in broad daylight a sign that the code had become more lax? Or does the fact that they were given so much attention testify to a stricter regime and to its concern to bring them under close supervision? In terms of repression, things are unclear. There was permissiveness, if one bears in mind that the severity of the codes relating to sexual offenses diminished considerably in the nineteenth century and that law itself often deferred to medicine. But an additional ruse of severity, if one thinks of all the agencies of control and all the mechanisms of surveillance that were put into operation by pedagogy or therapeutics. It may be the case that the intervention of the Church in conjugal sexuality and its rejection of "frauds" against procreation had lost much of their insistence over the previous two hundred years. But medicine made a forceful entry into the pleasures of the couple: it created an entire organic, functional, or mental pathology arising out of "incomplete" sexual practices; it carefully classified all forms of related pleasures; it incorporated them into the notions of "development" and instinctual "disturbances"; and it undertook to manage them.

Perhaps the point to consider is not the level of indulgence or the quantity of repression but the form of power that was exercised. When this whole thicket of disparate sexualities was labeled, as if to disentangle them from one another, was the object to exclude them from reality? It appears, in fact, that the function of the power exerted in this instance was not that of interdiction, and that it involved four operations quite different from simple prohibition.

1. Take the ancient prohibitions of consanguine marriages (as numerous and complex as they were) or the condemnation of adultery, with its inevitable frequency of occurrence; or on the other hand, the recent controls through which, since the nineteenth century, the sexuality of children has been subordinated and their "solitary habits" interfered with. It is clear that we are not dealing with one and the same power mechanism. Not only because in the one case it is a question of law and penalty, and in the other, medicine and regimentation; but also because the tactics employed is not the same. On the surface, what appears in both cases is an effort at elimination that was always destined to fail and always constrained to begin again. But the prohibition of "incests" attempted to reach its objective through an asymptotic decrease in the thing it condemned, whereas the control of infantile sexuality hoped to reach it through a simultaneous propagation of its own power and of the object on which it was brought to bear. It proceeded in accordance with a twofold increase extended indefinitely. Educators and doctors combatted children's onanism like an epidemic that needed to be eradicated. What this actually entailed, throughout this whole secular campaign that mobilized the adult world around the sex of children, was using these tenuous pleasures as a prop, constituting them as secrets (that is, forcing them into hiding so as to make possible their discovery), tracing them back to their source, tracking them from their origins to their effects, searching out everything that might cause them or simply enable them to exist. Wherever there was the chance they might appear, devices of surveillance were installed; traps were laid for compelling admissions; inexhaustible

and corrective discourses were imposed; parents and teachers were alerted, and left with the suspicion that all children were guilty, and with the fear of being themselves at fault if their suspicions were not sufficiently strong; they were kept in readiness in the face of this recurrent danger; their conduct was prescribed and their pedagogy recodified; an entire medico-sexual regime took hold of the family milieu. The child's "vice" was not so much an enemy as a support; it may have been designated as the evil to be eliminated, but the extraordinary effort that went into the task that was bound to fail leads one to suspect that what was demanded of it was to persevere, to proliferate to the limits of the visible and the invisible, rather than to disappear for good. Always relying on this support, power advanced, multiplied its relays and its effects, while its target expanded, subdivided, and branched out, penetrating further into reality at the same pace. In appearance, we are dealing with a barrier system; but in fact, all around the child, indefinite *lines of penetration* were disposed.

2. This new persecution of the peripheral sexualities entailed an *incorporation of perversions* and a new *specification of individuals*. As defined by the ancient civil or canonical codes, sodomy was a category of forbidden acts; their perpetrator was nothing more than the juridical subject of them. The nineteenth-century homosexual became a personage, a past, a case history, and a childhood, in addition to being a type of life, a life form, and a morphology, with an indiscreet anatomy and possibly a mysterious physiology. Nothing that went into his total composition was unaffected by his sexuality. It was everywhere present in him: at the root of all his actions because it was their insidious and indefinitely active principle; written immodestly on his face and body because it was a secret that always gave itself away. It was consubstantial with him, less as a habitual sin than as a singular nature. We must not forget that the psychological, psychiatric, medical category of homosexuality was constituted from the moment it was characterized—Westphal's famous article of 1870⁷ on "contrary sexual sensations" can stand as its date of birth—less by a type of sexual relations than by a certain quality of sexual sensibility, a certain way of inverting the masculine and the feminine in oneself. Homosexuality appeared as one of the forms of sexuality when it was transposed from the practice of sodomy onto a kind of interior androgyny, a hermaphrodism of the soul. The sodomite had been a temporary aberration; the homosexual was now a species.

So too were all those minor perverts whom nineteenth-century psychiatrists entomologized by giving them strange baptismal names: there were Krafft-Ebing's zoophiles and zoerasts, Rohleder's auto-monosexualists; and later, mixoscopophiles, gynecomasts, presbyophiles, sexoesthetic inverts, and dyspareunist women.⁸ These fine names for heresies referred to a nature that

7. Carl Westphal, *Archiv für Neurologie*, 1870 [Foucault's note]. Westphal (1833–1890), German neurologist.

8. The scientists named are Richard Krafft-Ebing (1840–1902), a German psychiatrist best known for his study of sexual abnormalities, and Hermann Rohleder (1866–1938), a German physician who wrote extensively on sexual behavior. They and other psychiatrists labeled people who desire sexual contact with animals (zoophiles, zoerasts),

people who masturbate but have no sexual contact with other people (auto-monosexualists), people who get sexual pleasure from viewing pictures of animals or humans having sexual intercourse (mixoscopophiles), men with enlarged breasts (gynecomasts), people who are sexually attracted to old men (presbyophiles), homosexuals who idealize the young male body (sexoesthetic inverts), and women for whom sexual intercourse is painful (dyspareunist women).

was overlooked by the law, but not so neglectful of itself that it did not go on producing more species, even where there was no order to fit them into. The machinery of power that focused on this whole alien strain did not aim to suppress it, but rather to give it an analytical, visible, and permanent reality: it was implanted in bodies, slipped in beneath modes of conduct, made into a principle of classification and intelligibility, established as a *raison d'être* and a natural order of disorder. Not the exclusion of these thousand aberrant sexualities, but the specification, the regional solidification of each one of them. The strategy behind this dissemination was to strew reality with them and incorporate them into the individual.

3. More than the old taboos, this form of power demanded constant, attentive, and curious presences for its exercise; it presupposed proximities; it proceeded through examination and insistent observation; it required an exchange of discourses, through questions that extorted admissions, and confidences that went beyond the questions that were asked. It implied a physical proximity and an interplay of intense sensations. The medicalization of the sexually peculiar was both the effect and the instrument of this. Imbedded in bodies, becoming deeply characteristic of individuals, the oddities of sex relied on a technology of health and pathology. And conversely, since sexuality was a medical and medicalizable object, one had to try and detect it—as a lesion, a dysfunction, or a symptom—in the depths of the organism, or on the surface of the skin, or among all the signs of behavior. The power which thus took charge of sexuality set about contacting bodies, caressing them with its eyes, intensifying areas, electrifying surfaces, dramatizing troubled moments. It wrapped the sexual body in its embrace. There was undoubtedly an increase in effectiveness and an extension of the domain controlled; but also a sensualization of power and a gain of pleasure. This produced a twofold effect: an impetus was given to power through its very exercise; an emotion rewarded the overseeing control and carried it further; the intensity of the confession renewed the questioner's curiosity; the pleasure discovered fed back to the power that encircled it. But so many pressing questions singularized the pleasures felt by the one who had to reply. They were fixed by a gaze, isolated and animated by the attention they received. Power operated as a mechanism of attraction; it drew out those peculiarities over which it kept watch. Pleasure spread to the power that harried it; power anchored the pleasure it uncovered.

The medical examination, the psychiatric investigation, the pedagogical report, and family controls may have the over-all and apparent objective of saying no to all wayward or unproductive sexualities, but the fact is that they function as mechanisms with a double impetus: pleasure and power. The pleasure that comes of exercising a power that questions, monitors, watches, spies, searches out, palpates, brings to light; and on the other hand, the pleasure that kindles at having to evade this power, flee from it, fool it, or travesty it. The power that lets itself be invaded by the pleasure it is pursuing; and opposite it, power asserting itself in the pleasure of showing off, scandalizing, or resisting. Capture and seduction, confrontation and mutual reinforcement: parents and children, adults and adolescents, educator and students, doctors and patients, the psychiatrist with his hysteric and his pervers, all have played this game continually since the nineteenth century. These attractions, these evasions, these circular incitements have traced

around bodies and sexes, not boundaries not to be crossed, but *perpetual spirals of power and pleasure*.

4. Whence those *devices of sexual saturation* so characteristic of the space and the social rituals of the nineteenth century. People often say that modern society has attempted to reduce sexuality to the couple—the heterosexual and, insofar as possible, legitimate couple. There are equal grounds for saying that it has, if not created, at least outfitted and made to proliferate, groups with multiple elements and a circulating sexuality: a distribution of points of power, hierarchized and placed opposite to one another; “pursued” pleasures, that is, both sought after and searched out; compartmental sexualities that are tolerated or encouraged; proximities that serve as surveillance procedures, and function as mechanisms of intensification; contacts that operate as inductors. This is the way things worked in the case of the family, or rather the household, with parents, children, and in some instances, servants. Was the nineteenth-century family really a monogamic and conjugal cell? Perhaps to a certain extent. But it was also a network of pleasures and powers linked together at multiple points and according to transformable relationships. The separation of grown-ups and children, the polarity established between the parents’ bedroom and that of the children (it became routine in the course of the century when working-class housing construction was undertaken), the relative segregation of boys and girls, the strict instructions as to the care of nursing infants (maternal breast-feeding, hygiene), the attention focused on infantile sexuality, the supposed dangers of masturbation, the importance attached to puberty, the methods of surveillance suggested to parents, the exhortations, secrets, and fears, the presence—both valued and feared—of servants: all this made the family, even when brought down to its smallest dimensions, a complicated network, saturated with multiple, fragmentary, and mobile sexualities. To reduce them to the conjugal relationship, and then to project the latter, in the form of a forbidden desire, onto the children, cannot account for this apparatus which, in relation to these sexualities, was less a principle of inhibition than an inciting and multiplying mechanism.⁹ Educational or psychiatric institutions, with their large populations, their hierarchies, their spatial arrangements, their surveillance systems, constituted, alongside the family, another way of distributing the interplay of powers and pleasures; but they too delineated areas of extreme sexual saturation, with privileged spaces or rituals such as the classroom, the dormitory, the visit, and the consultation. The forms of a nonconjugal, nonmonogamous sexuality were drawn there and established.

Nineteenth-century “bourgeois” society—and it is doubtless still with us—was a society of blatant and fragmented perversion. And this was not by way of hypocrisy, for nothing was more manifest and more prolix, or more manifestly taken over by discourses and institutions. Not because, having tried to erect too rigid or too general a barrier against sexuality, society succeeded only in giving rise to a whole perverse outbreak and a long pathology of the sexual instinct. At issue, rather, is the type of power it brought to bear on the body and on sex. In point of fact, this power had neither the form of the law, nor the effects of the taboo. On the contrary, it acted by multiplication of singular sexualities. It did not set boundaries for sexuality; it extended

9. An oblique critique of Freud’s concept of the Oedipus complex.

the various forms of sexuality, pursuing them according to lines of indefinite penetration. It did not exclude sexuality, but included it in the body as a mode of specification of individuals. It did not seek to avoid it; it attracted its varieties by means of spirals in which pleasure and power reinforced one another. It did not set up a barrier; it provided places of maximum saturation. It produced and determined the sexual mosaic. Modern society is perverse, not in spite of its puritanism or as if from a backlash provoked by its hypocrisy; it is in actual fact, and directly, perverse.

In actual fact. The manifold sexualities—those which appear with the different ages (sexualities of the infant or the child), those which become fixated on particular tastes or practices (the sexuality of the invert, the gerontophile,¹ the fetishist), those which, in a diffuse manner, invest relationships (the sexuality of doctor and patient, teacher and student, psychiatrist and mental patient), those which haunt spaces (the sexuality of the home, the school, the prison)—all form the correlate of exact procedures of power. We must not imagine that all these things that were formerly tolerated attracted notice and received a pejorative designation when the time came to give a regulative role to the one type of sexuality that was capable of reproducing labor power and the form of the family. These polymorphous conducts were actually extracted from people's bodies and from their pleasures; or rather, they were solidified in them; they were drawn out, revealed, isolated, intensified, incorporated, by multifarious power devices. The growth of perversions is not a moralizing theme that obsessed the scrupulous minds of the Victorians. It is the real product of the encroachment of a type of power on bodies and their pleasures. It is possible that the West has not been capable of inventing any new pleasures, and it has doubtless not discovered any original vices. But it has defined new rules for the game of powers and pleasures. The frozen countenance of the perversions is a fixture of this game.

Directly. This implantation of multiple perversions is not a mockery of sexuality taking revenge on a power that has thrust on it an excessively repressive law. Neither are we dealing with paradoxical forms of pleasure that turn back on power and invest it in the form of a "pleasure to be endured." The implantation of perversions is an instrument-effect: it is through the isolation, intensification, and consolidation of peripheral sexualities that the relations of power to sex and pleasure branched out and multiplied, measured the body, and penetrated modes of conduct. And accompanying this encroachment of powers, scattered sexualities rigidified, became stuck to an age, a place, a type of practice. A proliferation of sexualities through the extension of power; an optimization of the power to which each of these local sexualities gave a surface of intervention: this concatenation, particularly since the nineteenth century, has been ensured and relayed by the countless economic interests which, with the help of medicine, psychiatry, prostitution, and pornography, have tapped into both this analytical multiplication of pleasure and this optimization of the power that controls it. Pleasure and power do not cancel or turn back against one another; they seek out, overlap, and reinforce one another. They are linked together by complex mechanisms and devices of excitation and incitement.

1. Lover of the old.

We must therefore abandon the hypothesis that modern industrial societies ushered in an age of increased sexual repression. We have not only witnessed a visible explosion of unorthodox sexualities; but—and this is the important point—a deployment quite different from the law, even if it is locally dependent on procedures of prohibition, has ensured, through a network of interconnecting mechanisms, the proliferation of specific pleasures and the multiplication of disparate sexualities. It is said that no society has been more prudish; never have the agencies of power taken such care to feign ignorance of the thing they prohibited, as if they were determined to have nothing to do with it. But it is the opposite that has become apparent, at least after a general review of the facts: never have there existed more centers of power; never more attention manifested and verbalized; never more circular contacts and linkages; never more sites where the intensity of pleasures and the persistency of power catch hold, only to spread elsewhere.

1976

*From "Society Must Be Defended"*¹

From Chapter 11. 17 March 1976

[BIOPOWER]

* * *

It seems to me that one of the basic phenomena of the nineteenth century was what might be called power's hold over life. What I mean is the acquisition of power over man insofar as man is a living being, that the biological came under State control, that there was at least a certain tendency that leads to what might be termed State control of the biological. And I think that in order to understand what was going on, it helps if we refer to what used to be the classical theory of sovereignty, which ultimately provided us with the backdrop to—a picture of—all these analyses of war, races, and so on. You know that in the classical theory of sovereignty, the right of life and death was one of sovereignty's basic attributes. Now the right of life and death is a strange right. Even at the theoretical level, it is a strange right. What does having the right of life and death actually mean? In one sense, to say that the sovereign has a right of life and death means that he can, basically, either have people put to death or let them live, or in any case that life and death are not natural or immediate phenomena which are primal or radical, and which fall outside the field of power. If we take the argument a little further, or to the point where it becomes paradoxical, it means that in terms of his relationship with the sovereign, the subject is, by rights, neither dead nor alive. From the point of view of life and death, the subject is neutral, and it is thanks to the sovereign that the subject has the right to be alive or, possibly, the right to be dead. In any case, the lives and deaths of subjects become rights only as a result of the will of the sovereign. That is, if you like, the theoretical paradox. And it is of course a theoretical paradox that must have as its corollary a sort of practi-

1. Translated by David Macey.

cal disequilibrium. What does the right of life and death actually mean? Obviously not that the sovereign can grant life in the same way that he can inflict death. The right of life and death is always exercised in an unbalanced way: the balance is always tipped in favor of death. Sovereign power's effect on life is exercised only when the sovereign can kill. The very essence of the right of life and death is actually the right to kill: it is at the moment when the sovereign can kill that he exercises his right over life. It is essentially the right of the sword. So there is no real symmetry in the right over life and death. It is not the right to put people to death or to grant them life. Nor is it the right to allow people to live or to leave them to die. It is the right to take life or let live. And this obviously introduces a startling dissymmetry.

And I think that one of the greatest transformations political right underwent in the nineteenth century was precisely that, I wouldn't say exactly that sovereignty's old right—to take life or let live—was replaced, but it came to be complemented by a new right which does not erase the old right but which does penetrate it, permeate it. This is the right, or rather precisely the opposite right. It is the power to "make" live and "let" die. The right of sovereignty was the right to take life or let live. And then this new right is established: the right to make live and to let die.

This transformation obviously did not occur all at once. We can trace it in the theory of right (but here, I will be extraordinarily rapid). The jurists of the seventeenth and especially the eighteenth century were, you see, already asking this question about the right of life and death. The jurists ask: When we enter into a contract, what are individuals doing at the level of the social contract,² when they come together to constitute a sovereign, to delegate absolute power over them to a sovereign? They do so because they are forced to by some threat or by need. They therefore do so in order to protect their lives. It is in order to live that they constitute a sovereign. To the extent that this is the case, can life actually become one of the rights of the sovereign? Isn't life the foundation of the sovereign's right, and can the sovereign actually demand that his subjects grant him the right to exercise the power of life and death over them, or in other words, simply the power to kill them? Mustn't life remain outside the contract to the extent that it was the first, initial, and foundational reason for the contract itself? All this is a debate within political philosophy that we can leave on one side, but it clearly demonstrates how the problem of life began to be problematized in the field of political thought, of the analysis of political power. I would in fact like to trace the transformation not at the level of political theory, but rather at the level of the mechanisms, techniques, and technologies of power. And this brings us back to something familiar: in the seventeenth and eighteenth centuries, we saw the emergence of techniques of power that were essentially centered on the body, on the individual body. They included all devices that were used to ensure the spatial distribution of individual bodies (their separation, their alignment, their serialization, and their surveillance) and the organization, around those individuals, of a whole field of visibility. They were also techniques that could be used to take control over bodies. Attempts were made to increase their productive force through exercise,

2. For "social contract" theory, see the political philosophers Thomas Hobbes (1588–1679), John Locke (1632–1704), and Jean-Jacques Rousseau (1712–1778).

drill, and so on. They were also techniques for rationalizing and strictly economizing on a power that had to be used in the least costly way possible, thanks to a whole system of surveillance, hierarchies, inspections, book-keeping, and reports—all the technology that can be described as the disciplinary technology of labor. It was established at the end of the seventeenth century, and in the course of the eighteenth.³

Now I think we see something new emerging in the second half of the eighteenth century: a new technology of power, but this time it is not disciplinary. This technology of power does not exclude the former, does not exclude disciplinary technology, but it does dovetail into it, integrate it, modify it to some extent, and above all, use it by sort of infiltrating it, embedding itself in existing disciplinary techniques. This new technique does not simply do away with the disciplinary technique, because it exists at a different level, on a different scale, and because it has a different bearing area, and makes use of very different instruments.

Unlike discipline, which is addressed to bodies, the new nondisciplinary power is applied not to man-as-body but to the living man, to man-as-living-being; ultimately, if you like, to man-as-species. To be more specific, I would say that discipline tries to rule a multiplicity of men to the extent that their multiplicity can and must be dissolved into individual bodies that can be kept under surveillance, trained, used, and, if need be, punished. And that the new technology that is being established is addressed to a multiplicity of men, not to the extent that they are nothing more than their individual bodies, but to the extent that they form, on the contrary, a global mass that is affected by overall processes characteristic of birth, death, production, illness, and so on. So after a first seizure of power over the body in an individualizing mode, we have a second seizure of power that is not individualizing but, if you like, massifying, that is directed not at man-as-body but at man-as-species. After the anatomo-politics of the human body established in the course of the eighteenth century, we have, at the end of that century, the emergence of something that is no longer an anatomo-politics of the human body, but what I would call a “biopolitics” of the human race.

What does this new technology of power, this biopolitics, this biopower that is beginning to establish itself, involve? I told you very briefly a moment ago; a set of processes such as the ratio of births to deaths, the rate of reproduction, the fertility of a population, and so on. It is these processes—the birth rate, the mortality rate, longevity, and so on—together with a whole series of related economic and political problems (which I will not come back to for the moment) which, in the second half of the eighteenth century, become biopolitics’ first objects of knowledge and the targets it seeks to control. It is at any rate at this moment that the first demographers begin to measure these phenomena in statistical terms. They begin to observe the more or less spontaneous, more or less compulsory techniques that the population actually used to control the birth rate; in a word, if you like, to identify the phenomena of birth-control practices in the eighteenth century. We also see the beginnings of a natalist policy, plans to intervene in all phe-

3. On the question of disciplinary technology, see *Discipline and Punish* [1975; translator’s note]. Disciplinary technologies are practices focused

on the body such as surveillance, drills, uniforms, and posture.

nomena relating to the birth rate. This biopolitics is not concerned with fertility alone. It also deals with the problem of morbidity, but not simply, as had previously been the case, at the level of the famous epidemics, the threat of which had haunted political powers ever since the early Middle Ages (these famous epidemics were temporary disasters that caused multiple deaths, times when everyone seemed to be in danger of imminent death).⁴ At the end of the eighteenth century, it was not epidemics that were the issue, but something else—what might broadly be called endemics, or in other words, the form, nature, extension, duration, and intensity of the illnesses prevalent in a population. These were illnesses that were difficult to eradicate and that were not regarded as epidemics that caused more frequent deaths, but as permanent factors which—and that is how they were dealt with—sapped the population's strength, shortened the working week, wasted energy, and cost money, both because they led to a fall in production and because treating them was expensive. In a word, illness as phenomena affecting a population. Death was no longer something that suddenly swooped down on life—as in an epidemic. Death was now something permanent, something that slips into life, perpetually gnaws at it, diminishes it and weakens it.

These are the phenomena that begin to be taken into account at the end of the eighteenth century, and they result in the development of a medicine whose main function will now be public hygiene, with institutions to coordinate medical care, centralize information, and normalize knowledge. And which also takes the form of campaigns to teach hygiene and to medicalize the population. So, problems of reproduction, the birth rate, and the problem of the mortality rate too. Biopolitics' other field of intervention will be a set of phenomena some of which are universal, and some of which are accidental but which can never be completely eradicated, even if they are accidental. They have similar effects in that they incapacitate individuals, put them out of the circuit or neutralize them. This is the problem, and it will become very important in the early nineteenth century (the time of industrialization), of old age, of individuals who, because of their age, fall out of the field of capacity, of activity. The field of biopolitics also includes accidents, infirmities, and various anomalies. And it is in order to deal with these phenomena that this biopolitics will establish not only charitable institutions (which had been in existence for a very long time), but also much more subtle mechanisms that were much more economically rational than an indiscriminate charity which was at once widespread and patchy, and which was essentially under church control. We see the introduction of more subtle, more rational mechanisms: insurance, individual and collective savings, safety measures, and so on.⁵

Biopolitics' last domain is, finally—I am enumerating the main ones, or at least those that appeared in the late eighteenth and early nineteenth centuries; many others would appear later—control over relations between the human race, or human beings insofar as they are a species, insofar as they are living beings, and their environment, the milieu in which they live. This includes the direct effects of the geographical, climatic, or hydrographic

4. Many of these epidemics were caused by plague; the most famous, the Black Death (1347–51), killed up to one-third of Europe's population. Other epidemic diseases include typhus and

cholera.

5. On all these questions, see *Psychiatric Power: Lectures at the Collège de France, 1973–1974* [translator's note].

environment: the problem, for instance, of swamps, and of epidemics linked to the existence of swamps throughout the first half of the nineteenth century. And also the problem of the environment to the extent that it is not a natural environment, that it has been created by the population and therefore has effects on that population. This is, essentially, the urban problem. I am simply pointing out some of biopolitics' starting points, some of its practices, and the first of its domains of intervention, knowledge, and power: biopolitics will derive its knowledge from, and define its power's field of intervention in terms of, the birth rate, the mortality rate, various biological disabilities, and the effects of the environment.

In all this, a number of things are, I think, important. The first appears to be this: the appearance of a new element—I almost said a new character—of which both the theory of right and disciplinary practice knew nothing. The theory of right basically knew only the individual and society: the contracting individual and the social body constituted by the voluntary or implicit contract among individuals. Disciplines, for their part, dealt with individuals and their bodies in practical terms. What we are dealing with in this new technology of power is not exactly society (or at least not the social body, as defined by the jurists), nor is it the individual-as-body. It is a new body, a multiple body, a body with so many heads that, while they might not be infinite in number, cannot necessarily be counted. Biopolitics deals with the population, with the population as political problem, as a problem that is at once scientific and political, as a biological problem and as power's problem. And I think that biopolitics emerges at this time.

Second, the other important thing—quite aside from the appearance of the "population" element itself—is the nature of the phenomena that are taken into consideration. You can see that they are collective phenomena which have their economic and political effects, and that they become pertinent only at the mass level. They are phenomena that are aleatory and unpredictable when taken in themselves or individually, but which, at the collective level, display constants that are easy, or at least possible, to establish. And they are, finally, phenomena that occur over a period of time, which have to be studied over a certain period of time; they are serial phenomena. The phenomena addressed by biopolitics are, essentially, aleatory events that occur within a population that exists over a period of time.

On this basis—and this is, I think, the third important point—this technology of power, this biopolitics, will introduce mechanisms with a certain number of functions that are very different from the functions of disciplinary mechanisms. The mechanisms introduced by biopolitics include forecasts, statistical estimates, and overall measures. And their purpose is not to modify any given phenomenon as such, or to modify a given individual insofar as he is an individual, but, essentially, to intervene at the level at which these general phenomena are determined, to intervene at the level of their generality. The mortality rate has to be modified or lowered; life expectancy has to be increased; the birth rate has to be stimulated. And most important of all, regulatory mechanisms must be established to establish an equilibrium, maintain an average, establish a sort of homeostasis, and compensate for variations within this general population and its aleatory field. In a word, security mechanisms have to be installed around the random element inherent in a population of living beings so as to optimize a state of

life. Like disciplinary mechanisms, these mechanisms are designed to maximize and extract forces, but they work in very different ways. Unlike disciplines, they no longer train individuals by working at the level of the body itself. There is absolutely no question relating to an individual body, in the way that discipline does. It is therefore not a matter of taking the individual at the level of individuality but, on the contrary, of using overall mechanisms and acting in such a way as to achieve overall states of equilibration or regularity; it is, in a word, a matter of taking control of life and the biological processes of man-as-species and of ensuring that they are not disciplined, but regularized.⁶

Beneath that great absolute power, beneath the dramatic and somber absolute power that was the power of sovereignty, and which consisted in the power to take life, we now have the emergence, with this technology of biopower, of this technology of power over "the" population as such, over men insofar as they are living beings. It is continuous, scientific, and it is the power to make live. Sovereignty took life and let live. And now we have the emergence of a power that I would call the power of regularization, and it, in contrast, consists in making live and letting die.

I think that we can see a concrete manifestation of this power in the famous gradual disqualification of death, which sociologists and historians have discussed so often. Everyone knows, thanks in particular to a certain number of recent studies, that the great public ritualization of death gradually began to disappear, or at least to fade away, in the late eighteenth century and that it is still doing so today. So much so that death—which has ceased to be one of those spectacular ceremonies in which individuals, the family, the group, and practically the whole of society took part—has become, in contrast, something to be hidden away. It has become the most private and shameful thing of all (and ultimately, it is now not so much sex as death that is the object of a taboo). Now I think that the reason why death had become something to be hidden away is not that anxiety has somehow been displaced or that repressive mechanisms have been modified. What once (and until the end of the eighteenth century) made death so spectacular and ritualized it so much was the fact that it was a manifestation of a transition from one power to another. Death was the moment when we made the transition from one power—that of the sovereign of this world—to another—that of the sovereign of the next world. We went from one court of law to another, from a civil or public right over life and death, to a right to either eternal life or eternal damnation. A transition from one power to another. Death also meant the transmission of the power of the dying, and that power was transmitted to those who survived him: last words, last recommendations, last wills and testaments, and so on. All these phenomena of power were ritualized.

Now that power is decreasingly the power of the right to take life, and increasingly the right to intervene to make live, or once power begins to intervene mainly at this level in order to improve life by eliminating accidents, the random element, and deficiencies, death becomes, insofar as it is the end of life, the term, the limit, or the end of power too. Death is outside

6. Foucault comes back to all these disciplines, especially in the lectures from the Collège de France of 1977–1978, *Security, Territory, and*

Population, and of 1978–1979, *The Birth of Biopolitics* [translator's note].

the power relationship. Death is beyond the reach of power, and power has a grip on it only in general, overall, or statistical terms. Power has no control over death, but it can control mortality. And to that extent, it is only natural that death should now be privatized, and should become the most private thing of all. In the right of sovereignty, death was the moment of the most obvious and most spectacular manifestation of the absolute power of the sovereign; death now becomes, in contrast, the moment when the individual escapes all power, falls back on himself and retreats, so to speak, into his own privacy. Power no longer recognizes death. Power literally ignores death.

To symbolize all this, let's take, if you will, the death of Franco,⁷ which is after all a very, very interesting event. It is very interesting because of the symbolic values it brings into play, because the man who died had, as you know, exercised the sovereign right of life and death with great savagery, was the bloodiest of all the dictators, wielded an absolute right of life and death for forty years, and at the moment when he himself was dying, he entered this sort of new field of power over life which consists not only in managing life, but in keeping individuals alive after they are dead. And thanks to a power that is not simply scientific prowess, but the actual exercise of the political biopower established in the eighteenth century, we have become so good at keeping people alive that we've succeeded in keeping them alive when, in biological terms, they should have been dead long ago. And so the man who had exercised the absolute power of life and death over hundreds of thousands of people fell under the influence of a power that managed life so well, that took so little heed of death, and he didn't even realize that he was dead and was being kept alive after his death. I think that this minor but joyous event symbolizes the clash between two systems of power: that of sovereignty over death, and that of the regularization of life.

I would now like to go back to comparing the regulatory technology of life and the disciplinary technology of the body I was telling you about a moment ago. From the eighteenth century onward (or at least the end of the eighteenth century onward) we have, then, two technologies of power which were established at different times and which were superimposed. One technique is disciplinary; it centers on the body, produces individualizing effects, and manipulates the body as a source of forces that have to be rendered both useful and docile. And we also have a second technology which is centered not upon the body but upon life: a technology which brings together the mass effects characteristic of a population, which tries to control the series of random events that can occur in a living mass, a technology which tries to predict the probability of those events (by modifying it, if necessary), or at least to compensate for their effects. This is a technology which aims to establish a sort of homeostasis, not by training individuals, but by achieving an overall equilibrium that protects the security of the whole from internal dangers. So, a technology of drilling, as opposed to, as distinct from, a technology of security; a disciplinary technology, as distinct from a reassuring or regulatory technology. Both technologies are obviously technologies of the body, but

7. Francisco Franco (1892–1975), leader of the rightist military forces that overthrew the Republic in the Spanish Civil War (1936–39) and military dictator of Spain from 1939 until his death.

Foucault is referring to Franco's protracted final illness, which ended only when his family ordered doctors to turn off the life support.

one is a technology in which the body is individualized as an organism endowed with capacities, while the other is a technology in which bodies are replaced by general biological processes.

One might say this: It is as though power, which used to have sovereignty as its modality or organizing schema, found itself unable to govern the economic and political body of a society that was undergoing both a demographic explosion and industrialization. So much so that far too many things were escaping the old mechanism of the power of sovereignty, both at the top and at the bottom, both at the level of detail and at the mass level. A first adjustment was made to take care of the details. Discipline had meant adjusting power mechanisms to the individual body by using surveillance and training. That, of course, was the easier and more convenient thing to adjust. That is why it was the first to be introduced—as early as the seventeenth century, or the beginning of the eighteenth—at a local level, in intuitive, empirical, and fragmented forms, and in the restricted framework of institutions such as schools, hospitals, barracks, workshops, and so on. And then at the end of the eighteenth century, you have a second adjustment; the mechanisms are adjusted to phenomena of population, to the biological or biosociological processes characteristic of human masses. This adjustment was obviously much more difficult to make because it implied complex systems of coordination and centralization.

So we have two series: the body-organism-discipline-institutions series, and the population-biological processes-regulatory mechanisms-State.⁸ An organic institutional set, or the organo-discipline of the institution, if you like, and, on the other hand, a biological and Statist set, or bioregulation by the State. I am not trying to introduce a complete dichotomy between State and institution, because disciplines in fact always tend to escape the institutional or local framework in which they are trapped. What is more, they easily take on a Statist dimension in apparatuses such as the police, for example, which is both a disciplinary apparatus and a State apparatus (which just goes to prove that discipline is not always institutional). In similar fashion, the great overall regulations that proliferated throughout the nineteenth century are, obviously enough, found at the State level, but they are also found at the sub-State level, in a whole series of sub-State institutions such as medical institutions, welfare funds, insurance, and so on. That is the first remark I would like to make.

What is more, the two sets of mechanisms—one disciplinary and the other regulatory—do not exist at the same level. Which means of course that they are not mutually exclusive and can be articulated with each other. To take one or two examples. Take, if you like, the example of the town or, more specifically, the rationally planned layout of the model town, the artificial town, the town of utopian reality that was not only dreamed of but actually built in the nineteenth century. What were working-class housing estates, as they existed in the nineteenth century? One can easily see how the very grid pattern, the very layout, of the estate articulated, in a sort of perpendicular way, the disciplinary mechanisms that controlled the body, or bodies, by localizing families (one to a house) and individuals (one to a

8. The manuscript has "assuring" in place of "regulatory" [translator's note].

room). The layout, the fact that individuals were made visible, and the normalization of behavior meant that a sort of spontaneous policing or control was carried out by the spatial layout of the town itself. It is easy to identify a whole series of disciplinary mechanisms in the working-class estate. And then you have a whole series of mechanisms which are, by contrast, regulatory mechanisms, which apply to the population as such and which allow, which encourage patterns of saving related to housing, to the renting of accommodations and, in some cases, their purchase. Health-insurance systems, old-age pensions; rules on hygiene that guarantee the optimal longevity of the population; the pressures that the very organization of the town brings to bear on sexuality and therefore procreation; child care, education, et cetera, so you have [certain] disciplinary measures and [certain] regulatory mechanisms.⁹

Take the very different—though it is not altogether that different—take a different axis, something like sexuality. Basically, why did sexuality become a field of vital strategic importance in the nineteenth century? I think that sexuality was important for a whole host of reasons, and for these reasons in particular. On the one hand, sexuality, being an eminently corporeal mode of behavior, is a matter for individualizing disciplinary controls that take the form of permanent surveillance (and the famous controls that were, from the late eighteenth to the twentieth century, placed both at home and at school on children who masturbated represent precisely this aspect of the disciplinary control of sexuality). But because it also has procreative effects, sexuality is also inscribed, takes effect, in broad biological processes that concern not the bodies of individuals but the element, the multiple unity of the population. Sexuality exists at the point where body and population meet. And so it is a matter for discipline, but also a matter for regularization.

It is, I think, the privileged position it occupies between organism and population, between the body and general phenomena, that explains the extreme emphasis placed upon sexuality in the nineteenth century. Hence too the medical idea that when it is undisciplined and irregular, sexuality also has effects at two levels. At the level of the body, of the undisciplined body that is immediately sanctioned by all the individual diseases that the sexual debauchee brings down upon himself. A child who masturbates too much will be a lifelong invalid: disciplinary sanction at the level of the body. But at the same time, debauched, perverted sexuality has effects at the level of the population, as anyone who has been sexually debauched is assumed to have a heredity. Their descendants also will be affected for generations, unto the seventh generation and unto the seventh of the seventh and so on. This is the theory of degeneracy:¹ given that it is the source of individual diseases and that it is the nucleus of degeneracy, sexuality represents the precise point where the disciplinary and the regulatory, the body

9. The bracketed words are in Foucault's lecture notes, though he did not speak them when giving the lecture.

1. Foucault refers here to the theory elaborated in mid-nineteenth-century France by certain alienists. [...] This theory of degeneracy, which is based upon a principle that a so-called hereditary trait can be transmitted, was the kernel of

the medical knowledge about madness and abnormality in the second half of the nineteenth century. It was quickly adopted by forensic medicine, and it had a considerable effect on eugenicist doctrines and practices, and was not without its influence on a whole literature, a whole criminology, and a whole anthropology [translator's note].

and the population, are articulated. Given these conditions, you can understand how and why a technical knowledge such as medicine, or rather the combination of medicine and hygiene, is in the nineteenth century, if not the most important element, an element of considerable importance because of the link it establishes between scientific knowledge of both biological and organic processes (or in other words, the population and the body), and because, at the same time, medicine becomes a political intervention-technique with specific power-effects. Medicine is a power-knowledge that can be applied to both the body and the population, both the organism and biological processes, and it will therefore have both disciplinary effects and regulatory effects.

In more general terms still, we can say that there is one element that will circulate between the disciplinary and the regulatory, which will also be applied to body and population alike, which will make it possible to control both the disciplinary order of the body and the aleatory events that occur in the biological multiplicity. The element that circulates between the two is the norm. The norm is something that can be applied to both a body one wishes to discipline and a population one wishes to regularize. The normalizing society is therefore not, under these conditions, a sort of generalized disciplinary society whose disciplinary institutions have swarmed and finally taken over everything—that, I think, is no more than a first and inadequate interpretation of a normalizing society. The normalizing society is a society in which the norm of discipline and the norm of regulation intersect along an orthogonal articulation. To say that power took possession of life in the nineteenth century, or to say that power at least takes life under its care in the nineteenth century, is to say that it has, thanks to the play of technologies of discipline on the one hand and technologies of regulation on the other, succeeded in covering the whole surface that lies between the organic and the biological, between body and population.

We are, then, in a power that has taken control of both the body and life or that has, if you like, taken control of life in general—with the body as one pole and the population as the other. We can therefore immediately identify the paradoxes that appear at the points where the exercise of this biopower reaches its limits. The paradoxes become apparent if we look, on the one hand, at atomic power, which is not simply the power to kill, in accordance with the rights that are granted to any sovereign, millions and hundreds of millions of people (after all, that is traditional). The workings of contemporary political power are such that atomic power represents a paradox that is difficult, if not impossible, to get around. The power to manufacture and use the atom bomb represents the deployment of a sovereign power that kills, but it is also the power to kill life itself. So the power that is being exercised in this atomic power is exercised in such a way that it is capable of suppressing life itself. And, therefore, to suppress itself insofar as it is the power that guarantees life. Either it is sovereign and uses the atom bomb, and therefore cannot be power, biopower, or the power to guarantee life, as it has been ever since the nineteenth century. Or, at the opposite extreme, you no longer have a sovereign right that is in excess of biopower, but a biopower that is in excess of sovereign right. This excess of biopower appears when it becomes technologically and politically possible for man not only to manage life but to make it proliferate, to create living matter, to build the

monster, and, ultimately, to build viruses that cannot be controlled and that are universally destructive. This formidable extension of biopower, unlike what I was just saying about atomic power, will put it beyond all human sovereignty.

You must excuse this long digression into biopower, but I think that it does provide us with a basic argument that will allow us to get back to the problem I was trying to raise.

If it is true that the power of sovereignty is increasingly on the retreat and that disciplinary or regulatory disciplinary power is on the advance, how will the power to kill and the function of murder operate in this technology of power, which takes life as both its object and its objective? How can a power such as this kill, if it is true that its basic function is to improve life, to prolong its duration, to improve its chances, to avoid accidents, and to compensate for failings? How, under these conditions, is it possible for a political power to kill, to call for deaths, to demand deaths, to give the order to kill, and to expose not only its enemies but its own citizens to the risk of death? Given that this power's objective is essentially to make live, how can it let die? How can the power of death, the function of death, be exercised in a political system centered upon biopower?

1976

WOLFGANG ISER

1926–2007

Against a narrow focus on “the text itself,” theorists in the 1970s turned to consider the role of the reader. Alongside French poststructuralist approaches that asserted, in ROLAND BARTHES’s phrase, the “writerly” nature of reading and psychoanalytic views that studied the psychology of reading, the German “Constance School” was most prominent in advocating the investigation of *Rezeptionsästhetik*, or “the aesthetics of reception.” Wolfgang Iser was a leading member of the Constance School, and he focused particularly on the way in which texts are actively constructed by individual readers through the phenomenology of the reading process.

Born in Germany and trained as an undergraduate at the University of Leipzig and the University of Tübingen, Iser earned his Ph.D. in 1950 from the University of Heidelberg, where he studied with the philosopher Hans-Georg Gadamer. Thereafter, Iser held a series of appointments in English literature at the Universities of Glasgow, Heidelberg, Würzburg, and Cologne, settling finally in 1967 in Germany at the newly founded University of Constance as a professor of English and comparative literature. He technically retired from Constance in 1991, but he remained active there until his death. Iser’s arrival at Constance, where he joined a research group that included the reader-response theorist Hans Robert Jauss, proved especially fruitful for the development of his theories of reader response. Iser also held an appointment as professor of English at the University of California at Irvine from 1978 to 2005.

The Constance School draws on the philosophical tradition of aesthetics inaugurated in eighteenth-century German philosophy by Alexander Baumgarten, IMMANUEL

KANT, and FRIEDRICH VON SCHILLER, and it focuses on the affective as well as the formal dimensions of art. The work of the Constance School has also been influenced by philosophical considerations of hermeneutics, or the theory of interpretation, developed by FRIEDRICH SCHLEIERMACHER (1768–1834), MARTIN HEIDEGGER (1889–1976), and others. In particular, Iser's work draws on the hermeneutic philosophy of Gadamer and the phenomenological literary theory of Roman Ingarden (1893–1970), which examines the processes of cognition through which we understand literary works.

Iser's early work includes two scholarly studies of English literature, but it was not until his inaugural lecture at Constance in 1970, "The Affective Structure of the Text," that he articulated his theory of the interactive nature of the reading experience. This was followed by two influential books, *The Implied Reader: Patterns of Communication in Prose Fiction from Bunyan to Beckett* (1972; trans. 1974) and *The Act of Reading: A Theory of Aesthetic Response* (1976; trans. 1978). In the former, Iser holds that literary texts provide the foundation for their interpretation, but they also imply the action of the reader. Reading is not passive but a process of discovery; a reader questions, negates, and revises the expectations that the text establishes, filling in what Iser calls "blanks" or "gaps" in the text and continually modifying his or her interpretation. In *The Act of Reading*, Iser argues that texts provide "sets of instructions" or a "repertoire" that the reader must assemble, so that interpretation depends on both the text and response, producing what he calls "the virtual text."

Iser's version of reader response differs from that of Jauss, who deals with the historical reception of a literary work and how it tempers our expectations and therefore influences our interpretation. We never see a text on its own, but always in the context of its reception by others. Iser focuses on the individual interactive process—the phenomenology or cognition—of reading, rather than the larger literary-historical concerns that Jauss describes. Iser's investigation of response also differs from that of STANLEY FISH, an early advocate of response criticism in the United States, who locates the meaning of literary texts in the protocols of the interpretive communities to which readers belong rather than in the interaction of text and reader.

Reader-response criticism takes particular aim at the once-dominant dictates of the New Criticism, codified in W. K. WIMSATT JR. and MONROE BEARDSLEY'S "Affective Fallacy" (1949), which dismisses considerations of the reader as "a confusion between the poem and its results." Iser carves out a compromise position between such formalist theories of literature that assume a stable object of study (witness the titles of the best-known books of the New Criticism, CLEANTH BROOKS'S *Well Wrought Urn* and Wimsatt's *Verbal Icon*) and more radical reader-based approaches, such as Fish's. Iser carefully qualifies his position, insisting that a theory of response, "if it is to carry any weight at all, must have its foundations in literary texts." A text functions in much the same way as a script does for a play. A script guides a performance, but performers enact it in different ways at different times.

Some critics of reader-response criticism charge that it promotes radical relativism and indeterminacy, leaving meaning to the subjective whim of each individual reader, with no objective or secure basis for literary interpretation. Further, there might be an infinite number of possible readings for every text—as many as there are readers. Iser's analyses of literature do not subscribe to these views. His concept of a textual "repertoire" acknowledges the formal dimensions of literary works and their determinate role in producing the "virtual text."

Our selection, "Interaction between Text and Reader" (1980), summarizes the theoretical argument offered in *The Act of Reading*. Iser stresses that interpretation is neither objective nor subjective, but always a result of the dynamic interaction of text and reader. The structure of the literary text guides the reader, but the reader continually modifies her or his viewpoint, connecting new segments of the text and filling in the "gaps" of what the text does not mention. Meaning is constantly revised

in a process that Iser compares to a feedback loop in communication theory, resembling what philosophers call “the hermeneutic circle.”

As Stanley Fish remarks in an essay titled “Why No One Is Afraid of Wolfgang Iser,” despite the sometimes contentious debates in contemporary literary theory, there has been relatively little disagreement with Iser’s work. This results, in part, from Iser’s middle-ground position between formalism and certain poststructuralist approaches that argue for the ultimate indeterminacy of interpretation. Fish also argues that Iser’s terms are vague and contradictory; for instance, to postulate the existence of gaps, one must assume that there are definite givens, and Fish questions whether one can determine the difference between the two. Other criticism has been voiced by those advocating the study of the social dimensions of literature, such as the Marxist critic TERRY EAGLETON, who notes that by solely concentrating on the “aesthetic aspects” of texts, Iser ignores their social and historical dimensions. Nonetheless, Iser has influenced those focusing on the actual processes of reading, particularly those exploring new cognitive approaches to literature and those concerned with pedagogy.

“Interaction between Text and Reader” Keywords: Aesthetics, Affect, Hermeneutics, Phenomenology, Reception Theory

Interaction between Text and Reader

Central to the reading of every literary work is the interaction between its structure and its recipient. This is why the phenomenological theory of art¹ has emphatically drawn attention to the fact that the study of a literary work should concern not only the actual text but also, and in equal measure, the actions involved in responding to that text. The text itself simply offers “schematized aspects”² through which the aesthetic object of the work can be produced.

From this we may conclude that the literary work has two poles, which we might call the artistic and the aesthetic: the artistic pole is the author’s text, and the aesthetic is the realization accomplished by the reader. In view of this polarity, it is clear that the work itself cannot be identical with the text or with its actualization but must be situated somewhere between the two. It must inevitably be virtual in character, as it cannot be reduced to the reality of the text or to the subjectivity of the reader, and it is from this virtuality that it derives its dynamism. As the reader passes through the various perspectives offered by the text, and relates the different views and patterns to one another, he sets the work in motion, and so sets himself in motion, too.

If the virtual position of the work is between text and reader, its actualization is clearly the result of an interaction between the two, and so exclusive concentration on either the author’s techniques or the reader’s psychology will tell us little about the reading process itself. This is not to deny the vital importance of each of the two poles—it is simply that if one loses sight of

1. Phenomenological theories of philosophy focus on human consciousness and perception, particularly the interrelation between the perceiving subject and the perceived object (here, audience and work).

2. See Roman Ingarden, *The Literary Work of Art*,

the relationship, one loses sight of the virtual work. Despite its uses, separate analysis would only be conclusive if the relationship were that of transmitter and receiver, for this would presuppose a common code, ensuring accurate communication since the message would only be traveling one way. In literary works, however, the message is transmitted in two ways, in that the reader "receives" it by composing it. There is no common code—at best one could say that a common code may arise in the course of the process. Starting out from this assumption, we must search for structures that will enable us to describe basic conditions of interaction, for only then shall we be able to gain some insight into the potential effects inherent in the work.

It is difficult to describe this interaction, not least because literary criticism has very little to go on in the way of guidelines, and, of course, the two partners in the communication process, namely, the text and the reader, are far easier to analyze than is the event that takes place between them. However, there are discernible conditions that govern interaction generally, and some of these will certainly apply to the special reader-text relationship. The differences and similarities may become clear if we briefly examine types of interaction that have emerged from psychoanalytical research into the structure of communication. The findings of the *Tavistock School*³ will serve us as a model in order to move the problem into focus.

In assessing interpersonal relationships R. D. Laing writes: "I may not actually be able to see myself as others see me, but I am constantly supposing them to be seeing me in particular ways, and I am constantly acting in the light of the actual or supposed attitudes, opinions, needs, and so on the other has in respect of me."⁴ Now, the views that others have of me cannot be called "pure" perception; they are the result of interpretation. And this need for interpretation arises from the structure of interpersonal experience. We have experience of one another insofar as we know one another's conduct; but we have no experience of how others experience us.

In his book, *The Politics of Experience*, Laing pursues this line of thought by saying: "*your experience of me is invisible to me and my experience of you is invisible to you*. I cannot experience your experience. You cannot experience my experience. We are both invisible men. All men are invisible to one another. Experience is man's invisibility to man."⁵ It is this invisibility, however, that forms the basis of interpersonal relations—a basis which Laing calls "no-thing." "That which is really 'between' cannot be named by any things that come between. The between is itself no-thing."⁶ In all our interpersonal relations we build upon this "no-thing," for we react as if we knew how our partners experienced us; we continually form views of their views, and then act as if our views of their views were realities. Contact therefore depends upon our continually filling in a central gap in our experience. Thus, dyadic⁷ and dynamic interaction comes about only because we are unable to experience how we experience one another, which in turn proves to be a propellant to interaction. Out of this fact arises the basic need for interpretation, which regulates the

3. A British school of psychology, prominent in the 1960s and 1970s, focused on interpersonal relations; its most prominent member was R. D. Laing (1927–1989), a Scottish psychiatrist.

7. Involving two entities.

whole process of interaction. As we cannot perceive without preconception, each percept, in turn, only makes sense to us if it is processed, for pure perception is quite impossible. Hence dyadic interaction is not given by nature but arises out of an interpretative activity, which will contain a view of others and, unavoidably, an image of ourselves.

An obvious and major difference between reading and all forms of social interaction is the fact that with reading there is no *face-to-face-situation*.⁸ A text cannot adapt itself to each reader it comes into contact with. The partners in dyadic interaction can ask each other questions in order to ascertain how far their images have bridged the gap of the inexperienceability of one another's experiences. The reader, however, can never learn from the text how accurate or inaccurate are his views of it. Furthermore, dyadic interaction serves specific purposes, so that the interaction always has a regulative context, which often serves as a *tertium comparationis*.⁹ There is no such frame of reference governing the text-reader relationship; on the contrary, the codes which might regulate this interaction are fragmented in the text, and must first be reassembled or, in most cases, restructured before any frame of reference *can* be established. Here, then, in conditions and intention, we find two basic differences between the text-reader relationship and the dyadic interaction between social partners.

Now, it is the very lack of ascertainability and defined intention that brings about the text-reader interaction, and here there is a vital link with dyadic interaction. Social communication, as we have seen, arises out of the fact that people cannot experience how others experience them, and not out of the common situation or out of the conventions that join both partners together. The situations and conventions regulate the manner in which gaps are filled, but the gaps in turn arise out of the inexperienceability and, consequently, function as a basic inducement to communication. Similarly, it is the gaps, the fundamental asymmetry between text and reader, that give rise to communication in the reading process; the lack of a common situation and a common frame of reference corresponds to the "no-thing," which brings about the interaction between persons. Asymmetry and the "no-thing" are all different forms of an indeterminate, constitutive blank, which underlies all processes of interaction. With dyadic interaction, the imbalance is removed by the establishment of pragmatic connections resulting in an action, which is why the preconditions are always clearly defined in relation to situations and common frames of reference. The imbalance between text and reader, however, is undefined, and it is this very indeterminacy that increases the variety of communication possible.

Now, if communication between text and reader is to be successful, clearly the reader's activity must also be controlled in some way by the text. The control cannot be as specific as in a *face-to-face-situation*, equally it cannot be as determinate as a social code, which regulates social interaction. However, the guiding devices operative in the reading process have to initiate communication and to control it. This control cannot be understood as a tangible entity occurring independently of the process of communication.

born American sociologist.

9. Third point of comparison (Latin).

Although exercised *by* the text, it is not in the text. This is well illustrated by a comment Virginia Woolf made on the novels of Jane Austen:¹

Jane Austen is thus a mistress of much deeper emotion than appears upon the surface. She stimulates us to supply what is not there. What she offers is, apparently, a trifle, yet is composed of something that expands in the reader's mind and endows with the most enduring form of life scenes which are outwardly trivial. Always the stress is laid upon character. . . . The turns and twists of the dialogue keep us on the tenterhooks of suspense. Our attention is half upon the present moment, half upon the future. . . . Here, indeed, in this unfinished and in the main inferior story, are all the elements of Jane Austen's greatness.²

What is missing from the apparently trivial scenes, the gaps arising out of the dialogue—this is what stimulates the reader into filling the blanks with projections. He is drawn into the events and made to supply what is meant from what is not said. What is said only appears to take on significance as a reference to what is not said; it is the implications and not the statements that give shape and weight to the meaning. But as the unsaid comes to life in the reader's imagination, so the said “expands” to take on greater significance than might have been supposed: even trivial scenes can seem surprisingly profound. The “enduring form of life” which Virginia Woolf speaks of is not manifested on the printed page; it is a product arising out of the interaction between text and reader.

Communication in literature, then, is a process set in motion and regulated, not by a given code, but by a mutually restrictive and magnifying interaction between the explicit and the implicit, between revelation and concealment. What is concealed spurs the reader into action, but this action is also controlled by what is revealed; the explicit in its turn is transformed when the implicit has been brought to light. Whenever the reader bridges the gaps, communication begins. The gaps function as a kind of pivot on which the whole text-reader relationship revolves. Hence, the structured blanks of the text stimulate the process of ideation to be performed by the reader on terms set by the text. There is, however, another place in the textual system where text and reader converge, and that is marked by the various types of negation which arise in the course of the reading. Blanks and negations both control the process of communication in their own different ways: the blanks leave open the connection between textual perspectives, and so spur the reader into coordinating these perspectives and patterns—in other words, they induce the reader to perform basic operations *within* the text. The various types of negation invoke familiar and determinate elements or knowledge only to cancel them out. What is cancelled, however, remains in view, and thus brings about modifications in the reader's attitude toward what is familiar or determinate—in other words, he is guided to adopt a position in *relation* to the text.

In order to spotlight the communication process we shall confine our consideration to how the blanks trigger off and simultaneously control the reader's activity. Blanks indicate that the different segments and patterns

1. English novelist (1775–1817). WOOLF (1882–1941), English novelist and essayist.

2. Virginia Woolf, *The Common Reader, First Series* (London, 1957), p. 174 [Iser's note].

of the text are to be connected even though the text itself does not say so. They are the unseen joints of the text, and as they mark off schemata and textual perspectives from one another, they simultaneously prompt acts of ideation on the reader's part. Consequently when the schemata and perspectives have been linked together, the blanks "disappear."

If we are to grasp the unseen structure that regulates but does not formulate the connection or even the meaning, we must bear in mind the various forms in which the textual segments are presented to the reader's viewpoint in the reading process. Their most elementary form is to be seen on the level of the story. The threads of the plot are suddenly broken off, or continued in unexpected directions. One narrative section centers on a particular character and is then continued by the abrupt introduction of new characters. These sudden changes are often denoted by new chapters and so are clearly distinguished; the object of this distinction, however, is not separation so much as a tacit invitation to find the missing link. Furthermore, in each articulated reading moment, only segments of textual perspectives are present to the reader's wandering viewpoint.

In order to become fully aware of the implication, we must bear in mind that a narrative text, for instance, is composed of a variety of perspectives, which outline the author's view and also provide access to what the reader is meant to visualize. As a rule, there are four main perspectives in narration: those of the narrator, the characters, the plot, and the fictitious reader.³ Although these may differ in order of importance, none of them on its own is identical to the meaning of the text, which is to be brought about by their constant intertwining through the reader in the reading process. An increase in the number of blanks is bound to occur through the frequent subdivisions of each of the textual perspectives; thus the narrator's perspective is often split into that of the implied author's set against that of the author as narrator. The hero's perspective may be set against that of the minor characters. The fictitious reader's perspective may be divided between the explicit position ascribed to him and the implicit attitude he must adopt to that position.

As the reader's wandering viewpoint travels between all these segments, its constant switching during the time flow of reading intertwines them, thus bringing forth a network of perspectives, within which each perspective opens a view not only of others, but also of the intended imaginary object. Hence no single textual perspective can be equated with this imaginary object, of which it forms only one aspect. The object itself is a product of interconnection, the structuring of which is to a great extent regulated and controlled by blanks.

In order to explain this operation, we shall first give a schematic description of how the blanks function, and then we shall try to illustrate this function with an example. In the time flow of reading, segments of the various perspectives move into focus and are set off against preceding segments. Thus the segments of characters, narrator, plot, and fictitious reader perspectives are not only marshaled into a graduated sequence but are also transformed into reciprocal reflectors. The blank as an empty space between segments enables them to be joined together, thus constituting a field of vision for the wandering viewpoint. A referential field is always

3. The reader addressed in a text, as distinct from the actual reader.

formed when there are at least two positions related to and influencing one another—it is the minimal organizational unit in all processes of comprehension,⁴ and it is also the basic organizational unit of the wandering viewpoint.

The first structural quality of the blank, then, is that it makes possible the organization of a referential field of interacting textual segments projecting themselves one upon another. Now, the segments present in the field are structurally of equal value, and the fact that they are brought together highlights their affinities and their differences. This relationship gives rise to a tension that has to be resolved, for, as Arnheim has observed in a more general context: "It is one of the functions of the third dimension to come to the rescue when things get uncomfortable in the second."⁵ The third dimension comes about when the segments of the referential field are given a common framework, which allows the reader to relate affinities and differences and so to grasp the patterns underlying the connections. But this framework is also a blank, which requires an act of ideation in order to be filled. It is as if the blank in the field of the reader's viewpoint had changed its position. It began as the empty space between perspective segments, indicating their connectability, and so organizing them into projections of reciprocal influence. But with the establishment of this connectability the blank, as the unformulated framework of these interacting segments, now enables the reader to produce a determinate relationship between them. We may infer already from this change in position that the blank exercises significant control over all the operations that occur within the referential field of the wandering viewpoint.

Now we come to the third and most decisive function of the blank. Once the segments have been connected and a determinate relationship established, a referential field is formed which constitutes a particular reading moment, and which in turn has a discernible structure. The grouping of segments within the referential field comes about, as we have seen, by making the viewpoint switch between the perspective segments. The segment on which the viewpoint focuses in each particular moment becomes the theme. The theme of one moment becomes the background against which the next segment takes on its actuality, and so on. Whenever a segment becomes a theme, the previous one must lose its thematic relevance⁶ and be turned into a marginal, thematically vacant position, which can be and usually is occupied by the reader so that he may focus on the new thematic segment.

In this connection it might be more appropriate to designate the marginal or horizontal position as a vacancy and not as a blank; blanks refer to suspended connectability in the text, vacancies refer to nonthematic segments within the referential field of the wandering viewpoint. Vacancies, then, are important guiding devices for building up the aesthetic object, because they condition the reader's view of the new theme, which in turn conditions his view of previous themes. These modifications, however, are not formulated in the text—they are to be implemented by the reader's ide-

ational activity. And so these vacancies enable the reader to combine segments into a field by reciprocal modification, to form positions from those fields, and then to adapt each position to its successor and predecessors in a process that ultimately transforms the textual perspectives, through a whole range of alternating themes and background relationships, into the aesthetic object of the text.

Let us turn now to an example in order to illustrate the operations sparked off and governed by the vacancies in the referential field of the wandering viewpoint. For this reason we shall have a brief look at Fielding's⁷ *Tom Jones* and again, in particular, at the characters' perspective: that of the hero and that of the minor characters. Fielding's aim of depicting human nature is fulfilled by way of a repertoire that incorporates the prevailing norms of eighteenth-century thought systems and social systems and represents them as governing the conduct of the most important characters. In general, these norms are arranged in more or less explicitly contrasting patterns; Allworthy (*benevolence*) is set against Squire Western (*ruling passion*); the same applies to the two pedagogues, Square (*the eternal fitness of things*) and Thwackum (*the human mind as a sink of iniquity*), who in turn are also contrasted with Allworthy and so forth.

Thus in the individual situations, the hero is linked up with the norms of latitudinarian morality, orthodox theology, deistic philosophy,⁸ eighteenth-century anthropology, and eighteenth-century aristocracy. Contrasts and discrepancies within the perspective of the characters give rise to the missing links, which enable the hero and the norms to shed light upon one another, and through which the individual situations may combine into a referential field. The hero's conduct cannot be subsumed under the norms, and through the sequence of situations the norms shrink to a reified manifestation of human nature. This, however, is already an observation which the reader must make for himself, because such syntheses are rarely given in the text, even though they are prefigured in the theme-and-background structure. The discrepancies continually arising between the perspectives of hero and minor characters bring about a series of changing positions, with each theme losing its relevance but remaining in the background to influence and condition its successor. Whenever the hero violates the norms—as he does most of the time—the resultant situation may be judged in one or two different ways: either the norm appears as a drastic reduction of human nature, in which case we view the theme from the standpoint of the hero, or the violation shows the imperfections of human nature, in which case it is the norm that conditions our view.

In both cases, we have the same structure of interacting positions being transformed into a determinate meaning. For those characters that represent a norm—in particular Allworthy, Squire Western, Square, and Thwackum—human nature is defined in terms of one principle, so that all those possibilities which are not in harmony with the principle are given a negative slant. But when the negated possibilities exert their influence upon the course of

8. Belief in a supreme being as the source of existence of the universe that rejects the supernatural doctrines of Christianity and the influ-

ence or revelation of God in the events of the universe, stressing instead the importance of reason and ethical conduct. "Latitudinarian morality": tolerating free thought or a range of opinion, especially on religious questions.

events, and so show up the limitations of the principle concerned, the norms begin to appear in a different light. The apparently negative aspects of human nature fight back, as it were, against the principle itself and cast doubt upon it in proportion to its limitations.

In this way, the negation of other possibilities by the norm in question gives rise to a virtual diversification of human nature, which takes on a definite form to the extent that the norm is revealed as a restriction on human nature. The reader's attention is now fixed, not upon what the norms represent, but upon what their representation excludes, and so the aesthetic object—which is the whole spectrum of human nature—begins to arise out of what is adumbrated by the negated possibilities. In this way, the function of the norms themselves has changed: they no longer represent the social regulators prevalent in the thought systems of the eighteenth century, but instead they indicate the amount of human experience which they suppress because, as rigid principles, they cannot tolerate any modifications.

Transformations of this kind take place whenever the norms are the foregrounded theme and the perspective of the hero remains the background conditioning the reader's viewpoint. But whenever the hero becomes the theme, and the norms of the minor characters shape the viewpoint, his well-intentioned spontaneity turns into the depravity of an impulsive nature. Thus the position of the hero is also transformed, for it is no longer the standpoint from which we are to judge the norms; instead we see that even the best of intentions may come to nought if they are not guided by *circumspection*, and spontaneity must be controlled by *prudence*⁹ if it is to allow a possibility of self-preservation.

The transformations brought about by the theme-and-background interaction are closely connected with the changing position of the vacancy within the referential field. Once a theme has been grasped, conditioned by the marginal position of the preceding segment, a feedback is bound to occur, thus retroactively modifying the shaping influence of the reader's viewpoint. This reciprocal transformation is hermeneutic by nature,¹ even though we may not be aware of the processes of interpretation resulting from the switching and reciprocal conditioning of our viewpoints. In this sense, the vacancy transforms the referential field of the moving viewpoint into a self-regulating structure, which proves to be one of the most important links in the interaction between text and reader, and which prevents the reciprocal transformation of textual segments from being arbitrary.

To sum up, then, the blank in the fictional text induces and guides the reader's constitutive activity. As a suspension of connectability between textual perspective and perspective segments, it marks the need for an equivalence, thus transforming the segments into reciprocal projections, which in turn organize the reader's wandering viewpoint as a referential field. The tension that occurs within the field between heterogeneous perspective segments is resolved by the theme-and-background structure, which makes

9. See Henry Fielding, *Tom Jones*, III.7 and XVIII, Chapter the Last (London, 1962), pp. 92, 427 [Iser's note].

1. Hermeneutics is the theory of interpretation;

Iser is alluding to what is called the "hermeneutic circle," a model which holds that meaning is not straightforward but continually modified by feedback.

the viewpoint focus on one segment as the theme, to be grasped from the thematically vacant position now occupied by the reader as his standpoint. Thematically vacant positions remain present in the background against which new themes occur; they condition and influence those themes and are also retroactively influenced by them, for as each theme recedes into the background of its successor, the vacancy shifts, allowing for a reciprocal transformation to take place. As the vacancy is structured by the sequence of positions in the time flow of reading, the reader's viewpoint cannot proceed arbitrarily; the thematically vacant position always acts as the angle from which a selective interpretation is to be made.

Two points need to be emphasized: (1) we have described the structure of the blank in an abstract, somewhat idealized way in order to explain the pivot on which the interaction between text and reader turns; (2) the blank has different structural qualities, which appear to dovetail. The reader fills in the blank in the text, thereby bringing about a referential field; the blank arising in turn out of the referential field is filled in by way of the theme-and-background structure; and the vacancy arising from juxtaposed themes and backgrounds is occupied by the reader's standpoint, from which the various reciprocal transformations lead to the emergence of the aesthetic object. The structural qualities outlined make the blank shift, so that the changing positions of the empty space mark out a definite need for determination, which the constitutive activity of the reader is to fulfill. In this sense, the shifting blank maps out the path along which the wandering viewpoint is to travel, guided by the self-regulatory sequence in which the structural qualities of the blank interlock.

Now we are in a position to qualify more precisely what is actually meant by reader participation in the text. If the blank is largely responsible for the activities described, then participation means that the reader is not simply called upon to "internalize" the positions given in the text, but he is induced to make them act upon and so transform each other, as a result of which the aesthetic object begins to emerge. The structure of the blank organizes this participation, revealing simultaneously the intimate connection between this structure and the reading subject. This interconnection completely conforms to a remark made by Piaget: "In a word, the subject is there and alive, because the basic quality of each structure is the structuring process itself."² The blank in the fictional text appears to be a paradigmatic structure; its function consists in initiating structured operations in the reader, the execution of which transmits the reciprocal interaction of textual positions into consciousness. The shifting blank is responsible for a sequence of colliding images, which condition each other in the time flow of reading. The discarded image imprints itself on its successor, even though the latter is meant to resolve the deficiencies of the former. In this respect the images hang together in a sequence, and it is by this sequence that the meaning of the text comes alive in the reader's imagination.

HAYDEN WHITE

b. 1928

A historian by training, Hayden White has since the 1970s been a central figure in literary debates about the nature of history. At the same time literary critics like STEPHEN GREENBLATT began to turn to history to explain the formal structures of literary texts, White was investigating the formal literary structures of history, beginning with his celebrated 1973 book *Metahistory: The Historical Imagination of Nineteenth-Century Europe*, which outlines an ambitious structuralist scheme for describing a "poetics of history." Drawing on NORTHROP FRYE's *Anatomy of Criticism* (1957) to describe the underlying "deep structure" of historical narratives, this project brings together historiography and literary criticism in a broad reflection on narrative and its relation to culture. "To raise the question of the nature of narrative," White writes in *The Content of the Form: Narrative Discourse and Historical Representation* (1987), "is to invite reflection on the very nature of culture and, possibly, even on the nature of humanity itself. So natural is the impulse to narrative, so inevitable is the form of narrative for any report on the way things really happened, that narrativity could appear problematical only in a culture in which it was absent—or, as in some domains of contemporary Western intellectual and artistic culture, programmatically refused." Reacting against the tendency of history as a discipline to seek its models in the sciences, White contends that the literary dimension of history cannot be dismissed as mere decoration; rather, historians deploy the traditional devices of narrative to make sense of raw data, to organize and give meaning to their accounts of the past. Bringing the tools of the literary critic to bear on historical writing, White's analyses are powerful extensions of narrative theory for students and scholars of literature interested in understanding the nature and mechanisms of history as discourse.

White was born in Martin, Tennessee. After attending Wayne State University he did his graduate work in history at the University of Michigan, earning an M.A. in 1952 and a Ph.D. in 1956. He taught first as an instructor at Wayne State (1955–58), then in 1958 was appointed to the history faculty at the University of Rochester, where he served as head of the department from 1962 to 1964. He subsequently taught history at the University of California at Los Angeles (1968–73), served as the director of the Center for Humanities at Wesleyan University in Connecticut (1973–77), and in 1978 became a professor in the History of Consciousness program at the University of California at Santa Cruz. Since formally retiring in 1994, he has been the Bonsall Professor of Comparative Literature at Stanford University.

White, who began his career as a historian of the medieval church and turned to nineteenth-century thought in the 1960s, has always been eclectic in his scholarly interests. With the publication of *Metahistory*, however, his scholarship became explicitly engaged in literary and theoretical issues, as he responded to critics from the disciplines of both history and literature. His book *Tropics of Discourse: Essays in Cultural Criticism* (1978), from which our selection is taken, examines the structuring role of plots and tropes (figures of speech) in the discourse of history. *The Content of Form* explores the contemporary interplay between narrative theory and history in the work of both historians such as MICHEL FOUCAULT and literary theorists such as FREDRIC JAMESON and Paul Ricoeur. And in *Figural Realism: Studies in the Mimesis Effect* (1999), White takes on mimesis—the representation of reality—in history, an issue that has concerned literary critics from PLATO to ERICH AUERBACH (see *Mimesis: The Representation of Reality in Western Literature*, 1946).

Hayden White has been in the vanguard of the movement among historians, starting in the 1980s, that has come to be known as the "new cultural history."

Historians associated with the movement, such as Lynn Hunt, Thomas Laqueur, and, in France, Roger Chartier, began to question the methods and goals of history in general, many turning to literary techniques and approaches to develop new materials and methods of analysis. The influences on this group of historians are varied. They include cultural Marxist approaches developed in the 1960s by British scholars such as E. P. Thompson and RAYMOND WILLIAMS, as well as the French Annales school, founded in the late 1920s by the historians Marc Bloch and Lucien Febvre. The new cultural history has also been strongly influenced by the work of Foucault, by literary theorists such as JACQUES DERRIDA and MIKHAIL BAKHTIN, and, of course, by White himself. Many of the historians associated with the new cultural history have ties with literary practitioners of the New Historicism and cultural studies.

"The Historical Text as Literary Artifact," our selection, provides an accessible and engaging synopsis of White's main arguments in *Metahistory*, beginning with his definition of metahistory as the attempt to "get behind or beneath the presuppositions which sustain a given type of inquiry [in this case historical inquiry]." A key assumption that, according to White, has sustained historical inquiry is the belief that history (judged by its correspondence to reality) and literature (judged as fiction) are two distinct, diametrically opposed, activities, a presupposition shared by practitioners in both disciplines. On the contrary, White argues, because history, like literature, is a verbal structure and the historian, first and foremost, is a writer, the tools that have served literary critics, the tools that compose the linguistic and rhetorical structures of a text, serve the historian as well. The language in which history is written cannot be dismissed as window dressing, as most historians are tempted to do. Language in history is never merely a means to an end; it is neither transparent nor neutral, nor does it disappear to allow the pure truth of history to emerge. In White's view, historical narratives are verbal fictions with invented contexts. He goes beyond Auerbach, arguing that history, because of its claims to represent reality adequately, is the form best suited for a study of the style of narrative "realism."

Histories gain their explanatory power by processing data into stories. Those stories take their shape from what White calls "emplotment," the process through which the facts contained in "chronicles" are encoded as components of plots. Plots are not immanent in events themselves but exist in the minds of historians, who rarely reflect on them. No historical event can itself constitute a story, tragic or ironic: it can be presented as such only from a particular historian's narrative point of view. The event emerges as a plotted story, which takes on meaning when it is combined with other elements in the limited number of generic plot structures by which a series of events can be constituted. Following Northrop Frye's archetypal analysis, White identifies four possible emplotments: tragic, comic, romantic, and ironic. These generic deep-plot structures are shared between historians and their audiences by virtue of their participation in a common culture.

The kind of emplotment historians will employ to give meaning to a series of events, White argues, is determined by the dominant figurative mode of the language they use to describe these events and story elements. Drawing on the eighteenth-century philosopher GIAMBATTISTA VICO and the twentieth-century critic Kenneth Burke, White identifies four master tropes or modes of figurative representation—metaphor, metonymy, synecdoche, and irony—which correspond to the four types of emplotment. For White, the differences between contending histories of, say, the French Revolution cannot be resolved by recourse to the facts, because the facts—and, more important, the relationships among those facts—do not inhere in the events themselves, but instead are constituted by historians in the linguistic and literary structures they use to identify and describe the events they study. Tropes are ineradicable from discourse, as are plots. Thus history evokes reality: it does not reproduce or represent it.

This analysis of historical narrative makes special sense in the context of the structuralism of the 1970s, when it first caught public attention. Although White does not draw directly on the terminology of structural linguistics, his debts to such modern structuralists as CLAUDE LÉVI-STRAUSS, ROMAN JAKOBSON, and the linguist Noam Chomsky are clear. And his adaptation of Frye's archetypal criticism is structuralist both in its basic argument that history uses a few "deep structures" to generate its "surface structures" and in its broad contention that historians have mistakenly focused their attention only on the surface, while ignoring the underlying deep structures that produce those narratives.

Historians have objected to White's narrowing of history to language, while more poststructuralist-minded literary critics have taken issue with White's structuralist reductionism (only four master plots and tropes). Some critics argue that Frye's archetypal approach to narrative, which White relies on, is too simple, forcing all narratives willy-nilly into abstract and timeless structures without regard to how they might function in particular cultural contexts. Others contend that unlike most structuralists, White imagines plot as a quintessential expression of the historian's personal style and self. Despite these objections, White's skillful dismantling of the opposition between history and literature has paved the way for many productive studies in both fields. Once historians and literary critics no longer believe that history gives its readers a privileged access to the real or the truth, they turn to investigating the grounds of history—its nature and forms, its uses and abuses—as well as its links to other fields of knowledge and to ideologies.

The Historical Text as Literary Artifact¹

One of the ways that a scholarly field takes stock of itself is by considering its history. Yet it is difficult to get an objective history of a scholarly discipline, because if the historian is himself a practitioner of it, he is likely to be a devotee of one or another of its sects and hence biased; and if he is not a practitioner, he is unlikely to have the expertise necessary to distinguish between the significant and the insignificant events of the field's development. One might think that these difficulties would not arise in the field of history itself, but they do and not only for the reasons mentioned above. In order to write the history of any given scholarly discipline or even of a science, one must be prepared to ask questions *about* it of a sort that do not have to be asked in the practice *of* it. One must try to get behind or beneath the presuppositions which sustain a given type of inquiry and ask the questions that can be begged² in its practice in the interest of determining why this type of inquiry has been designed to solve the problems it characteristically tries to solve. This is what metahistory seeks to do. It addresses itself to such questions as, What is the structure of a peculiarly *historical* consciousness?

1. This essay is a revised version of a lecture given before the Comparative Literature Colloquium of Yale University on 24 January, 1974. In it I have tried to elaborate some of the themes that I originally discussed in an article, "The Structure of Historical Narrative," *Clio* 1 (1972): 5–20. I have also drawn upon the materials of

my book *Metahistory: The Historical Imagination in Nineteenth-Century Europe* (Baltimore, 1973), especially the introduction, entitled "The Poetics of History" [White's note].

2. That is, questions that are wrongly assumed to be settled.

What is the epistemological status of historical *explanations*, as compared with other kinds of explanations that might be offered to account for the materials with which historians ordinarily deal? What are the possible *forms* of historical representation and what are their bases? What authority can historical accounts claim as contributions to a secured knowledge of reality in general and to the human sciences in particular?

Now, many of these questions have been dealt with quite competently over the last quarter-century by philosophers concerned to define history's relationships to other disciplines, especially the physical and social sciences, and by historians interested in assessing the success of their discipline in mapping the past and determining the relationship of the past to the present. But there is one problem that neither philosophers nor historians have looked at very seriously and to which literary theorists have given only passing attention. This question has to do with the status of the historical narrative, considered purely as a verbal artifact purporting to be a model of structures and processes long past and therefore not subject to either experimental or observational controls. This is not to say that historians and philosophers of history have failed to take notice of the essentially provisional and contingent nature of historical representations and of their susceptibility to infinite revision in the light of new evidence or more sophisticated conceptualization of problems. One of the marks of a good professional historian is the consistency with which he reminds his readers of the purely provisional nature of his characterizations of events, agents, and agencies found in the always incomplete historical record. Nor is it to say that literary theorists have *never* studied the structure of historical narratives. But in general there has been a reluctance to consider historical narratives as what they most manifestly are: verbal fictions, the contents of which are as much *invented* as *found* and the forms of which have more in common with their counterparts in literature than they have with those in the sciences.

Now, it is obvious that this conflation of mythic and historical consciousness will offend some historians and disturb those literary theorists whose conception of literature presupposes a radical opposition of history to fiction or of fact to fancy. As Northrop Frye has remarked, "In a sense the historical is the opposite of the mythical, and to tell the historian that what gives shape to his book is a myth would sound to him vaguely insulting."³ Yet Frye himself grants that "when a historian's scheme gets to a certain point of comprehensiveness it becomes mythical in shape, and so approaches the poetic in its structure." He even speaks of different kinds of historical myths: Romantic myths "based on a quest or pilgrimage to a City of God or classless society"; Comic "myths of progress through evolution or revolution"; Tragic myths of "decline and fall, like the works of Gibbon and Spengler"; and Ironic "myths of recurrence or casual catastrophe." But Frye appears to believe that these myths are operative only in such victims of what might be called the "poetic fallacy" as Hegel, Marx, Nietzsche, Spengler, Toynbee, and Sartre⁴—

3. From *Anatomy of Criticism* (1957); White also cites "New Directions from Old," in *Fables of Identity* (1963), by FRYE (1912–1991), Canadian literary critic.

4. French philosopher (1905–1980). Edward Gibbon (1737–1794), English historian, author of *The History of the Decline and Fall of the Roman Empire* (1776–87). Oswald Spengler (1880–1936), German philosopher of history, author of *The*

Decline of the West (1918–22). GEORG WILHELM FRIEDRICH HEGEL (1770–1831), German philosopher, author of *The Philosophy of History* (1837). KARL MARX (1818–1883), political and economic theorist whose philosophy of communism draws on Hegel. FRIEDRICH NIETZSCHE (1844–1900), German philosopher. Arnold Toynbee (1889–1975), English historian, author of the 12-volume *Study of History* (1936–61).

historians whose fascination with the “constructive” capacity of human thought has deadened their responsibility to the “found” data. “The historian works inductively,” he says, “collecting his facts and trying to avoid any informing patterns except those he sees, or is honestly convinced he sees, in the facts themselves.” He does not work “from” a “unifying form,” as the poet does, but “toward” it; and it therefore follows that the historian, like any writer of discursive prose, is to be judged “by the truth of what he says, or by the adequacy of his verbal reproduction of his external model,” whether that external model be the actions of past men or the historian’s own thought about such actions.

What Frye says is true enough as a statement of the *ideal* that has inspired historical writing since the time of the Greeks, but that ideal presupposes an opposition between myth and history that is as problematical as it is venerable. It serves Frye’s purposes very well, since it permits him to locate the specifically “fictive” in the space between the two concepts of the “mythic” and the “historical.” As readers of Frye’s *Anatomy of Criticism* will remember, Frye conceives fictions to consist in part of sublimates of archetypal myth-structures. These structures have been displaced to the interior of verbal artifacts in such a way as to serve as their latent meanings. The fundamental meanings of all fictions, their thematic content, consist, in Frye’s view, of the “pre-generic plot-structures” or *mythoi* derived from the corpora of Classical and Judaeo-Christian religious literature. According to this theory, we understand *why* a particular story has “turned out” as it has when we have identified the archetypal myth, or pregeneric plot structure, of which the story is an exemplification. And we see the “point” of a story when we have identified its theme (Frye’s translation of *dianoia*⁵), which makes of it a “parable or illustrative fable.” “Every work of literature,” Frye insists, “has both a fictional and a thematic aspect,” but as we move from “fictional projection” toward the overt articulation of theme, the writing tends to take on the aspect of “direct address, or straight discursive writing and cease[s] to be literature.” And in Frye’s view, as we have seen, history (or at least “proper history”) belongs to the category of “discursive writing,” so that when the fictional element—or mythic plot structure—is *obviously* present in it, it ceases to be history altogether and becomes a bastard genre, product of an unholy, though not unnatural, union between history and poetry.

Yet, I would argue, histories gain part of their explanatory effect by their success in making stories out of *mere* chronicles; and stories in turn are made out of chronicles by an operation which I have elsewhere called “emplotment.” And by emplotment I mean simply the encodation of the facts contained in the chronicle as components of specific *kinds* of plot structures, in precisely the way that Frye has suggested is the case with “fictions” in general.

The late R. G. Collingwood⁶ insisted that the historian was above all a story teller and suggested that historical sensibility was manifested in the capacity to make a plausible story out of a congeries of “facts” which, in their unprocessed form, made no sense at all. In their efforts to make sense of the historical record, which is fragmentary and always incomplete, historians have to make use of what Collingwood called “the constructive imagination,”

5. Thought (Greek).

6. English historian (1889–1943), author of *The Idea of History* (1946).

which told the historian—as it tells the competent detective—what “must have been the case” given the available evidence and the formal properties it displayed to the consciousness capable of putting the right question to it. This constructive imagination functions in much the same way that Kant⁷ supposed the *a priori* imagination functions when it tells us that even though we cannot perceive both sides of a tabletop simultaneously, we can be certain it has *two* sides if it has one, because the very concept of *one side* entails at least *one other*. Collingwood suggested that historians come to their evidence endowed with a sense of the *possible* forms that different kinds of recognizably human situations *can* take. He called this sense the nose for the “story” contained in the evidence or for the “true” story that was buried in or hidden behind the “apparent” story. And he concluded that historians provide plausible explanations for bodies of historical evidence when they succeed in discovering the story or complex of stories implicitly contained within them.

What Collingwood failed to see was that no given set of casually recorded historical events can in itself constitute a story; the most it might offer to the historian are story *elements*. The events are *made* into a story by the suppression or subordination of certain of them and the highlighting of others, by characterization, motific repetition, variation of tone and point of view, alternative descriptive strategies, and the like—in short, all of the techniques that we would normally expect to find in the emplotment of a novel or a play. For example, no historical event is *intrinsically tragic*; it can only be conceived as such from a particular point of view or from within the context of a structured set of events of which it is an element enjoying a privileged place. For in history what is tragic from one perspective is comic from another, just as in society what appears to be tragic from the standpoint of one class may be, as Marx purported to show of the 18th Brumaire of Louis Bonaparte,⁸ only a farce from that of another class. Considered as potential elements of a story, historical events are value-neutral. Whether they find their place finally in a story that is tragic, comic, romantic, or ironic—to use Frye’s categories—depends upon the historian’s decision to *configure* them according to the imperatives of one plot structure or mythos rather than another. The same set of events can serve as components of a story that is tragic *or* comic, as the case may be, depending on the historian’s choice of the plot structure that he considers most appropriate for ordering events of that kind so as to make them into a comprehensible story.

This suggests that what the historian brings to his consideration of the historical record is a notion of the *types* of configurations of events that can be recognized as stories by the audience for which he is writing. True, he can misfire. I do not suppose that anyone would accept the emplotment of the life of President Kennedy as comedy, but whether it ought to be emplotted romantically, tragically, or satirically is an open question. The important point is that most historical sequences can be emplotted in a number of different ways, so as to provide different interpretations of those events and to endow them with different meanings. Thus, for example, what Michelet

7. IMMANUEL KANT (1724–1804), German philosopher. He distinguished between knowledge deduced from self-evident propositions (*a priori*) and knowledge deduced from empirical observa-

tion (*a posteriori*).

8. Marx, *The Eighteenth Brumaire of Louis Bonaparte* (1852).

in his great history of the French Revolution construed as a drama of Romantic transcendence, his contemporary Tocqueville⁹ emplotted as an ironic Tragedy. Neither can be said to have had more knowledge of the "facts" contained in the record; they simply had different notions of the kind of story that best fitted the facts they knew. Nor should it be thought that they told different stories of the Revolution because they had discovered different *kinds* of facts, political on the one hand, social on the other. They sought out different kinds of facts because they had different kinds of stories to tell. But why did these alternative, not to say mutually exclusive, representations of what was substantially the same set of events appear equally plausible to their respective audiences? Simply because the historians shared with their audiences certain preconceptions about how the Revolution might be emplotted, in response to imperatives that were generally extra historical, ideological, aesthetic, or mythical.

Collingwood once remarked that you could never explicate a tragedy to anyone who was not already acquainted with the kinds of situations that are regarded as "tragic" in our culture. Anyone who has taught or taken one of those omnibus courses usually entitled Western Civilization or Introduction to the Classics of Western Literature will know what Collingwood had in mind. Unless you have some idea of the generic attributes of tragic, comic, romantic, or ironic situations, you will be unable to recognize them as such when you come upon them in a literary text. But historical situations do not have built into them intrinsic meanings in the way that literary texts do. Historical situations are not *inherently* tragic, comic, or romantic. They may all be inherently ironic, but they need not be emplotted that way. All the historian needs to do to transform a tragic into a comic situation is to shift his point of view or change the scope of his perceptions. Anyway, we only think of situations as tragic or comic because these concepts are part of our generally cultural and specifically literary heritage. *How* a given historical situation is to be configured depends on the historian's subtlety in matching up a specific plot structure with the set of historical events that he wishes to endow with a meaning of a particular kind. This is essentially a literary, that is to say fiction-making, operation. And to call it that in no way detracts from the status of historical narratives as providing a kind of knowledge. For not only are the pregeneric plot structures by which sets of events can be constituted as stories of a particular kind limited in number, as Frye and other archetypal critics suggest; but the encodation of events in terms of such plot structures is one of the ways that a culture has of making sense of both personal and public pasts.

We can make sense of sets of events in a number of different ways. One of the ways is to subsume the events under the causal laws which may have governed their concatenation in order to produce the particular configuration that the events appear to assume when considered as "effects" of mechanical forces. This is the way of scientific explanation. Another way we make sense of a set of events which appears strange, enigmatic, or mysterious in its immediate manifestations is to encode the set in terms of culturally provided categories, such as metaphysical concepts, religious beliefs, or story

9. Alexis de Tocqueville (1805–1859), French historian and author of *The Old Régime and the French Revolution* (1856). Jules Michelet (1798–

1874), French historian, author of a 7-volume history of the French Revolution (1847–53).

forms. The effect of such encodings is to familiarize the unfamiliar; and in general this is the way of historiography, whose "data" are always immediately strange, not to say exotic, simply by virtue of their distance from us in time and their origin in a way of life different from our own.

The historian shares with his audience *general notions* of the *forms* that significant human situations *must* take by virtue of his participation in the specific processes of sense-making which identify him as a member of one cultural endowment rather than another. In the process of studying a given complex of events, he begins to perceive the *possible* story form that such events *may* figure. In his narrative account of how this set of events took on the shape which he perceives to inhere within it, he emplots his account as a story of a particular kind. The reader, in the process of following the historian's account of those events, gradually comes to realize that the story he is reading is of one kind rather than another: romance, tragedy, comedy, satire, epic, or what have you. And when he has perceived the class or type to which the story that he is reading belongs, he experiences the effect of having the events in the story explained to him. He has at this point not only successfully *followed* the story; he has grasped the point of it, *understood* it, as well. The original strangeness, mystery, or exoticism of the events is dispelled, and they take on a familiar aspect, not in their details, but in their functions as elements of a familiar kind of configuration. They are rendered comprehensible by being subsumed under the categories of the plot structure in which they are encoded as a story of a particular kind. They are familiarized, not only because the reader now has more *information* about the events, but also because he has been shown how the data conform to an *icon* of a comprehensible finished process, a plot structure with which he is familiar as a part of his cultural endowment.

This is not unlike what happens, or is supposed to happen, in psychotherapy. The sets of events in the patient's past which are the presumed cause of his distress, manifested in the neurotic syndrome, have been defamiliarized, rendered strange, mysterious, and threatening and have assumed a meaning that he can neither accept nor effectively reject. It is not that the patient does not *know* what those events were, does not know the facts; for if he did not in some sense know the facts, he would be unable to recognize them and repress them whenever they arise in his consciousness. On the contrary, he knows them all too well. He knows them so well, in fact, that he lives with them constantly and in such a way as to make it impossible for him to see any other facts except through the coloration that the set of events in question gives to his perception of the world. We might say that, according to the theory of psychoanalysis, the patient has overemplotted these events, has charged them with a meaning so intense that, whether real or merely imagined, they continue to shape both his perceptions and his responses to the world long after they should have become "past history." The therapist's problem, then, is not to hold up before the patient the "real facts" of the matter, the "truth" as against the "fantasy" that obsesses him. Nor is it to give him a short course in psychoanalytical theory by which to enlighten him as to the true nature of his distress by cataloguing it as a manifestation of some "complex." This is what the analyst might do in relating the patient's case to a third party, and especially to another analyst. But psychoanalytic theory recognizes that the patient will resist both of these tactics in the same way that he resists the

intrusion into consciousness of the traumatized memory traces in the *form* that he obsessively remembers them. The problem is to get the patient to "reemplot" his whole life history in such a way as to change the *meaning* of those events for him and their *significance* for the economy of the whole set of events that make up his life. As thus envisaged, the therapeutic process is an exercise in the refamiliarization of events that have been defamiliarized, rendered alienated from the patient's life-history, by virtue of their overdetermination as causal forces. And we might say that the events are detraumatized by being removed from the plot structure in which they have a dominant place and inserted in another in which they have a subordinate or simply ordinary function as elements of a life shared with all other men.

Now, I am not interested in forcing the analogy between psychotherapy and historiography; I use the example merely to illustrate a point about the fictive component in historical narratives. Historians seek to refamiliarize us with events which have been forgotten through either accident, neglect, or repression. Moreover, the greatest historians have always dealt with those events in the histories of their cultures which are "traumatic" in nature and the meaning of which is either problematical or overdetermined in the significance that they still have for current life, events such as revolutions, civil wars, large-scale processes such as industrialization and urbanization, or institutions which have lost their original function in a society but continue to play an important role on the current social scene. In looking at the ways in which such structures took shape or evolved, historians *refamiliarize* them, not only by providing more information about them, but also by showing how their developments conformed to one or another of the story types that we conventionally invoke to make sense of our own life-histories.

Now, if any of this is plausible as a characterization of the explanatory effect of historical narrative, it tells us something important about the *mimetic* aspect of historical narratives.¹ It is generally maintained—as Frye said—that a history is a verbal model of a set of events external to the mind of the historian. But it is wrong to think of a history as a model similar to a scale model of an airplane or ship, a map, or a photograph. For we can check the adequacy of this latter kind of model by going and looking at the original and, by applying the necessary rules of translation, seeing in what respect the model has actually succeeded in reproducing aspects of the original. But historical structures and processes are not like these originals; we cannot go and look at them in order to see if the historian has adequately reproduced them in his narrative. Nor should we want to, even if we could; for after all it was the very strangeness of the original as it appeared in the documents that inspired the historian's efforts to make a model of it in the first place. If the historian only did that for us, we should be in the same situation as the patient whose analyst merely told him, on the basis of interviews with his parents, siblings, and childhood friends, what the "true facts" of the patient's early life were. We would have no reason to think that anything at all had been *explained* to us.

This is what leads me to think that historical narratives are not only models of past events and processes, but also metaphorical statements which suggest a relation of similitude between such events and processes and the

1. White explores in history the same problem of mimesis that PLATO explored in poetry in *Republic* 10 (ca. 373 B.C.E.; see above).

story types that we conventionally use to endow the events of our lives with culturally sanctioned meanings. Viewed in a purely formal way, a historical narrative is not only a *reproduction* of the events reported in it, but also a *complex of symbols* which gives us directions for finding an *icon* of the structure of those events in our literary tradition.

I am here, of course, invoking the distinctions between sign, symbol, and icon which C. S. Peirce² developed in his philosophy of language. I think that these distinctions will help us to understand what is fictive in all putatively realistic representations of the world and what is realistic in all manifestly fictive ones. They help us, in short, to answer the question, What are historical representations *representations of*? It seems to me that we must say of histories what Frye seems to think is true only of poetry or philosophies of history, namely that, considered as a system of signs, the historical narrative points in two directions simultaneously: *toward* the events described in the narrative and *toward* the story type or mythos which the historian has chosen to serve as the icon of the structure of the events. The narrative itself is not the icon; what it does is *describe* events in the historical record in such a way as to inform the reader *what to take as an icon* of the events so as to render them “familiar” to him. The historical narrative thus mediates between the events reported in it on the one side and pregeneric plot structures conventionally used in our culture to endow unfamiliar events and situation with meanings on the other.

The evasion of the implications of the fictive nature of historical narrative is in part a consequence of the utility of the concept “history” for the definition of other types of discourse. “History” can be set over against “science” by virtue of its want of conceptual rigor and failure to produce the kinds of universal laws that the sciences characteristically seek to produce. Similarly, “history” can be set over against “literature” by virtue of its interest in the “actual” rather than the “possible,” which is supposedly the object of representation of “literary” works. Thus, within a long and distinguished critical tradition that has sought to determine what is “real” and what is “imagined” in the novel, history has served as a kind of archetype of the “realistic” pole of representation. I am thinking of Frye, Auerbach, Booth, Scholes and Kellogg,³ and others. Nor is it unusual for literary theorists, when they are speaking about the “context” of a literary work, to suppose that this context—the “historical milieu”—has a concreteness and an accessibility that the work itself can never have, as if it were easier to perceive the reality of a past world put together from a thousand historical documents than it is to probe the depths of a single literary work that is present to the critic studying it. But the presumed concreteness and accessibility of historical milieux, these contexts of the texts that literary scholars study, are themselves products of the fictive capability of the historians who have studied those contexts. The historical documents are not less opaque than the texts studied by the literary critic. Nor

2. Charles Sanders Peirce (1839–1914), American philosopher generally credited, along with FERDINAND DE SAUSSURE (1857–1913), with the founding of semiotics, the modern science that studies all types of sign systems. An icon is a sign in which the signifier (the sound or symbol that conveys meaning) resembles or imitates the signified (the meaning conveyed); a symbol is a sign in which the relationship between the two is purely conventional.

3. All those named are authors of key texts of narrative theory. ERICH AUERBACH (1892–1957), German literary critic and author of *Mimesis: The Representation of Reality in Western Literature* (1946); Wayne Booth (1921–2005), American literary critic and author of *The Rhetoric of Fiction* (1961); and Robert Scholes (1929–2016) and Robert Kellogg (1928–2004), American coauthors of *The Nature of Narrative* (1966).

is the world those documents figure more accessible. The one is no more "given" than the other. In fact, the opaqueness of the world figured in historical documents is, if anything, increased by the production of historical narratives. Each new historical work only adds to the number of possible texts that have to be interpreted if a full and accurate picture of a given historical milieu is to be faithfully drawn. The relationship between the past to be analyzed and historical works produced by analysis of the documents is paradoxical; the *more* we know about the past, the more difficult it is to generalize about it.

But if the increase in our knowledge of the past makes it more difficult to generalize about it, it should make it easier for us to generalize about the forms in which that knowledge is transmitted to us. Our knowledge of the past may increase incrementally, but our understanding of it does not. Nor does our understanding of the past progress by the kind of revolutionary breakthroughs that we associate with the development of the physical sciences.⁴ Like literature, history progresses by the production of classics, the nature of which is such that they cannot be disconfirmed or negated, in the way that the principal conceptual schemata of the sciences are. And it is their nondisconfirmability that testifies to the essentially *literary* nature of historical classics. There is something in a historical masterpiece that cannot be negated, and this non-negatable element is its form, the form which is its fiction.

It is frequently forgotten or, when remembered, denied that no given set of events attested by the historical record comprises a *story* manifestly finished and complete. This is as true as the events that comprise the life of an individual as it is of an institution, a nation, or a whole people. We do not *live* stories, even if we give our lives meaning by retrospectively casting them in the form of stories. And so too with nations or whole cultures. In an essay on the "mythical" nature of historiography, Lévi-Strauss⁵ remarks on the astonishment that a visitor from another planet would feel if confronted by the thousands of histories written about the French Revolution. For in those works, the "authors do not always make use of the same incidents; when they do, the incidents are revealed in different lights. And yet these are variations which have to do with the same country, the same period, and the same events—events whose reality is scattered across every level of a multilayered structure." He goes on to suggest that the criterion of validity by which historical accounts might be assessed cannot depend on their "elements"—that is to say—their putative factual content. On the contrary, he notes, "pursued in isolation, each element shows itself to be beyond grasp. But certain of them derive consistency from the fact that they can be integrated into a system whose terms are more or less credible when set against the overall coherence of the series." But his "coherence of the series" cannot be the coherence of the *chronological* series, that sequence of "facts" organized into the temporal order of their original occurrence. For the "chronicle" of events, out of which the historian fashions his story of "what really happened," already comes preencoded. There are "hot" and "cold" chronologies, chronologies in which more or fewer dates appear to demand inclusion in a full chronicle of

4. White may be alluding to Thomas Kuhn's celebrated *Structure of Scientific Revolutions* (1962), which characterizes scientific progress as a sequence of abrupt revolutions that overturn existing paradigms, rendering them obsolete.

5. CLAUDE LÉVI-STRAUSS (1908–2009), French

anthropologist whose work was influential in the development of structuralism. White cites Lévi-Strauss's *Savage Mind* (1966) and his "Overture to *Le Cru et le cuit*," published in *Structuralism* (ed. Jacques Ehrmann, 1966).

what happened. Moreover, the dates themselves come to us already grouped into classes of dates, classes which are constitutive of putative domains of the historical field, domains which appear as problems for the historian to solve if he is to give a full and culturally responsible account of the past.

All this suggests to Lévi-Strauss that, when it is a matter of working up a comprehensive account of the various domains of the historical record in the form of a story, the “alleged historical continuities” that the historian purports to find in the record are “secured only by dint of fraudulent outlines” imposed by the historian on the record. These “fraudulent outlines” are, in his view, a product of “abstraction” and a means of escape from the “threat of an infinite regress” that always lurks at the interior of every complex set of historical “facts.” We can construct a comprehensible story of the past, Lévi-Strauss insists, only by a decision to “give up” one or more of the domains of facts offering themselves for inclusion in our accounts. Our *explanations* of historical structures and processes are thus determined more by what we leave out of our representations than by what we put in. For it is in this brutal capacity to exclude certain facts in the interest of constituting others as components of comprehensible stories that the historian displays his tact as well as his understanding. The “overall coherence” of any given “series” of historical facts is the coherence of story, but this coherence is achieved only by a tailoring of the “facts” to the requirements of the story form. And thus Lévi-Strauss concludes: “In spite of worthy and indispensable efforts to bring another moment in history alive and to possess it, a clairvoyant history should admit that it never completely escapes from the nature of myth.”

It is this mediative function that permits us to speak of a historical narrative as an extended metaphor. As a symbolic structure, the historical narrative does not *reproduce* the events it describes; it tells us in what direction to think about the events and charges our thought about the events with different emotional valences. The historical narrative does not *image* the things it indicates; it *calls to mind* images of the things it indicates, in the same way that a metaphor does. When a given concourse of events is emplotted as a “tragedy,” this simply means that the historian has so described the events as to *remind us* of that form of fiction which we associate with the concept “tragic.” Properly understood, histories ought never to be read as unambiguous signs of the events they report, but rather as symbolic structures, extended metaphors, that “liken” the events reported in them to some form with which we have already become familiar in our literary culture.

Perhaps I should indicate briefly what is meant by the *symbolic* and *iconic* aspects of a metaphor. The hackneyed phrase “My love, a rose” is not, obviously, intended to be understood as suggesting that the loved one is *actually* a rose. It is not even meant to suggest that the loved one has the specific attributes of a rose—that is to say, that the loved one is red, yellow, orange, or black, is a plant, has thorns, needs sunlight, should be sprayed regularly with insecticides, and so on. It is meant to be understood as indicating that the beloved shares the *qualities* which the rose has come to *symbolize* in the customary linguistic usages of Western culture. That is to say, considered as a message, the metaphor gives directions for finding an entity that will evoke the images associated *with loved ones and roses alike* in our culture. The metaphor does not *image* the thing it seeks to characterize, *it gives directions* for finding the set of images that are intended to be associated with that

thing. It functions as a symbol, rather than as a sign: which is to say that it does not give us either a *description* or an *icon* of the thing it represents, but *tells us* what images to look for in our culturally encoded experience in order to determine how we *should feel* about the thing represented.

So too for historical narratives. They succeed in endowing sets of past events with meanings, over and above whatever comprehension they provide by appeal to putative causal laws, by exploiting the metaphorical similarities between sets of real events and the conventional structures of our fictions. By the very constitution of a set of events in such a way as to make a comprehensible story out of them, the historian charges those events with the symbolic significance of a comprehensible plot structure. Historians may not like to think of their works as translations of fact into fictions; but this is one of the effects of their works. By suggesting alternative emplotments of a given sequence of historical events, historians provide events with all of the possible meanings with which the literary art of their culture is capable of endowing them. The real dispute between the proper historian and the philosopher of history has to do with the latter's insistence that events can be emplotted in one and only one story form. History-writing thrives on the discovery of all the possible plot structures that might be invoked to endow sets of events with different meanings. And our understanding of the past increases precisely in the degree to which we succeed in determining how far that past conforms to the strategies of sense-making that are contained in their purest forms in literary art.

Conceiving historical narratives in this way may give us some insight into the crisis in historical thinking which has been under way since the beginning of our century. Let us imagine that the problem of the historian is to make sense of a hypothetical *set* of events by arranging them in a *series* that is at once chronologically *and* syntactically structured, in the way that any discourse from a sentence all the way up to a novel is structured. We can see immediately that the imperatives of chronological arrangement of the events constituting the set must exist in tension with the imperatives of the syntactical strategies alluded to, whether the latter are conceived as those of logic (the syllogism) or those of narrative (the plot structure).

Thus, we have a set of events

- (1) $a, b, c, d, e, \dots, n,$

ordered chronologically but requiring description and characterization as elements of plot or argument by which to give them meaning. Now, the series can be emplotted in a number of different ways and thereby endowed with different meanings without violating the imperatives of the chronological arrangement at all. We may briefly characterize some of these emplotments in the following ways:

- (2) A, b, c, d, e, \dots, n
 (3) a, B, c, d, e, \dots, n
 (4) a, b, C, d, e, \dots, n
 (5) a, b, c, D, e, \dots, n

And so on.

The capitalized letters indicate the privileged status given to certain events or sets of events in the series by which they are endowed with explanatory force, either as causes explaining the structure of the whole series or as symbols of the plot structure of the series considered as a story of a specific kind. We might say that any history which endows any putatively original event (*a*) with the status of a decisive factor (*A*) in the structuration of the whole series of events following after it is "deterministic." The emplotments of the history of "society" by Rousseau in his *Second Discourse*, Marx in the *Manifesto*, and Freud in *Totem and Taboo* would fall into this category.⁶ So too, any history which endows the last event in the series (*e*), whether real or only speculatively projected, with the force of full explanatory power (*E*) is of the type of all eschatological or apocalyptic histories. St. Augustine's *City of God* and the various versions of the Joachite notion⁷ of the advent of a millennium, Hegel's *Philosophy of History*, and, in general, all Idealist histories are of this sort. In between we would have the various forms of historiography which appeal to plot structures of a distinctively "fictional" sort (Romance, Comedy, Tragedy, and Satire) by which to endow the series with a perceivable form and a conceivable "meaning."

If the series were simply recorded in the order in which the events originally occurred, under the assumption that the ordering of the events in their temporal sequence itself provided a kind of explanation of why they occurred when and where they did, we would have the pure form of the *chronicle*. This would be a "naive" form of chronicle, however, inasmuch as the categories of time and space alone served as the informing interpretative principles. Over against the naive form of chronicle we could postulate as a logical possibility its "sentimental" counterpart,⁸ the ironic denial that historical series have any kind of larger significance or describe any imaginable plot structure or indeed can even be construed as a story with a discernible beginning, middle, and end. We could conceive such accounts of history as intending to serve as antidotes to their false or overemplotted counterparts (nos. 2, 3, 4, and 5 above) and could represent them as an ironic return to mere chronicle as constituting the only sense which any cognitively responsible history could take. We could characterize such histories thus:

(6) "a, b, c, d, e , n"

with the quotation marks indicating the conscious interpretation of the events as having nothing other than seriality as their meaning.

This schema is of course highly abstract and does not do justice to the possible mixtures of and variations within the types that it is meant to distinguish. But it helps us, I think, to conceive how events might be emplotted in different ways without violating the imperatives of the chronological order of the events (however they are construed) so as to yield alternative, mutually

exclusive, and yet, equally plausible interpretations of the set. I have tried to show in *Metahistory* how such mixtures and variations occur in the writings of the master historians of the nineteenth century; and I have suggested in that book that classic historical accounts always represent attempts both to emplot the historical series adequately and implicitly to come to terms with other plausible emplotments. It is this dialectical tension between two or more possible emplotments that signals the elements of critical self-consciousness present in any historian of recognizably classical stature.

Histories, then, are not only about events but also about the possible sets of relationships that those events can be demonstrated to figure. These sets of relationships are not, however, immanent in the events themselves; they exist only in the mind of the historian reflecting on them. Here they are present as the modes of relationships conceptualized in the myth, fable, and folklore, scientific knowledge, religion, and literary art, of the historian's own culture. But more importantly, they are, I suggest, immanent in the very language which the historian must use to *describe* events prior to a scientific analysis of them or a fictional emplotment of them. For if the historian's aim is to familiarize us with the unfamiliar, he must use figurative, rather than technical, language. Technical languages are familiarizing only *to* those who have been indoctrinated in their uses and only *of* those sets of events which the practitioners of a discipline have agreed to describe in a uniform terminology. History possesses no such generally accepted technical terminology and in fact no agreement on what kind of events make up its specific subject matter. The historian's characteristic instrument of encodation, communication, and exchange is ordinary educated speech. This implies that the only instruments that he has for endowing his data with meaning, of rendering the strange familiar, and of rendering the mysterious past comprehensible, are the techniques of *figurative* language. All historical narratives presuppose figurative characterizations of the events they purport to represent and explain. And this means that historical narratives, considered purely as verbal artifacts, can be characterized by the mode of figurative discourse in which they are cast.

If this is the case, then it may well be that the kind of emplotment that the historian decides to use to give meaning to a set of historical events is dictated by the dominant figurative mode of the language he has used to *describe* the elements of his account *prior* to his composition of a narrative. Geoffrey Hartman⁹ once remarked in my hearing, at a conference on literary history, that he was not sure that he knew what historians of literature might want to do, but he did know that to write a history meant to place an event within a context, by relating it as a part to some conceivable whole. He went on to suggest that as far as he knew, there were only two ways of relating parts to wholes, by metonymy and by synecdoche.¹ Having been engaged for some time in the study of the thought of Giambattista Vico,² I was much taken with this thought, because it conformed to Vico's

9. American literary critic and theorist (1929–2016).

1. A figure of speech in which a part is used for the whole (e.g., "all *hands* on deck") or the whole for a part (e.g., "England won the World Cup"). "Metonymy": a figure of speech in which one word or

phrase is substituted for another with which it is closely associated (e.g., *the stage* meaning "the theater").

2. Italian philosopher and historian (1668–1744), author of *New Science* (1725; see above).

notion that the “logic” of all “poetic wisdom” was contained in the relationships which language itself provided in the four principal modes of figurative representation: metaphor, metonymy, synecdoche, and irony. My own hunch—and it is a hunch which I find confirmed in Hegel’s reflections on the nature of nonscientific discourse—is that in any field of study which, like history, has not yet become disciplinized to the point of constructing a formal terminological system for describing its objects, in the way that physics and chemistry have, it is the types of figurative discourse that dictate the fundamental forms of the data to be studied. This means that the *shape* of the *relationships* which will appear to be inherent in the objects inhabiting the field will in reality have been imposed on the field by the investigator in the very *act of identifying and describing* the objects that he finds there. The implication is that historians *constitute* their subjects as possible objects of narrative representation by the very language they use to *describe* them. And if this is the case, it means that the different kinds of historical interpretations that we have of the same set of events, such as the French Revolution as interpreted by Michelet, Tocqueville, Taine,³ and others, are little more than projections of the linguistic protocols that these historians used to *pre-figure* that set of events prior to writing their narratives of it. It is only a hypothesis, but it seems possible that the conviction of the historian that he has “found” the form of his narrative in the events themselves, rather than imposed it upon them, in the way the poet does, is a result of a certain lack of linguistic self-consciousness which obscures the extent to which descriptions of events *already* constitute interpretations of their nature. As thus envisaged, the difference between Michelet’s and Tocqueville’s accounts of the Revolution does not reside only in the fact that the former emplotted his story in the modality of a Romance and the latter his in the modality of Tragedy; it resides as well in the tropological mode—metaphorical and metonymic, respectively—with each brought to his apprehension of the facts as they appeared in the documents.

I do not have the space to try to demonstrate the plausibility of this hypothesis, which is the informing principle of my book *Metahistory*. But I hope that this essay may serve to suggest an approach to the study of such discursive prose forms as historiography, an approach that is as old as the study of rhetoric and as new as modern linguistics. Such a study would proceed along the lines laid out by Roman Jakobson⁴ in a paper entitled “Linguistics and Poetics,” in which he characterized the difference between Romantic poetry and the various forms of nineteenth-century Realistic prose as residing in the essentially metaphorical nature of the former and the essentially metonymical nature of the latter. I think that this characterization of the difference between poetry and prose is too narrow, because it presupposes that complex macrostructural narratives such as the novel are little more than projections of the “selective” (i.e., phonemic) axis of all speech acts. Poetry, and especially Romantic poetry, is then characterized by Jakobson as a projection of the “combinatory” (i.e., morphemic) axis of

3. Hippolyte-Adolphe Taine (1828–1893), French literary and art critic, philosopher, and historian who analyzed art and literature as products of

race, environment, and epoch.

4. Russian-born American linguist (1896–1982); for “Linguistics and Poetics” (1960), see above.

language. Such a binary theory pushes the analyst toward a dualistic opposition between poetry and prose which appears to rule out the possibility of a metonymical poetry and a metaphorical prose. But the fruitfulness of Jakobson's theory lies in its suggestion that the various forms of both poetry and prose, all of which have their counterparts in narrative in general and therefore in historiography too, can be characterized in terms of the dominant trope which serves as the paradigm, provided by language itself, of all significant relationships conceived to exist in the world by anyone wishing to represent those relationships in language.

Narrative, or the syntagmatic dispersion of events across a temporal series presented as a prose discourse,⁵ in such a way as to display their progressive elaboration as a comprehensible form, would represent the "inward turn" that discourse takes when it tries to *show* the reader the true form of things existing behind a merely apparent formlessness. Narrative *style*, in history as well as in the novel, would then be construed as the modality of the movement from a representation of some original state of affairs to some subsequent state. The primary *meaning* of a narrative would then consist of the destruction of a set of events (real or imagined) originally encoded in one tropological mode and the progressive restructuration of the set in another tropological mode. As thus envisaged, narrative would be a process of decodation and recodation in which an original perception is clarified by being cast in a figurative mode different from that in which it has come encoded by convention, authority, or custom. And the explanatory force of the narrative would then depend on the contrast between the original encodation and the later one.

For example, let us suppose that a set of experiences comes to us as a grotesque, i.e., as unclassified and unclassifiable. Our problem is to identify the modality of the relationships that bind the discernible elements of the formless totality together in such a way as to make of it a whole of some sort. If we stress the similarities among the elements, we are working in the mode of metaphor; if we stress the differences among them, we are working in the mode of metonymy. Of course, in order to make sense of any set of experiences, we must obviously identify both the parts of a thing that appear to make it up and the nature of the shared aspects of the parts that make them identifiable as a totality. This implies that all original characterizations of anything must utilize *both* metaphor and metonymy in order to "fix" it as something about which we can meaningfully discourse.

In the case of historiography, the attempts of commentators to make sense of the French Revolution are instructive. Burke⁶ decodes the events of the Revolution which his contemporaries experience as a grotesque by recoding it in the mode of irony; Michelet recodes these events in the mode of synecdoche; Tocqueville recodes them in the mode of metonymy. In each case, however, the movement from code to recode is narratively described, i.e., laid out on a time-line in such a way as to make the interpretation of the events that made up the "Revolution" a kind of drama that we can recognize as Satirical, Romantic, and Tragic, respectively. This drama can be followed

5. In linguistics, *syntagmatic* designates the relationship between items that combine to form a meaningful whole (e.g., the words in a sentence); by extension, the term here refers to the relation-

ships between events in a narrative, their sequence.

6. EDMUND BURKE (1729–1797), English author of *Reflections on the Revolution in France* (1790).

by the reader of the narrative in such a way as to be experienced as a progressive revelation of what the *true* nature of the events consists of. The revelation is not experienced, however, as a restructuring of perception so much as an illumination of a field of occurrence. But actually what has happened is that a set of events originally encoded in one way is simply being decoded by being recoded in another. The events themselves are not substantially changed from one account to another. That is to say, the data that are to be analyzed are not significantly different in the different accounts. What is different are the modalities of their relationships. These modalities, in turn, although they *may* appear to the reader to be based on different theories of the nature of society, politics, and history, ultimately have their origin in the figurative characterizations of the whole set of events as representing wholes of fundamentally different sorts. It is for this reason that, when it is a matter of setting different interpretations of the same set of historical phenomena over against one another in an attempt to decide which is the best or most convincing, we are often driven to confusion or ambiguity. This is not to say that we cannot distinguish between good and bad historiography, since we can always fall back on such criteria as responsibility to the rules of evidence, the relative fullness of narrative detail, logical consistency, and the like to determine this issue. But it is to say that the effort to distinguish between good and bad interpretations of a historical event such as the Revolution is not as easy as it might at first appear when it is a matter of dealing with alternative interpretations produced by historians of relatively equal learning and conceptual sophistication. After all, a great historical classic cannot be disconfirmed or nullified either by the discovery of some new datum that might call a specific explanation of some element of the whole account into question or by the generation of new methods of analysis which permit us to deal with questions that earlier historians might not have taken under consideration. And it is precisely because great historical classics, such as works by Gibbon, Michelet, Thucydides, Mommsen, Ranke, Burckhardt, Bancroft,⁷ and so on, cannot be definitely disconfirmed that we must look to the specifically literary aspects of their work as crucial, and not merely subsidiary, elements in their historiographical technique.

What all this points to is the necessity of revising the distinction conventionally drawn between poetic and prose discourse in discussion of such narrative forms as historiography and recognizing that the distinction, as old as Aristotle,⁸ between history and poetry obscures as much as it illuminates about both. If there is an element of the historical in all poetry, there is an element of poetry in every historical account of the world. And this because in our account of the historical world we are dependent, in ways perhaps that we are not in the natural sciences, on the techniques of *figurative language*

7. All prominent historians: Thucydides (ca. 455–ca. 400 B.C.E.), Greek author of *The History of the Peloponnesian Wars*; Theodor Mommsen (1817–1903), German classical scholar and author of *The History of Rome* (1854–55), who received the 1902 Nobel Prize in Literature; Leopold von Ranke (1795–1886), German founder of the modern school of history that championed objectivity based on source materials rather than on legend and tradition; Jakob Burckhardt (1818–1897), Swiss historian of art and culture, author of *The*

Civilization of the Renaissance in Italy (1860); and George Bancroft (1800–1891), U.S. statesman and author of a 10-volume *History of the United States* (1837–74).

8. See ARISTOTLE (384–322 B.C.E.), *Poetics* 9, 1451b: “The difference [between history and poetry] is that the former relates things that have happened, the latter things that may happen. For this reason poetry is more philosophical and more serious than history; poetry tends to speak of universals, history of particulars.”

both for our *characterization* of the objects of our narrative representations and for the *strategies* by which to constitute narrative accounts of the transformations of those objects in time. And this because history has no stipulatable subject matter uniquely its own; it is always written as part of a contest between contending poetic figurations of what the past *might* consist of.

The older distinction between fiction and history, in which fiction is conceived as the representation of the imaginable and history as the representation of the actual, must give place to the recognition that we can only know the *actual* by contrasting it with or likening it to the *imaginable*. As thus conceived, historical narratives are complex structures in which a world of experience is imagined to exist under at least two modes, one of which is encoded as "real," the other of which is "revealed" to have been illusory in the course of the narrative. Of course, it is a fiction of the historian that the various states of affairs which he constitutes as the beginning, the middle, and the end of a course of development are all "actual" or "real" and that he has merely recorded "what happened" in the transition from the inaugural to the terminal phase. But both the beginning state of affairs and the ending one are inevitably poetic constructions, and as such, dependent upon the modality of the figurative language used to give them the aspect of coherence. This implies that all narrative is not simply a recording of "what happened" in the transition from one state of affairs to another, but a progressive *redescription* of sets of events in such a way as to dismantle a structure encoded in one verbal mode in the beginning so as to justify a recoding of it in another mode at the end. This is what the "middle" of all narratives consist of.

All of this is highly schematic, and I know that this insistence on the fictive element in all historical narratives is certain to arouse the ire of historians who believe that they are doing something fundamentally different from the novelist, by virtue of the fact that they deal with "real," while the novelist deals with "imagined," events. But neither the form nor the explanatory power of narrative derives from the different contents it is presumed to be able to accommodate. In point of fact, history—the real world as it evolves in time—is made sense of in the same way that the poet or novelist tries to make sense of it, i.e., by endowing what originally appears to be problematical and mysterious with the aspect of a recognizable, because it is a familiar, form. It does not matter whether the world is conceived to be real or only imagined; the manner of making sense of it is the same.

So too, to say that we make sense of the real world by imposing upon it the formal coherency that we customarily associate with the products of writers of fiction in no way detracts from the status as knowledge which we ascribe to historiography. It would only detract from it if we were to believe that literature did not teach us anything about reality, but was a product of an imagination which was not of this world but of some other, inhuman one. In my view, we experience the "fictionalization" of history as an "explanation" for the same reason that we experience great fiction as an illumination of a world that we inhabit along with the author. In both we recognize the forms by which consciousness both constitutes and colonizes the world it seeks to inhabit comfortably.

Finally, it may be observed that if historians were to recognize the fictive element in their narratives, this would not mean the degradation of historiography to the status of ideology or propaganda. In fact, this recognition

would serve as a potent antidote to the tendency of historians to become captive of ideological preconceptions which they do not recognize as such but honor as the “correct” perception of “the way things *really* are.” By drawing historiography nearer to its origins in literary sensibility, we should be able to identify the ideological, because it is the fictive, element in our own discourse. We are always able to see the fictive element in those historians with whose interpretations of a given set of events we disagree; we seldom perceive that element in our own prose. So, too, if we recognized the literary or fictive element in every historical account, we would be able to move the teaching of historiography onto a higher level of self-consciousness than it currently occupies.

What teacher has not lamented his inability to give instruction to apprentices in the *writing* of history? What graduate student of history has not despaired at trying to comprehend and imitate the model which his instructors *appear* to honor but the principles of which remain uncharted? If we recognize that there is a fictive element in all historical narrative, we would find in the theory of language and narrative itself the basis for a more subtle presentation of what historiography consists of than that which simply tells the student to go and “find out the facts” and write them up in such a way as to tell “what really happened.”

In my view, history as a discipline is in bad shape today because it has lost sight of its origins in the literary imagination. In the interest of *appearing* scientific and objective, it has repressed and denied to itself its own greatest source of strength and renewal. By drawing historiography back once more to an intimate connection with its literary basis, we should not only be putting ourselves on guard against *merely* ideological distortions; we should be by way of arriving at that “theory” of history without which it cannot pass for a “discipline” at all.

1978

JEAN BAUDRILLARD

1929–2007

A prophet crying out in the wilderness of postmodernity, the sociologist Jean Baudrillard made dramatic pronouncements that hit a nerve in the 1980s and 1990s, especially in the international art world. The urge to define our “postmodern condition” has perhaps faded, but the basic tenets of Baudrillard’s critique still speak directly to the phenomena of global financial speculation, ever-increasing tourism, and the frenzied stimulation of consumer desire through the media. The obliteration of nature by culture, particularly the replacement of the real by signs, is Baudrillard’s great theme. Paradoxically enough, the accuracy of his analysis, its correspondence to what is happening in the contemporary world, secures him a hearing even from those who find his style cryptic and his claims about media simulation of reality hyperbolic.

The son of civil servants and the grandson of peasants, Baudrillard shares the formative experiences of others among his generation of French intellectuals:

coming to age in the aftermath of the German Occupation during World War II, when Jean-Paul Sartre's existential Marxism dominated French thought; political radicalization in response to French colonial wars in Indochina and Algeria during the 1950s; opposition to the American war in Vietnam; and involvement, as a young professor, in the "events" of 1968, when French student protesters brought the nation to a standstill for the month of May.

Baudrillard earned his graduate degree in sociology in 1966, and in 1968 he was teaching at Nanterre, one of the new universities at the center of the students' movement. Before getting his degree, he wrote about and translated German literature; he was deeply influenced by the Frankfurt School social theorists MAX HORKHEIMER and THEODOR ADORNO and by the semiotic criticism of ROLAND BARTHES. In the late 1960s he was affiliated with the "Situationists," an international anarchist group that combined Marxist analysis with innovative critiques of consumer society and bourgeois values. After the collapse of the student movement, Baudrillard, like other members of his generation, began to consider what went wrong, starting with his critiques of Marxism (most notably in his *Mirror of Production*, 1973; trans. 1983) and moving toward the issues of media simulation and the hyperreality of consumer society taken up in our selection from *Simulations* (1981; trans. 1983). After becoming a minor cult figure in the 1980s, Baudrillard in 1987 resigned his post at Nanterre and published increasingly experimental texts that abandon consecutive argumentation for impressionistic collages of travel narrative, autobiographical material, social critique, and theoretical musings.

The key to Baudrillard's thought is his reversal of the commonsense understanding of the relation of culture to nature, of sign to thing signified. Conventional thought holds that nature (both human and nonhuman, such as trees, weather, ecological systems, the law of gravity) precedes culture (the human-made), which is built on top of it. Similarly, we think of a thing as existing in the world, and then of a word being invented and used to designate that thing. At times, Baudrillard implies that this commonsense view accurately describes how things used to be, at some unspecified time in the past. In our selection, he speaks of four "successive phases of the image [the sign]."

Baudrillard argues that signs have now taken priority over the things signified. In fact, things have just about disappeared altogether. He links this development to the "death of God" (an event famously heralded in the nineteenth century by FRIEDRICH NIETZSCHE), to the devastation of natural environments, and to Western imperial destruction of all "primitive," non-Western, nonmetropolitan "others." Something has changed in the human relation to the nonhuman that plays itself out in a deadly hostility to all things different. It is, Baudrillard makes clear, a change for the worse, and all attempts to turn back the clock only accelerate the triumph of the sign. We are left yearning for the things we have killed, and "nostalgia assumes its full meaning" as we create ever more signs to simulate those lost things. This is "the vengeance of the dead," who haunt us in their absence.

To designate this new function of signs, Baudrillard chooses the term *simulacrum*, a word that denotes representation but also carries the sense of a counterfeit, sham, or fake. Simulacra seem to have referents (real phenomena they refer to), but they are merely pretend representations that mark the absence, not the existence, of the objects they purport to represent. Baudrillard blames two distinct but related culprits for this change: contemporary consumer culture and imperialistic Western science and philosophy.

In consumer society, natural needs or desires have been buried under, if not totally eliminated by, desires stimulated by cultural discourses (advertising, media, and the rest), which tell us what we want. We are so precoded, so filled from the very start with the images of what we desire, that we process our relation to the world completely through those images. Furthermore, capitalist production in our time proceeds by first creating a demand through marketing and then producing

the product to meet that demand. There are no longer natural needs that human work strives to satisfy. Rather, there are culturally produced “hyperreal” needs that are generated to provide work and profits. The world is remade in the image of our desires. The signs (the images of what we want) exist before we create the thing to which the sign refers. Thus, for example, sexual desire is no longer a response to a person whom we meet and know face-to-face. Rather, sexual desire is stimulated by images promulgated by the media, and we strive to remake our bodies to fit those images. The “hyperreality” of the model overwhelms the reality of the people we actually live among. Consumer society provides a “precession of simulacra,” a parade of images that project a life that consumers are encouraged to try to live.

The second part of Baudrillard’s argument—his view of Western thought and Western science—explains how things lose their reality in the final phase, the phase of the simulacrum. His account here parallels visions of the West found earlier in Nietzsche and later in JACQUES DERRIDA, MICHEL FOUCAULT, and other poststructuralist thinkers. The West, with its compulsions to explore and to know the whole globe, is driven to *name* and to explain each thing it encounters. The name, our knowledge, replaces the thing. For the difference and otherness of the thing, we substitute the signs that translate, account for, and tame it within our own signifying system. This is why Baudrillard insists that signs murder. The ethnologist (the anthropologist) erases the very people being studied by embalming them in his or her categories, replacing their reality with an explanatory, scholarly account. Having killed the real thing by reducing it to scientific terms, the anthropologist provides an embalmed simulation of that thing for display in the natural history museum. Western science, especially since the Enlightenment, has increasingly translated all otherness into its own terms, making it safe for subsequent touristlike encounters with the packaged exotic. We get simulated otherness; the real thing has evaporated.

In claiming that “we all become living specimens under the spectral light of ethnology,” Baudrillard suggests that we all live our lives as if within quotation marks, as if playing a part in a movie. The student who is starting college, for example, has so many images of college students (from movies or TV) in mind that his or her way of being a student will inevitably be patterned in response to those preexisting images. The patterning may come from an attempt to resist the stereotype, to play against expectations, but the priority of the image still prevails. As “authentic” experience becomes ever harder to conceive, simulation, willed or not, rules the day.

We sense this loss of the real, according to Baudrillard; and our search for authenticity, often subconscious, has become ever more panicky as a result. He interprets Disneyland as an elaborately artificial land created precisely to convince us that our “real” lives are real. Caught up in the “precession of simulacra” that kills everything real and replaces it with fabricated models, we feel that something is wrong; but we have no satisfactory strategies for overturning the growing dominance of images and signs.

In many ways, Baudrillard’s work echoes Horkheimer and Adorno’s earlier critique of the culture industry. Like them, he often comes across as a European intellectual appalled by American mass culture, extravagantly pessimistic and overgeneralizing. Los Angeles for these critics stands for a dystopian future whose worst feature is that its inhabitants apparently like it. The passivity of (post)modern consumers in Baudrillard’s work leaves little space for hope. Only his apocalyptic rhetoric, with its hints of coming implosions, offers any prospect of change.

Critiques of Baudrillard’s work since the 1980s have emerged largely from cultural studies, with its attention to the creative and progressive uses to which resisting audiences put the materials offered to them by the various media. In describing how we as social agents live out prescribed patterns, Baudrillard misses the playful and parodic resignifications emphasized by performative accounts of action like JUDITH BUTLER’S. But the power of his work—and its influence—rests in its one-sidedness, the energy with which he presents his vision of a globalized economy of

simulacra, of signs gone mad as they dictate all of our lives and obliterate anything that stands outside of them.

"The Precession of Simulacra" Keywords: Aesthetics, Media, Postmodernity, Poststructuralism, Representation, Semiotics

*From The Precession of Simulacra*¹

The simulacrum is never that which conceals the truth—it is the truth which conceals that there is none.
The simulacrum is true.

*Ecclesiastes*²

If we were able to take as the finest allegory of simulation the Borges tale³ where the cartographers of the Empire draw up a map so detailed that it ends up exactly covering the territory (but where the decline of the Empire sees this map become frayed and finally ruined, a few shreds still discernible in the deserts—the metaphysical beauty of this ruined abstraction, bearing witness to an Imperial pride and rotting like a carcass, returning to the substance of the soil, rather as an aging double ends up being confused with the real thing)—then this fable has come full circle for us, and now has nothing but the discrete charm of second-order simulacra.⁴

Abstraction today is no longer that of the map, the double, the mirror or the concept. Simulation is no longer that of a territory, a referential being or a substance. It is the generation by models of a real without origin or reality: a hyperreal. The territory no longer precedes the map, nor survives it. Henceforth, it is the map that precedes the territory—**PRECESSION OF SIMULACRA**—it is the map that engenders the territory and if we were to revive the fable today, it would be the territory whose shreds are slowly rotting across the map. It is the real, and not the map, whose vestiges subsist here and there, in the deserts which are no longer those of the Empire, but our own. *The desert of the real itself.*

In fact, even inverted, the fable is useless. Perhaps only the allegory of the Empire remains. For it is with the same Imperialism that present-day simulators try to make the real, all the real, coincide with their simulation models. But it is no longer a question of either maps or territory. Something has disappeared: the sovereign difference between them that was the abstraction's charm. For it is the difference which forms the poetry of the map and the charm of the territory, the magic of the concept and the charm of the real. This representational imaginary, which both culminates in and is engulfed by the cartographer's mad project of an ideal coextensivity between the map and the territory, disappears with simulation—whose operation is nuclear and genetic, and no longer specular and discursive. With it goes all of metaphysics.⁵ No more mirror of being and appearances, of the real and

Death (1976) [Baudrillard's note].

5. The branch of philosophy that deals with the ultimate structures or substance of the real. With the replacement of the real by the sign, there would be nothing left for metaphysics to ponder.

its concept. No more imaginary coextensivity: rather, genetic miniaturisation is the dimension of simulation. The real is produced from miniaturised units, from matrices, memory banks and command models—and with these it can be reproduced an indefinite number of times. It no longer has to be rational, since it is no longer measured against some ideal or negative instance. It is nothing more than operational. In fact, since it is no longer enveloped by an imaginary, it is no longer real at all. It is a hyperreal, the product of an irradiating synthesis of combinatory models in a hyperspace without atmosphere.

In this passage to a space whose curvature is no longer that of the real, nor of truth, the age of simulation thus begins with a liquidation of all referentials—worse: by their artificial resurrection in systems of signs, a more ductile material than meaning, in that it lends itself to all systems of equivalence, all binary oppositions and all combinatory algebra. It is no longer a question of imitation, nor of reduplication, nor even of parody. It is rather a question of substituting signs of the real for the real itself, that is, an operation to deter every real process by its operational double, a meta-stable, programmatic, perfect descriptive machine which provides all the signs of the real and short-circuits all its vicissitudes. Never again will the real have to be produced—this is the vital function of the model in a system of death, or rather of anticipated resurrection which no longer leaves any chance even in the event of death. A hyperreal henceforth sheltered from the imaginary, and from any distinction between the real and the imaginary, leaving room only for the orbital recurrence of models and the simulated generation of difference.

The Divine Irrelevance of Images

To dissimulate is to feign not to have what one has. To simulate is to feign to have what one hasn't. One implies a presence, the other an absence. But the matter is more complicated, since to simulate is not simply to feign: "Someone who feigns an illness can simply go to bed and make believe he is ill. Some who simulates an illness produces in himself some of the symptoms." (Littre)⁶ Thus, feigning or dissimulating leaves the reality principle intact: the difference is always clear, it is only masked; whereas simulation threatens the difference between "true" and "false", between "real" and "imaginary". Since the simulator produces "true" symptoms, is he ill or not? He cannot be treated objectively either as ill, or as not-ill. Psychology and medicine stop at this point, before a thereafter undiscoverable truth of the illness. For if any symptom can be "produced", and can no longer be accepted as a fact of nature, then every illness may be considered as simulatable and simulated, and medicine loses its meaning since it only knows how to treat "true" illnesses by their objective causes. Psychosomatics⁷ evolves in a dubious way on the edge of the illness principle. As for psychoanalysis, it transfers the symptom from the organic to the unconscious order: once again, the latter is held to be true, more true than the former—but why should

6. Maximilien-Paul-Émile Littre (1801–1881), French lexicographer and translator of Hippocrates. Baudrillard takes this definition from Littre's dictionary.

7. Bodily symptoms caused by mental or emotional disturbance; these interest Baudrillard as an example of how ideas or images produce a physical reality.

simulation stop at the portals of the unconscious? Why couldn't the "work" of the unconscious be "produced" in the same way as any other symptom in classical medicine? Dreams already are.⁸

The alienist,⁹ of course, claims that "for each form of the mental alienation there is a particular order in the succession of symptoms, of which the simulator is unaware and in the absence of which the alienist is unlikely to be deceived." This (which dates from 1865) in order to save at all cost the truth principle, and to escape the spectre raised by simulation—namely that truth, reference and objective causes have ceased to exist. What can medicine do with something which floats on either side of illness, on either side of health, or with the reduplication of illness in a discourse that is no longer true or false? What can psychoanalysis do with the reduplication of the discourse of the unconscious in a discourse of simulation that can never be unmasked, since it isn't false either?¹

What can the army do with simulators? Traditionally, following a direct principle of identification, it unmasks and punishes them. Today, it can reform an excellent simulator as though he were equivalent to a "real" homosexual, heart-case or lunatic. Even military psychology retreats from the Cartesian clarities² and hesitates to draw the distinction between true and false, between the "produced" symptom and the authentic symptom. "If he acts crazy so well, then he must be mad." Nor is it mistaken: in the sense that all lunatics are simulators, and this lack of distinction is the worst form of subversion. Against it classical reason armed itself with all its categories. But it is this today which again outflanks them, submerging the truth principle.

Outside of medicine and the army, favored terrains of simulation, the affair goes back to religion and the simulacrum of divinity: "I forbid any simulacrum in the temples because the divinity that breathes life into nature cannot be represented." Indeed it can. But what becomes of the divinity when it reveals itself in icons, when it is multiplied in simulacra? Does it remain the supreme authority, simply incarnated in images as a visible theology? Or is it volatilized into simulacra which alone deploy their pomp and power of fascination—the visible machinery of icons being substituted for the pure and intelligible Idea of God? This is precisely what was feared by the Iconoclasts, whose millennial quarrel is still with us today.³ Their rage to destroy images rose precisely because they sensed this omnipotence of simulacra, this facility they have of effacing God from the consciousness of men, and the overwhelming, destructive truth which they suggest: that ultimately there has never been any God, that only the simulacrum exists, indeed that God himself has only ever been his own simulacrum. Had they

8. That is, patients in therapy have dreams that fit their therapist's style of interpretation, "produced" in response to the therapist's prompting rather than reflective of some "truth" or "reality."

9. Psychologist (a 19th-century term).

1. And which is not susceptible to resolution in transference. It is the entanglement of these two discourses which makes psychoanalysis interminable [Baudrillard's note]. SIGMUND FREUD (1856–1939), the Austrian founder of psychoanalysis, wrote that therapy, strictly speaking, was "interminable," but that it should end when the

"transference"—which involves the patient's repetition of his or her basic problems in the relationship developed with the therapist—was complete and understood by the patient. The therapist uses this repetition as a way of enlightening the patient about the more general patterns of his or her life.

2. The French philosopher René Descartes (1596–1650) proposed a method for discerning "clear" and hence "certain" ideas.

3. Cf. M. Perniola, "Icones, Visions, Simulacres," *Traverses* / 10, p. 39 [Baudrillard's note].

been able to believe that images only occulted or masked the Platonic Idea⁴ of God, there would have been no reason to destroy them. One can live with the idea of a distorted truth. But their metaphysical despair came from the idea that the images concealed nothing at all, and that in fact they were not images, such as the original model would have made them, but actually perfect simulacra forever radiant with their own fascination. But this death of the divine referential has to be exorcised at all cost.

It can be seen that the iconoclasts, who are often accused of despising and denying images, were in fact the ones who accorded them their actual worth, unlike the iconolaters, who saw in them only reflections and were content to venerate God at one remove. But the converse can also be said, namely that the iconolaters were the most modern and adventurous minds, since underneath the idea of the apparition of God in the mirror of images, they already enacted his death and his disappearance in the epiphany of his representations (which they perhaps knew no longer represented anything, and that they were purely a game, but that this was precisely the greatest game—knowing also that it is dangerous to unmask images, since they dis-simulate the fact that there is nothing behind them).

This was the approach of the Jesuits,⁵ who based their politics on the virtual disappearance of God and on the worldly and spectacular manipulation of consciences—the evanescence of God in the epiphany of power—the end of transcendence, which no longer serves as alibi for a strategy completely free of influences and signs. Behind the baroque of images hides the grey eminence of politics.

Thus perhaps at stake has always been the murderous capacity of images, murderers of the real, murderers of their own model as the Byzantine icons could murder the divine identity.⁶ To this murderous capacity is opposed the dialectical capacity of representations as a visible and intelligible mediation of the Real. All of Western faith and good faith was engaged in this wager on representation: that a sign could refer to the depth of meaning, that a sign could *exchange* for meaning and that something could guarantee this exchange—God, of course. But what if God himself can be simulated, that is to say, reduced to the signs which attest his existence? Then the whole system becomes weightless, it is no longer anything but a gigantic simulacrum—not unreal, but a simulacrum, never again exchanging for what is real, but exchanging in itself, in an uninterrupted circuit without reference or circumference.

So it is with simulation, insofar as it is opposed to representation. The latter starts from the principle that the sign and the real are equivalent (even if this equivalence is utopian, it is a fundamental axiom). Conversely, simulation starts from the *utopia* of this principle of equivalence, *from the radical negation of the sign as value*, from the sign as reversion and death sentence of every reference. Whereas representation tries to absorb simula-

4. That is, a perfect, immutable, transcendent Form or Idea in whose reality particular phenomena imperfectly participate, as described in the writings of PLATO (ca. 427–ca. 347 B.C.E.).

5. Members of a Roman Catholic religious order founded in response to the Protestant Reformation, who have long had a reputation for being manipulative and unscrupulous in promoting

Catholicism over Protestantism.

6. The Byzantine empire, the eastern half of the Roman Empire, was the home of the Greek Orthodox Church, whose lavish icons have been seen by Western commentators, depending on their own attitude toward images of the divine, as examples either of pagan idolatry or of beautiful religious art.

tion by interpreting it as false representation, simulation envelops the whole edifice of representation as itself a simulacrum.

This would be the successive phases of the image:

- it is the reflection of a basic reality
- it masks and perverts a basic reality
- it masks the *absence* of a basic reality
- it bears no relation to any reality whatever: it is its own pure simulacrum.

In the first case, the image is a *good* appearance—the representation is of the order of sacrament. In the second, it is an *evil* appearance—of the order of malice.⁷ In the third, it *plays at being* an appearance—it is of the order of sorcery. In the fourth, it is no longer in the order of appearance at all, but of simulation.

The transition from signs which dissimulate something to signs which dissimulate that there is nothing, marks the decisive turning point. The first implies a theology of truth and secrecy (to which the notion of ideology still belongs). The second inaugurates an age of simulacra and stimulation, in which there is no longer any God to recognise his own, nor any last judgement to separate true from false, the real from its artificial resurrection, since everything is already dead and risen in advance.

When the real is no longer what it used to be, nostalgia assumes its full meaning. There is a proliferation of myths of origin and signs of reality; of second-hand truth, objectivity and authenticity. There is an escalation of the true, of the lived experience; a resurrection of the figurative where the object and substance have disappeared. And there is a panic-stricken production of the real and the referential, above and parallel to the panic of material production: this is how simulation appears in the phase that concerns us—a strategy of the real, neo-real and hyperreal whose universal double is a strategy of deterrence.

Rameses, or Rose-Coloured Resurrection

Ethnology almost met a paradoxical death that day in 1971 when the Philippine government decided to return the few dozen Tasaday⁸ discovered deep in the jungle, where they had lived for eight centuries undisturbed by the rest of mankind, to their primitive state, out of reach of colonists, tourists and ethnologists. This was at the initiative of the anthropologists themselves, who saw the natives decompose immediately on contact, like a mummy in the open air.

For ethnology to live, its object must die. But the latter revenges itself by dying for having been “discovered,” and defies by its death the science that wants to take hold of it.

Doesn't every science live on this paradoxical slope to which it is doomed by the evanescence of its object in the very process of its apprehension, and by the pitiless reversal this dead object exerts on it? Like Orpheus it always turns around too soon, and its object, like Eurydice, falls back into Hades.⁹

7. An evil deed.

8. A small group of people “discovered” in 1971 living in the highland rain forest in the Philippines; they were acclaimed as an example of a “primitive” tribe untouched by modern life. (By the mid-1980s, many anthropologists were convinced that the whole episode was a hoax perpetrated by the Philippine government. Opinion

remains divided about the “authenticity” of the Tasaday.)

9. In Greek mythology, the poet-singer Orpheus wins back his dead wife, Eurydice, from the underworld—on the condition (which he does not keep) that he not look back at her until they are on the earth's surface.

It was against this hades of paradox that the ethnologists wanted to protect themselves by cordoning off the Tasaday with virgin forest. Nobody now will touch it: the vein is closed down, like a mine. Science loses a precious capital, but the object will be safe—lost to science, but intact in its “virginity”. It isn’t a question of sacrifice (science never sacrifices itself: it is always murderous), but of the simulated sacrifice of its object in order to save its reality principle. The Tasaday, frozen in their natural element, provide a perfect alibi, an eternal guarantee. At this point begins a persistent anti-ethnology to which Jaulin, Castaneda and Clastres¹ variously belong. In any case, the logical evolution of a science is to distance itself ever further from its object until it dispenses with it entirely: its autonomy evermore fantastical in reaching its pure form.

The Indian thereby driven back into the ghetto, into the glass coffin of virgin forest, becomes the simulation model for all conceivable Indians *before ethnology*. The latter thus allows itself the luxury of being incarnate beyond itself, in the “brute” reality of these Indians it has entirely reinvented—Savages who are indebted to ethnology for still being Savages: what a turn of events, what a triumph for this science which seemed dedicated to their destruction!

Of course, these particular Savages are posthumous: frozen, cryogenised, sterilised, protected to *death*, they have become referential simulacra, and the science itself a pure simulation. Same thing at Creusot² where, in the form of an “open” museum exhibition, they have “museumised” on the spot, as historical witnesses to their period, entire working class quarters, living metallurgical zones, a complete culture including men, women and children and their gestures, languages and habits—living beings fossilised as in a snap shot. The museum, instead of being circumscribed in a geometrical location, is now everywhere, like a dimension of life itself. Thus ethnology, now freed from its object, will no longer be circumscribed as an objective science but is applied to all living things and becomes invisible, like an omnipresent fourth dimension, that of the simulacrum. *We are all Tasaday*, or Indians who have once more become “what they used to be”, or at least that which ethnology has made them—simulacra Indians who proclaim at last the universal truth of ethnology.

We all become living specimens under the spectral light of ethnology, or of anti-ethnology which is only the pure form of triumphal ethnology, under the sign of dead differences, and of the resurrection of differences. It is thus extremely naive to look for ethnology among the Savages or in some Third World—it is here, everywhere, in the metropolis, among the whites, in a world completely catalogued and analysed and then *artificially revived as though real*, in a world of simulation: of the hallucination of truth, of blackmail by the real, of the murder and historical (hysterical) retrospection of every symbolic form—a murder whose first victims were, noblesse oblige, the Savages, but which for a long time now has been extended to all Western societies.

1. Three revisionist anthropologists of the 1960s and 1970s, especially interested in Native American peoples and their suffering at the hands of the West: the French Robert Jaulin (1928–1996), Mexican American Carlos Castaneda (1925–1998), and French Pierre Clastres (1934–1977).
2. A town in the Burgundy region of central

France and home of the historic Schneider iron and steel mills, founded in 1837. In response to the mill's economic troubles and to the decline of coal mining in the region, the town established a museum in the Schneider family mansion, where it stages the work that it once did in earnest.

But at the same moment ethnology gives up its final and only lesson, the secret which kills it (and which the savages understood much better): the vengeance of the dead.

The confinement of the scientific object is the same as that of the insane and the dead. And just as the whole of society is hopelessly contaminated by that mirror of madness it has held out for itself, so science can only die contaminated by the death of the object which is its inverse mirror. It is science which ostensibly masters the object, but it is the latter which deeply invests the former, following an unconscious reversion, giving only dead and circular replies to a dead and circular interrogation.

Nothing changes when society breaks the mirror of madness (abolishes asylums, gives speech back to the mad, etc.) nor when science seems to break the mirror of its objectivity (effacing itself before its object, as Castaneda does, etc.) and to bow down before "differences." Confinement is succeeded by an apparatus which assumes a countless and endlessly diffractable, multipliable form. As fast as ethnology in its classical institution collapses, it survives in an anti-ethnology whose task is to reinject fictional difference and Savagery everywhere, in order to conceal the fact that it is this world, our own, which in its way has become savage again, that is to say devastated by difference and death.

It is in this way, under the pretext of saving the original, that the caves of Lascaux³ have been forbidden to visitors and an exact replica constructed 500 metres away, so that everyone can see them (you glance through a peephole at the real grotto and then visit the reconstituted whole). It is possible that the very memory of the original caves will fade in the mind of future generations, but from now on there is no longer any difference: the duplication is sufficient to render both artificial.

In the same way the whole of science and technology were recently mobilised to save the mummy of Rameses II, after it had been left to deteriorate in the basement of a museum.⁴ The West was panic-stricken at the thought of not being able to save what the symbolic order had been able to preserve for 40 centuries, but away from the light and gaze of onlookers. Rameses means nothing to us: only the mummy is of inestimable worth since it is what guarantees that accumulation means something. Our entire linear and accumulative culture would collapse if we could not stockpile the past in plain view. To this end the pharaohs must be brought out of their tombs, and the mummies out of their silence. To this end they must be exhumed and given military honors. They are prey to both science and the worms. Only absolute secrecy ensured their potency throughout the millennia—their mastery over putrefaction, which signified a mastery over the total cycle of exchange with death. We know better than to use our science for the *reparation* of the mummy, that is, to restore a *visible* order, whereas embalming was a mythical labor aimed at immortalising a *hidden* dimension.

We need a visible past, a visible continuum, a visible myth of origin to reassure us as to our ends, since ultimately we have never believed in them.

3. Site in southern France of cave paintings from the Upper Paleolithic period.

4. In 1977, at the instigation of a French archaeologist, the mummy of Rameses II (Egyptian pharaoh, ca. 1303–1213 B.C.E.) was brought from

Cairo to Paris for restoration. French scientists declared it cured of all infection and "immunized" for the future after repairing some tissues and sterilizing them with gamma radiation.

Whence that historic scene of the mummy's reception at Orly airport.⁵ All because Rameses was a great despot and military figure? Certainly: but above all because the order which our culture dreams of, behind that defunct power it seeks to annex, could have had nothing to do with it, and it dreams thus because it has exterminated this order by exhuming it *as if it were our own past*.

We are fascinated by Rameses as Renaissance Christians were by the American Indians: those (human?) beings who had never known the word of Christ. Thus, at the beginning of colonisation, there was a moment of stupor and amazement before the very possibility of escaping the universal law of the Gospel. There were two possible responses: either to admit that this law was not universal, or to exterminate the Indians so as to remove the evidence. In general, it was enough to convert them, or even simply to discover them, to ensure their slow extermination.

Thus it would have been enough to exhume Rameses to ensure his extermination by museumification. For mummies do not decay because of worms: they die from being transplanted from a prolonged symbolic order, which is master over death and putrescence, on to an order of history, science and museums—our own, which is no longer master over anything, since it only knows how to condemn its predecessors to death and putrescence and their subsequent resuscitation by science. An irreparable violence towards all secrets, the violence of a civilisation without secrets. The hatred by an entire civilization for its own foundations.

And just as with ethnology playing at surrendering its object the better to establish itself in its pure form, so museumification is only one more turn in the spiral of artificiality. Witness the cloister of St-Michel de Cuxa, which is going to be repatriated at great expense from the Cloisters in New York to be reinstalled on "its original site".⁶ And everyone is supposed to applaud this restitution (as with the "experimental campaign to win back the sidewalks" on the Champs-Élysées!⁷). However, if the exportation of the cornices was in effect an arbitrary act, and if the Cloisters of New York are really an artificial mosaic of all cultures (according to a logic of the capitalist centralisation of value), then reimportation to the original location is even more artificial: it is a total simulacrum that links up with "reality" by a complete circumvolution.

The cloister should have stayed in New York in its simulated environment, which at least would have fooled no one. Repatriation is only a supplementary subterfuge, in order to make out as though nothing had happened and to indulge in a retrospective hallucination.

In the same way Americans flatter themselves they brought the number of Indians back to what it was before their conquest. Everything is obliterated only to begin again. They even flatter themselves they went one better, by surpassing the original figure. This is presented as proof of the superiority of civilisation: it produces more Indians than they were capable of themselves. By a sinister mockery, this overproduction is yet again a way of destroying

5. One of two main airports serving Paris.

6. A 9th-century Benedictine monastery located in the northeast Pyrenees in France. (This cloister has not in fact been removed from the Clois-

ters, a New York City museum that contains medieval ecclesiastic architecture taken from Europe.)

7. Broad avenue in Paris.

them: for Indian culture, like all tribal culture, rests on the limitation of the group and prohibiting any of its "unrestricted" growth, as can be seen in case of Ishi.⁸ Demographic "promotion", therefore, is just one more step towards symbolic extermination.

We too live in a universe everywhere strangely similar to the original—here things are duplicated by their own scenario. But this double does not mean, as in folklore, the imminence of death—they are already purged of death, and are even better than in life; more smiling, more authentic, in light of their model, like the faces in funeral parlors.

Hyperreal and Imaginary

Disneyland is a perfect model of all the entangled orders of simulation. To begin with it is a play of illusions and phantasms: Pirates, the Frontier, Future World, etc. This imaginary world is supposed to be what makes the operation successful. But what draws the crowds is undoubtedly much more the social microcosm, the miniaturised and *religious* revelling in real America, in its delights and drawbacks. You park outside, queue up inside, and are totally abandoned at the exit. In this imaginary world the only phantasmagoria is in the inherent warmth and affection of the crowd, and in that sufficiently excessive number of gadgets used there to specifically maintain the multitudinous affect. The contrast with the absolute solitude of the parking lot—a veritable concentration camp—is total. Or rather: inside, a whole range of gadgets magnetise the crowd into direct flows—outside, solitude is directed onto a single gadget: the automobile. By an extraordinary coincidence (one that undoubtedly belongs to the peculiar enchantment of this universe), this deep-frozen infantile world happens to have been conceived and realised by a man who is himself now cryogenised: Walt Disney,⁹ who awaits his resurrection at minus 180 degrees centigrade.

The objective profile of America, then, may be traced throughout Disneyland, even down to the morphology of individuals and the crowd. All its values are exalted here, in miniature and comic strip form. Embalmed and pacified. Whence the possibility of an ideological analysis of Disneyland (L. Marin¹ does it well in *Utopies, jeux d'espaces*): digest of the American way of life, panegyric to American values, idealised transposition of a contradictory reality. To be sure. But this conceals something else, and that "ideological" blanket exactly serves to cover over a *third-order simulation*: Disneyland is there to conceal the fact that it is the "real" country, all of "real" America, which is Disneyland (just as prisons are there to conceal the fact that it is the social in its entirety, in its banal omnipresence, which is carceral²). Disneyland is presented as imaginary in order to make us believe that the rest is real, when in fact all of Los Angeles and the America

8. The last surviving member of the Yahi (d. 1916), a Native American tribe of northern California. "Discovered" in 1911 and famed as "the last Stone Age man," Ishi lived his last five years at the University of California's Museum of Anthropology in Berkeley.

9. The cartoonist and film producer (1901–1966), who opened Disneyland in 1955. Disney is widely (though mistakenly) believed to have had his body cryogenically preserved upon

death.

1. Louis Marin (1931–1992), French cultural historian and semiotician, who writes about Disneyland in *Utopies: Spatial Play* (1973).

2. Relating to prisons and imprisonment and incarceration. In his book about prisons, *Discipline and Punish* (1975; see above), MICHEL FOUCAULT claimed that modern society was increasingly "carceral."

surrounding it are no longer real, but of the order of the hyperreal and of simulation. It is no longer a question of a false representation of reality (ideology), but of concealing the fact that the real is no longer real, and thus of saving the reality principle.

The Disneyland imaginary is neither true nor false; it is a deterrence machine set up in order to rejuvenate in reverse the fiction of the real. Whence the debility, the infantile degeneration of this imaginary. It is meant to be an infantile world, in order to make us believe that the adults are elsewhere, in the “real” world, and to conceal the fact that real childishness is everywhere, particularly amongst those adults who go there to act the child in order to foster illusions as to their real childishness.

Moreover, Disneyland is not the only one. Enchanted Village, Magic Mountain, Marine World: Los Angeles is encircled by these “imaginary stations” which feed reality, reality-energy, to a town whose mystery is precisely that it is nothing more than a network of endless, unreal circulation—a town of fabulous proportions, but without space or dimensions. As much as electrical and nuclear power stations, as much as film studios, this town, which is nothing more than an immense script and a perpetual motion picture, needs this old imaginary made up of childhood signals and faked phantasms for its sympathetic nervous system.

1981

JÜRGEN HABERMAS

b. 1929

Committed to completing what he calls “the unfinished project of modernity,” Jürgen Habermas is the most important liberal political philosopher and public intellectual of post–World War II Germany. Although steeped in the Marxist tradition of the University of Frankfurt, Habermas nonetheless champions the civil liberties and formal equality before the law associated with constitutional democracy. In particular, he sees the Federal Republic of West Germany, formed after the war, as proof that constitutional representative government serves as a necessary, although not always sufficient, bulwark against the abuses of state power characteristic of the Nazis and, later, of East Germany’s Democratic Republic. Habermas recognizes that liberal democracies have been less successful when addressing questions of economic justice and equality, but he argues that the welfare state or what some Europeans call “social democracy” has a better track record in promoting and spreading prosperity than socialism or other alternatives. His political views led him to argue vehemently against the critique of modernity developed by French poststructuralist writers such as MICHEL FOUCAULT, JACQUES DERRIDA, and JEAN-FRANÇOIS LYOTARD. The postmodernism debates initiated in the 1970s often center on Habermas’s attempt to defend Enlightenment ideals (most fully articulated in the work of IMMANUEL KANT) of universal reason, rights, and justice against the critiques of the poststructuralists. In the first years of the twenty-first century, however, Derrida and

Habermas found common ground in their joint effort to articulate a “European” ethos against the United States and Britain’s military response to the terrorist attacks of 9/11.

Born in Düsseldorf in 1929, Habermas was just young enough to avoid service in Adolf Hitler’s army. He recalls the Nuremberg trials of the Nazi war criminals as the formative historical event of his youth, and he insists that Germany must always keep in mind the lessons of its militaristic, totalitarian, and genocidal past. As a public intellectual, Habermas has commented on just about every important event of the past fifty years, including strongly opposing (at the outset) the reunification of Germany after 1989 and arguing vehemently against the so-called new historians who tried to mitigate views of Nazi crimes by comparing them to Joseph Stalin’s murders in Russia. As a student, Habermas worked for and with THEODOR ADORNO at the Frankfurt Institute for Social Research, and he eventually directed the Frankfurt Institute himself for ten years (1983–93) after an earlier stint as director of the Max Planck Institute. Since his retirement from Frankfurt in 1993, Habermas has taught at several American universities and maintained an active presence as a scholar and a public intellectual.

Habermas’s early work, especially *Knowledge and Human Interests* (1968), reveals a Marxist concern with domination, class struggle, and emancipation. His liberalism retains a Marxist tint, notably in his refusal to consider the economic sphere a “private” domain off-limits to state action and in his focus on illegitimate power inequities. But his battle with poststructuralism and, in particular, his defense of a normative ideal of “communicative reason” shape his later work more than does Marxism. Fundamentally, Habermas remains committed to Kant’s desire to identify universal norms that underlie all claims to legitimate authority. Yet even in his early work, Habermas had a more historical understanding than Kant of how those norms emerge and of the specific social conditions needed for their efficacy. Since the 1980s, he has consistently moved away from “transcendental” arguments that ground reason or norms in the necessary conditions of communication or of thought. Instead, his work has become more “pragmatic” (to use a term from linguistics)—that is, more reliant on the intersubjective processes of communication in specific settings as the means through which norms are produced, revised, and enforced. Thus, he has become more interested in laws as they are politically established in specific societies and less interested in “reason,” especially in its universal form.

Habermas’s first book, *The Structural Transformation of the Public Sphere* (1962), already indicates the interest in civil society, civil liberties, and public communication that marks his endorsement of “the project of modernity” in his later debate with the postmodernists. Modernity, for Habermas, is largely a product of the Enlightenment dream of a free and just society guided by the light of reason. Western societies have not realized that dream, but it provides the standards by which they can measure their failings and thus strive for improvement. Of course, modernity is also a product of the economic arrangements of capitalism, of technological advances, and of the formation of nation-states grounded in ethnic and racial nationalisms. Habermas exhibits his Marxist training in his understanding of society as the product of conflicting forces and in his concern about the various forms of domination (economic, political, and bureaucratic) that threaten the possibility of a free and just society. But he firmly believes that we can criticize domination only from a standpoint that legitimizes political and social arrangements in terms of their rationality and their normative commitment to equality.

Poststructuralists argue that *reason* is an exclusionary term, used to denigrate or silence unwelcome opinions. The other side is always “irrational.” In particular, nonprivileged social groups such as women, the poor, children, racial and ethnic others, and the disabled are consistently portrayed as unreasonable. Thus, the “universality” that purports to treat all people equally becomes a double bind: because the standards of “reason” are deemed universally applicable (and everywhere the

same), whole social groups are marginalized (or worse) for supposedly failing to meet those standards. Moreover, the instrumental reason associated with the economic and scientific practices that prevail in “modern” societies has produced nuclear weapons, environmental degradation, and the merciless bureaucracies that Foucault so memorably describes in *Discipline and Punish* (1975). It is far from obvious that modernity has increased the freedom or improved the quality of life of most of the world’s inhabitants. To many poststructuralists, in light of this history of oppression and destruction the unconditional celebration of reason appears naive at best, and complicit with those ill effects at worst.

Habermas disagrees. He admits that universal rights have been honored more in the breach than in the observance, but he still thinks that reason, suitably revised, can serve as the ideal against which actual practice can be judged. Only the existence of such a norm, he insists, frees us from a political world in which might makes right. And he argues that Foucault (in particular) assumes this very norm even as he attacks reason, since it is the failure of reason in practice to be universal that incites Foucault’s ire.

Habermas identifies the norm as “the ideal speech situation,” on which depends the very possibility of what he calls “communicative action.” He argues that we can derive an effective rational and universal norm if we examine the conditions required for successful communication. This focus on pragmatics makes Habermas especially interesting for literary theorists. He contends that people would not be able to understand one another or to coordinate their activities together without some fundamental agreements embedded in the speech situation.

In our first selection, “The Public Sphere” (1964), Habermas summarizes his influential historical account of the genesis of the Enlightenment ideal of reason. Before the formation of the bourgeoisie (men who command considerable wealth not based on owning land), power and rights in Europe were divided up among the monarch, the nobility (the “first estate”), and the clergy (the “second estate”); members of the populace as a whole (the “third estate”) were passive subjects. King, nobility, and clergy continually jockeyed for advantage in the medieval social order, each drawing power from the allegiance of different segments of the nation’s population, as the balance tilted first one way, then another.

The bourgeoisie, however, gained social but not political power by accumulating “private” wealth—that is, wealth unconnected with the political power that comes from holding legitimate and actual sway over other people. Within the old order (often called the *ancien régime*), the bourgeoisie had no way to translate its growing economic and social power into political power. So this new class needed to change the whole order. (Habermas is offering his own answer here to the question “What caused the French Revolution?”) One key issue is whether the bourgeoisie’s revolution can benefit the nonbourgeois members of the third estate. Habermas believes that the values associated with the new public sphere are at least potentially liberating for all, even if in fact the poor, the uneducated, and various stigmatized groups have not enjoyed the fruits of that transformation.

The crucial change began with the transformation of the public sphere, the creation of “civil society” in its modern form. Unlike the court, the aristocratic estate, the cathedral, the family home, or the place of business, civil society features the congregation of private persons who are not acting in any official capacity when they get together, who do not know each other intimately, and who gather primarily to talk and exchange opinions. Habermas has in mind not just the face-to-face exchanges of the salon and the coffeehouse but also the explosion of newspapers and other written expressions of opinion during the eighteenth century. As TERRY EAGLETON puts it in his Habermasian *The Function of Criticism* (1984): “Modern criticism was born of a struggle against the absolutist state.” Post-Renaissance literary criticism is one important form of the publicly enunciated opinions that mark the emergence of the bourgeoisie from the “private” realm onto the public stage of

politics. This claim that the eighteenth century saw the creation of a new "public," one that developed a sense of its own identity through the emergence of a print culture that mediated its interactions, is later deployed by BENEDICT ANDERSON to explain the rise of nationalism during that same time period.

For Habermas, as he explains in *The Structural Transformation of the Public Sphere*, Enlightenment "standards of 'reason' and the forms of the 'law'" emerge from this explosion of speech aimed at persuading others. He is not claiming here (as at times he appears to do) that some agreement about these standards has been reached. Rather, the point is that the very grounds of legitimacy have shifted. Increasingly, governments must account for their actions in the court of public opinion, and they will win the case only if they can convince significant portions of the population that those actions are "reasonable" and "legal." Appeals to traditional authority or to absolutist imposition will no longer do. The bourgeoisie triumphs over the monarchy, nobility, and clergy because "public opinion" becomes powerful (although not all-powerful), and the transformation of the public sphere is an essential precondition for that victory.

Habermas ends his encyclopedia article by briefly considering how the public sphere in the twentieth century differs from its eighteenth-century ancestor. In mass democracies, he worries, face-to-face interactions in public spaces are no longer common: they have been replaced by the circulation of ideas and images in the mass media. The centralized and corporate control of the media threatens a free, open, and fully diverse exchange of ideas and information. Against this threat, he does find hope in the rights and freedoms guaranteed in democracies. But he argues that those benefits can be maintained only if various social groups organize themselves politically and work ceaselessly to make the state deliver on its promises.

This theme of bringing pressure to bear so that ideals of democracy and freedom can be realized returns in our second selection, "Modernity—An Incomplete Project" (1980), which sharply delineates his differences with the postmodernists. Habermas argues that the Enlightenment project of basing authority on reason has gone awry because the specialized discourses of economics, of bureaucratic administration, of technological knowledge, and of art have become separated from the "life-world" of everyday moral and practical decisions. As science, economics, government, and art become increasingly autonomous and professionalized, they grow distant from the needs of the people. Thus, the criticism of modernity and its experts launched by traditional conservatives, neoconservatives, and "young conservative" poststructuralists is understandable, even justified. But Habermas strongly urges that we not condemn modernity altogether. Instead of rejecting Enlightenment ideals of equality and civil liberties and their extension to all, we must strive to fully reintegrate the discourses of modern science, art, and politics with the everyday perspectives of a life-world in which people seek a decent life for themselves and their loved ones. The prestige of Enlightenment ideals gives people in post-Enlightenment societies a lever with which to move their less-than-perfect societies toward a better future.

Habermas reads modernism in the arts as a failed attempt to rectify on a cultural level "the differentiation of science, morality and art . . . from the hermeneutics of everyday communication" that is characteristic of social modernization. He scorns neoconservative attempts to blame the arts for the erosion of tradition caused by capitalist transformations. But he sees modernist art, even the radical "surrealist attempt to blow up the autarkical sphere of art and to force a reconciliation of art and life," as incapable of reversing the alienations of modernity, because it is confined to "a single cultural sphere." Remedying the ills of modernity requires a more holistic analysis and action on a wider social terrain. Habermas admits that "the chances for this today are not very good." But he points out that "young conservative" poststructuralists are beholden to a modernity they claim to despise, because they launch their critique from a distanced aesthetic space. They rely on that distance for their anti-modernism, not realizing that such distance is quintessentially modern and is in fact

what is most wrong with modernity. In short, Habermas (once again displaying his Marxist roots) insists that only a holistic approach can ensure political effectiveness. At the same time, he believes that liberal constitutional guarantees offer the best bulwark against oppression by accumulated economic or state power.

It would be hard to overestimate the impact of Habermas's characterization of the poststructuralists as "young conservatives" or of his description of a surprising "alliance of postmodernists with premodernists" linked by their shared hostility to modernity. The argument over the political significance of poststructuralism has been fierce—and inconclusive. Like the contemporaneous debate between Anglo-American and French feminisms, the battle is between two visions of social transformation, both of which are left of center. At issue is the extent to which the very terms by which political emancipation has been understood since the Enlightenment are themselves a hindrance to liberation. "Modernity—An Incomplete Project" has been a major rallying point for artists and critics who believe that liberal ideals of universal right, equal protection under the law, and economic justice are norms that should be protected from critique and norms to which our societies should be held answerable.

Not a single thing Habermas has argued has gone uncontested, from his historical claims about the eighteenth century to his various accounts of speech pragmatics to his arguments about the necessity of rational norms and of completing the project of modernity. Critics have questioned the possibility of isolating universal norms of "communicative reason" or of other liberal ideals from the vastly different situations in which they are embedded. Similarly, the existence of many different public spheres—with distinctive conventions, protocols, and histories of censorship, media development, and cultural or national identity formation—makes generalizations about the "ideal speech situation" suspect. In short, norms appear more context-sensitive and potentially oppressive than Habermas allows. Partly in response to such criticisms, Habermas's own work has continued to evolve, moving from a focus on communicative reason in the early 1980s to issues of "discourse ethics" in the late 1980s, questions of law and democracy in the 1990s, and questions of the pressures of nationalism, religion, terrorism, and immigration in his twenty-first-century work.

"Modernity—An Incomplete Project" Keywords: Aesthetics, Enlightenment Theory, Modernity, Postmodernity

The Public Sphere: An Encyclopedia Article¹

1. *The Concept.* By "the public sphere" we mean first of all a realm of our social life in which something approaching public opinion can be formed. Access is guaranteed to all citizens. A portion of the public sphere comes into being in every conversation in which private individuals assemble to form a public body.² They then behave neither like business or professional people transacting private affairs, nor like members of a constitutional order subject to the legal constraints of a state bureaucracy. Citizens behave as a

1. Edited by Peter Uwe Hohendahl, and translated by Sara Lennox and Frank Lennox, who sometimes include the original German in parentheses.

2. Habermas' concept of the public sphere is not to be equated with that of "the public," i.e. of the

individuals who assemble. His concept is directed instead at the institution, which to be sure only assumes concrete form through the participation of people. It cannot, however, be characterized simply as a crowd [Hohendahl's note].

public body when they confer in an unrestricted fashion—that is, with the guarantee of freedom of assembly and association and the freedom to express and publish their opinions—about matters of general interest. In a large public body this kind of communication requires specific means for transmitting information and influencing those who receive it. Today newspapers and magazines, radio and television are the media of the public sphere. We speak of the political public sphere in contrast, for instance, to the literary one, when public discussion deals with objects connected to the activity of the state. Although state authority is so to speak the executor of the political public sphere, it is not a part of it.³ To be sure, state authority is usually considered “public” authority, but it derives its task of caring for the well-being of all citizens primarily from this aspect of the public sphere. Only when the exercise of political control is effectively subordinated to the democratic demand that information be accessible to the public, does the political public sphere win an institutionalized influence over the government through the instrument of law-making bodies. The expression “public opinion” refers to the tasks of criticism and control which a public body of citizens informally—and, in periodic elections, formally as well—practices *vis-à-vis* the ruling structure organized in the form of a state. Regulations demanding that certain proceedings be public (*Publizitätsvorschriften*), for example those providing for open court hearings, are also related to this function of public opinion. The public sphere as a sphere which mediates between society and state, in which the public organizes itself as the bearer of public opinion, accords with the principle of the public sphere⁴—that principle of public information which once had to be fought for against the arcane policies of monarchies and which since that time has made possible the democratic control of state activities.

It is no coincidence that these concepts of the public sphere and public opinion arose for the first time only in the eighteenth century. They acquire their specific meaning from a concrete historical situation. It was at that time that the distinction of “opinion” from “opinion publique” and “public opinion” came about. Though mere opinions (cultural assumptions, normative attitudes, collective prejudices and values) seem to persist unchanged in their natural form as a kind of sediment of history, public opinion can by definition only come into existence when a reasoning public is presupposed. Public discussions about the exercise of political power which are both critical in intent and institutionally guaranteed have not always existed—they grew out of a specific phase of bourgeois society and could enter into the order of the bourgeois constitutional state only as a result of a particular constellation of interests.

2. History. There is no indication European society of the high middle ages possessed a public sphere as a unique realm distinct from the private

3. The state and the public sphere do not overlap, as one might suppose from casual language use. Rather they confront one another as opponents. Habermas designates that sphere as public which antiquity understood to be private, i.e. the sphere of non-governmental opinion making [Hohendahl's note].

4. The principle of the public sphere could still be distinguished from an institution which is

demonstrable in social history. Habermas thus would mean a model of norms and modes of behavior by means of which the very functioning of public opinion can be guaranteed for the first time. These norms and modes of behavior include: (a) general accessibility; (b) elimination of all privileges and (c) discovery of general norms and rational legitimations [Hohendahl's note].

sphere. Nevertheless, it was not coincidental that during that period symbols of sovereignty, for instance the princely seal, were deemed "public." At that time there existed a public representation of power. The status of the feudal lord, at whatever level of the feudal pyramid, was oblivious to the categories "public" and "private," but the holder of the position represented it publicly: he showed himself, presented himself as the embodiment of an ever present "higher" power. The concept of this representation has been maintained up to the most recent constitutional history. Regardless of the degree to which it has loosed itself from the old base, the authority of political power today still demands a representation at the highest level by a head of state. Such elements, however, derive from a pre-bourgeois social structure. Representation in the sense of a bourgeois public sphere,⁵ for instance the representation of the nation or of particular mandates, has nothing to do with the medieval representative public sphere—a public sphere directly linked to the concrete existence of a ruler. As long as the prince and the estates of the realm still "are" the land, instead of merely functioning as deputies for it, they are able to "re-present"; they represent their power "before" the people, instead of for the people.

The feudal authorities (church, princes and nobility), to which the representative public sphere was first linked, disintegrated during a long process of polarization. By the end of the eighteenth century they had broken apart into private elements on the one hand, and into public on the other. The position of the church changed with the reformation:⁶ the link to divine authority which the church represented, that is, religion, became a private matter. So-called religious freedom came to insure what was historically the first area of private autonomy. The church itself continued its existence as one public and legal body among others. The corresponding polarization within princely authority was visibly manifested in the separation of the public budget from the private household expenses of a ruler. The institutions of public authority, along with the bureaucracy and the military, and in part also with the legal institutions, asserted their independence from the privatized sphere of the princely court. Finally, the feudal estates⁷ were transformed as well: the nobility became the organs of public authority, parliament and the legal institutions; while those occupied in trades and professions, insofar as they had already established urban corporations and territorial organizations, developed into a sphere of bourgeois society which would stand apart from the state as a genuine area of private autonomy.

The representative public sphere yielded to that new sphere of "public authority" which came into being with national and territorial states. Continuous state activity (permanent administration, standing army) now corresponded to the permanence of the relationships which with the stock exchange and the press had developed within the exchange of commodities and information. Public authority consolidated into a concrete opposition

5. The expression "represent" is used in a very specific sense in the following section, namely to "present oneself." The important thing to understand is that the medieval public sphere, if it even deserves this designation, is tied to the *personal*. The feudal lord and estates create the public sphere by means of their very presence [Hohendahl's note].

6. The religious movement to reform the Catholic Church, initiated by Martin Luther in 1517, that led to the establishment of Protestant churches in Europe.

7. That is, classes. Before the Revolution of 1789, the French legislative assembly represented the three estates: nobility, clergy, and commons.

for those who were merely subject to it and who at first found only a negative definition of themselves within it. These were the “private individuals” who were excluded from public authority because they held no office. “Public” no longer referred to the “representative” court of a prince endowed with authority, but rather to an institution regulated according to competence, to an apparatus endowed with a monopoly on the legal exertion of authority. Private individuals subsumed in the state at whom public authority was directed now made up the public body.

Society, now a private realm occupying a position in opposition to the state, stood on the one hand as if in clear contrast to the state. On the other hand, that society had become a concern of public interest to the degree that the reproduction of life in the wake of the developing market economy had grown beyond the bounds of private domestic authority. *The bourgeois public sphere* could be understood as the sphere of private individuals assembled into a public body, which almost immediately laid claim to the officially regulated “intellectual newspapers” for use against the public authority itself. In those newspapers, and in moralistic and critical journals, they debated that public authority on the general rules of social intercourse in their fundamentally privatized yet publically relevant sphere of labor and commodity exchange.

3. *The Liberal Model of the Public Sphere.* The medium of this debate—public discussion—was unique and without historical precedent. Hitherto the estates had negotiated agreements with their princes, settling their claims to power from case to case. This development took a different course in England, where the parliament limited royal power,⁸ than it did on the continent, where the monarchies mediatized the estates. The third estate then broke with this form of power arrangement since it could no longer establish itself as a ruling group. A division of power by means of the delineation of the rights of the nobility was no longer possible within an exchange economy—private authority over capitalist property is, after all, unpolitical. Bourgeois individuals are private individuals. As such, they do not “rule.” Their claims to power *vis-à-vis* public authority were thus directed not against the concentration of power, which was to be “shared.” Instead, their ideas infiltrated the very principle on which the existing power is based. To the principle of the existing power, the bourgeois public opposed the principle of supervision—that very principle which demands that proceedings be made public (*Publizität*). The principle of supervision is thus a means of transforming the nature of power, not merely one basis of legitimation exchanged for another.

In the first modern constitutions the catalogues of fundamental rights were a perfect image of the liberal model of the public sphere: they guaranteed the society as a sphere of private autonomy and the restriction of public authority to a few functions. Between these two spheres, the constitutions further insured the existence of a realm of private individuals assembled into a public body who as citizens transmit the needs of bourgeois society to the state, in order, ideally, to transform political into “rational” authority within the medium of this public sphere. The general interest, which was the measure of such a rationality, was then guaranteed, according to the

8. The provisions of the 1689 Bill of Rights, which declared William of Orange and his wife, Mary, joint sovereigns of Great Britain, also gave Parliament political supremacy.

presuppositions of a society of free commodity exchange, when the activities of private individuals in the marketplace were freed from social compulsion and from political pressure in the public sphere.

At the same time, daily political newspapers assumed an important role. In the second half of the eighteenth century literary journalism created serious competition for the earlier news sheets which were mere compilations of notices. Karl Bücher⁹ characterized this great development as follows: "Newspapers changed from mere institutions for the publication of news into bearers and leaders of public opinion—weapons of party politics. This transformed the newspaper business. A new element emerged between the gathering and the publication of news: the editorial staff. But for the newspaper publisher it meant that he changed from a vendor of recent news to a dealer in public opinion." The publishers insured the newspapers a commercial basis, yet without commercializing them as such. The press remained an institution of the public itself, effective in the manner of a mediator and intensifier of public discussion, no longer a mere organ for the spreading of news but not yet the medium of a consumer culture.

This type of journalism can be observed above all during periods of revolution when newspapers of the smallest political groups and organizations spring up, for instance in Paris in 1789. Even in the Paris of 1848¹ every half-way eminent politician organized his club, every other his journal: 450 clubs and over 200 journals were established there between February and May alone. Until the permanent legalization of a politically functional public sphere, the appearance of a political newspaper meant joining the struggle for freedom and public opinion, and thus for the public sphere as a principle. Only with the establishment of the bourgeois constitutional state was the intellectual press relieved of the pressure of its convictions. Since then it has been able to abandon its polemical position and take advantage of the earning possibilities of a commercial undertaking. In England, France, and the United States the transformation from a journalism of conviction to one of commerce began in the 1830s at approximately the same time. In the transition from the literary journalism of private individuals to the public services of the mass media the public sphere was transformed by the influx of private interests, which received special prominence in the mass media.

4. *The Public Sphere in the Social Welfare State Mass Democracy.* Although the liberal model of the public sphere is still instructive today with respect to the normative claim that information be accessible to the public,² it cannot be applied to the actual conditions of an industrially advanced mass democracy organized in the form of the social welfare state. In part the liberal model had always included ideological components, but it is also in part true that the social pre-conditions, to which the ideological elements could at one time at least be linked, had been fundamentally transformed. The very forms in which the public sphere manifested itself, to which supporters of the liberal model could appeal for evidence, began to change with the Chartist move-

2. Here it should be understood that Habermas considers the principle behind the bourgeois public sphere as indispensable but not its historical form [Hohendahl's note].

ment in England³ and the February revolution in France. Because of the diffusion of press and propaganda, the public body expanded beyond the bounds of the bourgeoisie. The public body lost not only its social exclusivity; it lost in addition the coherence created by bourgeois social institutions and a relatively high standard of education. Conflicts hitherto restricted to the private sphere now intrude into the public sphere. Group needs which can expect no satisfaction from a self-regulating market now tend towards a regulation by the state. The public sphere, which must now mediate these demands, becomes a field for the competition of interests, competitions which assume the form of violent conflict. Laws which obviously have come about under the "pressure of the street" can scarcely still be understood as arising from the consensus of private individuals engaged in public discussion. They correspond in a more or less unconcealed manner to the compromise of conflicting private interests. Social organizations which deal with the state act in the political public sphere, whether through the agency of political parties or directly in connection with the public administration. With the interweaving of the public and private realm, not only do the political authorities assume certain functions in the sphere of commodity exchange and social labor, but conversely social powers now assume political functions. This leads to a kind of "refeudalization" of the public sphere. Large organizations strive for political compromises with the state and with each other, excluding the public sphere whenever possible. But at the same time the large organizations must assure themselves of at least plebiscitary support from the mass of the population through an apparent display of openness (*demonstrative Publizität*).⁴

The political public sphere of the social welfare state is characterized by a peculiar weakening of its critical functions. At one time the process of making proceedings public (*Publizität*) was intended to subject persons or affairs to public reason, and to make political decisions subject to appeal before the court of public opinion. But often enough today the process of making public simply serves the arcane policies of special interests; in the form of "publicity" it wins public prestige for people or affairs, thus making them worthy of acclamation in a climate of non-public opinion. The very words "public relations work" (*Öffentlichkeitsarbeit*) betray the fact that a public sphere must first be arduously constructed case by case, a public sphere which earlier grew out of the social structure. Even the central relationship of the public, the parties and the parliament is affected by this change in function.

Yet this trend towards the weakening of the public sphere as a principle is opposed by the extension of fundamental rights in the social welfare state. The demand that information be accessible to the public is extended from organs of the state to all organizations dealing with the state. To the degree that this is realized, a public body of organized private individuals would take the place of the now-defunct public body of private individuals who relate individually to each other. Only these organized individuals could participate effectively in the process of public communication; only they could

3. A working-class movement (1838–48) that took its name from a petition, the People's Charter, calling for such reforms as universal male suffrage.

4. One must distinguish between Habermas' concept of "making proceedings public" (*Publizität*) and the "public sphere" (*Öffentlichkeit*). The

term *Publizität* describes the degree of public effect generated by a public act. Thus a situation can arise in which the form of public opinion making is maintained, while the substance of the public sphere has long ago been undermined [Hohendahl's note].

use the channels of the public sphere which exist within parties and associations and the process of making proceedings public (*Publizität*) which was established to facilitate the dealings of organizations with the state. Political compromises would have to be legitimized through this process of public communication. The idea of the public sphere, preserved in the social welfare state mass democracy, an idea which calls for a rationalization of power through the medium of public discussion among private individuals, threatens to disintegrate with the structural transformation of the public sphere itself. It could only be realized today, on an altered basis, as a rational reorganization of social and political power under the mutual control of rival organizations committed to the public sphere in their internal structure as well as in their relations with the state and each other.

1964

Modernity—An Incomplete Project¹

In 1980, architects were admitted to the Biennial in Venice,² following painters and filmmakers. The note sounded at this first Architecture Biennial was one of disappointment. I would describe it by saying that those who exhibited in Venice formed an avant-garde of reversed fronts. I mean that they sacrificed the tradition of modernity in order to make room for a new historicism. Upon this occasion, a critic of the German newspaper, *Frankfurter Allgemeine Zeitung*, advanced a thesis whose significance reaches beyond this particular event; it is a diagnosis of our times: "Postmodernity definitely presents itself as Antimodernity." This statement describes an emotional current of our times which has penetrated all spheres of intellectual life. It has placed on the agenda theories of postenlightenment, postmodernity, even of posthistory.

From history we know the phrase, "The Ancients and the Moderns." Let me begin by defining these concepts. The term "modern" has a long history, one which has been investigated by Hans Robert Jauss.³ The word "modern" in its Latin form "modernus" was used for the first time in the late 5th century in order to distinguish the present, which had become officially Christian, from the Roman and pagan past. With varying content, the term "modern" again and again expresses the consciousness of an epoch that relates itself to the past of antiquity, in order to view itself as the result of a transition from the old to the new.

Some writers restrict this concept of "modernity" to the Renaissance, but this is historically too narrow. People considered themselves modern during the period of Charles the Great in the 12th century, as well as in France of the late 17th century at the time of the famous "Querelle des

Anciens et des Modernes.”⁴ That is to say, the term “modern” appeared and reappeared exactly during those periods in Europe when the consciousness of a new epoch formed itself through a renewed relationship to the ancients—whenever, moreover, antiquity was considered a model to be recovered through some kind of imitation.

The spell which the classics of the ancient world cast upon the spirit of later times was first dissolved with the ideals of the French Enlightenment. Specifically, the idea of being “modern” by looking back to the ancients changed with the belief, inspired by modern science, in the infinite progress of knowledge and in the infinite advance towards social and moral betterment. Another form of modernist consciousness was formed in the wake of this change. The romantic modernist sought to oppose the antique ideals of the classicists; he looked for a new historical epoch and found it in the idealized Middle Ages. However, this new ideal age, established early in the 19th century, did not remain a fixed ideal. In the course of the 19th century, there emerged out of this romantic spirit that radicalized consciousness of modernity which freed itself from all specific historical ties. This most recent modernism simply makes an abstract opposition between tradition and the present; and we are, in a way, still the contemporaries of that kind of aesthetic modernity which first appeared in the midst of the 19th century. Since then, the distinguishing mark of works which count as modern is “the new” which will be overcome and made obsolete through the novelty of the next style. But, while that which is merely “stylish” will soon become outmoded, that which is modern preserves a secret tie to the classical. Of course, whatever can survive time has always been considered to be a classic. But the emphatically modern document no longer borrows this power of being a classic from the authority of a past epoch; instead, a modern work becomes a classic because it has once been authentically modern. Our sense of modernity creates its own self-enclosed canons of being classic. In this sense we speak, e.g., in view of the history of modern art, of classical modernity. The relation between “modern” and “classical” has definitely lost a fixed historical reference.

The Discipline of Aesthetic Modernity

The spirit and discipline of aesthetic modernity assumed clear contours in the work of Baudelaire.⁵ Modernity then unfolded in various avant-garde movements and finally reached its climax in the Café Voltaire of the dadaists and in surrealism.⁶ Aesthetic modernity is characterized by attitudes which find a common focus in a changed consciousness of time. This time consciousness expresses itself through metaphors of the vanguard and the avant-garde. The avant-garde understands itself as invading unknown territory, exposing itself to the dangers of sudden, shocking encounters, conquering an as yet unoccupied future. The avant-garde must find a direction in a landscape into which no one seems to have yet ventured.

4. Quarrel of the Ancients and the Moderns (French), a literary dispute between those arguing for strict adherence to classical (Greek and Latin) models and defenders of modern (contemporary) works. “Charles the Great” may refer to Charlemagne (742–814), though Habermas places him in the wrong century, perhaps intentionally.
5. Charles Baudelaire (1821–1867), French poet

and critic.

6. An artistic movement, founded in 1924, that grew directly out of dadaism, which began during World War I; both reacted against logic and both intended to revolutionize art and society. Café Voltaire: meeting place (1915–17) in Zurich, Switzerland, of a group of artists identified with dadaism.

But these forward gropings, this anticipation of an undefined future and the cult of the new mean in fact the exaltation of the present. The new time consciousness, which enters philosophy in the writings of Bergson,⁷ does more than express the experience of mobility in society, of acceleration in history, of discontinuity in everyday life. The new value placed on the transitory, the elusive and the ephemeral, the very celebration of dynamism, discloses a longing for an undefiled, immaculate and stable present.

This explains the rather abstract language in which the modernist temper has spoken of the "past." Individual epochs lose their distinct forces. Historical memory is replaced by the heroic affinity of the present with the extremes of history—a sense of time wherein decadence immediately recognizes itself in the barbaric, the wild and the primitive. We observe the anarchistic intention of blowing up the continuum of history, and we can account for it in terms of the subversive force of this new aesthetic consciousness. Modernity revolts against the normalizing functions of tradition; modernity lives on the experience of rebelling against all that is normative. This revolt is one way to neutralize the standards of both morality and utility. This aesthetic consciousness continuously stages a dialectical play between secrecy and public scandal; it is addicted to a fascination with that horror which accompanies the act of profaning, and yet is always in flight from the trivial results of profanation.

On the other hand, the time consciousness articulated in avant-garde art is not simply ahistorical; it is directed against what might be called a false normativity in history. The modern, avant-garde spirit has sought to use the past in a different way; it disposes those pasts which have been made available by the objectifying scholarship of historicism, but it opposes at the same time a neutralized history which is locked up in the museum of historicism.

Drawing upon the spirit of surrealism, Walter Benjamin⁸ constructs the relationship of modernity to history in what I would call a posthistoricist attitude. He reminds us of the self-understanding of the French Revolution: "The Revolution cited ancient Rome, just as fashion cites an antiquated dress. Fashion has a scent for what is current, whenever this moves within the thicket of what was once." This is Benjamin's concept of the *Jetztzeit*,⁹ of the present as a moment of revelation; a time in which splinters of a messianic presence are enmeshed. In this sense, for Robespierre, the antique Rome was a past laden with momentary revelations.¹

Now, this spirit of aesthetic modernity has recently begun to age. It has been recited once more in the 1960s; after the 1970s, however, we must admit to ourselves that this modernism arouses a much fainter response today than it did fifteen years ago. Octavio Paz,² a fellow-traveller of modernity, noted already in the middle of the 1960s that "the avant-garde of 1967 repeats the deeds and gestures of those of 1917. We are experiencing the end of the idea of modern art." The work of Peter Bürger has since taught us to speak of "post-avant-garde" art; this term is chosen to indicate the failure of

the surrealist rebellion.³ But what is the meaning of this failure? Does it signal a farewell to modernity? Thinking more generally, does the existence of a post-avant-garde mean there is a transition to that broader phenomenon called postmodernity?

This is in fact how Daniel Bell,⁴ the most brilliant of the American neo-conservatives, interprets matters. In his book, *The Cultural Contradictions of Capitalism*, Bell argues that the crises of the developed societies of the West are to be traced back to a split between culture and society. Modernist culture has come to penetrate the values of everyday life; the life-world⁵ is infected by modernism. Because of the forces of modernism, the principle of unlimited self-realization, the demand for authentic self-experience and the subjectivism of a hyperstimulated sensitivity have come to be dominant. This temperament unleashes hedonistic motives irreconcilable with the discipline of professional life in society, Bell says. Moreover, modernist culture is altogether incompatible with the moral basis of a purposive, rational conduct of life. In this manner, Bell places the burden of responsibility for the dissolution of the Protestant ethic (a phenomenon which had already disturbed Max Weber⁶) on the “adversary culture.” Culture in its modern form stirs up hatred against the conventions and virtues of everyday life, which has become rationalized under the pressures of economic and administrative imperatives.

I would call your attention to a complex wrinkle in this view. The impulse of modernity, we are told on the other hand, is exhausted; anyone who considers himself avant-garde can read his own death warrant. Although the avant-garde is still considered to be expanding, it is supposedly no longer creative. Modernism is dominant but dead. For the neoconservative the question then arises: how can norms arise in society which will limit libertinism, reestablish the ethic of discipline and work? What new norms will put a brake on the levelling caused by the social welfare state so that the virtues of individual competition for achievement can again dominate? Bell sees a religious revival to be the only solution. Religious faith tied to a faith in tradition will provide individuals with clearly defined identities and existential security.

Cultural Modernity and Societal Modernization

One can certainly not conjure up by magic the compelling beliefs which command authority. Analyses like Bell's, therefore, only result in an attitude which is spreading in Germany no less than in the States: an intellectual and political confrontation with the carriers of cultural modernity. I cite Peter Steinfels, an observer of the new style which the neoconservatives have imposed upon the intellectual scene in the 1970s:

3. For Paz on the avant-garde see in particular *Children of the Mire: Modern Poetry from Romanticism to the Avant-Garde* (1974), pp. 148–64. For Bürger see *Theory of the Avant-Garde* (1983) [Foster's note]. Bürger (1936–2017), German literary critic.

4. American sociologist (1919–2011); *The Cultural Contradictions of Capitalism* was published in 1976.

5. Ordinary, daily lived experience: Habermas uses the term to distinguish everyday life from the specialized “systems” of knowledge and procedure that have emerged in complex, modern societies.

6. German sociologist (1864–1920); his best-known work is *The Protestant Ethic and the Spirit of Capitalism* (1905).

The struggle takes the form of exposing every manifestation of what could be considered an oppositionist mentality and tracing its "logic" so as to link it to various forms of extremism: drawing the connection between modernism and nihilism . . . between government regulation and totalitarianism, between criticism of arms expenditures and subservience to communism, between Women's liberation or homosexual rights and the destruction of the family . . . between the Left generally and terrorism, anti-semitism, and fascism . . .⁷

The *ad hominem* approach and the bitterness of these intellectual accusations have also been trumpeted loudly in Germany. They should not be explained so much in terms of the psychology of neoconservative writers; rather, they are rooted in the analytical weaknesses of neoconservative doctrine itself.

Neoconservatism shifts onto cultural modernism the uncomfortable burdens of a more or less successful capitalist modernization of the economy and society. The neoconservative doctrine blurs the relationship between the welcomed process of societal modernization on the one hand, and the lamented cultural development on the other. The neoconservative does not uncover the economic and social causes for the altered attitudes towards work, consumption, achievement and leisure. Consequently, he attributes all of the following—hedonism, the lack of social identification, the lack of obedience, narcissism, the withdrawal from status and achievement competition—to the domain of "culture." In fact, however, culture is intervening in the creation of all these problems in only a very indirect and mediated fashion.

In the neoconservative view, those intellectuals who still feel themselves committed to the project of modernity are then presented as taking the place of those unanalyzed causes. The mood which feeds neoconservatism today in no way originates from discontent about the antinomian consequences⁸ of a culture breaking from the museums into the stream of ordinary life. This discontent has not been called into life by modernist intellectuals. It is rooted in deep-seated reactions against the process of *societal* modernization. Under the pressures of the dynamics of economic growth and the organizational accomplishments of the state, this social modernization penetrates deeper and deeper into previous forms of human existence. I would describe this subordination of the life-worlds under the system's imperatives as a matter of disturbing the communicative infrastructure of everyday life.

Thus, for example, neopopulist protests only express in pointed fashion a widespread fear regarding the destruction of the urban and natural environment and of forms of human sociability. There is a certain irony about these protests in terms of neoconservatism. The tasks of passing on a cultural tradition, of social integration and of socialization require adherence to what I call communicative rationality. But the occasions for protest and discontent originate precisely when spheres of communicative action, centered on the reproduction and transmission of values and norms, are penetrated by a form of modernization guided by standards of economic and administra-

7. Peter Steinfels, *The Neoconservatives* (1979), p. 65 [Foster's note]. Steinfels (b. 1941), American editor and journalist.

8. That is, the resulting rejection of socially established norms and morality.

tive rationality—in other words, by standards of rationalization quite different from those of communicative rationality on which those spheres depend. But neoconservative doctrines turn our attention precisely away from such societal processes: they project the causes, which they do not bring to light, onto the plane of a subversive culture and its advocates.

To be sure, cultural modernity generates its own aporias⁹ as well. Independently from the consequences of *societal* modernization and within the perspective of *cultural* development itself, there originate motives for doubting the project of modernity. Having dealt with a feeble kind of criticism of modernity—that of neoconservatism—let me now move our discussion of modernity and its discontents into a different domain that touches on these aporias of cultural modernity—issues that often serve only as a pretense for those positions which either call for a postmodernity, recommend a return to some form of premodernity, or throw modernity radically overboard.

The Project of Enlightenment

The idea of modernity is intimately tied to the development of European art, but what I call “the project of modernity” comes only into focus when we dispense with the usual concentration upon art. Let me start a different analysis by recalling an idea from Max Weber. He characterized cultural modernity as the separation of the substantive reason expressed in religion and metaphysics into three autonomous spheres. They are: science, morality and art. These came to be differentiated because the unified world-views of religion and metaphysics fell apart. Since the 18th century, the problems inherited from these older world-views could be arranged so as to fall under specific aspects of validity: truth, normative rightness, authenticity and beauty. They could then be handled as questions of knowledge, or of justice and morality, or of taste. Scientific discourse, theories of morality, jurisprudence, and the production and criticism of art could in turn be institutionalized. Each domain of culture could be made to correspond to cultural professions in which problems could be dealt with as the concern of special experts. This professionalized treatment of the cultural tradition brings to the fore the intrinsic structures of each of the three dimensions of culture. There appear the structures of cognitive-instrumental, of moral-practical and of aesthetic-expressive rationality, each of these under the control of specialists who seem more adept at being logical in these particular ways than other people are. As a result, the distance grows between the culture of the experts and that of the larger public. What accrues to culture through specialized treatment and reflection does not immediately and necessarily become the property of everyday praxis. With cultural rationalization of this sort, the threat increases that the life-world, whose traditional substance has already been devalued, will become more and more impoverished.

The project of modernity formulated in the 18th century by the philosophers of the Enlightenment consisted in their efforts to develop objective science, universal morality and law, and autonomous art according to their inner logic. At the same time, this project intended to release the cognitive

9. Difficulties, logical impasses (a term often used in deconstructive criticism to indicate the point in a text where inherent contradictions render interpretation undecidable).

potentials of each of these domains from their esoteric forms. The Enlightenment philosophers wanted to utilize this accumulation of specialized culture for the enrichment of everyday life—that is to say, for the rational organization of everyday social life.

Enlightenment thinkers of the cast of mind of Condorcet¹ still had the extravagant expectation that the arts and sciences would promote not only the control of natural forces but also understanding of the world and of the self, moral progress, the justice of institutions and even the happiness of human beings. The 20th century has shattered this optimism. The differentiation of science, morality and art has come to mean the autonomy of the segments treated by the specialist and their separation from the hermeneutics of everyday communication. This splitting off is the problem that has given rise to efforts to “negate” the culture of expertise. But the problem won’t go away: should we try to hold on to the *intentions* of the Enlightenment, feeble as they may be, or should we declare the entire project of modernity a lost cause? I now want to return to the problem of artistic culture, having explained why, historically, aesthetic modernity is only a part of cultural modernity in general.

The False Programs of the Negation of Culture

Greatly oversimplifying, I would say that in the history of modern art one can detect a trend towards ever greater autonomy in the definition and practice of art. The category of “beauty” and the domain of beautiful objects were first constituted in the Renaissance. In the course of the 18th century, literature, the fine arts and music were institutionalized as activities independent from sacred and courtly life. Finally, around the middle of the 19th century an aestheticist conception of art emerged, which encouraged the artist to produce his work according to the distinct consciousness of art for art’s sake. The autonomy of the aesthetic sphere could then become a deliberate project: the talented artist could lend authentic expression to those experiences he had in encountering his own de-centered subjectivity, detached from the constraints of routinized cognition and everyday action.

In the mid-19th century, in painting and literature, a movement began which Octavio Paz finds epitomized already in the art criticism of Baudelaire. Color, lines, sounds and movement ceased to serve primarily the cause of representation; the media of expression and the techniques of production themselves became the aesthetic object. Theodor W. Adorno² could therefore begin his *Aesthetic Theory* with the following sentence: “It is now taken for granted that nothing which concerns art can be taken for granted any more: neither art itself, nor art in its relationship to the whole, nor even the right of art to exist.” And this is what surrealism then denied: *das Existenzrecht der Kunst als Kunst*.³ To be sure, surrealism would not have challenged the right of art to exist, if modern art no longer had advanced a promise of happiness concerning its own relationship “to the whole” of life. For

3. The right of art to exist as art (German).

Schiller,⁴ such a promise was delivered by aesthetic intuition, but not fulfilled by it. Schiller's *Letters on the Aesthetic Education of Man* speaks to us of a utopia reaching beyond art itself. But by the time of Baudelaire, who repeated this *promesse de bonheur*⁵ via art, the utopia of reconciliation with society had gone sour. A relation of opposites had come into being; art had become a critical mirror, showing the irreconcilable nature of the aesthetic and the social worlds. This modernist transformation was all the more painfully realized, the more art alienated itself from life and withdrew into the untouchableness of complete autonomy. Out of such emotional currents finally gathered those explosive energies which unloaded in the surrealist attempt to blow up the autarkical sphere of art and to force a reconciliation of art and life.

But all those attempts to level art and life, fiction and praxis, appearance and reality to one plane; the attempts to remove the distinction between artifact and object of use, between conscious staging and spontaneous excitement; the attempts to declare everything to be art and everyone to be an artist, to retract all criteria and to equate aesthetic judgment with the expression of subjective experiences—all these undertakings have proved themselves to be sort of nonsense experiments. These experiments have served to bring back to life, and to illuminate all the more glaringly, exactly those structures of art which they were meant to dissolve. They gave a new legitimacy, as ends in themselves, to appearance as the medium of fiction, to the transcendence of the artwork over society, to the concentrated and planned character of artistic production as well as to the special cognitive status of judgments of taste. The radical attempt to negate art has ended up ironically by giving due exactly to these categories through which Enlightenment aesthetics had circumscribed its object domain. The surrealists waged the most extreme warfare, but two mistakes in particular destroyed their revolt. First, when the containers of an autonomously developed cultural sphere are shattered, the contents get dispersed. Nothing remains from a desublimated meaning or a destructured form; an emancipatory effect does not follow.

Their second mistake has more important consequences. In everyday communication, cognitive meanings, moral expectations, subjective expressions and evaluations must relate to one another. Communication processes need a cultural tradition covering all spheres—cognitive, moral-practical and expressive. A rationalized everyday life, therefore, could hardly be saved from cultural impoverishment through breaking open a single cultural sphere—art—and so providing access to just one of the specialized knowledge complexes. The surrealist revolt would have replaced only one abstraction.

In the spheres of theoretical knowledge and morality, there are parallels to this failed attempt of what we might call the false negation of culture. Only they are less pronounced. Since the days of the Young Hegelians,⁶ there has been talk about the negation of philosophy. Since Marx,⁷ the question of the relationship of theory and practice has been posed. However, Marxist intellectuals joined a social movement; and only at its peripheries were there sectarian attempts to carry out a program of the negation of philosophy similar

to the surrealist program to negate art. A parallel to the surrealist mistakes becomes visible in these programs when one observes the consequences of dogmatism and of moral rigorism.

A reified⁸ everyday praxis can be cured only by creating unconstrained interaction of the cognitive with the moral-practical and the aesthetic-expressive elements. Reification cannot be overcome by forcing just one of those highly stylized cultural spheres to open up and become more accessible. Instead, we see under certain circumstances a relationship emerge between terroristic activities and the over-extension of any one of these spheres into other domains: examples would be tendencies to aestheticize politics, or to replace politics by moral rigorism or to submit it to the dogmatism of a doctrine. These phenomena should not lead us, however, into denouncing the intentions of the surviving Enlightenment tradition as intentions rooted in a "terroristic reason." Those who lump together the very project of modernity with the state of consciousness and the spectacular action of the individual terrorist are no less short-sighted than those who would claim that the incomparably more persistent and extensive bureaucratic terror practiced in the dark, in the cellars of the military and secret police, and in camps and institutions, is the *raison d'être* of the modern state, only because this kind of administrative terror makes use of the coercive means of modern bureaucracies.

Alternatives

I think that instead of giving up modernity and its project as a lost cause, we should learn from the mistakes of those extravagant programs which have tried to negate modernity. Perhaps the types of reception of art may offer an example which at least indicates the direction of a way out.

Bourgeois art had two expectations at once from its audience. On the one hand, the layman who enjoyed art should educate himself to become an expert. On the other hand, he should also behave as a competent consumer who uses art and relates aesthetic experiences to his own life problems. This second, and seemingly harmless, manner of experiencing art has lost its radical implications exactly because it had a confused relation to the attitude of being expert and professional.

To be sure, artistic production would dry up, if it were not carried out in the form of a specialized treatment of autonomous problems and if it were to cease to be the concern of experts who do not pay so much attention to exoteric questions. Both artists and critics accept thereby the fact that such problems fall under the spell of what I earlier called the "inner logic" of a cultural domain. But this sharp delineation, this exclusive concentration on one aspect of validity alone and the exclusion of aspects of truth and justice, break down as soon as aesthetic experience is drawn into an individual life history and is absorbed into ordinary life. The reception of art by the layman, or by the "everyday expert," goes in a rather different direction than the reception of art by the professional critic.

Albrecht Wellmer⁹ has drawn my attention to one way that an aesthetic experience which is not framed around the experts' critical judgments of

8. Ossified.

9. German philosopher (b. 1933).

taste can have its significance altered: as soon as such an experience is used to illuminate a life-historical situation and is related to life problems, it enters into a language game which is no longer that of the aesthetic critic. The aesthetic experience then not only renews the interpretation of our needs in whose light we perceive the world. It permeates as well our cognitive significations and our normative expectations and changes the manner in which all these moments refer to one another. Let me give an example of this process.

This manner of receiving and relating to art is suggested in the first volume of the work *The Aesthetics of Resistance* by the German-Swedish writer Peter Weiss. Weiss describes the process of reappropriating art by presenting a group of politically motivated, knowledge-hungry workers in 1937 in Berlin.¹ These were young people who, through an evening high-school education, acquired the intellectual means to fathom the general and social history of European art. Out of the resilient edifice of this objective mind, embodied in works of art which they saw again and again in the museums in Berlin, they started removing their own chips of stone, which they gathered together and reassembled in the context of their own milieu. This milieu was far removed from that of traditional education as well as from the then existing regime. These young workers went back and forth between the edifice of European art and their own milieu until they were able to illuminate both.

In examples like this which illustrate the reappropriation of the expert's culture from the standpoint of the life-world, we can discern an element which does justice to the intentions of the hopeless surrealist revolts, perhaps even more to Brecht's² and Benjamin's interests in how art works, which having lost their aura,³ could yet be received in illuminating ways. In sum, the project of modernity has not yet been fulfilled. And the reception of art is only one of at least three of its aspects. The project aims at a differentiated relinking of modern culture with an everyday praxis that still depends on vital heritages, but would be impoverished through mere traditionalism. This new connection, however, can only be established under the condition that societal modernization will also be steered in a different direction. The life-world has to become able to develop institutions out of itself which set limits to the internal dynamics and imperatives of an almost autonomous economic system and its administrative complements.

If I am not mistaken, the chances for this today are not very good. More or less in the entire Western world a climate has developed that furthers capitalist modernization processes as well as trends critical of cultural modernism. The disillusionment with the very failures of those programs that called for the negation of art and philosophy has come to serve as a pretense for conservative positions. Let me briefly distinguish the antimodernism of the "young conservatives" from the premodernism of the "old conservatives" and from the postmodernism of the neoconservatives.

The "young conservatives" recapitulate the basic experience of aesthetic modernity. They claim as their own the revelations of a decentered

1. The reference is to the novel *Die Ästhetik des Widerstands* (3 vols., 1975–81) by the author [1916–1982] perhaps best known in the United States for his 1965 play *Marat/Sade*. The work of art "reappropriated" by the workers is the Pergamon altar, emblem of power, classicism, and

rationality [Foster's note].

2. Bertolt Brecht (1898–1956), German Marxist playwright.

3. On the "aura" of the artwork, see Benjamin, "The Work of Art in the Age of Its Technological Reproducibility" (written 1936–39; see above).

subjectivity, emancipated from the imperatives of work and usefulness, and with this experience they step outside the modern world. On the basis of modernistic attitudes they justify an irreconcilable antimodernism. They remove into the sphere of the far-away and the archaic the spontaneous powers of imagination, self-experience and emotion. To instrumental reason they juxtapose in Manichean fashion⁴ a principle only accessible through evocation, be it the will to power or sovereignty, Being or the Dionysiac force⁵ of the poetical. In France this line leads from Georges Bataille via Michel Foucault to Jacques Derrida.⁶

The "old conservatives" do not allow themselves to be contaminated by cultural modernism. They observe the decline of substantive reason, the differentiation of science, morality and art, the modern world view and its merely procedural rationality, with sadness and recommend a withdrawal to a position *anterior* to modernity. Neo-Aristotelianism, in particular, enjoys a certain success today. In view of the problematic of ecology, it allows itself to call for a cosmological ethic. (As belonging to this school, which originates with Leo Strauss, one can count the interesting works of Hans Jonas and Robert Spaemann.)⁷

Finally, the neoconservatives welcome the development of modern science, as long as this only goes beyond its sphere to carry forward technical progress, capitalist growth and rational administration. Moreover, they recommend a politics of defusing the explosive content of cultural modernity. According to one thesis, science, when properly understood, has become irrevocably meaningless for the orientation of the life-world. A further thesis is that politics must be kept as far aloof as possible from the demands of moral-practical justification. And a third thesis asserts the pure immanence of art, disputes that it has a utopian content, and points to its illusory character in order to limit the aesthetic experience to privacy. (One could name here the early Wittgenstein, Carl Schmitt of the middle period, and Gottfried Benn⁸ of the late period.) But with the decisive confinement of science, morality and art to autonomous spheres separated from the life-world and administered by experts, what remains from the project of cultural modernity is only what we would have if we were to give up the project of modernity altogether. As a replacement one points to traditions which, however, are held to be immune to demands of (normative) justification and validation.

This typology is like any other, of course, a simplification, but it may not prove totally useless for the analysis of contemporary intellectual and political confrontations. I fear that the ideas of antimodernity, together with an

4. That is, as a polar opposite (like the followers of Manichaeism, a religion founded in the 3d c. C.E., who saw the world as divided between two opposed forces—good and evil, spirit and matter, etc.).

5. A reference to *The Birth of Tragedy* (1872; see above) by FRIEDRICH NIETZSCHE, who saw in Greek culture a dynamic tension between the gods Apollo (representing form and reason) and Dionysus (representing frenzy and emotion). He also championed the idea of "the will to power."

6. All important French writers: Bataille (1897–1962), cultural critic and novelist; FOUCAULT (1926–1984), poststructuralist philosopher and historian of ideas; and DERRIDA (1930–2004), deconstructionist philosopher and critic.

7. All philosophers: STRAUSS (1899–1973), German-born American political philosopher; Jonas (1903–1993), German-born American moral philosopher; and Spaemann (b. 1927), German moral philosopher. Any philosopher who adapts the thought of ARISTOTLE (384–322 B.C.E.) to his or her own times may be called a "neo-Aristotelian"; Strauss argued in particular for the superiority of Aristotle's political science to the behaviorist approach dominant in the United States in the mid-20th century.

8. German poet (1886–1956). Ludwig Wittgenstein (1889–1951), Austrian-born English philosopher. Schmitt (1888–1985), German political philosopher.

additional touch of premodernity, are becoming popular in the circles of alternative culture. When one observes the transformations of consciousness within political parties in Germany, a new ideological shift (*Tendenzwende*) becomes visible. And this is the alliance of postmodernists with premodernists. It seems to me that there is no party in particular that monopolizes the abuse of intellectuals and the position of neoconservatism. I therefore have good reason to be thankful for the liberal spirit in which the city of Frankfurt offers me a prize bearing the name of Theodor Adorno, a most significant son of this city, who as philosopher and writer has stamped the image of the intellectual in our country in incomparable fashion, who, even more, has become the very image of emulation for the intellectual.

1980

ADRIENNE RICH

1929–2012

One of the most celebrated poets of her generation, Adrienne Rich was a major voice in American feminism during the latter half of the twentieth century. In her nonfiction prose and in her poetry, she explored the ways in which patriarchal society oppresses women and the ways in which women have responded to that oppression. While her analysis of “compulsory heterosexuality” may prove her most lasting contribution to social theory, Rich’s contributions to feminist thought covered a wide range of topics, from the silencing of women’s voices to the history of childbirth and motherhood. Like SUSAN BORDO, Rich linked patriarchal oppression to power exerted directly (and often violently) on women’s bodies. But her concern with the psychic and social underpinnings of sexual identity also links Rich’s work to the queer theory of JUDITH BUTLER and EVE KOSOFSKY SEDGWICK.

Born and raised in a Jewish family in Baltimore, Rich was chosen by the poet W. H. Auden as a winner of the prestigious Yale Younger Poets Award at the age of twenty-two, the year she graduated from Radcliffe College. She traveled in Europe in 1952–53 on a Guggenheim Fellowship. On her return, she married Alfred Conrad, an economist who taught at Harvard University. Between 1955 and 1976, she raised three sons while continuing to publish poetry. When the family moved to New York City in 1966, she began teaching at Columbia University and the City College of New York.

Rich became increasingly identified with the women’s movement throughout the 1970s, composing poetry with feminist themes but also writing prose. She published essays and an important historical, theoretical, and first-person study of motherhood, *Of Woman Born: Motherhood as Experience and Institution* (1976). During this decade, *Diving into the Wreck* (1973) won the National Book Award for poetry, solidifying her status as a major literary figure.

By the mid-1970s Rich was openly lesbian, and in her poetry and prose she was exploring all aspects of what she calls in our selection “lesbian experience.” Her work in the 1980s and 1990s, while still exploring feminist and lesbian themes, also included new attempts to connect to her Jewishness, her family (especially her father), and the poetic tradition. Rich was a visiting professor at Cornell University from 1981 to 1987, and she taught at Stanford University from 1987 to 1997. Rich

received many honorary doctorates and literary prizes, but such awards do not convey how revered a figure she was. An inspiration especially for lesbian women and feminists, Rich was admired almost universally for her strength of character, staunch integrity, and immense talents as a poet and a writer.

The essay "Compulsory Heterosexuality and Lesbian Existence" (1980) has been widely influential. When it first appeared, it marked (along with several roughly contemporaneous works, many of them cited in Rich's first footnote) the end of "sisterhood" feminism—the assumption that all women were "sisters" in their shared oppression. Rich highlights the presence of both lesbians and heterosexual women in the feminist movement and calls on feminism to acknowledge its fear of lesbians. Because those hostile to feminism often dismiss it as the complaints of a small group of lesbians, many 1970s feminists went out of their way to prove their heterosexuality. Lesbians and the whole topic of lesbian experience became practically taboo within the movement (except in its more radical separatist branches, which the mainstream also held at a distance). Thus Rich's essay, along with the feminist work of women of color and of working-class women, challenged a feminism that purported to speak for all women yet assumed the viewpoint of a heterosexual, middle-class white woman. Much of the feminist work of the 1980s was devoted to considering the ramifications of these differences (of race, class, and sexual orientation) for the category "woman" and to attending to how such differences would strengthen or weaken feminist activism.

Rich's main purpose, however, was not so much to introduce or explore difference as to consider the extent to which heterosexual desire and identity are fundamental to women's oppression. Heterosexuality, she argued, is not natural but social, and it should be analyzed as we would any social institution. Similar arguments are advanced by the lesbian theorists MONIQUE WITTIG and Bonnie Zimmerman. How is heterosexuality established and maintained? What groups resist it? What alternatives must be suppressed for it to prevail? Who benefits from and who is harmed by this institution's dominance? What forms of enforcement underwrite that dominance? Rich argued that heterosexuality is compulsory because only partners of the opposite sex are deemed appropriate, all same-sex desire must be denied or indulged in secret, and various kinds of same-sex bonding (including friendships) are viewed with suspicion. Compulsory heterosexuality functions to ensure that women are sexually accessible to men, with consent or choice on the women's part neither legally nor practically taken into account. In sum, compulsory heterosexuality is an institution that punishes those who are not heterosexual and systematically ensures the power of men over women.

Because compulsory sexuality is central to creating and preserving the inequality between men and women, Rich argued that "the issue feminists have to address is not simple 'gender inequality' nor the domination of culture by males nor mere 'taboos against homosexuality,' but the enforcement of heterosexuality for women as a means of assuring male right of physical, economic, and emotional access." Feminism cannot truly comprehend the sources and system of inequality if it does not analyze the institution of compulsory heterosexuality. In the years since Rich published her essay, feminists have actively investigated the topics suggested by this charge.

Three topics in Rich's essay have been especially important for feminist literary theory: sexualized relations of power within institutions, lesbian experience, and questions of sexual identity. To begin with, Rich argued that women do not simply face the trials and tribulations experienced by all subordinates in hierarchical institutions; they must also present themselves as "attractive" according to dominant standards of heterosexual desirability and be concerned with sexuality in the appropriate ways (e.g., be flirtatious within the proper bounds, be supportive of male superiors). Such expectations, rarely conscious, even more rarely explicit, permeate public male-female relationships. They form part of a larger unwritten set of rules about the relative positions of men and women in society.

Second, *lesbian experience*—and its corollary term, the *lesbian continuum*—challenges the notion that women “need” men by calling attention to all the ways in which women interact with one another, all the activities central to their lives, that do not involve connection to a man. Rich wanted to highlight both how hostile to and threatened by women’s independent action patriarchal society is *and* the prevalence of such action despite the price (sometimes very high) paid for it. The lesbian continuum encompasses a wide variety of relationships between and among women, ranging from “the sharing of a rich inner life, the bonding against male tyranny, [to] the giving and receiving of practical and political support.” By desexualizing the term *lesbian*, Rich called our attention to the variety of bonds formed between women and to the various functions those bonds play in women’s lives.

Finally, Rich’s essay looks forward to the queer theory of the 1990s by asking a crucial question: How is sexual identity formed? Through what processes of psychic identification does a self form heterosexual and/or homosexual desires? While Rich was more suspicious of psychoanalytic understandings of these processes than are many subsequent queer theorists (such as Butler), she fully recognized that the “law of compulsory heterosexuality” plays a crucial role in the formation of selves, even as she noted that the early bond of the girl baby with her mother works against the injunction to be heterosexual. In addition, the notion of the lesbian continuum recognizes that sexuality comes in many forms and results in many different behaviors—a variety badly captured by the simple dichotomy homosexual/heterosexual.

Rich came very close here to queer theory’s later interest in examples that confound received categories, that challenge the terms by which we make the world and our experiences intelligible. However, she was impatient with the poststructuralist and French psychoanalytic theory that stands behind much queer theory; in articulating similar concepts, she used her own idiom. Throughout her career, an uneasy truce prevailed between Rich and most theoretically minded American feminists, with both sides carefully avoiding direct attacks on the other. Desire, as Rich discovered in her own life, is neither unitary nor fixed once for all. Women especially suffer in a heterosexual regime that ignores the fluidity of desire in favor of channeling that desire toward heterosexual unions in which the needs of the male are primary.

“Compulsory Heterosexuality and Lesbian Existence” Keywords: The Body, Feminist Theory, Gender, Institutional Studies, Queer Theory, Sexuality, Women’s Literature

*From Compulsory Heterosexuality and Lesbian Existence*¹

Foreword (1983)

I want to say a little about the way “Compulsory Heterosexuality” was originally conceived and the context in which we are now living. It was written in part to challenge the erasure of lesbian existence from so much of scholarly feminist literature, an erasure which I felt (and feel) to be not just anti-lesbian, but anti-feminist in its consequences, and to distort the experience of heterosexual women as well. It was not written to widen divisions but to encourage heterosexual feminists to examine heterosexuality as a political

1. This essay was first published in *Signs: Journal of Women in Culture and Society* (1980). The shorter version printed here originally appeared

in *Adrienne Rich's Poetry and Prose*, edited by Barbara Charlesworth Gelpi and Albert Gelpi (1993); the asterisks mark their deletions.

institution which disempowers women—and to change it. I also hoped that other lesbians would feel the depth and breadth of woman identification and woman bonding that has run like a continuous though stifled theme through the heterosexual experience, and that this would become increasingly a politically activating impulse, not simply a validation of personal lives. I wanted the essay to suggest new kinds of criticism, to incite new questions in classrooms and academic journals, and to sketch, at least, some bridge over the gap between *lesbian* and *feminist*. I wanted, at the very least, for feminists to find it less possible to read, write, or teach from a perspective of unexamined heterocentricity.

Within the three years since I wrote "Compulsory Heterosexuality"—with this energy of hope and desire—the pressures to conform in a society increasingly conservative in mood have become more intense. The New Right's² messages to women have been, precisely, that we are the emotional and sexual property of men, and that the autonomy and equality of women threaten family, religion, and state. The institutions by which women have traditionally been controlled—patriarchal motherhood, economic exploitation, the nuclear family, compulsory heterosexuality—are being strengthened by legislation, religious fiat, media imagery, and efforts at censorship. In a worsening economy, the single mother trying to support her children confronts the feminization of poverty which Joyce Miller of the National Coalition of Labor Union Women has named one of the major issues of the 1980s. The lesbian, unless in disguise, faces discrimination in hiring and harassment and violence in the street. Even within feminist-inspired institutions such as battered-women's shelters and Women's Studies programs, open lesbians are fired and others warned to stay in the closet. The retreat into sameness—assimilation for those who can manage it—is the most passive and debilitating of responses to political repression, economic insecurity, and a renewed open season on difference.

I want to note that documentation of male violence against women—within the home especially—has been accumulating rapidly in this period. At the same time, in the realm of literature which depicts woman bonding and woman identification as essential for female survival, a steady stream of writing and criticism has been coming from women of color in general and lesbians of color in particular—the latter group being even more profoundly erased in academic feminist scholarship by the double bias of racism and homophobia.³

2. Social or cultural conservatives who stress so-called moral and "family" values, and who are often self-identified Christians. They played a large role in the U.S. election of President Ronald Reagan in 1980.

3. See, for example, Paula Gunn Allen, *The Sacred Hoop: Recovering the Feminine in American Indian Traditions* (Boston: Beacon, 1986); Beth Brant, ed., *A Gathering of Spirit: Writing and Art by North American Indian Women* (Montpelier, Vt.: Sinister Wisdom Books, 1984); GLORIA ANZALDÚA and Cherrie Moraga, eds., *This Bridge Called My Back: Writings by Radical Women of Color* (Watertown, Mass.: Persephone, 1981; distributed by Kitchen Table/Women of Color Press, Albany, N.Y.); J. R. Roberts, *Black Lesbians: An*

Annotated Bibliography (Tallahassee, Fla.: Naiad, 1981); Barbara Smith, ed., *Home Girls: A Black Feminist Anthology* (Albany, N.Y.: Kitchen Table/Women of Color Press, 1984). As Lorraine Bethel and Barbara Smith pointed out in *Conditions 5: The Black Women's Issue* (1980), a great deal of fiction by Black women depicts primary relationships between women. I would like to cite here the work of Ama Ata Aidoo, Toni Cade Bambara, Buchi Emecheta, Bessie Head, ZORA NEALE HURSTON, Alice Walker. Donna Allegra, Red Jordan Arobateau, Audre Lorde, Ann Allen Shockley, among others, who write directly as Black lesbians. For fiction by other lesbians of color, see Elly Bulkin, ed., *Lesbian Fiction: An Anthology* (Watertown, Mass.: Persephone, 1981).

There has recently been an intensified debate on female sexuality among feminists and lesbians, with lines often furiously and bitterly drawn, with *sadomasochism* and *pornography* as key words which are variously defined according to who is talking.⁴ The depth of women's rage and fear regarding sexuality and its relation to power and pain is real, even when the dialogue sounds simplistic, self-righteous, or like parallel monologues.

Because of all these developments, there are parts of this essay that I would word differently, qualify, or expand if I were writing it today. But I continue to think that heterosexual feminists will draw political strength for change from taking a critical stance toward the ideology which *demand*s heterosexuality, and that lesbians cannot assume that we are untouched by that ideology and the institutions founded upon it. There is nothing about such a critique that requires us to think of ourselves as victims, as having been brainwashed or totally powerless. Coercion and compulsion are among the conditions in which women have learned to recognize our strength. Resistance is a major theme in this essay and in the study of women's lives, if we know what we are looking for.

I

Biologically men have only one innate orientation—a sexual one that draws them to women,—while women have two innate orientations, sexual toward men and reproductive toward their young.⁵

I was a woman terribly vulnerable, critical, using femaleness as a sort of standard or yardstick to measure and discard men. Yes—something like that. I was an Anna who invited defeat from men without ever being conscious of it. (But I am conscious of it. And being conscious of it means I shall leave it all behind me and become—but what?) I was stuck fast in an emotion common to women of our time, that can turn them bitter, or Lesbian, or solitary. Yes, that Anna during that time was . . .

[Another blank line across the page:]⁶

The bias of compulsory heterosexuality, through which lesbian experience is perceived on a scale ranging from deviant to abhorrent or simply rendered invisible, could be illustrated from many texts other than the two just preceding. The assumption made by Rossi, that women are “innately” sexually

See also, for accounts of contemporary Jewish-lesbian existence, Evelyn Torton Beck, ed., *Nice Jewish Girls: A Lesbian Anthology* (Watertown, Mass.: Persephone, 1982; distributed by Crossing Press, Trumansburg, N.Y.); Alice Bloch, *Lifetime Guarantee* (Watertown, Mass.: Persephone, 1982); and Melanie Kaye-Kantrowitz and Irena Klepfisz, eds., *The Tribe of Dina: A Jewish Women's Anthology* (Montpelier, Vt.: Sinister Wisdom Books, 1986).

The earliest formulation that I know of heterosexuality as an institution was in the lesbian-feminist paper *The Furies*, founded in 1971. For a collection of articles from that paper, see Nancy Myron and Charlotte Bunch, eds., *Lesbi-*

anism and the Women's Movement (Oakland, Calif.: Diana Press, 1975; distributed by Crossing Press, Trumansburg, N.Y.) [Rich's note].

4. The so-called sex wars within feminism—with the status of sadomasochism a key issue as feminists argued about pornography—flared in the wake of an academic conference, “Toward a Politics of Sexuality,” held at Barnard College in April 1982.

5. Alice Rossi, “Children and Work in the Lives of Women,” paper delivered at the University of Arizona, Tucson, February 1976 [Rich's note].

6. Doris Lessing, *The Golden Notebook* (1962; reprint, New York: Bantam, 1977), p. 480 [Rich's note].

oriented only toward men, and that made by Lessing, that the lesbian is simply acting out of her bitterness toward men, are by no means theirs alone; these assumptions are widely current in literature and in the social sciences.

I am concerned here with two other matters as well: first, how and why women's choice of women as passionate comrades, life partners, co-workers, lovers, community has been crushed, invalidated, forced into hiding and disguise; and second, the virtual or total neglect of lesbian existence in a wide range of writings, including feminist scholarship. Obviously there is a connection here. I believe that much feminist theory and criticism is stranded on this shoal.

My organizing impulse is the belief that it is not enough for feminist thought that specifically lesbian texts exist. Any theory or cultural/political creation that treats lesbian existence as a marginal or less "natural" phenomenon, as mere "sexual preference," or as the mirror image of either heterosexual or male homosexual relations is profoundly weakened thereby, whatever its other contributions. Feminist theory can no longer afford merely to voice a toleration of "lesbianism" as an "alternative life style" or make token allusion to lesbians. A feminist critique of compulsory heterosexual orientation for women is long overdue. In this exploratory paper, I shall try to show why.

* * *

II

If women are the earliest sources of emotional caring and physical nurture for both female and male children, it would seem logical, from a feminist perspective at least, to pose the following questions: whether the search for love and tenderness in both sexes does not originally lead toward women; *why in fact women would ever redirect that search*; why species survival, the means of impregnation, and emotional/erotic relationships should ever have become so rigidly identified with each other; and why such violent strictures should be found necessary to enforce women's total emotional, erotic loyalty and subservience to men. I doubt that enough feminist scholars and theorists have taken the pains to acknowledge the societal forces which wrench women's emotional and erotic energies away from themselves and other women and from woman-identified values. These forces, as I shall try to show, range from literal physical enslavement to the disguising and distorting of possible options.

I do not assume that mothering by women is a "sufficient cause" of lesbian existence. But the issue of mothering by women has been much in the air of late, usually accompanied by the view that increased parenting by men would minimize antagonism between the sexes and equalize the sexual imbalance of power of males over females. These discussions are carried on without reference to compulsory heterosexuality as a phenomenon, let alone as an ideology. I do not wish to psychologize here, but rather to identify sources of male power. I believe large numbers of men could, in fact, undertake child care on a large scale without radically altering the balance of male power in a male-identified society.

In her essay "The Origin of the Family," Kathleen Gough lists eight characteristics of male power in archaic and contemporary societies which I

would like to use as a framework: "men's ability to deny women sexuality or to force it upon them; to command or exploit their labor to control their produce; to control or rob them of their children; to confine them physically and prevent their movements; to use them as objects in male transactions; to cramp their creativeness; or to withhold from them large areas of the society's knowledge and cultural attainments."⁷ (Gough does not perceive these power characteristics as specifically enforcing heterosexuality, only as producing sexual inequality.) Below, Gough's words appear in italics; the elaboration of each of her categories, in brackets, is my own.

Characteristics of male power include *the power of men*

1. *to deny women* [their own] *sexuality*—[by means of clitoridectomy and infibulation;⁸ chastity belts; punishment, including death, for female adultery; punishment, including death, for lesbian sexuality; psychoanalytic denial of the clitoris;⁹ strictures against masturbation; denial of maternal and postmenopausal sensuality; unnecessary hysterectomy; pseudolesbian images in the media and literature; closing of archives and destruction of documents relating to lesbian existence]
2. *or to force it* [male sexuality] *upon them*—[by means of rape (including marital rape) and wife beating; father-daughter, brother-sister incest; the socialization of women to feel that male sexual "drive" amounts to a right;¹ idealization of heterosexual romance in art, literature, the media, advertising, etc.; child marriage; arranged marriage; prostitution; the harem; psychoanalytic doctrines of frigidity and vaginal orgasm;² pornographic depictions of women responding pleasurably to sexual violence and humiliation (a subliminal message being that sadistic heterosexuality is more "normal" than sensuality between women)]
3. *to command or exploit their labor to control their produce*—[by means of the institutions of marriage and motherhood as unpaid production; the horizontal segregation of women in paid employment;³ the decoy of the upwardly mobile token woman; male control of abortion, contraception, sterilization, and childbirth; pimping; female infanticide, which robs mothers of daughters and contributes to generalized devaluation of women]
4. *to control or rob them of their children*—[by means of father right and "legal kidnapping";⁴ enforced sterilization, systematized infanticide;

7. Kathleen Gough, "The Origin of the Family," in *Toward an Anthropology of Women*, ed. Rayna Reiter (New York: Monthly Review Press, 1975), pp. 60–70 [Rich's note].

8. The stitching together of the vulva after a clitoridectomy, leaving a small opening for the passage of urine and menstrual blood. "Clitoridectomy": usually the removal of the clitoris occurs in the context of a cultural rite of passage to womanhood, but at times such surgery has been recommended to curb sexual desire.

9. The persistent medical claim, prior to the 1970s, that women's sexual pleasure derived from stimulation of the clitoris is not a "true" orgasm.

1. Kathleen Barry, *Female Sexual Slavery* (Engle-

wood Cliffs, N.J.: Prentice-Hall, 1979), pp. 216–19 [Rich's note].

2. The notion that orgasm is achieved through vaginal stimulation (not the case for most women).

3. That is, at the lowest levels of wage labor.

4. Anna Demeter, *Legal Kidnapping* (Boston: Beacon, 1979), pp. xx, 126–28 [Rich's note]. Traditionally, fathers have sole rights to their children; and even when mothers win custody, the courts have often maintained the father's right of access to children despite a history of abuse or of financial or emotional neglect. Denied access by mothers, fathers have sometimes resorted to kidnappings, later upheld by the courts as legal.

seizure of children from lesbian mothers by the courts; the malpractice of male obstetrics; use of the mother as "token torturer"⁵ in genital mutilation or in binding the daughter's feet (or mind) to fit her for marriage]

5. *to confine them physically and prevent their movement*—[by means of rape as terrorism, keeping women off the streets; purdah; foot binding; atrophying of women's athletic capabilities; high heels and "feminine" dress codes in fashions; the veil;⁶ sexual harassment on the streets; horizontal segregation of women in employment; prescriptions for "full-time" mothering at home; enforced economic dependence of wives]
6. *to use them as objects in male transactions*—[use of women as "gifts"; bride price; pimping; arranged marriage; use of women as entertainers to facilitate male deals—e.g., wife-hostess, cocktail waitress required to dress for male sexual titillation, call girls, "bunnies," geisha, *kisaeng*⁷ prostitutes, secretaries]
7. *to cramp their creativeness*—[witch persecutions as campaigns against midwives and female healers, and as pogrom against independent, "unassimilated" women;⁸ definition of male pursuits as more valuable than female within any culture, so that cultural values become the embodiment of male subjectivity; restriction of female self-fulfillment to marriage and motherhood; sexual exploitation of women by male artists and teachers; the social and economic disruption of women's creative aspirations;⁹ erasure of female tradition]¹
8. *to withhold from them large areas of the society's knowledge and cultural attainments*—[by means of noneducation of females; the "Great Silence" regarding women and particularly lesbian existence in history and culture;² sex-role tracking which deflects women from science, technology, and other "masculine" pursuits; male social/professional bonding which excludes women; discrimination against women in the professions]

These are some of the methods by which male power is manifested and maintained. Looking at the schema, what surely impresses itself is the fact that we are confronting not a simple maintenance of inequality and property possession, but a pervasive cluster of forces, ranging from physical brutality to control of consciousness, which suggests that an enormous potential counterforce is having to be restrained.

5. Mary Daly, *Gyn/Ecology: The Metaethics of Radical Feminism* (Boston: Beacon, 1978), pp. 139–41, 163–65 [Rich's note]. The practice of foot-binding among upper-class women in pre-Communist China was largely aimed at male sexual gratification.

6. Muslim women often wear a veil or *hijab* (sometimes covering their entire body); to "take the veil" in Western countries is to become a nun and traditionally to retire to a convent.

7. Appropriated (Korean); that is, women forced into prostitution. "Bunnies": women working at Playboy Clubs (a chain, 1960–91).

2. Daly, *Beyond God the Father*, p. 93 [Rich's note].

Some of the forms by which male power manifests itself are more easily recognizable as enforcing heterosexuality on women than are others. Yet each one I have listed adds to the cluster of forces within which women have been convinced that marriage and sexual orientation toward men are inevitable—even if unsatisfying or oppressive—components of their lives. The chastity belt; child marriage; erasure of lesbian existence (except as exotic and perverse) in art, literature, film; idealization of heterosexual romance and marriage—these are some fairly obvious forms of compulsion, the first two exemplifying physical force, the second two control of consciousness. While clitoridectomy has been assailed by feminists as a form of woman torture,³ Kathleen Barry first pointed out that it is not simply a way of turning the young girl into a “marriageable” woman through brutal surgery. It intends that women in the intimate proximity of polygynous marriage will not form sexual relationships with each other, that—from a male, genital-fetishist⁴ perspective—female erotic connections, even in a sex-segregated situation, will be literally excised.⁵

The function of pornography as an influence on consciousness is a major public issue of our time, when a multibillion-dollar industry has the power to disseminate increasingly sadistic, women-degrading visual images. But even so-called soft-core pornography and advertising depict women as objects of sexual appetite devoid of emotional context, without individual meaning or personality—essentially as a sexual commodity to be consumed by males. (So-called lesbian pornography, created for the male voyeuristic eye, is equally devoid of emotional context or individual personality.) The most pernicious message relayed by pornography is that women are natural sexual prey to men and love it, that sexuality and violence are congruent, and that for women sex is essentially masochistic, humiliation pleasurable, physical abuse erotic. But along with this message comes another, not always recognized: that enforced submission and the use of cruelty, if played out in heterosexual pairing, is sexually “normal,” while sensuality between women, including erotic mutuality and respect, is “queer,” “sick,” and either pornographic in itself or not very exciting compared with the sexuality of whips and bondage.⁶ Pornography does not simply create a climate in which sex and violence are interchangeable; *it widens the range of behavior considered acceptable from men in heterosexual intercourse*—behavior which reiteratively strips women of their autonomy, dignity, and sexual potential, including the potential of loving and being loved by women in mutuality and integrity.

In her brilliant study *Sexual Harassment of Working Women: A Case of Sex Discrimination*, Catharine A. MacKinnon delineates the intersection of compulsory heterosexuality and economics. Under capitalism, women are horizontally segregated by gender and occupy a structurally inferior position

Hosken, “The Violence of Power: Genital Mutilation of Females,” *Heresies: A Feminist Journal of Art and Politics* 6 (1979): 28–35; Diana Russell and Nicole Van de Ven, eds., *Proceedings of the Informational Tribunal of Crimes Against Women* (Millbrae, Calif.: Les Femmes, 1976), pp. 194–95. See especially “Circumcision of Girls,” in Nawal El Saadawi, *The Hidden Face of Eve: Women in the Arab World* (Boston: Beacon, 1982), pp. 33–43 [Rich’s note].

4. In the psychoanalytic theory of SIGMUND FREUD, mature sexuality is “genitally organized,”

while the fetishist takes an object or a nongenital part of the body as the site for a habitual erotic response or fixation. Rich is suggesting instead that male sexuality, fixated on the genitals, is itself fetishistic.

5. Barry, pp. 163–64 [Rich’s note].

6. The issue of “lesbian sadomasochism” needs to be examined in terms of dominant cultures’ teachings about the relation of sex and violence. I believe this to be another example of the “double life” of women [Rich’s note].

in the workplace. This is hardly news, but MacKinnon raises the question why, even if capitalism “requires some collection of individuals to occupy low-status, low-paying positions . . . such persons must be biologically female,” and goes on to point out that “the fact that male employers often do not hire qualified women, *even when they could pay them less than men* suggests that more than the profit motive is implicated” [emphasis added].⁷ She cites a wealth of material documenting the fact that women are not only segregated in low-paying service jobs (as secretaries, domestics, nurses, typists, telephone operators, child-care workers, waitresses), but that “sexualization of the woman” is part of the job. Central and intrinsic to the economic realities of women’s lives is the requirement that women will “market sexual attractiveness to men, who tend to hold the economic power and position to enforce their predilections.” And MacKinnon documents that “sexual harassment perpetuates the interlocked structure by which women have been kept sexually in thrall to men at the bottom of the labor market. Two forces of American society converge: men’s control over women’s sexuality and capital’s control over employees’ work lives.”⁸ Thus, women in the workplace are at the mercy of sex as power in a vicious circle. Economically disadvantaged, women—whether waitresses or professors—endure sexual harassment to keep their jobs and learn to behave in a complaisantly and ingratiatingly heterosexual manner because they discover this is their true qualification for employment, whatever the job description. And, MacKinnon notes, the woman who too decisively resists sexual overtures in the workplace is accused of being “dried up” and sexless, or lesbian. This raises a specific difference between the experiences of lesbians and homosexual men. A lesbian, closeted on her job because of heterosexual prejudice, is not simply forced into denying the truth of her outside relationships or private life. Her job depends on her pretending to be not merely heterosexual, but a heterosexual *woman* in terms of dressing and playing the feminine, deferential role required of “real” women.

MacKinnon raises radical questions as to the qualitative differences between sexual harassment, rape, and ordinary heterosexual intercourse. (“As one accused rapist put it, he hadn’t used ‘any more force than is usual for males during the preliminaries.’”) She criticizes Susan Brownmiller⁹ for separating rape from the mainstream of daily life and for her unexamined premise that “rape is violence, intercourse is sexuality,” removing rape from the sexual sphere altogether. Most crucially she argues that “taking rape from the realm of ‘the sexual,’ placing it in the realm of ‘the violent,’ allows one to be against it without raising any questions about the extent to which the institution of heterosexuality has defined force as a normal part of ‘the preliminaries.’”¹ “Never is it asked whether, under conditions of male supremacy, the notion of ‘consent’ has any meaning.”²

The fact is that the workplace, among other social institutions, is a place where women have learned to accept male violation of their psychic and

9. Susan Brownmiller, *Against Our Will: Men, Women, and Rape* (New York: Simon and Schuster, 1975) [Rich’s note].

1. MacKinnon, p. 219. Susan Schecter writes:

“The push for heterosexual union at whatever cost is so intense that . . . it has become a cultural force of its own that creates battering. The ideology of romantic love and its jealous possession of the partner as property provide the masquerade for what can become severe abuse.” (*Aegis: Magazine on Ending Violence against Women* [July–August, 1979]: 50–51) [Rich’s note].

2. MacKinnon, p. 298 [Rich’s note].

physical boundaries as the price of survival; where women have been educated—no less than by romantic literature or by pornography—to perceive themselves as sexual prey. A woman seeking to escape such casual violations along with economic disadvantage may well turn to marriage as a form of hoped-for protection, while bringing into marriage neither social nor economic power, thus entering that institution also from a disadvantaged position. MacKinnon finally asks:

What if inequality is built into the social conceptions of male and female sexuality, of masculinity and femininity, of sexiness and heterosexual attractiveness? Incidents of sexual harassment suggest that male sexual desire itself may be aroused by female vulnerability. . . . Men feel they can take advantage, so they want to, so they do. Examination of sexual harassment, precisely because the episodes appear commonplace, forces one to confront the fact that sexual intercourse normally occurs between economic (as well as physical) unequals . . . the apparent legal requirement that violations of women's sexuality appear out of the ordinary before they will be punished helps prevent women from defining the ordinary conditions of their own consent.³

Given the nature and extent of heterosexual pressures—the daily “erotization of women's subordination,” as MacKinnon phrases it⁴—I question the more or less psychoanalytic perspective (suggested by such writers as Karen Horney, H. R. Hayes, Wolfgang Lederer, and, most recently, Dorothy Dinnerstein)⁵ that the male need to control women sexually results from some primal male “fear of women” and of women's sexual insatiability. It seems more probable that men really fear not that they will have women's sexual appetites forced on them or that women want to smother and devour them, but that women could be indifferent to them altogether, that men could be allowed sexual and emotional—therefore economic—access to women *only* on women's terms, otherwise being left on the periphery of the matrix.

The means of assuring male sexual access to women have recently received searching investigation by Kathleen Barry.⁶ She documents extensive and appalling evidence for the existence, on a very large scale, of international female slavery, the institution once known as “white slavery” but which in fact has involved, and at this very moment involves, women of every race and class. In the theoretical analysis derived from her research, Barry makes the connection between all enforced conditions under which women live subject to men: prostitution, marital rape, father-daughter and brother-sister incest, wife beating, pornography, bride price, the selling of daughters, purdah, and genital mutilation. She sees the rape paradigm—where the victim of sexual assault is held responsible for her own victimization—as leading to

3. *Ibid.*, p. 220 [Rich's note].

4. *Ibid.*, p. 221 [Rich's note].

5. Dinnerstein's *The Mermaid and the Minotaur* (1976) focuses on women's child-bearing and child-caring capacities and argues that a more balanced involvement of the male and female parents in child-rearing will greatly improve relations between the sexes. In *Feminine Psychology* (1967), Horney rejects the Freudian notion of “penis envy,” arguing that men are afraid of women

because of women's procreative abilities. Hayes's *The Dangerous Sex: The Myth of the Feminine* (1964) and Lederer's *The Fear of Women* (1968) make similar arguments.

6. Barry, op. cit. [Rich's note]. [A.R., 1986: See also Kathleen Barry, Charlotte Bunch, and Shirley Castley, eds., *International Feminism: Networking against Female Sexual Slavery* (New York: International Women's Tribune Center, 1984).]

the rationalization and acceptance of other forms of enslavement where the woman is presumed to have "chosen" her fate, to embrace it passively, or to have courted it perversely through rash or unchaste behavior. On the contrary, Barry maintains, "female sexual slavery is present in ALL situations where women or girls cannot change the conditions of their existence; where regardless of how they got into those conditions, e.g., social pressure, economic hardship, misplaced trust or the longing for affection, they cannot get out; and where they are subject to sexual violence and exploitation."⁷ She provides a spectrum of concrete examples, not only as to the existence of a widespread international traffic in women, but also as to how this operates—whether in the form of a "Minnesota pipeline" funneling blonde, blue-eyed midwestern runaways to Times Square, or the purchasing of young women out of rural poverty in Latin America or Southeast Asia, or the providing of *maisons d'abattage*⁸ for migrant workers in the eighteenth arrondissement of Paris. Instead of "blaming the victim" or trying to diagnose her presumed pathology, Barry turns her floodlights on the pathology of sex colonization itself, the ideology of "cultural sadism" represented by the pornography industry and by the overall identification of women primarily as "sexual beings whose responsibility is the sexual service of men."⁹

Barry delineates what she names a "sexual domination perspective" through whose lens sexual abuse and terrorism of women by men has been rendered almost invisible by treating it as natural and inevitable. From its point of view, women are expendable as long as the sexual and emotional needs of the male can be satisfied. To replace this perspective of domination with a universal standard of basic freedom for women from gender-specific violence, from constraints on movement, and from male right of sexual and emotional access is the political purpose of her book. Like Mary Daly in *Gyn/Ecology*, Barry rejects structuralist and other cultural-relativist rationalizations¹ for sexual torture and anti-woman violence. In her opening chapter, she asks of her readers that they refuse all handy escapes into ignorance and denial. "The only way we can come out of hiding, break through our paralyzing defenses, is to know it all—the full extent of sexual violence and domination of women. . . . In *knowing*, in facing directly, we can learn to chart our course out of this oppression, by envisioning and creating a world which will preclude sexual slavery."²

"Until we name the practice, give conceptual definition and form to it, illustrate its life over time and in space, those who are its most obvious victims will also not be able to name it or define their experience."

But women are all, in different ways and to different degrees, its victims; and part of the problem with naming and conceptualizing female sexual slavery is, as Barry clearly sees, compulsory heterosexuality.³ Compulsory heterosexuality simplifies the task of the procurer and pimp in worldwide

7. Barry, p. 33 [Rich's note].

8. Houses for beating or battering (French). The 18th arrondissement is a district where many Algerians and other North African immigrants to France live.

9. Barry, p. 103 [Rich's note].

1. Structural anthropology in most cases tries to be value-neutral, simply describing the practices and structures of various cultures, without claiming any one culture is superior to another

or morally reprehensible in some way.

2. Barry, p. 5 [Rich's note].

3. *Ibid.*, p. 100 [Rich's note].

[A.R., 1986: This statement has been taken as claiming that "all women are victims" purely and simply, or that "all heterosexuality equals sexual slavery." I would say, rather, that all women are affected, though differently, by dehumanizing attitudes and practices directed at women as a group.]

prostitution rings and “eros centers,” while, in the privacy of the home, it leads the daughter to “accept” incest/rape by her father, the mother to deny that it is happening, the battered wife to stay on with an abusive husband. “Befriending or love” is a major tactic of the procurer, whose job it is to turn the runaway or the confused young girl over to the pimp for seasoning. The ideology of heterosexual romance, beamed at her from childhood out of fairy tales, television, films, advertising, popular songs, wedding pageantry, is a tool ready to the procurer’s hand and one which he does not hesitate to use, as Barry documents. Early female indoctrination in “love” as an emotion may be largely a Western concept; but a more universal ideology concerns the primacy and uncontrollability of a male sexual drive. This is one of many insights offered by Barry’s work:

As sexual power is learned by adolescent boys through the social experience of their sex drive, so do girls learn that the locus of sexual power is male. Given the importance placed on the male sex drive in the socialization of girls as well as boys, early adolescence is probably the first significant phase of male identification in a girl’s life and development. . . . As a young girl becomes aware of her own increasing sexual feelings . . . she turns away from her heretofore primary relationships with girlfriends. As they become secondary to her, recede in importance in her life, her own identity also assumes a secondary role and she grows into male identification.⁴

We still need to ask why some women never, even temporarily, turn away from “heretofore primary relationships” with other females. And why does male identification—the casting of one’s social, political, and intellectual allegiances with men—exist among lifelong sexual lesbians? Barry’s hypothesis throws us among new questions, but it clarifies the diversity of forms in which compulsory heterosexuality presents itself. In the mystique of the overpowering, all-conquering male sex drive, the penis-with-a-life-of-its-own, is rooted the law of male sex right to women, which justifies prostitution as a universal cultural assumption on the one hand, while defending sexual slavery within the family on the basis of “family privacy and cultural uniqueness” on the other.⁵ The adolescent male sex drive, which, as both young women and men are taught, once triggered cannot take responsibility for itself or take no for an answer, becomes, according to Barry, the norm and rationale for adult male sexual behavior: a condition of *arrested sexual development*. Women learn to accept as natural the inevitability of this “drive” because they receive it as dogma. Hence, marital rape; hence, the Japanese wife resignedly packing her husband’s suitcase for a weekend in the *kisaeng* brothels of Taiwan; hence, the psychological as well as economic imbalance of power between husband and wife, male employer and female worker, father and daughter, male professor and female student.

The effect of male identification means

internalizing the values of the colonizer and actively participating in carrying out the colonization of one’s self and one’s sex. . . . Male identification is the act whereby women place men above women, including

4. Ibid., p. 218 [Rich’s note].

5. Ibid., p. 140 [Rich’s note].

themselves, in credibility, status, and importance in most situations, regardless of the comparative quality the women may bring to the situation. . . . Interaction with women is seen as a lesser form of relating on every level.⁶

What deserves further exploration is the doublethink many women engage in and from which no woman is permanently and utterly free: However woman-to-woman relationships, female support networks, a female and feminist value system are relied on and cherished, indoctrination in male credibility and status can still create synapses in thought, denial of feeling, wishful thinking, a profound sexual and intellectual confusion.⁷ I quote here from a letter I received the day I was writing this passage: "I have had very bad relationships with men—I am now in the midst of a very painful separation. I am trying to find my strength through women—without my friends, I could not survive." How many times a day do women speak words like these or think them or write them, and how often does the synapse reassert itself?

Barry summarizes her findings:

Considering the arrested sexual development that is understood to be normal in the male population, and considering the numbers of men who are pimps, procurers, members of slavery gangs, corrupt officials participating in this traffic, owners, operators, employees of brothels and lodging and entertainment facilities, pornography purveyors, associated with prostitution, wife beaters, child molesters, incest perpetrators, johns (tricks) and rapists, one cannot but be momentarily stunned by the enormous male population engaging in female sexual slavery. The huge number of men engaged in these practices should be cause for declaration of an international emergency, a crisis in sexual violence. But what should be cause for alarm is instead accepted as normal sexual intercourse.⁸

Susan Cavin, in a rich and provocative, if highly speculative, dissertation, suggests that patriarchy becomes possible when the original female band, which includes children but ejects adolescent males, becomes invaded and outnumbered by males; that not patriarchal marriage, but the rape of the mother by the son, becomes the first act of male domination. The entering wedge, or leverage, which allows this to happen is not just a simple change in sex ratios; it is also the mother-child bond, manipulated by adolescent males in order to remain within the matrix past the age of exclusion. Maternal affection is used to establish male right of sexual access, which, however, must ever after be held by force (or through control of consciousness) since the original deep adult bonding is that of woman for woman.⁹ I find this hypothesis extremely suggestive, since one form of false consciousness

6. *Ibid.*, p. 172 [Rich's note].

7. Elsewhere I have suggested that male identification has been a powerful source of white women's racism and that it has often been women already seen as "disloyal" to male codes and systems who have actively battled against it (Adrienne Rich, "Disloyal to Civilization: Feminism, Racism, Gynophobia," in *On Lies, Secrets, and*

Silence: Selected Prose, 1966–1978 [New York: W. W. Norton, 1979]) [Rich's note].

8. Barry, p. 220 [Rich's note].

9. Susan Cavin, "Lesbian Origins" (Ph.D. diss., Rutgers University, 1978), unpublished, chap. 6 [Rich's note]. [A.R., 1986: This dissertation was recently published as *Lesbian Origins* (San Francisco: Ism Press, 1986).]

which serves compulsory heterosexuality is the maintenance of a mother-son relationship between women and men, including the demand that women provide maternal solace, nonjudgmental nurturing, and compassion for their harassers, rapists, and batterers (as well as for men who passively vampirize them).

But whatever its origins, when we look hard and clearly at the extent and elaboration of measures designed to keep women within a male sexual purview, it becomes an inescapable question whether the issue feminists have to address is not simple "gender inequality" nor the domination of culture by males nor mere "taboos against homosexuality," but the enforcement of heterosexuality for women as a means of assuring male right of physical, economic, and emotional access.¹ One of many means of enforcement is, of course, the rendering invisible of the lesbian possibility, an engulfed continent which rises fragmentedly into view from time to time only to become submerged again. Feminist research and theory that contribute to lesbian invisibility or marginality are actually working against the liberation and empowerment of women as a group.² The assumption that "most women are innately heterosexual" stands as a theoretical and political stumbling block for feminism. It remains a tenable assumption partly because lesbian existence has been written out of history or catalogued under disease, partly because it has been treated as exceptional rather than intrinsic, partly because to acknowledge that for women heterosexuality may not be a "preference" at all but something that has had to be imposed, managed, organized, propagandized, and maintained by force is an immense step to take if you consider yourself freely and "innately" heterosexual. Yet the failure to examine heterosexuality as an institution is like failing to admit that the economic system called capitalism or the caste system of racism is maintained by a variety of forces, including both physical violence and false consciousness.³ To take the step of questioning heterosexuality as a "preference" or "choice" for women—and to do the intellectual and emotional work that follows—will call for a special quality of courage in heterosexually identified feminists, but I think the rewards will be great: a freeing-up of thinking, the exploring of new paths, the shattering of another great silence, new clarity in personal relationships.

1. For my perception of heterosexuality as an economic institution I am indebted to Lisa Leghorn and Katherine Parker, who allowed me to read the unpublished manuscript of their book *Woman's Worth: Sexual Economics and the World of Women* (London and Boston: Routledge and Kegan Paul, 1981) [Rich's note].

2. I would suggest that lesbian existence has been most recognized and tolerated where it has resembled a "deviant" version of heterosexuality—e.g., where lesbians have, like Stein and Toklas, played heterosexual roles (or seemed to in public) and have been chiefly identified with male culture. See also Claude E. Schaeffer, "The Kuterai Female Berdache: Courier, Guide, Prophetess and Warrior," *Ethnohistory* 12, no. 3 (summer 1965): 193–236. (Berdache: "an individual of a definite physiological sex [m. or f.] who assumes the role and status of the opposite sex and who is viewed by the community as being

of one sex physiologically but as having assumed the role and status of the opposite sex" [Schaeffer, p. 231].) Lesbian existence has also been relegated to an upper-class phenomenon, an elite decadence (as in the fascination with Paris salon lesbians such as Renée Vivien and Natalie Clifford Barney), to the obscuring of such "common women" as Judy Grahn depicts in her *The Work of a Common Woman* (Oakland, Calif.: Diana Press, 1978) and *True to Life Adventure Stories* (Oakland, Calif.: Diana Press, 1978) [Rich's note]. Stein and Toklas: the American writer Gertrude Stein (1874–1946) lived from 1909 on with Alice B. Toklas (1877–1967), who in many respects acted like the "wife" of a "genius."

3. A Marxist term referring to an individual's tendency to view reality in ways congruent with the interests of the dominant orthodoxy rather than in ways that reflect his or her own class interest.

III

I have chosen to use the terms *lesbian existence* and *lesbian continuum* because the word *lesbianism* has a clinical and limiting ring. *Lesbian existence* suggests both the fact of the historical presence of lesbians and our continuing creation of the meaning of that existence. I mean the term *lesbian continuum* to include a range—through each woman's life and throughout history—of woman-identified experience, not simply the fact that a woman has had or consciously desired genital sexual experience with another woman. If we expand it to embrace many more forms of primary intensity between and among women, including the sharing of a rich inner life, the bonding against male tyranny, the giving and receiving of practical and political support, if we can also hear it in such associations as *marriage resistance* and the "haggard" behavior identified by Mary Daly (obsolete meanings: "intractable," "willful," "wanton," and "unchaste," "a woman reluctant to yield to wooing"),⁴ we begin to grasp breadths of female history and psychology which have lain out of reach as a consequence of limited, mostly clinical, definitions of *lesbianism*.

Lesbian existence comprises both the breaking of a taboo and the rejection of a compulsory way of life. It is also a direct or indirect attack on male right of access to women. But it is more than these, although we may first begin to perceive it as a form of naysaying to patriarchy, an act of resistance. It has, of course, included isolation, self-hatred, breakdown, alcoholism, suicide, and intrawoman violence; we romanticize at our peril what it means to love and act against the grain, and under heavy penalties; and lesbian existence has been lived (unlike, say, Jewish or Catholic existence) without access to any knowledge of a tradition, a continuity, a social underpinning. The destruction of records and memorabilia and letters documenting the realities of lesbian existence must be taken very seriously as a means of keeping heterosexuality compulsory for women, since what has been kept from our knowledge is joy, sensuality, courage, and community, as well as guilt, self-betrayal, and pain.⁵

Lesbians have historically been deprived of a political existence through "inclusion" as female versions of male homosexuality. To equate lesbian existence with male homosexuality because each is stigmatized is to erase female reality once again. Part of the history of lesbian existence is, obviously, to be found where lesbians, lacking a coherent female community, have shared a kind of social life and common cause with homosexual men. But there are differences: women's lack of economic and cultural privilege relative to men; qualitative differences in female and male relationships—for example, the patterns of anonymous sex among male homosexuals, and the pronounced ageism in male homosexual standards of sexual attractiveness. I perceive the lesbian experience as being, like motherhood, a profoundly *female* experience, with particular oppressions, meanings, and potentialities we cannot comprehend as long as we simply bracket it with other sexually stigmatized

5. "In a hostile world in which women are not supposed to survive except in relation with and in service to men, entire communities of women are simply erased. History tends to bury what it seeks to reject" (Blanche W. Cook, "Women Alone Stir My Imagination: Lesbianism and the Cultural Tradition," *Signs: Journal of Women in Culture*

and Society 4, no. 4 [summer 1979]: 719–20). The Lesbian Herstory Archives in New York City is one attempt to preserve contemporary documents on lesbian existence—a project of enormous value and meaning, working against the continuing censorship and obliteration of relationships, networks, communities in other archives and elsewhere in the culture [Rich's note].

existences. Just as the term *parenting* serves to conceal the particular and significant reality of being a parent who is actually a mother, the term *gay* may serve the purpose of blurring the very outlines we need to discern, which are of crucial value for feminism and for the freedom of women as a group.⁶

As the term *lesbian* has been held to limiting, clinical associations in its patriarchal definition, female friendship and comradeship have been set apart from the erotic, thus limiting the erotic itself. But as we deepen and broaden the range of what we define as lesbian existence, as we delineate a lesbian continuum, we begin to discover the erotic in female terms: as that which is unconfined to any single part of the body or solely to the body itself; as an energy not only diffuse but, as Audre Lorde has described it, omnipresent in "the sharing of joy, whether physical, emotional, psychic," and in the sharing of work; as the empowering joy which "makes us less willing to accept powerlessness, or those other supplied states of being which are not native to me, such as resignation, despair, self-effacement, depression, self-denial."⁷ In another context, writing of women and work, I quoted the autobiographical passage in which the poet H.D. described how her friend Bryher⁸ supported her in persisting with the visionary experience which was to shape her mature work:

I knew that this experience, this writing-on-the-wall before me, could not be shared with anyone except the girl who stood so bravely there beside me. This girl said without hesitation, "Go on." It was she really who had the detachment and integrity of the Pythoness of Delphi. But it was I, battered and dissociated . . . who was seeing the pictures, and who was reading the writing or granted the inner vision. Or perhaps, in some sense, we were "seeing" it together, for without her, admittedly, I could not have gone on.⁹

If we consider the possibility that all women—from the infant suckling at her mother's breast, to the grown woman experiencing orgasmic sensations while suckling her own child, perhaps recalling her mother's milk smell in her own, to two women, like Virginia Woolf's Chloe and Olivia, who share a laboratory,¹ to the woman dying at ninety, touched and handled by women—exist on a lesbian continuum, we can see ourselves as moving in and out of this continuum, whether we identify ourselves as lesbian or not.

We can then connect aspects of woman identification as diverse as the impudent, intimate girl friendships of eight or nine year olds and the banding together of those women of the twelfth and fifteenth centuries known as Beguines who "shared houses, rented to one another, bequeathed houses to their room-mates . . . in cheap subdivided houses in the artisans' area of town," who "practiced Christian virtue on their own, dressing and living simply and not associating with men," who earned their livings as spinsters, bak-

ers, nurses, or ran schools for young girls, and who managed—until the Church forced them to disperse—to live independent both of marriage and of conventual restrictions.² It allows us to connect these women with the more celebrated “Lesbians” of the women’s school around Sappho³ of the seventh century B.C., with the secret sororities and economic networks reported among African women, and with the Chinese marriage-resistance sisterhoods—communities of women who refused marriage or who, if married, often refused to consummate their marriages and soon left their husbands, the only women in China who were not footbound and who, Agnes Smedley⁴ tells us, welcomed the births of daughters and organized successful women’s strikes in the silk mills.⁵ It allows us to connect and compare disparate individual instances of marriage resistance: for example, the strategies available to Emily Dickinson, a nineteenth-century white woman genius, with the strategies available to Zora Neale Hurston, a twentieth-century Black woman genius. Dickinson never married, had tenuous intellectual friendships with men, lived self-convented in her genteel father’s house in Amherst, and wrote a lifetime of passionate letters to her sister-in-law Sue Gilbert and a smaller group of such letters to her friend Kate Scott Anthon. Hurston married twice but soon left each husband, scrambled her way from Florida to Harlem to Columbia University to Haiti and finally back to Florida, moved in and out of white patronage and poverty, professional success, and failure; her survival relationships were all with women, beginning with her mother. Both of these women in their vastly different circumstances were marriage resisters, committed to their own work and selfhood, and were later characterized as “apolitical.” Both were drawn to men of intellectual quality; for both of them women provided the ongoing fascination and sustenance of life.

If we think of heterosexuality as *the* natural emotional and sexual inclination for women, lives such as these are seen as deviant, as pathological, or as emotionally and sensually deprived. Or, in more recent and permissive jargon, they are banalized as “life styles.” And the work of such women, whether merely the daily work of individual or collective survival and resistance or the work of the writer, the activist, the reformer, the anthropologist, or the artist—the work of self-creation—is undervalued, or seen as the bitter fruit of “penis envy” or the sublimation of repressed eroticism or the meaningless rant of a “man-hater.” But when we turn the lens of vision and consider the degree to which and the methods whereby heterosexual “preference” has actually been imposed on women, not only can we understand differently the meaning of individual lives and work, but we can begin to recognize a central fact of women’s history: that women have always resisted male tyr-

MacKinnon (Old Westbury, N.Y.: Feminist Press, 1976), pp. 103–10 [Rich’s note].

anny. A feminism of action, often though not always without a theory, has constantly re-emerged in every culture and in every period. We can then begin to study women's struggle against powerlessness, women's radical rebellion, not just in male-defined "concrete revolutionary situations"⁶ but in all the situations male ideologies have not perceived as revolutionary—for example, the refusal of some women to produce children, aided at great risk by other women;⁷ the refusal to produce a higher standard of living and leisure for men (Leghorn and Parker show how both are part of women's unacknowledged, unpaid, and ununionized economic contribution). We can no longer have patience with Dinnerstein's view that women have simply collaborated with men in the "sexual arrangements" of history. We begin to observe behavior, both in history and in individual biography, that has hitherto been invisible or misnamed, behavior which often constitutes, given the limits of the counterforce exerted in a given time and place, radical rebellion. And we can connect these rebellions and the necessity for them with the physical passion of woman for woman which is central to lesbian existence: the erotic sensuality which has been, precisely, the most violently erased fact of female experience.

* * *

IV

Woman identification is a source of energy, a potential springhead of female power, curtailed and contained under the institution of heterosexuality. The denial of reality and visibility to women's passion for women, women's choice of women as allies, life companions, and community, the forcing of such relationships into dissimulation and their disintegration under intense pressure have meant an incalculable loss to the power of all women *to change the social relations of the sexes, to liberate ourselves and each other*. The lie of compulsory female heterosexuality today afflicts not just feminist scholarship, but every profession, every reference work, every curriculum, every organizing attempt, every relationship or conversation over which it hovers. It creates, specifically, a profound falseness, hypocrisy, and hysteria in the heterosexual dialogue, for every heterosexual relationship is lived in the queasy strobe light of that lie. However we choose to identify ourselves, however we find ourselves labeled, it flickers across and distorts our lives.⁸

The lie keeps numberless women psychologically trapped, trying to fit mind, spirit, and sexuality into a prescribed script because they cannot look beyond the parameters of the acceptable. It pulls on the energy of such women even as it drains the energy of "closeted" lesbians—the energy exhausted in the double life. The lesbian trapped in the "closet," the woman imprisoned in prescriptive ideas of the "normal" share the pain of blocked options, broken connections, lost access to self-definition freely and powerfully assumed.

The lie is many-layered. In Western tradition, one layer—the romantic—asserts that women are inevitably, even if rashly and tragically, drawn to men;

7. [A.R., 1986: See Angela Davis, *Women, Race, and Class* (New York: Random House, 1981), p.

102; Orlando Patterson, *Slavery and Social Death: A Comparative Study* (Cambridge: Harvard University Press, 1982), p. 133.]

8. See Russell and Van de Ven, p. 40: "Few heterosexual women realize their lack of free choice about their sexuality, and few realize how and why compulsory heterosexuality is also a crime against them" [Rich's note].

that even when that attraction is suicidal (e.g., *Tristan and Isolde*, Kate Chopin's *The Awakening*),⁹ it is still an organic imperative. In the tradition of the social sciences it asserts that primary love between the sexes is "normal"; that women *need* men as social and economic protectors, for adult sexuality, and for psychological completion; that the heterosexually constituted family is the basic social unit; that women who do not attach their primary intensity to men must be, in functional terms, condemned to an even more devastating outsiderhood than their outsiderhood as women. Small wonder that lesbians are reported to be a more hidden population than male homosexuals. The Black lesbian-feminist critic Lorraine Bethel, writing on Zora Neale Hurston, remarks that for a Black woman—already twice an outsider—to choose to assume still another "hated identity" is problematic indeed. Yet the lesbian continuum has been a life line for Black women both in Africa and the United States.

Black women have a long tradition of bonding together . . . in a Black/women's community that has been a source of vital survival information, psychic and emotional support for us. We have a distinct Black woman-identified folk culture based on our experiences as Black women in this society; symbols, language and modes of expression that are specific to the realities of our lives. . . . Because Black women were rarely among those Blacks and females who gained access to literary and other acknowledged forms of artistic expression, this Black female bonding and Black woman-identification has often been hidden and unrecorded except in the individual lives of Black women through our own memories of our particular Black female tradition.¹

Another layer of the lie is the frequently encountered implication that women turn to women out of hatred for men. Profound skepticism, caution, and righteous paranoia about men may indeed be part of any healthy woman's response to the misogyny of male-dominated culture, to the forms assumed by "normal" male sexuality, and to *the failure even of "sensitive" or "political" men to perceive or find these troubling*. Lesbian existence is also represented as mere refuge from male abuses, rather than as an electric and empowering charge between women. One of the most frequently quoted literary passages on lesbian relationship is that in which Colette's² Renée, in *The Vagabond*, describes "the melancholy and touching image of two weak creatures who have perhaps found shelter in each other's arms, there to sleep and weep, safe from man who is often cruel, and there to taste *better than any pleasure, the bitter happiness of feeling themselves akin, frail and forgotten* [emphasis added]."³ Colette is often con-

9. *The Awakening* (1899), by the American fiction writer Chopin (1851–1904), records the heroine's sexual awakening through an adulterous liaison and ends with her suicide. *Tristan and Isolde*: the 1859 opera by Richard Wagner, with its celebratory mingling of love and death, retells the medieval legend of a doomed adulterous love.

2. Pen name of Sidonie Gabrielle Claudine

Colette (1873–1954), prolific French novelist; *The Vagabond* was published in 1910.

3. Dorothy Dinnerstein, the most recent writer to quote this passage, adds ominously: "But what has to be added to her account is that these 'women enlaced' are sheltering each other not just from what men want to do to them, but also from what they want to do to each other" (Dinnerstein, *The Mermaid and the Minotaur: Sexual Arrangements and the Human Malaise* [New York: Harper and Row, 1976], p. 103). The fact is, however, that woman-to-woman violence is a minute grain in the universe of male-against-female violence perpetuated and rationalized in every social institution [Rich's note].

sidered a lesbian writer. Her popular reputation has, I think, much to do with the fact that she writes about lesbian existence as if for a male audience; her earliest "lesbian" novels, the Claudine series, were written under compulsion for her husband and published under both their names. At all events, except for her writings on her mother, Colette is a less reliable source on the lesbian continuum than, I would think, Charlotte Brontë,⁴ who understood that while women may, indeed must, be one another's allies, mentors, and comforters in the female struggle for survival, there is quite extraneous delight in each other's company and attraction to each others' minds and character, which attend a recognition of each others' strengths.

By the same token, we can say that there is a *nascent* feminist political content in the act of choosing a woman lover or life partner in the face of institutionalized heterosexuality.⁵ But for lesbian existence to realize this political content in an ultimately liberating form, the erotic choice must deepen and expand into conscious woman identification—into lesbian feminism.

The work that lies ahead, of unearthing and describing what I call here "lesbian existence," is potentially liberating for all women. It is work that must assuredly move beyond the limits of white and middle-class Western Women's Studies to examine women's lives, work, and groupings within every racial, ethnic, and political structure. There are differences, moreover, between "lesbian existence" and the "lesbian continuum," differences we can discern even in the movement of our own lives. The lesbian continuum, I suggest, needs delineation in light of the "double life" of women, not only women self-described as heterosexual but also of self-described lesbians. We need a far more exhaustive account of the forms the double life has assumed. Historians need to ask at every point how heterosexuality as institution has been organized and maintained through the female wage scale, the enforcement of middle-class women's "leisure," the glamorization of so-called sexual liberation, the withholding of education from women, the imagery of "high art" and popular culture, the mystification of the "personal" sphere, and much else. We need an economics which comprehends the institution of heterosexuality, with its doubled workload for women and its sexual divisions of labor, as the most idealized of economic relations.

The question inevitably will arise: Are we then to condemn all heterosexual relationships, including those which are least oppressive? I believe this question, though often heartfelt, is the wrong question here. We have been stalled in a maze of false dichotomies which prevents our apprehending the institution as a whole: "good" versus "bad" marriages; "marriage for love" versus arranged marriage; "liberated" sex versus prostitution; heterosexual intercourse versus rape; *Liebeschmerz*⁶ versus humiliation and dependency. Within the institution exist, of course, qualitative differences of experience; but the absence of choice remains the great unacknowledged reality, and in the absence of choice, women will remain dependent upon the chance or luck of particular relationships and will have no collective power to determine the meaning and place of sexuality in their lives. As we address the institution itself, moreover, we begin to perceive a history of female resistance which has never fully understood itself because it has been so fragmented, miscalled,

erased. It will require a courageous grasp of the politics and economics, as well as the cultural propaganda, of heterosexuality to carry us beyond individual cases or diversified group situations into the complex kind of overview needed to undo the power men everywhere wield over women, power which has become a model for every other form of exploitation and illegitimate control.

1980, 1986

CHINUA ACHEBE

1930–2013

In the wake of global realignments after World War II, many African, Asian, and other countries sought political independence from European colonial rule. The struggle for cultural recognition was an important part of this political process, and the 1960s and 1970s witnessed a profusion of writing from formerly colonial cultures. Arguably the most prominent African writer of his generation, Chinua Achebe brought to the English-speaking world highly regarded novelistic portraits of Nigeria. Alongside his fiction, he also published influential criticism exposing colonialist biases in English fiction and criticism and arguing for an indigenous African literature. Indicting the view of Africa in Joseph Conrad's classic *Heart of Darkness* (1902) as a reflection of European racist assumptions of the "darkness" or inferiority of Africans, Achebe's "An Image of Africa: Racism in Conrad's *Heart of Darkness*" (1977) is a touchstone of anticolonialist—or what has come to be called postcolonial—criticism.

Born in the village of Ogidi in eastern Nigeria, Achebe experienced the world of colonialism firsthand. Nigeria was a construction of European colonial powers; its disparate African tribes and territories were placed under British control from 1906 until 1960, when it achieved independence. His father was a churchman in an evangelical Protestant mission, but as a boy Achebe was also exposed to traditional Igbo culture. He was selected to attend a prestigious colonial secondary school, the Government College at Umuahia, and in 1948 went on to receive his undergraduate training at the newly formed University College in Ibadan, then an affiliate of the University of London. After graduating in 1953, he worked as a producer for the Nigerian Broadcasting Company, later founding and directing the Voice of Nigeria from 1961 to 1966.

Achebe caught the attention of the literary world with the publication of his first novel, *Things Fall Apart* (1958). Depicting traditional Igbo culture and its clash with European culture, it has been an international success, translated into nearly fifty languages and selling millions of copies. Achebe became a senior research fellow at the University of Nigeria in 1967, a professor of English in 1976, and professor emeritus in 1985. He taught at various U.S. schools, including the University of Massachusetts, the University of Virginia, UCLA, and Bard College, and he won numerous prizes and honors. He was also actively involved in publishing ventures to promote African writing; most notably, from 1962 through 1987 he was founding editor of the British publisher Heinemann's African Writers Series, which has issued several hundred titles. In addition, Achebe was an outspoken public figure, especially during the Nigerian Civil War (1967–70), when he supported the independence of Biafra from the Nigerian federation.

Achebe's fiction and criticism present, as one African critic notes, "exemplary texts of nationalist contestation of colonialist myths and distortions of Africans and Africa." Achebe himself, in his influential essay "Colonialist Criticism" (1975), shows how colonialist biases permeate even sophisticated critical commentary on fiction representing Africa. This is the theme of "An Image of Africa," our selection, in which Achebe argues that Conrad's *Heart of Darkness*, however critical of the European imperialist mission, presents Africans as savage, subhuman, and incapable of speech. While allowing for the novel's artistry, he unequivocally condemns this view as "offensive and deplorable." Significantly, he focuses much of his attack not on Conrad but on the critical position of Conrad's text in the Western canon as a masterpiece, a position largely forgiving of or blind to its racism. Thus its critical reception—up to the present day—unthinkingly perpetuates racist stereotypes.

Although focused on the racism inherent in the specific case of *Heart of Darkness*, Achebe's argument broaches large theoretical debates about the canon and about the moral and social values of art. It poses a difficult question: how should we respond to classic works that exhibit racist or other condemnable views? Achebe answers with an emphatic ethical judgment. In dismissing the aestheticist view that art is solely for art's sake or that we should merely appreciate and analyze the aesthetic or linguistic skill of a work, Achebe presupposes a social theory of art, holding that art reflects and propagates social views and values. He does not fully justify this position in "An Image of Africa," but in a central early statement of his views, "The Novelist as Teacher" (1965), he underscores literature's pedagogical mission and its ethical and political responsibilities.

Since its publication, "An Image of Africa" has set the terms of debate about one of the most read and taught books in the English curriculum. Some scholars maintain that Conrad disdainfully opposes European imperialism, which was at its height in 1900, and exhibits sympathy for the plight of Africans. Others argue that *Heart of Darkness* represents not a real Africa but an allegory of an individual psychological descent or of a decontextualized battle between good and evil. Critics heeding Achebe's angry battle cry find texts such as *Heart of Darkness* irretrievably flawed in their racism and limited in that they depict Africa only through Western eyes. More moderate historicist critics have tried to mend fences; while agreeing that *Heart of Darkness* exhibits racist views, they point out that it represents relatively progressive views for its time and conclude that Conrad is not particularly blameworthy, noting that any condemnation would be unfairly based on anachronistic criteria.

Beyond its impact on Conrad criticism, Achebe's denunciation of Conrad assumed a larger significance in the so-called culture wars of the 1980s and 1990s. Traditionalists have taken it as a prime example of "political correctness," an attempt to impose moralistic and political standards on classic works of literature. They claim that canonical works exhibit high aesthetic value, proven by the test of time, and thus should be esteemed. On the other side, a range of theorists—postcolonial, African American, feminist, queer, and so on—contest a literary canon that carries racist, orientalist, sexist, homophobic, and other negative values. This debate seems intractable, in part because both groups argue at cross-purposes; it is doubtful that a traditionalist critic would advocate racism, or that a progressive critic would dispense with aesthetic appreciation. Rather, their disagreement rests on their differing theories of art: traditionalist critics claim priority for formal aesthetic properties, while progressive critics claim priority for art's social—or in Achebe's terms, pedagogical—value.

Along with the Kenyan novelist and critic NGUGI WAX THIONG'O and others, Achebe called for representations of imperialism to shift from European perspectives to the perspectives of those colonized. As he remarked in a 1989 interview, "The moment I realized in reading *Heart of Darkness* that I was not supposed to be part of Marlow's crew sailing down the Congo to a bend in the river, but I was one of those on the shore, jumping and clapping and making faces and so on, then I realized that was not

me, and that that story had to be told again.” This call, advocating a distinctive indigenous voice to represent its own experience, has been influential for the developing field of postcolonial studies, as well as for African American literature and criticism. Achebe’s analysis of the West’s imagination of Africa as a negative projection of itself draws on the psychoanalytic model of colonialism proposed by FRANTZ FANON, which argues that European depictions of colonies as the “Other” are symptomatic of the West’s own cultural neuroses. This analysis of the literary and cultural representation of non-Western cultures has received its fullest treatment in the work of EDWARD W. SAID, who labels Western projections onto the Eastern Other “Orientalism” (see below). In “An Image of Africa,” Achebe simply calls it racism.

“An Image of Africa: Racism in Conrad’s *Heart of Darkness*” Keywords: The Canon/Tradition, Ethics, The Novel, Postcolonial Criticism, Race and Ethnicity Studies, Representation

An Image of Africa: Racism in Conrad’s *Heart of Darkness*¹

In the fall of 1974 I was walking one day from the English Department at the University of Massachusetts to a parking lot. It was a fine autumn morning such as encouraged friendliness to passing strangers. Brisk youngsters were hurrying in all directions, many of them obviously freshmen in their first flush of enthusiasm. An older man going the same way as I turned and remarked to me how very young they came these days. I agreed. Then he asked me if I was a student too. I said no, I was a teacher. What did I teach? African literature. Now that was funny, he said, because he knew a fellow who taught the same thing, or perhaps it was African *history*, in a certain community college not far from here. It always surprised him, he went on to say, because he never had thought of Africa as having that kind of stuff, you know. By this time I was walking much faster. “Oh well,” I heard him say finally, behind me: “I guess I have to take your course to find out.”

A few weeks later I received two very touching letters from high school children in Yonkers, New York, who—bless their teacher—had just read *Things Fall Apart*.² One of them was particularly happy to learn about the customs and superstitions of an African tribe.

I propose to draw from these rather trivial encounters rather heavy conclusions which at first sight might seem somewhat out of proportion to them. But only, I hope, at first sight.

The young fellow from Yonkers, perhaps partly on account of his age, but I believe also for much deeper and more serious reasons, is obviously unaware that the life of his own tribesmen in Yonkers, New York, is full of odd customs and superstitions and, like everybody else in his culture, imagines that he needs a trip to Africa to encounter those things.

The other person being fully my own age could not be excused on the grounds of his years. Ignorance might be a more likely reason; but here again I believe that something more wilful than a mere lack of information was at

1. This is an amended version of the second Chancellor’s Lecture at the University of Massachusetts, Amherst, February 1975 [Achebe’s note].

2. Achebe’s first and best-known novel (published 1958); it depicts a traditional Nigerian society from an African rather than European perspective.

work. For did not that erudite British historian and Regius Professor at Oxford, Hugh Trevor-Roper,³ also pronounce that African history did not exist?

If there is something in these utterances more than youthful inexperience, more than a lack of factual knowledge, what is it? Quite simply it is the desire—one might indeed say the need—in Western psychology to set Africa up as a foil to Europe, as a place of negations at once remote and vaguely familiar, in comparison with which Europe's own state of spiritual grace will be manifest.

This need is not new; which should relieve us all of considerable responsibility and perhaps make us even willing to look at this phenomenon dispassionately. I have neither the wish nor the competence to embark on the exercise with the tools of the social and biological sciences but do so more simply in the manner of a novelist responding to one famous book of European fiction: Joseph Conrad's *Heart of Darkness*,⁴ which better than any other work that I know displays that Western desire and need which I have just referred to. Of course there are whole libraries of books devoted to the same purpose but most of them are so obvious and so crude that few people worry about them today. Conrad, on the other hand, is undoubtedly one of the great stylists of modern fiction and a good story-teller into the bargain. His contribution therefore falls automatically into a different class—permanent literature—read and taught and constantly evaluated by serious academics. *Heart of Darkness* is indeed so secure today that a leading Conrad scholar has numbered it “among the half-dozen greatest short novels in the English language.”⁵ I will return to this critical opinion in due course because it may seriously modify my earlier suppositions about who may or may not be guilty in some of the matters I will now raise.

Heart of Darkness projects the image of Africa as “the other world,” the antithesis of Europe and therefore of civilization, a place where man's vaunted intelligence and refinement are finally mocked by triumphant bestiality. The book opens on the River Thames, tranquil, resting peacefully “at the decline of day after ages of good service done to the race that peopled its banks.”⁶ But the actual story will take place on the River Congo, the very antithesis of the Thames. The River Congo is quite decidedly not a River Emeritus. It has rendered no service and enjoys no old-age pension. We are told that “going up that river was like travelling back to the earliest beginning of the world.”

Is Conrad saying then that these two rivers are very different, one good, the other bad? Yes, but that is not the real point. It is not the differentness that worries Conrad but the lurking hint of kinship, of common ancestry. For the Thames too “has been one of the dark places of the earth.” It conquered its darkness, of course, and is now in daylight and at peace. But if it were to visit its primordial relative, the Congo, it would run the terrible risk of hearing grotesque echoes of its own forgotten darkness, and falling victim to an avenging recrudescence of the mindless frenzy of the first beginnings.

3. English historian (1914–2003) known for his studies of World War II and the Elizabethan period; Regius Professor of Modern History (1957–80). He made this comment in a lecture delivered in 1963, reprinted in *The Rise of Christian Europe* (1965).

4. The best-known work (1902) of Conrad (1857–1924), the Polish-born English novelist. In it, a

ship captain named Marlow retells his journey down the Congo River on behalf of a Belgian company in search of their chief ivory agent, Kurtz.

5. Albert J. Guerard, introduction to *Heart of Darkness and the Secret Sharer*, by Joseph Conrad (New York: New American Library, 1950), p. 9 [Achebe's note].

6. Conrad, p. 66 [Achebe's note].

These suggestive echoes comprise Conrad's famed evocation of the African atmosphere in *Heart of Darkness*. In the final consideration, his method amounts to no more than a steady, ponderous, fake-ritualistic repetition of two antithetical sentences, one about silence and the other about frenzy. We can inspect samples of this on pages 103 and 105 of the New American Library edition: (a) "It was the stillness of an implacable force brooding over an inscrutable intention" and (b) "The steamer toiled along slowly on the edge of a black and incomprehensible frenzy." Of course, there is a judicious change of adjective from time to time, so that instead of "inscrutable," for example, you might have "unspeakable," even plain "mysterious," etc., etc.

The eagle-eyed English critic F. R. Leavis⁷ drew attention long ago to Conrad's "adjectival insistence upon inexpressible and incomprehensible mystery." That insistence must not be dismissed lightly, as many Conrad critics have tended to do, as a mere stylistic flaw; for it raises serious questions of artistic good faith. When a writer while pretending to record scenes, incidents, and their impact is in reality engaged in inducing hypnotic stupor in his readers through a bombardment of emotive words and other forms of trickery, much more has to be at stake than stylistic felicity. Generally, normal readers are well armed to detect and resist such underhand activity. But Conrad chose his subject well—one which was guaranteed not to put him in conflict with the psychological predisposition of his readers or raise the need for him to contend with their resistance. He chose the role of purveyor of comforting myths.

The most interesting and revealing passages in *Heart of Darkness* are, however, about people. I must crave the indulgence of my reader to quote almost a whole page from about the middle of the story when representatives of Europe in a steamer going down the Congo encounter the denizens of Africa:

We were wanderers on a prehistoric earth, on an earth that wore the aspect of an unknown planet. We could have fancied ourselves the first of men taking possession of an accursed inheritance, to be subdued at the cost of profound anguish and of excessive toil. But suddenly, as we struggled round a bend, there would be a glimpse of rush walls, of peaked grass-roofs, a burst of yells, a whirl of black limbs, a mass of hands clapping, of feet stamping, of bodies swaying, of eyes rolling, under the droop of heavy and motionless foliage. The steamer toiled along slowly on the edge of the black and incomprehensible frenzy. The prehistoric man was cursing us, praying to us, welcoming us—who could tell? We were cut off from the comprehension of our surroundings; we glided past like phantoms, wondering and secretly appalled, as sane men would be before an enthusiastic outbreak in a madhouse. We could not understand because we were too far and could not remember because we were travelling in the night of first ages, of those ages that are gone, leaving hardly a sign—and no memories.

The earth seemed unearthly. We are accustomed to look upon the shackled form of a conquered monster, but there—there you could look

7. Influential modern literary critic (1895–1978; see above); the following quotation is from *The Great Tradition: George Eliot, Henry James, and*

Joseph Conrad (1948; reprint, New York: New York University Press, 1960), p. 177.

at a thing monstrous and free. It was unearthly, and the men were—No, they were not inhuman. Well, you know, that was the worst of it—this suspicion of their not being inhuman. It would come slowly to one. They howled and leaped, and spun, and made horrid faces; but what thrilled you was just the thought of their humanity—like yours—the thought of your remote kinship with this wild and passionate uproar. Ugly. Yes, it was ugly enough; but if you were man enough you would admit to yourself that there was in you just the faintest trace of a response to the terrible frankness of that noise, a dim suspicion of there being a meaning in it which you—you so remote from the night of first ages—could comprehend.⁸

Herein lies the meaning of *Heart of Darkness* and the fascination it holds over the Western mind: “What thrilled you was just the thought of their humanity—like yours . . . Ugly.”

Having shown us Africa in the mass, Conrad then zeros in, half a page later, on a specific example, giving us one of his rare descriptions of an African who is not just limbs or rolling eyes:

And between whiles I had to look after the savage who was fireman. He was an improved specimen; he could fire up a vertical boiler. He was there below me, and, upon my word, to look at him was as edifying as seeing a dog in a parody of breeches and a feather hat, walking on his hind legs.⁹ A few months of training had done for that really fine chap. He squinted at the steam gauge and at the water gauge with an evident effort of intrepidity—and he had filed his teeth, too, the poor devil, and the wool of his pate shaved into queer patterns, and three ornamental scars on each of his cheeks. He ought to have been clapping his hands and stamping his feet on the bank, instead of which he was hard at work, a thrall to strange witchcraft, full of improving knowledge.¹

As everybody knows, Conrad is a romantic on the side. He might not exactly admire savages clapping their hands and stamping their feet but they have at least the merit of being in their place, unlike this dog in a parody of breeches. For Conrad, things being in their place is of the utmost importance.

“Fine fellows—cannibals—in their place,” he tells us pointedly. Tragedy begins when things leave their accustomed place, like Europe leaving its safe stronghold between the policeman and the baker to take a peep into the heart of darkness.

Before the story takes us into the Congo basin proper we are given this nice little vignette as an example of things in their place:

Now and then a boat from the shore gave one a momentary contact with reality. It was paddled by black fellows. You could see from afar the white of their eyeballs glistening. They shouted, sang; their bodies streamed with perspiration; they had faces like grotesque masks—these chaps; but they had bone, muscle, a wild vitality, an intense energy of

8. Conrad, pp. 105–6 [Achebe's note].

9. An allusion to a famous remark of SAMUEL JOHNSON (1709–1784), who described a woman's preaching as “like a dog's walking on his hinder

legs. It is not done well; but you are surprised to find it done at all” (quoted by James Boswell in his *Life of Johnson*, 1791).

1. Conrad, p. 106 [Achebe's note].

movement, that was as natural and true as the surf along their coast. They wanted no excuse for being there. They were a great comfort to look at.²

Towards the end of the story Conrad lavishes a whole page quite unexpectedly on an African woman who has obviously been some kind of mistress to Mr. Kurtz and now presides (if I may be permitted a little liberty) like a formidable mystery over the inexorable imminence of his departure:

She was savage and superb, wild-eyed and magnificent. . . . She stood looking at us without a stir and like the wilderness itself, with an air of brooding over an inscrutable purpose.³

This Amazon is drawn in considerable detail, albeit of a predictable nature, for two reasons. First, she is in her place and so can win Conrad's special brand of approval; and second, she fulfils a structural requirement of the story; a savage counterpart to the refined, European woman who will step forth to end the story:

She came forward, all in black with a pale head, floating toward me in the dusk. She was in mourning. . . . She took both my hands in hers and murmured, "I had heard you were coming" . . . She had a mature capacity for fidelity, for belief, for suffering.⁴

The difference in the attitude of the novelist to these two women is conveyed in too many direct and subtle ways to need elaboration. But perhaps the most significant difference is the one implied in the author's bestowal of human expression to the one and the withholding of it from the other. It is clearly not part of Conrad's purpose to confer language on the "rudimentary souls" of Africa. In place of speech they made "a violent babble of uncouth sounds." They "exchanged short grunting phrases" even among themselves. But most of the time they were too busy with their frenzy. There are two occasions in the book, however, when Conrad departs somewhat from his practice and confers speech, even English speech, on the savages. The first occurs when cannibalism gets the better of them:

"Catch 'im," he snapped, with a bloodshot widening of his eyes and a flash of sharp white teeth—"catch 'im. Give 'im to us." "To you, eh?" I asked; "what would you do with them?" "Eat 'im!" he said curtly.⁵

The other occasion was the famous announcement: "Mistah Kurtz—he dead."⁶

At first sight these instances might be mistaken for unexpected acts of generosity from Conrad. In reality they constitute some of his best assaults. In the case of the cannibals the incomprehensible grunts that had thus far served them for speech suddenly proved inadequate for Conrad's purpose of letting the European glimpse the unspeakable craving in their hearts. Weighing the necessity for consistency in the portrayal of the dumb brutes against the sensational advantages of securing their conviction by clear, unambiguous evidence issuing out of their own mouths, Conrad chose the

2. *Ibid.*, p. 78 [Achebe's note].

3. *Ibid.*, pp. 136–37.

4. *Ibid.*, p. 153.

5. *Ibid.*, p. 111.

6. *Ibid.*, p. 148.

latter. As for the announcement of Mr. Kurtz's death by the "insolent black head in the doorway," what better or more appropriate *finis* could be written to the horror story of that wayward child of civilization who willfully had given his soul to the powers of darkness and "taken a high seat amongst the devils of the land" than the proclamation of his physical death by the forces he had joined?

It might be contended, of course, that the attitude to the African in *Heart of Darkness* is not Conrad's but that of his fictional narrator, Marlow, and that far from endorsing it Conrad might indeed be holding it up to irony and criticism. Certainly, Conrad appears to go to considerable pains to set up layers of insulation between himself and the moral universe of his story. He has, for example, a narrator behind a narrator. The primary narrator is Marlow, but his account is given to us through the filter of a second, shadowy person. But if Conrad's intention is to draw a cordon sanitaire between himself and the moral and psychological *malaise* of his narrator, his care seems to me totally wasted because he neglects to hint, clearly and adequately, at an alternative frame of reference by which we may judge the actions and opinions of his characters. It would not have been beyond Conrad's power to make that provision if he had thought it necessary. Conrad seems to me to approve of Marlow, with only minor reservations—a fact reinforced by the similarities between their two careers.

Marlow comes through to us not only as a witness of truth, but one holding those advanced and humane views appropriate to the English liberal tradition which required all Englishmen of decency to be deeply shocked by atrocities in Bulgaria or the Congo of King Leopold⁷ of the Belgians or wherever.

Thus, Marlow is able to toss out such bleeding-heart sentiments as these:

They were all dying slowly—it was very clear. They were not enemies, they were not criminals, they were nothing earthly now—nothing but black shadows of disease and starvation, lying confusedly in the greenish gloom. Brought from all the recesses of the coast in all the legality of time contracts, lost in uncongenial surroundings, fed on unfamiliar food, they sickened, became inefficient, and were then allowed to crawl away and rest.⁸

The kind of liberalism espoused here by Marlow/Conrad touched all the best minds of the age in England, Europe and America. It took different forms in the minds of different people but almost always managed to sidestep the ultimate question of equality between white people and black people. That extraordinary missionary Albert Schweitzer,⁹ who sacrificed brilliant careers in music and theology in Europe for a life of service to Africans in much the same area as Conrad writes about, epitomizes the ambivalence. In a comment which has often been quoted Schweitzer says: "The African is

7. Leopold II (1835–1909; reigned 1865–1909), an ardent imperialist advocating the colonial development of the Congo region, which was then the private holding of a group of investors headed by Leopold and later (1908–60) a colonial possession of Belgium. "Atrocities in Bulgaria": after an unsuccessful Bulgarian rebellion against Turkish rule, in 1876 the Ottomans massacred some 30,000 Bulgarian men, women, and

children.

8. Conrad, p. 82 [Achebe's note].

9. Alsatian theologian, philosopher, and physician (1875–1965), who in 1913 founded a hospital in Lambaréné, a city in the Gabon province of French Equatorial Africa. In 1952 he was awarded the Nobel Peace Prize for his humanitarian efforts in Africa.

indeed my brother but my junior brother." And so he proceeded to build a hospital appropriate to the needs of junior brothers with standards of hygiene reminiscent of medical practice in the days before the germ theory of disease came into being. Naturally he became a sensation in Europe and America. Pilgrims flocked, and I believed still flock even after he has passed on, to witness the prodigious miracle in Lambaréné, on the edge of the primeval forest.

Conrad's liberalism would not take him quite as far as Schweitzer's, though. He would not use the word "brother" however qualified; the farthest he would go was "kinship." When Marlow's African helmsman falls down with a spear in his heart he gives his white master one final disquieting look:

And the intimate profundity of that look he gave me when he received his hurt remains to this day in my memory—like a claim of distant kinship affirmed in a supreme moment.¹

It is important to note that Conrad, careful as ever with his words, is concerned not so much about "distant kinship" as about someone *laying a claim* on it. The black man lays a claim on the white man which is well-nigh intolerable. It is the laying of this claim which frightens and at the same time fascinates Conrad, "the thought of their humanity—like yours . . . Ugly."

The point of my observations should be quite clear by now, namely that Joseph Conrad was a thoroughgoing racist. That this simple truth is glossed over in criticisms of his work is due to the fact that white racism against Africa is such a normal way of thinking that its manifestations go completely unremarked. Students of *Heart of Darkness* will often tell you that Conrad is concerned not so much with Africa as with the deterioration of one European mind caused by solitude and sickness. They will point out to you that Conrad is, if anything, less charitable to the Europeans in the story than he is to the natives, that the point of the story is to ridicule Europe's civilizing mission in Africa. A Conrad student informed me in Scotland that Africa is merely a setting for the disintegration of the mind of Mr. Kurtz.

Which is partly the point. Africa as setting and backdrop which eliminates the African as human factor. Africa as a metaphysical battlefield devoid of all recognizable humanity, into which the wandering European enters at his peril. Can nobody see the preposterous and perverse arrogance in thus reducing Africa to the role of props for the break-up of one petty European mind? But that is not even the point. The real question is the dehumanization of Africa and Africans which this age-long attitude has fostered and continues to foster in the world. And the question is whether a novel which celebrates this dehumanization, which depersonalizes a portion of the human race, can be called a great work of art. My answer is: No, it cannot. I do not doubt Conrad's great talents. Even *Heart of Darkness* has its memorably good passages and moments:

The reaches opened before us and closed behind, as if the forest had stepped leisurely across the water to bar the way for our return.²

Its exploration of the minds of the European characters is often penetrating and full of insight. But all that has been more than fully discussed in the last fifty years. His obvious racism has, however, not been addressed. And it is high time it was!

1. Conrad, p. 124 [Achebe's note].

2. *Ibid.*, pp. 104–5.

Conrad was born in 1857, the very year in which the first Anglican missionaries were arriving among my own people in Nigeria. It was certainly not his fault that he lived his life at a time when the reputation of the black man was at a particularly low level. But even after due allowances have been made for all the influences of contemporary prejudice on his sensibility, there remains still in Conrad's attitude a residue of antipathy to black people which his peculiar psychology alone can explain. His own account of his first encounter with a black man is very revealing:

A certain enormous buck nigger encountered in Haiti fixed my conception of blind, furious, unreasoning rage, as manifested in the human animal to the end of my days. Of the nigger I used to dream for years afterwards.³

Certainly Conrad had a problem with niggers. His inordinate love of that word itself should be of interest to psychoanalysts. Sometimes his fixation on blackness is equally interesting, as when he gives us this brief description: "A black figure stood up, strode on long black legs, waving long black arms"⁴—as though we might expect a black figure striding along on black legs to wave white arms! But so unrelenting is Conrad's obsession.

As a matter of interest, Conrad gives us in *A Personal Record* what amounts to a companion piece to the buck nigger of Haiti. At the age of sixteen Conrad encountered his first Englishman in Europe. He calls him "my unforgettable Englishman" and describes him in the following manner:

[his] calves exposed to the public gaze . . . dazzled the beholder by the splendour of their marble-like condition and their rich tone of young ivory . . . The light of a headlong, exalted satisfaction with the world of men . . . illumined his face . . . and triumphant eyes. In passing he cast a glance of kindly curiosity and a friendly gleam of big, sound, shiny teeth . . . his white calves twinkled sturdily.⁵

Irrational love and irrational hate jostling together in the heart of that talented, tormented man. But whereas irrational love may at worst engender foolish acts of indiscretion, irrational hate can endanger the life of the community. Naturally, Conrad is a dream for psychoanalytic critics. Perhaps the most detailed study of him in this direction is by Bernard C. Meyer, M.D. In his lengthy book, Dr. Meyer follows every conceivable lead (and sometimes inconceivable ones) to explain Conrad. As an example, he gives us long disquisitions on the significance of hair and hair-cutting in Conrad. And yet not even one word is spared for his attitude to black people. Not even the discussion of Conrad's antisemitism was enough to spark off in Dr. Meyer's mind those other dark and explosive thoughts. Which only leads one to surmise that Western psychoanalysts must regard the kind of racism displayed by Conrad as absolutely normal despite the profoundly important work done by Frantz Fanon⁶ in the psychiatric hospitals of French Algeria.

6. Black West Indian psychoanalyst and social critic (1925–1961; see above), who was an influential proponent of the national liberation of colonial peoples.

Whatever Conrad's problems were, you might say he is now safely dead. Quite true. Unfortunately, his heart of darkness plagues us still. Which is why an offensive and deplorable book can be described by a serious scholar as "among the half-dozen greatest short novels in the English language." And why it is today perhaps the most commonly prescribed novel in twentieth-century literature courses in English departments of American universities.

There are two probable grounds on which what I have said so far may be contested. The first is that it is no concern of fiction to please people about whom it is written. I will go along with that. But I am not talking about pleasing people. I am talking about a book which parades in the most vulgar fashion prejudices and insults from which a section of mankind has suffered untold agonies and atrocities in the past and continues to do so in many ways and many places today. I am talking about a story in which the very humanity of black people is called in question.

Secondly, I may be challenged on the grounds of actuality. Conrad, after all, did sail down the Congo in 1890 when my own father was still a babe in arms. How could I stand up more than fifty years after his death and purport to contradict him? My answer is that as a sensible man I will not accept just any traveller's tales solely on the grounds that I have not made the journey myself. I will not trust the evidence even of a man's very eyes when I suspect them to be as jaundiced as Conrad's. And we also happen to know that Conrad was, in the words of his biographer, Bernard C. Meyer, "notoriously inaccurate in the rendering of his own history."⁷

But more important by far is the abundant testimony about Conrad's savages which we could gather if we were so inclined from other sources and which might lead us to think that these people must have had other occupations besides merging into the evil forest or materializing out of it simply to plague Marlow and his dispirited band. For as it happened, soon after Conrad had written his book an event of far greater consequence was taking place in the art world of Europe. This is how Frank Willett, a British art historian, describes it:

Gauguin had gone to Tahiti, the most extravagant individual act of turning to a non-European culture in the decades immediately before and after 1900, when European artists were avid for new artistic experiences, but it was only about 1904–5 that African art began to make its distinctive impact. One piece is still identifiable; it is a mask that had been given to Maurice Vlaminck in 1905. He records that Derain was "speechless" and "stunned" when he saw it, bought it from Vlaminck and in turn showed it to Picasso and Matisse, who were also greatly affected by it. Ambroise Vollard then borrowed it and had it cast in bronze . . . The revolution of twentieth century art was under way!⁸

The mask in question was made by other savages living just north of Conrad's River Congo. They have a name too: the Fang people, and are without a doubt among the world's greatest masters of the sculptured form. The event

7. Meyer, p. 30 [Achebe's note].

8. Frank Willett, *African Art* (New York: Praeger, 1971), pp. 35–36 [Achebe's note]. Willett (1925–2006), English art historian who focused on works from Africa. Willett names the important French modern painters Paul Gauguin (1848–

1903), Maurice de Vlaminck (1876–1958), André Derain (1880–1954), and Henri Matisse (1869–1954), as well as the great Spanish modernist Pablo Picasso (1881–1973). Vollard (1867–1939) was an influential French art dealer and publisher who supported modern art.

Frank Willett is referring to marked the beginning of cubism and the infusion of new life into European art that had run completely out of strength.

The point of all this is to suggest that Conrad's picture of the peoples of the Congo seems grossly inadequate even at the height of their subjection to the ravages of King Leopold's International Association for the Civilization of Central Africa.⁹

Travellers with closed minds can tell us little except about themselves. But even those not blinkered, like Conrad, with xenophobia, can be astonishingly blind. Let me digress a little here. One of the greatest and most intrepid travellers of all time, Marco Polo, journeyed to the Far East from the Mediterranean in the thirteenth century and spent twenty years in the court of Kublai Khan¹ in China. On his return to Venice he set down in his book entitled *Description of the World* his impressions of the peoples and places and customs he had seen. But there were at least two extraordinary omissions in his account. He said nothing about the art of printing, unknown as yet in Europe but in full flower in China. He either did not notice it at all or, if he did, failed to see what use Europe could possibly have for it. Whatever the reason, Europe had to wait another hundred years for Gutenberg.² But even more spectacular was Marco Polo's omission of any reference to the Great Wall of China, nearly four thousand miles long and already more than one thousand years old at the time of his visit. Again, he may not have seen it; but the Great Wall of China is the only structure built by man which is visible from the moon!³ Indeed, travellers can be blind.

As I said earlier Conrad did not originate the image of Africa which we find in his book. It was and is the dominant image of Africa in the Western imagination and Conrad merely brought the peculiar gifts of his own mind to bear on it. For reasons which can certainly use close psychological inquiry, the West seems to suffer deep anxieties about the precariousness of its civilization and to have a need for constant reassurance by comparison with Africa. If Europe, advancing in civilization, could cast a backward glance periodically at Africa trapped in primordial barbarity it could say with faith and feeling: There go I but for the grace of God. Africa is to Europe as the picture is to Dorian Gray⁴—a carrier on to whom the master unloads his physical and moral deformities so that he may go forward, erect and immaculate. Consequently, Africa is something to be avoided just as the picture has to be hidden away to safeguard the man's jeopardous integrity. Keep away from Africa, or else! Mr. Kurtz of *Heart of Darkness* should have heeded that warning and the prowling horror in his heart would have kept its place, chained to its lair. But he foolishly exposed himself to the wild irresistible allure of the jungle and lo! the darkness found him out.

In my original conception of this essay I had thought to conclude it nicely on an appropriately positive note in which I would suggest from my privileged position in African and Western cultures some advantages the West might

9. An international group of explorers, geographers, and scientists, founded by Leopold II; it was first convened in Brussels in 1876.

1. Great Mongol ruler and emperor of China (1215–1294). Polo (1254–1324), Venetian merchant and traveler who is said to have spent years in the Khan's service; his writings about the court and Asia made him famous.

2. Johannes Gutenberg (ca. 1397–1468), the Ger-

man printer credited with inventing movable type, which revolutionized book production.

3. This often-repeated claim is not true (no structure is visible).

4. The title character of *The Picture of Dorian Gray* (1890), by the Irish author OSCAR WILDE; he does not age while his portrait changes, reflecting his moral disintegration.

derive from Africa once it rid its mind of old prejudices and began to look at Africa not through a haze of distortions and cheap mystifications but quite simply as a continent of people—not angels, but not rudimentary souls either—just people, often highly gifted people and often strikingly successful in their enterprise with life and society. But as I thought more about the stereotype image, about its grip and pervasiveness, about the wilful tenacity with which the West holds it to its heart; when I thought of the West's television and cinema and newspapers, about books read in its schools and out of school, of churches preaching to empty pews about the need to send help to the heathen in Africa, I realized that no easy optimism was possible. And there was in any case something totally wrong in offering bribes to the West in return for its good opinion of Africa. Ultimately the abandonment of unwholesome thoughts must be its own and only reward. Although I have used the word "wilful" a few times here to characterize the West's view of Africa, it may well be that what is happening at this stage is more akin to reflex action than calculated malice. Which does not make the situation more but less hopeful.

The *Christian Science Monitor*, a paper more enlightened than most, once carried an interesting article written by its Education Editor on the serious psychological and learning problems faced by little children who speak one language at home and then go to school where something else is spoken. It was a wide-ranging article taking in Spanish-speaking children in America, the children of migrant Italian workers in Germany, the quadrilingual phenomenon in Malaysia and so on. And all this while the article speaks unequivocally about language. But then out of the blue sky comes this:

In London there is an enormous immigration of children who speak Indian or Nigerian dialects, or some other native language.⁵

I believe that the introduction of "dialects," which is technically erroneous in the context, is almost a reflex action caused by an instinctive desire of the writer to downgrade the discussion to the level of Africa and India. And this is quite comparable to Conrad's withholding of language from his rudimentary souls. Language is too grand for these chaps; let's give them dialects!

In all this business a lot of violence is inevitably done not only to the image of despised peoples but even to words, the very tools of possible redress. Look at the phrase "native language" in the *Christian Science Monitor* excerpt. Surely the only *native* language possible in London is Cockney English. But our writer means something else—something appropriate to the sounds Indians and Africans make!

Although the work of redressing which needs to be done may appear too daunting, I believe it is not one day too soon to begin. Conrad saw and condemned the evil of imperial exploitation but was strangely unaware of the racism on which it sharpened its iron tooth. But the victims of racist slander who for centuries have had to live with the inhumanity it makes them heir to have always known better than any casual visitor, even when he comes loaded with the gifts of a Conrad.

ADŪNĪS

b. ca. 1930

Adūnīs is the pen name of ‘Alī Ahmad Sa‘īd, a Syrian-born poet and critic who has Lebanese citizenship. Like many of his fellow countrymen and -women, he is not certain of his birthdate, but it is usually placed around 1930. The story has it that as a young boy, he sent a poem to a local newspaper. After it was rejected because of his age, he adopted the name of the traditional mythic figure Adonis (Adūnīs in Arabic) and submitted another poem, which was immediately published. He then went back to the newspaper and introduced himself as Adūnīs, whereupon his reputation was established. That reputation has continued to grow throughout his long career as a poet and literary-cultural scholar. He has produced not only books on literary history and criticism but also poetic manifestos and anthologies devoted to the Arabic poetic heritage. He is widely recognized as the Arab world’s most significant advocate and practitioner of “modernizing” poetry.

In pursuing this combination of roles, Adūnīs self-consciously continues a long-standing tradition in Arabic literature. Abū Tammām (ca. 804–ca. 845), one of the greatest poets of the early Islamic era (which begins in 622 C.E.), was among many who compiled anthologies of his predecessors’ poetry. Ibn al-Mu‘tazz (861–908), a member of the Abbasid family of caliphs, who headed the Islamic community for a single day in Baghdad before being assassinated, not only was a renowned poet but also composed one of the pioneering studies of poetic devices in Arabic, the *Kitāb al-badī‘* (*Book of Tropes*). Like his predecessors, then, Adūnīs is both a *shā‘ir* (poet; literally, “someone possessed of inner vision”) and an *adīb* (literary scholar), an acute thinker concerned with both the present and the past of his own literary culture. In his case, it is difficult, if not impossible, to separate the poet and creative writer from the analyst of the Arabic cultural tradition in general and its poetic heritage in particular.

As historian and critic, Adūnīs surveys the heritage of his predecessors over fifteen centuries with the eye and mind of a contemporary poet, one who is actively engaged in reformulating the past in light of the cultural and political trends of the present. It was OSCAR WILDE who, in one of his more serious moments, declared, “The one duty we owe to history is to rewrite it.” In 1964 Adūnīs edited a pathbreaking three-volume anthology of premodern Arabic poetry, *Dīwān al-shi‘r al-‘Arabī* (*Collection of Arabic Poetry*), applying to the entire tradition many of his own developing critical principles regarding the nature and function of poetry and poetics. The results were startling and controversial: while almost all the great poets were included, a number of new names were added and some prominent figures omitted. His experience in compiling this collection probably led Adūnīs to the subject of his doctoral dissertation, written for St. Joseph’s University in Beirut, which was published (also in three volumes) as *Al-Thābit wa-al-mutahawwil* (1974, *The Static and Dynamic*). As the title implies, this detailed study of the entire premodern tradition of Arabic poetry emphasizes the ongoing cultural tension between tradition and change. It foregrounds the tendency of Arabic poetry to focus on past models of excellence rather than value the promise of the new. Here again, Adūnīs uses his own modernizing perspective to recast how the tradition developed. Adopting the notion of “ruptures” from the contemporary French critical tradition, he identifies particular moments during the centuries of Arabic poetic production when a poet broke radically with the received tradition and moved in a new direction.

Within the classical tradition, Adūnīs singles out Abū Tammām for successfully challenging norms of reception and evaluation and transforming the functions of the poetic image. Abū Tammām had been roundly condemned by his contemporaries for

the “obscurity” and complexity of his images and frequent rhetorical tricks. His defender ‘Abd al-Qāhir al-Jurjānī (ca. 1008–1078), the great critic who restored him to a central position within the history of Arabic poetry, is likewise crucial in Adūnīs’s account of change in Arabic poetry and poetics. Though Adūnīs does not question the traditional ranking of al-Mutanabbī (915–965) as the greatest Arab poet of the classical era, he sees the role of Abū Tammām as pivotal—without someone to create poetic ruptures, the static (*thābit*) would always tend to prevail over the dynamic (*mutahawwil*), especially when writings are judged by a steadfastly conservative community of critics. Adūnīs, the modern poet, argues that it is the poet’s function to decide on the poem’s form, which emerges naturally from its content; the function of criticism, in turn, is to analyze what the poet has produced, not to use old formulas to dictate what the poet ought to produce. Other poets whose works he sees as leading to similar ruptures include the Lebanese American Jubrān Khalīl Jubrān (1883–1931), usually known in the Western world as Kahlil Gibran, and Adūnīs himself. At the conclusion of one of Adūnīs’s most memorable poems, “Qabr min Ajl Nyū-Yürk” (1971, “A Grave for New York”), these two poets find themselves surveying the Arab world and the United States. Once again in Adūnīs, the roles of poet and critic intertwine while remaining distinct.

In 1975 Adūnīs left his adopted homeland of Lebanon, where civil war had erupted (and would devastate the country until 1990), and he took up residence in Paris. He had long been influenced by French culture and poetry, particularly that of St. John Perse, pseudonym of Alexis Léger (1887–1975). There he formed a close friendship with the French poet and essayist Yves Bonnefoy, who was appointed a professor at the prestigious Collège de France in Paris in 1981. At Bonnefoy’s suggestion Adūnīs was invited in 1984 to give a series of lectures on Arabic poetry and poetics, which were delivered in French though originally written in Arabic. It is from the English translation of the Arabic version (*An Introduction to Arab Poetics*, 1985) that our selections are taken.

Orality and modernity, the concerns of the two chapters excerpted here, are the main focus of almost everything Adūnīs has written as poet and critic. From its earliest beginnings, Arabic poetry has been a social and cultural event—above all, a public performance. Though the spread of print culture has made the creations of both premodern and modern Arab poets available to a wider public, almost every poem is first performed in front of a group of listeners. Poets have traditionally been and still often are important public figures, and the community often turns first to poetry, especially in times of celebration or crisis. When the late Palestinian poet Mahmūd Darwīsh came to Morocco in 2000 to hold a reading, the venue had to be changed to a soccer stadium, where 24,000 attended. Any Arab poet would agree with the observation of the American poet Stanley Kunitz: “The page . . . is a cold bed.” Videos of poets vying to outdo one another in Lebanese *zajal*, a semi-improvised form that has flourished for centuries, can now be found online. Orality—broadly conceived to include the body, voice, gesture, rhythmic language, and living soul of the poet and audience—has always been and remains a crucial feature of the Arabic poetic tradition, and it is Adūnīs’s first topic.

In both selections Adūnīs, the modern and modernist poet, is determined to use his analyses to show how the contemporary tradition of Arabic poetry is linked to the literary heritage of the past. In the first chapter his emphasis on the role of orality immediately introduces questions of audience, performance, conventions, and modes of evaluation. Adūnīs is judiciously reviving connections that were deemphasized as the culture shifted from sole reliance on oral transmission and memorization toward use of the written word and record, a process aided by the arrival of paper in the Muslim world in the second half of the ninth century. Still, the tradition of audience participation in and criticism of public recitations stretches from at least the seventh century, when—according to the earliest records—poets judged each other’s performances at tribal gatherings and festivals, until today, as listen-

ers frequently call for favored lines of poetry to be repeated and audibly condemn or suggest improvements for lines they dislike. But even as Adūnīs celebrates orality and poetic song, he notes problems associated with the codification of the tradition.

In chapter 1 Adūnīs refers to several of the key debates that were critical to the development of a classical tradition of Arabic poetry. In its early decades, Islam moved out of the Arabian Peninsula, with its twin holy cities of Mecca and Medina, and came into contact with other regions and peoples; cultural and literary traditions and values inevitably clashed. Especially productive was the friction with Persia (modern Iran), conquered in the mid-seventh century, which had its own language and established literary tradition against which the Arabic poets defined themselves. For example, the perceived urbanity of the Persians was confronted by the desert-based tribal values of the peninsular Muslims, leading to some poetry that drew on nostalgia and other poetry that satirized it in the increasingly multicultural milieu of the caliph's court (located first in Damascus and then, after 762, in Baghdad). As Islam spread geographically and the central authority of the caliph in Baghdad gradually broke down, numerous other power centers emerged, such as Cairo in Egypt, Fez in Morocco, Cordoba in Spain (which the Arabs called "Al-Andalus"), Rayy in Persia, and Basra in Mesopotamia (modern Iraq).

These cultural centers began to foster the development of a wide variety of scholarly disciplines, including philology, lexicography, prosody, and literary theory and criticism, and specialists on the poetic tradition started to organize and evaluate an enormous body of odes created during the pre-Islamic era. Rules were laid down for meter, rhyme, and diction. During this time, a major distinction was drawn between "natural" poetry and poets (Arabic *matbūʿ*), associated with traditional values of the desert, and the "artificial" poetry (*masnūʿ*) of the city and court. As these intellectual communities expanded and grew more sophisticated, Adūnīs notes, the critics became more powerful than the poets on whom they were commenting. He laments the result—namely, "absolute criteria," based on oral poetry, that dictate how the modern Arab poet writes and a set of aesthetic principles that foster retrospection and imitation. Stasis thus threatens to prevail over the dynamic development of poetics.

In chapter 4, from which we draw our second selection, Adūnīs discusses the concept of modernity, pointing out that there have been modernities in every era. Each "present," including our own, has identified itself as modern by distinguishing itself from a particular past. For example, the one-day caliph, Ibn al-Muʿtazz, in a study of poetry by many of his own ninth-century contemporaries called them "modernist poets" (*shuʿarāʾ muhdathūn*). Adopting a similarly historical approach, Adūnīs begins by identifying those parameters that he believes have colored the discussion of the modern within Arab Islamic culture. He again returns to Islam's early days, when the emerging community of Muslim intellectuals established a notion of religious orthodoxy supported by specific texts. Like many other scholars, Adūnīs sees the dominance of that orthodoxy and of the institutions upholding it, coupled with an extreme reverence for the past and everything ancient, as explaining why change itself and the advocacy of the new and modern were often equated with heresy.

He has continued to critique religious orthodoxy as a trend in Islamic culture dangerous to creativity and true authenticity. As a result, in the past four decades Adūnīs has faced increasing hostility from various groups advocating a religious solution to Arab society's various ills. In a more productive vein, this tension has also led Adūnīs to thoughtfully engage with the Qurʾan as a creative artist, helping him to gain the profound insights he incorporates into his critical work *Al-Nass al-Qurʾāniyya wa-āfaq al-kitāba* (1993, *The Qurʾanic Text and the Horizons of Writing*), where he speaks movingly of the Qurʾan as both an inspiration for and limit on the language of anyone who writes in Arabic.

As early as his *Al-Thābit*, Adūnīs proposed that the retreat from modernity was a series of "falls" of Islamic centers (most prominently, the fall of Baghdad to the

Mongols in 1258), which led to the modern being identified with the (usually Western) other. In chapter 4, after providing this historical background, Adūnīs concentrates on a more recent period—the past two centuries, known in Arabic as the *naḥḍa*. The usual translation of the term, “renaissance” (literally, it means “process of rising up” or “revival”), is problematic, for its causes and characteristics are entirely different from those of the European Renaissance. Its two opposing currents have been, on the one hand, the revival of the past and its cultural heritage (*ihyāʾ*) and, on the other, renewed contacts with Europeans, as a wave of colonization that began in the nineteenth century brought their cultures to the Arabic-speaking region and drew Arabic speakers to Europe for their education (a process termed in Arabic *iqtibās*, “borrowing”).

While the dominance of Western technology and culture is largely responsible for the identification of literary modernity with the West, Adūnīs also points to indigenous obstacles to the development of an Arabic poetics of modernity, notably deference to religious authority and confusion about the nature of the Arabic language itself. To these should be added the attitude of the community of intellectuals, who so strongly favored the literary production of the earliest centuries of Islam that they dismissed as “a period of decadence” the years from about 1150 to 1850.

Adūnīs next considers modernity in the contemporary Middle East much more broadly. In assessing the relative influences of the two cultures, that are everywhere vaguely termed the “East” and the “West,” Adūnīs shuns the simplistic ideology behind such labels as “clash of civilizations,” focusing instead on some of the major underlying factors that shape cultural contacts and confrontations in the political and social spheres, both regionally and globally. The opposition between the two, he notes, has been political and ideological rather than “intellectual or poetic,” and Western technological superiority has led to the judgment that the East’s cultures and regions are “backward.” But the emphasis on technology is wrong: scientific progress, Adūnīs argues, must not be confused with human progress, and “the Westerner who lives surrounded by computers and exposed to the latest in space travel is not necessarily more advanced in any profound sense than the Arab peasant living among trees and cattle.” It is rather in culture, and specifically in poetry, that the distinctive qualities of a people are to be located and cherished.

Adūnīs’s complex, multifaceted exploration of modernity can be dizzying and dense. He makes use of the inventive metaphorical poetry of Abū Tammām; the innovative ideas of another early poet, Abū Nuwās (ca. 750–ca. 813); the mystical writings of al-Niffarī (d. ca. 965); and the critical theories of ‘Abd al-Qāhir al-Jurjānī—all prominent figures writing from the eighth to the eleventh centuries—as he traces the birth of modernity in Arabic to a new urban culture in ancient times, as well as to interactions with and assimilations of Persian, Greek, Indian, and other cultures. Later crucial confrontations with the West include not just nineteenth- and twentieth-century imperialism and colonialism—with the mixed blessings of science, technology, and consumer culture—but also the illuminating and influential avant-garde writings of European poets such as Charles Baudelaire and Stéphane Mallarmé. In Adūnīs’s view, all these vectors of modernity, internal and external, ancient and modern, oppose past-oriented authoritarian orthodoxies, conformisms, and traditionalisms, which are invariably rooted in scriptural fundamentalism. Modernity is associated with life-affirming innovation, freedom of thought, transgression, and heresy—both inside and outside Arab culture.

At the same time, the mechanical aspect of European-American modernity can be both superficial and destructive, a point also made by MAX HORKHEIMER and THEODOR W. ADORNO in their critique of modern culture. Scientific reason has no use for the past. Consumerism fills the present of global culture with material plenty, but is ephemeral and ultimately hollow. As both JÜRGEN HABERMAS and FREDRIC JAMESON

note, vanguardist modernism puts a premium on new artistic styles and rapid change, without connection to the genuine sources of life. Speaking very personally as a contemporary Arab poet, Adūnīs recounts his own lifelong search for fulfilling and sustaining sources of meaning that embraced the past—legends, mystical imagery, and magical elements of the literary tradition. In restoring and revaluing these materials that some condemned as heretical, he places a premium on open horizons, a better life, a truer form of progress, and, above all, a more authentic modernity rooted in tradition.

In his later poetry and criticism, Adūnīs more systematically explores several of what MICHEL FOUCAULT would surely have termed “subjugated knowledges” within the Islamic tradition, most notably through the lens of Sufism (Islamic mysticism). This inward turn has led him increasingly to examine the interconnections of Self and Other through the mediation of language. The result of these meditations is displayed most clearly in his volume *Al-Sūfiyya wa-al-sūrīyāliyya* (1995; trans. 2005 as *Sufism and Surrealism*). Since, in Arabic, language always has a religious dimension conditioned by its use in the Qur’an, Adūnīs has found himself assailed by Islamists who claim monopoly over linguistic interpretation and meaning. Adūnīs maintains instead that the human use of language has a nostalgic quality, at once precluding a (false) assertion of unitary discourse by the human subject and lending a heroic quality to the search for such unity.

More recently, Adūnīs initially supported the uprisings in Egypt and Tunisia in 2011, seemingly reflecting his lifelong commitment to the positive power of spontaneity, individual change. When the protests spread to his homeland of Syria, however, he came to publicly fault both the government and the opposition for their respective positions. He accused President Assad of betraying the principles of his own secular Ba’th party, which had originally supported democracy and dialogue (power sharing) among the different religions and ethnic groups that formed the Syrian polity. With equal harshness, he criticized the opposition groups for not separating religion from politics, and for concentrating solely on the seizure of power. He was in turn attacked by many intellectuals, both younger and of his own generation, for being an elitist, a modernist thinker out of touch with the present situation, who relied too heavily on religion and the abandonment of secular ideals to explain the conflict. Yet his reiterated pessimism about the possibility that a political transition alone might bring lasting change accords well with his focus in his later critical writing on the individual and the self, sometimes to the detriment of the social and communal.

Yet again, Adūnīs’s opinions leave him open to the charge of being a modernizer, a revisionist, a cosmopolitan, and a mystic. Yet his lifelong commitment to the tradition of Arabic poetics and poetry, including its earliest oral manifestations in the pre-Islamic period, underscores the complexity of his views on modernization. Insofar as the past is a malleable construct, always viewed from a present perspective, it is subject to revision by scholars, Adūnīs among them. With his wide-ranging focus on the pan-Arab tradition, he minimizes national and sectarian differences among Arabic-speaking peoples; to preserve that tradition, he promotes the use of modern standard Arabic rather than regional dialects, despite his emphasis on distinctive modernities. Adūnīs is a mystic, anchoring poetry in spiritual energy; but like the Sufi mystics known as the whirling dervishes, he recognizes the importance of the body (especially voice and gesture). Were he forced to choose between the static and the dynamic, Adūnīs would unquestionably opt for the latter, ensuring the continuous modernization of Arabic poetry and its tradition. For him the modern remains committed to the perfectible future.

An Introduction to Arab Poetics Keywords: Globalization, Language, Modernity, Poetry, Race and Ethnicity Studies, Religion, Rhetoric, Subjectivity, Tradition

*From An Introduction to Arab Poetics*¹

From Chapter 1.

*Poetics and Orality in the Jāhiliyya*²

I use the term orality here in three senses: first, to mean that Arabic poetry at the time of the *Jāhiliyya* (the pre-Islamic era in Arabia³) was rooted in the oral and developed within an audio-vocal culture; second, to indicate that this poetry did not come down to us in written form but was 'anthologized' in the memory and preserved through oral transmission; and finally, to investigate the characteristics of this orality in poetry and assess the extent of its influence on written Arabic poetry in succeeding periods, in particular on its aesthetics.

Pre-Islamic poetry was born as song;⁴ it developed as something heard and not read, sung and not written. The voice in this poetry was the breath of life — 'body music'. It was both speech and something which went beyond speech. It conveyed speech and also that which written speech in particular is incapable of conveying. This is an indication of the richness and complexity of the relationship between the voice and speech, and between the poet and his voice; it is the relationship between the individuality of the poet and the physical actuality of the voice, both of which are hard to define. When we hear speech in the form of a song, we do not hear the individual words but the being uttering them: we hear what goes beyond the body towards the expanses of the soul. The signifier⁵ is no longer an isolated word, but a word bound to a voice, a music-word, a song-word. It is not merely an indication of a certain meaning, but an energy replete with signs, the self transformed into speech-song, life in the form of language. From this comes the profound congruence between the vocal and acoustic values of speech and the emotional and affective content of pre-Islamic poetry.

To start with, orality implies listening, for the voice appeals to the ear first of all. Orality therefore had its own art of poetic expression which lay not in what was said, but in how it was said. This was particularly important because, on the whole, the pre-Islamic poet spoke of what his listeners already knew: their customs and traditions, wars and heroic exploits, victories and defeats. Thus the poet's individuality manifested itself in his manner of expression: the more inventive this was, the more he was admired for his originality. It was his duty to give to the collective, to the everyday moral and ethical existence of the group, a unique image of itself in a unique poetic language. In doing this, the poet was not expressing himself as much as he was expressing the group, or rather he expressed himself only through expressing the group. He was their singing witness, and therefore we should

1. Translated by Catherine Cobham, who occasionally retains the original Arabic in parentheses.

2. Period of ignorance (Arabic); the era preceding the revelation of the Qur'an to the Prophet Muhammad (ca. 610 C.E.) and the subsequent establishment of Islam.

3. The Arabian Peninsula (today comprising Bahrain, Saudi Arabia, Kuwait, Qatar, Oman,

the United Arab Emirates, and Yemen), the birthplace of the Arabic language.

4. Arabic poetry was frequently performed with some kind of musical accompaniment; the most famous collection of early Arabic poetry is titled *Kitāb al-Aghānī* (*The Book of Songs*).

5. The symbol or sound that conveys meaning (a term introduced into linguistics by FERDINAND DE SAUSSURE, 1857–1913).

not be surprised at this paradox in pre-Islamic poetry: unity of content and diversity of expression.

Let us say that recitation and memory did the work of a book in the dissemination and preservation of pre-Islamic poetry.

If we go back to the root of the word 'song' (*nashīd*) in Arabic, we see that it means the voice, the raising of the voice and the recited poetry itself. Two basic principles of pre-Islamic poetry were that it should be recited aloud and that the poet himself should recite his own poem: as al-Jāhiz⁶ (775–868) says, a poem sounds better from the mouth of its composer. The Arabs of the pre-Islamic period considered the recitation of poetry as a talent in itself, distinct from that of composition; obviously it was of considerable importance in drawing an audience and impressing them enough to hold them there—especially so since, at the time, listening was essential to the comprehension of words and to musical ecstasy (*ṭarab*⁷). For, in the words of Ibn Khaldūn⁸ (1332–1406), 'Hearing is father to the linguistic faculties.' From this perspective, the better the recitation, the more profound the effect of the poetry.

Recitation of poetry is a form of song. The Arab literary tradition is full of signs confirming this. The poets who recite their work are often compared to singing birds and their verses to birdsong. 'Song is the leading-rein of poetry,' according to a well-known expression, while Ḥasan Ibn Thābit⁹ (d. 674), 'the poet of the Prophet', has an equally famous verse:

Sing in every poem you compose
That song is poetry's domain.

Examples like these show the organic link that existed between poetry and song in the pre-Islamic period. This explains the significance of the claim that the Arabs 'measure poetry by song' or that 'Song is the measure for poetry.' The critic Ibn Rashīq¹ maintains that song was at the origin of rhyme and metre, and that 'Metres are the foundations of melodies, and poems set the standards for stringed instruments.'

Kitāb al-Aghānī (The Book of Songs) by Abu'l-Faraj al-Iṣḥāḥānī² (897–967), which consists of twenty-one volumes and took fifty years to compile, is the most striking proof that poetry in the pre-Islamic period was synonymous with recitation and song.

Ibn Khaldūn writes:

In the early period singing was a part of the art of literature, because it depended on poetry, being the setting of poetry to music. The literary

6. One of the greatest scholars and prose stylists of his era. His writings and collections on a wide variety of topics include *Kitāb al-Bayān wa-al-Tabayīn* (Book on Clarity and Clarification), one of the earliest works of literary criticism and theory in Arabic.

7. Literally, "heightened emotion" (of sadness or joy).

8. Great historian and historiographer, born in Tunis. In *Al-Muqaddima* (Introduction), he outlined a scientific view of history and developed a theory of the cyclical nature of civilization.

9. A convert to Islam and one of the best poets of his time, he recited many famous odes in praise of Muhammad, who rewarded him generously.

1. The compiler (d. 1046) of a major anthology of critical writing, *Al-Umdah fī mahāsīn al-shi'r wa-adabihi wa-naqdihi* (The Pillar Regarding Poetry's Embellishments, Proper Usage, and Criticism).

2. Iranian scholar; his *Kitāb al-Aghānī* was the most famous collection of early Arabic poetry and its musical accompaniment.

and intellectual elite of the Abbasid state³ occupied themselves with it, intent on acquiring a knowledge of the styles and genres of poetry.

Elsewhere he defines the craft of song as 'the setting of poems to music by dividing the sounds into regular intervals'.

The actual performance of poetry had its own rules in the pre-Islamic period which survived into later ages. Some poets, for example, recited standing up, while others proudly refused to recite unless they were seated. Some would gesture using their hands or their whole bodies, like the poetess al-Khansā⁴ (sixth–seventh century) who, it is said, rocked and swayed, and looked down at herself in a trance. Thus in orality there is a 'meeting in action' of voice, body, word and gesture.

* * *

It is important to note that the Arabs codified poetic orality, giving its conventions and practices systematic formulations, in the early years of the interaction between Arab-Islamic and other cultures, in particular Greek, Persian and Indian. The aim of this was to affirm, preserve and put into practice the rhetorical and musical specificity of the craft of Arabic poetry, thereby asserting its individual identity and that of the Arab poet. This eager pursuit of distinctiveness and specificity lay at the root of Arab intellectual activity during this period of social and cultural mingling between the Arabs and other peoples, especially in Basra (Iraq), the cultural capital, 'mediator to the earth and heart of the world', as an Arab historian has described it. Solecisms and mispronunciations had become widespread in the language. The Persians had introduced Persian words and some rules of grammar, as well as popularizing their music. Ṭaha Ḥusayn⁵ (1889–1973) characterizes the cultural situation at the time as a mixture of:

pure Arab culture based on the Qur'ān⁶ and related religious sciences, and poetry and the lexical and grammatical issues which it raised; Greek culture based on medicine and philosophy; and an oriental culture stemming originally from the Persians, the Indians and the Semitic peoples in Iraq.

In this climate the rules of language were laid down for fear that solecisms and corruptions would creep into the Qur'ān and the *ḥadīths*.⁷ Poetic metres were fixed to preserve the rhythms of poetry and to distinguish them from Greek, Syriac, Persian and Indian metres and rhythms, and rules for the composition, appreciation and transmission of poetry were laid down.

* * *

[I will now discuss] the relationship between poetic orality and the act of listening. Because of this relationship, poetry criticism revolved around the

3. The second dynasty of Muslim caliphs; the Abbasids ousted the Umayyads in 750 c.e. and established a new capital city in Baghdad in 762.

4. The nickname (literally, "Snub-Nosed") of Tumaydir bint 'Amr, renowned for her elegies for her brothers who died in tribal conflicts.

5. Scholar, novelist, literary critic, and historian, and a major figure in the Egyptian modernist movement.

6. The sacred text of Islam, which Muslims believe is the word of God revealed to Muhammad through the mediation of the angel Jibril (Gabriel).

7. Reports (Arabic); specifically, accounts of what the Prophet Muhammad said and did during his lifetime, which were collected and codified after his death. They are second only to the Qur'an in authority.

principle of listening and the link between the poetry and the audience. The poet of the *Jāhiliyya* did not create poetry for himself but for others, for those who listened to him in order to be moved by him. Poetic talent was judged by the poet's ability to invent something which would leave its mark on the listener's soul. The poet's basic preoccupation was therefore that his poem must correspond to what was in his listener's soul, because his eloquence was evaluated in terms of how much the listener understood of what he said. However, what was in the listener's soul was a part of the common code, and his comprehension merely reflected the prevailing common taste. So the merit of the poetry did not lie in what the poet affirmed, but rather in 'the manner of affirmation', as al-Jurjānī⁸ (d. 1078) puts it, and the effect this had on the listener.

The poetry was therefore judged according to how far it could arouse *tarab*, a state of musical delight or ecstasy, and the poetics was founded on what could be called an aesthetics of listening and delight. This was then transformed by political exploitation and the general ideology into a sort of aesthetics of information, so that poetry became a variety of declamatory speech able to affect people in its own particular manner, through panegyric or satire, enticement or intimidation.

At the semantic level, this aesthetics of listening required the poet to avoid 'remote allusions, abstruse tales and ambiguous suggestions' and 'to aim at the opposite of these'. It also required him 'to use metaphors which were close to reality, not remote from it', because poetic speech should be 'based on what is useful, whether metaphoric or literal'.

These beliefs regarding the nature of poetry were what brought about the separation of poetry from thought. Al-Jāhīz goes so far as to assert that poetry is the antithesis of thought because, according to him, eloquence in poetry is that which can be understood without recourse to thought and requires no interpretation.

This separation of poetry from thought reinforced the aesthetics of pre-Islamic orality as against an aesthetics of writing and confirmed a prejudice in favour of pure bedouinism⁹ as opposed to the ignoble ways of the town. It also implanted in people's minds a particular image of poetry as something to be recited aloud or sung. Perhaps this explains the importance attached by the critics to the concept of 'naturalness' (*badāha*) in poetry, a concept which was synonymous with spontaneity and instinct, and antithetical to refinement of technique (*taḥbīr*) and artificiality. Abū Sulayman al-Mantiqī¹ (d. 985) defines *badāha* as 'a spiritual energy in a human temperament'.

* * *

This is what is embodied in the following characterization of eloquence (*faṣāḥa*): 'The pure bedouin Arabs are the essence of perfect eloquence,'² and in the characterization of naturalness (*badāha*) as 'what differentiates the

2. This and the following quotations in this paragraph are from al-Jāhīz, *Book on Clarity and Clarification*.

Arabs from other peoples in eloquent expression'. It is the antithesis of an embellished style (*taḥbīr*), that is a style involving careful study and intellectual activity. *Taḥbīr* is an attribute of post-classical poetry³ and urban culture, the product of self-conscious technique, while *badāha* and natural aptitude are properties of bedouin poetry. These concepts led to a formulation of artistic standards in poetry, summed up by al-Jāḥiẓ as follows: 'The best kind of discourse is that whose meaning is present in the literal meaning of the words.'

Various normative values resulted from these ideas, including the belief that different meanings require different metres, so that the poet should choose a metre appropriate to the meaning he wishes to express. This in turn led to the belief that there is a definite link between the nature of meanings and the nature of poetic rhythms. Serious or impassioned content requires long metres; subtle, gentle, jesting or dancing content requires short, light metres; and the names of the metres are derived from their characteristics, for example: *al-tawīl*, 'the long'; *al-khafīf*, 'the light'.

Rhyme, which always had to be present with metre in the contemporary definition of poetry, must have an agreeable ring and a sweet tunefulness. The poet must avoid any transgression against musicality, in particular rhyming with words which are composed of unmusical letters such as *thā'*, *khā'*, *shīn*, *ṣād*, *ḍād*, *tā'*, *dhā'*, *ghayn*, *dhāl*, *wāw*, *zay*. The beginning of the poem must be beautiful. If the beginning is ugly, the listener will be repelled. If beautiful, he will be drawn into it and delighted by it and listen with interest to what follows.

From the above it is clear that the view of poetry in Arab-Islamic society, particularly in the early years, was dictated by pre-Islamic orality. The poem was perceived as call and response, the dialectic of a mutual invitation between the poet and the group; it was as if the aim of the poet in composing his poem, and that of the group or tribe in listening to it, coincided by prior agreement. In this situation there was no difference between poetry and life: life was poetry and poetry life, and so the structure of the poem corresponded to the movement involved in the act of communication as well as to its effectiveness and its ultimate intention. Rhythm is the basis of pre-Islamic poetical speech because it is a living energy binding the self to the other. It is the pulse of the living being, bringing together the movements of body and soul.

Rhyme was the basic element which distinguished pre-Islamic Arabic poetry from the poetry of other peoples. Neither in Aramaic, Syriac, Hebrew or Greek was it considered an essential feature of poetry in the way it was for the Arabs. Because of this, the ancient Arab critics maintained that the structure of pre-Islamic prosody⁴ was not an imitation of that of any other nation but was exclusive to the Arabs. They considered that it had passed through several stages, beginning with the chant of the camel-driver to his beasts, made up of words and sounds which seemed to follow rhythmic patterns, and with the chants and cries of war, and culminating in the musical

units called *tafāʿil*.⁵ Particular care was taken with rhyme because it was the repository of the meaning, and because it was the natural sound which took the place in the verse of the gesture accompanying the speaker's words.

* * *

I have discussed the theory of pre-Islamic poetic orality in a simplified and descriptive way. Whatever the critical discourse concerning it, pre-Islamic poetry is clearly our earliest poetry: here the foundations were laid for Arabic speech to confront life and for the Arab to confront himself and the other for the first time. It was not only a conscious application of speech, but also a conscious participation in the act of existence. Our awareness of history is expressed for the first time in this poetry, and a large part of the Arab group unconsciousness is stored there. When we read it today we are reminded of our earliest voice and we hear how the sounds of the language embraced history and mankind. It is the first artistic embodiment of the language which we use to express who we are and to open up pathways into the darkness of the unknown. As such it is not only our first memory but the first wellspring of our imagination.

Today, however, we are confronting a crisis in our relationship with this poetry, caused by the very interpretation and theorization of it which I have just discussed. This critical discourse, having defined the characteristics of pre-Islamic poetry as oral poetry, then transformed them into absolute criteria for written poetics: henceforth poetry was only to be considered as poetry if its metres followed the rules of oral poetry, as laid down by al-Khalīl.⁶ These rules prevailed, drawing the dividing line between poetry and non-poetry. The climate of rule-making and intellectualization, generated by the climate of ideological struggle between the Arabs and other peoples in the seventh to the tenth centuries, helped these rules to become firmly established. Thus, instead of metre being considered as a regulating device for reciting and singing in a particular type of speech, it came to be viewed as the essence of all poetical speech. As a result, the written poetic text was viewed by the critics as if it were an oral text, in so far as all that writing demands—contemplation, exploration, abstruseness, thought itself—was banished from the domain of poetry. In other words, although oral and written poetry involve two different physical activities, the same critical standards were applied to both. Thus the critical discourse which pre-Islamic poetry generated in the past, and continues to generate, is the very thing which obscures that poetry from us.

* * *

5. The individual metrical units that combine to form a complete line of poetry.

6. It is said that al-Khalīl discussed many subjects: song and rhythm, theology and dialectics, chess and backgammon among others. "He had a knowledge of melody and the distribution of sounds which led him to become a pioneer in the study of prosody. . . . He also wrote a book about song and rhythm and called it *Tarākīb al-aswāt*

(*The Structures of Sounds*)." For this and other information, see Maḥdī al-Makhzūmī's study of al-Khalīl [Adūnī's note]. Al-Khalīl ibn Aḥmad (ca. 718–ca. 791), a philologist who compiled the first Arabic dictionary and devised a system for the metrical analysis of Arabic poetry. Al-Makhzūmī's study is *Al-Khalīl ibn Aḥmad: A'māluhu wa-Manhajuhu* (1960).

From *Chapter 4.*
Poetics and Modernity

We will only be able to reach a proper understanding of the poetics of Arab modernity by viewing it in its social, cultural and political context. Its development in the eighth century was bound up with the revolutionary movements demanding equality, justice and an end to discrimination between Muslims on grounds of race or colour.⁷ It was also closely connected with the intellectual movements engaged in a re-evaluation of traditional ideas and beliefs, especially in the area of religion.

The dominant view held that the state was founded on a vision or message which was Islam. On the one hand, this state was constituted as a caliphate,⁸ in which the designated successor not only followed on from his predecessor but preserved the heritage and conformed to it in both theory and practice; on the other hand, it was a state formed of a single community, meaning that unanimity of opinion was an essential requirement. Politics and thought were religious; religion was one and permitted no divergence.

This explains why for the most part those in power fought against these revolutionary and intellectual movements. Politically, they were considered as a rebellion against religion because they attacked the caliphate, which represented religious authority. From an intellectual and philosophical point of view, their adherents were seen as heretics and apostates, either for restricting the role of religion in the teaching of virtue, or for denying the role of revelation in knowledge and saying that knowledge and truth were the business of reason. The authorities viewed the mystical elements in these movements as constituting an attack on the law and practice of Islam; this was because they made a distinction between 'the evident' (*al-ẓāhir*) and 'the hidden' (*al-bātin*), or between 'the law' and 'the truth', asserting that knowledge and truth come from 'the hidden', hence the possibility of achieving a kind of unity or union between God and existence and between God and man.

To put it another way, those in power designated everyone who did not think according to the culture of the caliphate as 'the people of innovation' (*ahl al-iḥdāth*), excluding them with this indictment of heresy from their Islamic affiliation. This explains how the terms *iḥdāth* (innovation) and *muḥdath* (modern, new), used to characterize the poetry which violated the ancient poetic principles, came originally from the religious lexicon. Consequently we can see that the modern in poetry appeared to the ruling establishment as a political or intellectual attack on the culture of the regime and a rejection of the idealized standards of the ancient, and how, therefore, in Arab life the poetic has always been mixed up with the political and the religious, and indeed continues to be so.

7. The expansion of Islam outside the Arabian Peninsula led to confrontations between the Arab Muslims and numerous non-Arab peoples—in both Asia and Africa—many of whom became Muslim. The arguments of these revolutionary movements resonated in the emerging fields of "Islamic studies"—philology, grammar,

history, Qur'anic commentary, text criticism, and so on—which reflected the increasingly multicultural nature of the Muslim community as well as its contacts with other cultures.

8. A state whose temporal and spiritual leader is the *khalīfā*, the "successor" (Arabic) of the Prophet Muhammad.

The problematic of poetic modernity (*ḥadātha*) in Arab society goes beyond poetry in the narrow sense and is indicative of a general cultural crisis, which is in some sense a crisis of identity. This is linked both to an internal power struggle which has many different aspects and operates on various levels, and to an external conflict against foreign powers. It would appear that the return to the ancient has been more eagerly pursued whenever the internal conflict has intensified or the danger from outside has grown more acute. In Arab society today⁹ we find a powerful extension of this historical phenomenon which confirms our observation.

Perhaps this helps to explain why the current of modernity in Arab society sometimes flows strongly (as was the case in the eighth, ninth and tenth centuries) and at other times abates and recedes (as it did in the following centuries), according to whether the double-sided conflict, internal and external, is at a high or low point. It may also explain why modernity has tended to be a force which rejects, questions and provokes without entering in any conscious, radical way into the structure of the Arab mind or into Arab life as a whole. Perhaps, finally, it may go some way to explaining the dominance of the traditionalist mentality in Arab life and in Arabic poetry and thought.

The retreat of Arab society from the ways opened up by modernity began with the fall of Baghdad in 1258.¹ With the Crusades came a complete halt, prolonged by the period of Ottoman domination.²

From the beginning of the nineteenth century to the middle of the twentieth—the time of Western colonialism and of contact with its culture and its modernity, the period known as the *nahḍa*³ (renaissance, a name which merits a detailed study in itself)—the question of modernity was revived and the debate resumed over the issues which it provoked. Opinions were divided into two general tendencies: the traditionalist/conformist (*uṣūlī*) tendency, which considered religion and the Arab linguistic sciences as its main base; and the transgressing/non-conformist (*tajāwvuzī*) tendency, which saw its base, by contrast, as lying in European secularism.

It is the first philosophy that has prevailed, especially at the level of the establishment, encouraged by economic, social and political conditions, both internal and external. According to this interpretation, the ancient—be it in religion, poetry or language—is the ideal of true and definitive knowledge. This implies that the future is contained within it: nobody who is a product of this culture is permitted to imagine the possibility of truths or knowledge being developed which would transcend this ancient ideal. According to this theory, modernity—as established in poetry by Abū Nuwās and Abū Tam-mām,⁴ in thought by Ibn al-Rāwandī (d. 910), al-Rāzī (d. 1210) and Jābir Ibn

9. That is, 1984, when Adūnīs originally delivered the lectures that became this book.

1. The sack of the city by a Mongol army, which executed the caliph; this conventionally marks the end of the “classical” period in Islamic history.

2. The Ottoman Empire (1299–1923), which began in modern-day Turkey, gained control of much of North Africa, southeastern Europe, and the Middle East (including Baghdad) by the mid-16th century, and from 1517 onward its sultan claimed succession to the caliphate. Crusades:

the series of campaigns (1095–1291) mounted by European Christians against the Muslims to gain possession of the Holy Land.

3. Revival (Arabic).

4. Arab poet (ca. 804–ca. 845), much criticized by his contemporaries for linguistic complexity but later appreciated by Adūnīs and others as a major catalyst in the development of Arabic poetry. Abū Nuwās (ca. 750–ca. 813), renowned Arab poet best known for celebrating wine and both male and female beauty.

Hayyān (d. 815),⁵ and in the nature of visionary experience by the mystics, and which assumes the emergence of new truths about man and the world—is not only a criticism of the ancient but a refutation of it.

In other words, to believe in the pronouncements of modernity is to believe in things that have not been known before. Seen in this light, the new reveals a certain failing or lack in the old. Modernity therefore constitutes an attack on the fundamentals. On this basis we can understand the connection made between innovation in poetry, which violates the ancient, and heresy, and also why words like *ḥadīth* (modern) and *iḥdāth* (innovation), originally religious terms, could be carried over into the domain of poetry.

This traditionalist culture is embodied in the uninterrupted practice of an epistemological method which sees truth as existing in the text, not in experience or reality; this truth is given definitively and finally and there is no other. The role of thought is to explain and teach, proceeding from a belief in this truth, and not to search and question in order to arrive at new, conflicting truths.

It was therefore natural that this culture should reject a theory that was fundamentally opposed to it, especially those aspects of it which might have led people to doubt its religious vision and its cultural and intellectual apparatus.

Because of the dominance of this 'fundamentalist' knowledge at the level of the establishment and those in power, the Arabs find themselves—in spite of all the changes of the past fourteen centuries—moving on a stage where history is repeating itself with just one objective: the continual actualization of the past.

The reason this approach has gained in ascendancy is because 'modern' Arab thought has not confronted it in an analytical and critical manner and dismantled it completely. Perhaps it has not dared to, or perhaps it has preferred to work some kind of magic to make it vanish into thin air, which has quickly had the opposite effect. This may go some way towards explaining why 'modern' Arab thinkers have adapted to the shock of modernization from the West by treating modernity primarily as a technological achievement. For this reason modernity in Arab society has continued to be something imported from abroad, a modernity which adopts the new things but not the intellectual attitude and method which produced them, whereas true modernity is a way of seeing before it is production.

From an artistic and poetical point of view the dominance of traditionalist or fundamentalist culture led to a return to the values of pre-Islamic orality. Most of the poetry written after the so-called Arab renaissance (*nahḍa*), by such poets as al-Bārūdī (1838–1904), Shawqī (1882–1932)⁶ and their contemporaries, was no more than a ritual consolidation of this return.

5. All Arab philosophers: Ibn al-Rāwandī, a controversial figure whose critical writings on religion (especially on the veracity of prophets, including Muhammad) led to charges of heresy; Fakhr al-Dīn al-Rāzī, a theologian and wide-ranging scholar who wrote one of the major commentaries on the Qur'an; and Ibn Hayyān, an astrologer, alchemist, and court physician whose writings influenced later alchemists.

6. Two Egyptian poets: Mahmud Sami al-Bārūdī, a nationalist who spent 17 years in exile after participating in an unsuccessful revolt against British rule and who wrote poetry on classical models, and Aḥmad Shawqī (1868–1932), the most significant figure in the neoclassical movement in Arabic poetry and a pioneer of Arabic poetical drama.

The poets who opposed the ancient, claiming to be modernizers, did not turn to Arab modernity as manifested in the poetry of Abū Nuwās and Abū Tammām or the mystic writings, nor did they refer to the theorization of the new poetic language carried out by al-Jurjānī. Instead, they began to imitate modern Western poetry.

Thus the crisis of modernity appeared at its most complex during the *nahḍa*, a period which created a split in Arab life, both theoretically and practically. On the one hand, it was a revival of forms of expression developed in past ages to respond to present problems and experiences, which was also a resuscitation of old ways of feeling and thinking and methods of approach. It therefore helped to establish these forms as absolute inviolable principles, to be eternally perpetuated as the single true poetry. The result was that the Arab personality, as expressed through this poetry, appeared to be a bundle of self-delusions, and Arab time to stand outside time. On the other hand, at the level of practical politics and daily life, the age of the *nahḍa* was set in motion in a state of almost complete dependency on the West.

In this way the period laid the foundations of a double dependency: a dependency on the past, to compensate for the lack of creative activity by remembering and reviving; and a dependency on the European-American West, to compensate for the failure to invent and innovate by intellectual and technical adaptation and borrowing. The present reality is that the prevailing Arab culture derives from the past in most of its theoretical aspects, the religious in particular, while its technique comes mainly from the West.

In both cases there is an obliteration of personality; in both cases, a borrowed mind, a borrowed life. This culture teaches not only the consumption of things but also the consumption of human beings.

Since the 1950s the cultural background of Arab poets and critics has derived from two divergent traditions: that of the self (ancient, traditionalist) and that of the other (modern, European-American). These two traditions blur or blot out the values of modernity and creativity in the Arab literary heritage. The first does so on the pretext of a return to original sources; the second does so perhaps out of ignorance, or is so dazzled by the other that it cannot perceive its own particular nature, and what distinguishes it from the other.

I should acknowledge here that I was one of those who were captivated by Western culture. Some of us, however, went beyond that stage, armed with a changed awareness and new concepts which enabled us to reread our heritage with new eyes and to realize our own cultural independence. I must also admit that I did not discover this modernity in Arabic poetry from within the prevailing Arab cultural order and its systems of knowledge. It was reading Baudelaire⁷ which changed my understanding of Abū Nuwās and revealed his particular poetical quality and modernity, and Mallarmé's⁸ work which explained to me the mysteries of Abū Tammām's poetic language and the modern dimension in it. My reading of Rimbaud, Nerval and Breton⁹ led me

7. Charles Baudelaire (1821–1867), French poet, critic, and translator.

8. Stéphane Mallarmé (1842–1898), French symbolist poet who focused on the role of sound in his poetry and critical writings.

9. All French poets: Arthur Rimbaud (1854–1891), whose hallucinatory prose-poems greatly influ-

enced the symbolists; Gérard de Nerval (pen name of Gérard Larunie, 1808–1855), whose dream images in his poetry and prose made him a precursor of surrealists and symbolists; and André Breton (1896–1966), a theorist of dadaism and surrealism.

to discover the poetry of the mystic writers in all its uniqueness and splendour, and the new French criticism gave me an indication of the newness of al-Jurjānī's critical vision.

I find no paradox in declaring that it was recent Western modernity which led me to discover our own, older, modernity outside our 'modern' politico-cultural system established on a Western model.

The problem here is that the modern Arab poet sees himself in fundamental conflict both with the culture of the dominant political system, which reclaims the roots in a traditionalist manner, and with the images of Western culture as adapted and popularized by this system. The system separates us from our Arab modernity, from what is richest and most profound in our heritage. It is in collusion with the prevailing traditionalist tendencies and also with the cultural structures which came into existence in the climate of colonialism, imposing this relationship with the technical and consumerist forms of Western achievement upon us.

The most disturbing aspect of the problem is that the modern Arab poet lives in a state of 'double siege' imposed upon him by the culture of dependency on the one hand, and the culture based on a foetal relationship with the traditionalist past on the other.

What makes this aspect of the problem more serious is the position of the Arabic language itself. The Arab has grown up in a culture which views language as his speaking image, and himself as its feeling, thinking reflection. It is a union of reason and sentiment, the chief symbol and assurance of Arab identity. It is as if language 'created' the Arabs, through instinct in the *Jāhiliyya*, revelation in the prophecy, and reason in Islam; as if originally in the Arab consciousness language was the Supreme Being itself, and its science the science of this Being. From the 'materialness' of this created language the rhythm of existence explodes and its essence pours forth. In this context we can understand the significance of the case endings (*i'rāb*):¹ they represent the purest principle of language, the sign of unity between the static and the moving, the spoken word and the breath. If language is the rhythmic musical form of nature, then this form only reaches a proper state of wholeness and unity with inflexion.

Language, viewed from this perspective, is not a tool for communicating a detached meaning. It is meaning itself because it is thought. Indeed, it precedes thought and is succeeded by knowledge. This implies that the criterion of meaning was contained in language itself, and was defined by the rules of language.

The problem here is that this language which is regarded in theory as the essence of Arabness appears in practice to be an amorphous heap of words, which some use imperfectly, others abandon in favour of a dialect or foreign tongue and few know how to use creatively. It is like a huge storehouse which people enter, acknowledging their need for it, only to escape from it on some pretext or other. A gap exists between the language and those who speak it. What was once an end is now only a means. How can there be any

1. In many languages, the grammatical relationship between words in a sentence (e.g., a verb's subject and object) is indicated by their different inflections, or cases. Because in Arabic the dif-

ferent cases are marked by different vowels, those collecting or analyzing Arabic poetry have always focused on the musical (and therefore emotional) impact of vowel sounds in performance.

accommodation between a past which made language the essence of the human being, and a present which sees it only as an instrument and does not hesitate to call for its structure to be modified and for dialects to take its place?² If we remember its relation to the sacred, and more precisely to the Qur'ān, can we not see in the current ignorance surrounding its usage or in the call for it to be modified by dialectal structures which separate it from the sacred, a sort of declaration of a changed awareness and identity?

The problematic of modernity at the present time thus becomes clearer at the level of language. What was the first sign of the presence of the Arabs and their creativity is being corrupted and degraded. The Arab of today is in the process of forgetting the fundamental element through which he knew existence, and which established his presence in history. He has lost the sense of language, as defined by Ibn Khaldūn, and appears ignorant of what has given him his identity, or of who he is.

In the light of these considerations it would appear that modernity is the problem of Arab thought in its dialogues with itself and with the history of knowledge in the Arab tradition. If we are to treat the problem of modernity, we must first re-examine the structures of Arab thought. To question modernity, Arab thought must question itself. Arab modernity can be studied only within the perspective of Arab thought, on the level of principles and actual historical developments, within the framework of its specific assumptions, using its epistemological tools and in the context of the issues which gave rise to the phenomenon and have resulted from it. To study it from a Western perspective would be to distort it and distance oneself from the real issues.

Having acknowledged this, however, we come up against a crisis which, because it has gone on for so long, has become almost a natural phenomenon. I would formulate this crisis as follows: there is a desire in Arab society to separate religion from any form of authority, but there is a contrasting eagerness on the part of the authorities to see religion as one of the foundations of Arab life, its most nearly perfect system, inasmuch as it is divinely revealed, and therefore the key element in guaranteeing the security and stability of the political regime. For this reason politics and religion are bound together in an almost organic relationship. Thus it is easy to understand why the freedom to ask questions, especially on strictly religious matters, under a regime which relies for its existence on this link, is almost non-existent. In practice politics becomes a sort of submission (*islām*) and an act of faith in the existing regime; anything else is tantamount to rebellion and blasphemy.

This crisis is made more problematic because many of the so-called modern intellectual tendencies striving to separate religion from political power are based on a closed intellectual structure which refuses to accept divine religion but puts another positivist 'religion' in its place.

2. Arabic today exists in a wide variety of regional dialects (usually but not always mutually comprehensible), which traditionally were thought unsuitable for literary expression; in a "standard" form, which has more cultural prestige and is used in writing across the Arabic-speaking world; and in the sacred text of the

Qur'an, whose language Islamic tradition views as inimitable. For centuries, these distinctions have shaped attitudes and fueled debate about the nature of literacy, the status of the intellectual, the appropriate means for expression in writing and in the theater, and the role of language in propagating religious values.

This crisis constitutes the nucleus around which the dominant structure of thought in Arab society is formed. Both the elements of it which are related to the politico-cultural order and those which characterize the opposition are firmly anchored in the belief that truth is given *a priori* in a text-source which is perfect and definitive. This article of faith, religious or ideological, serves as the all-inclusive founder text; the existing regime, together with its supposed alternative—the opposition which is eager to replace it—is the power which watches over it. Culture is the text which transmits and interprets. Poetry preaches and teaches or instructs and delights. Knowledge is no more than a mirror image of the truths in the all-inclusive founder text.

The flaw is not in the text but in the human being who does not understand it properly or deviates from it. This text contains truth and knowledge. Because it is unique the truth must be unique, because it is its truth, and the same goes for the knowledge. Therefore it is a text which is equated with power. According to this view, truth is always to be found at the heart of power, never outside it. Al-Māwardī³ (d. 1058), writing in the eleventh century, comments that when a religion loses its authority, its truth is erased. Truth and power form a unity so the division or alteration of power is a division or alteration of truth, which threatens not only truth or power but the Islamic community (*umma*) itself.

This being the case, it is natural that in the eyes of its adherents this text should be absolute, irreplaceable and not open to criticism. The past is defined according to the time when the text came into existence. It is the crucible where all times meet. It is not measured in time, but is itself the measure of time. Decadence lies in distance from this text, failure to adopt it, or deviation from the path traced by it. The *nahḍa* was not an awakening but a return to the past and a firmer attachment to the text. Did not a renaissance in Arab thought, ancient and modern, always represent a return to the prophetic text, the text of the leader and teacher?

This completes the picture of the blockade imposed on us by this crisis: prevailing Arab thought with its two strands, the 'ancient' and the 'modern', is radically opposed to modernity. It is through this crisis-ridden structure of thought that our 'modern' connection with the West and its modernity has been achieved. This has led us to concoct an illusory, specious modernity which is embodied on the practical, day-to-day level in the importation of modern manufactured goods of every kind, and on the level of poetry in plagiarizing forms of expression from languages whose particular genius is intrinsically different from that of Arabic. Thus the intellectual principles which gave birth to modernity are lost to us, their substance wiped out: the unbridled commitment to discovering the mysteries of nature and the unknown aspects of being in deed and word, not for the sake of any return to the past, but to find out more, to proceed, searching and questioning, towards a horizon open to infinity.

The technical, mechanical aspect of modernity is turning our lives into a desert of imported goods and consumption, eating away at us from within and distracting us from thinking about our own distinctive powers of inven-

3. A Muslim judge, ambassador, and scholar of law and ethics (972–1058). In *Al-Ahkām al-Sultāniyya* (*The Rules of Governance*), he lays

out principles for the proper exercise of authority and political power by Muslim rulers.

tion. In literature, and in poetry in particular, it generates superficial, naive conceptualizations that interpret modernity simply as a way of arranging and combining words, a mirror held up to everyday life, or an attempt to catch the spray as it flies off the rolling waves of time.

This superficial modernity which is predominant in our societies, engendered partly by a fear of confronting the true state of Arab culture and partly by an understanding which stops at appearances, gives rise to many illusions. I will limit myself to discussing those which act as obstacles to the development of modern poetry.

The first is temporality. There are those who see modernity as the quality of being directly connected with and alive to the present moment. To seize the movement of change in this moment is proof of modernity. It is obvious that these people view time as a series of regular uninterrupted leaps forward, so that what happens today is necessarily an advance on what happened yesterday, and what happens tomorrow is an advance on both. The mistake of this tendency is to turn poetry into a style, ignoring the essential point that the most modern poetry goes beyond the present moment, or goes against it. Poetry does not acquire its modernity merely from being current. Modernity is a characteristic latent in the actual structure of the poetic language.

The second illusion is the desire to be different from the ancient at all costs. Those who adhere to this belief think that merely to be different from what has gone before is proof of modernity. This is an instrumental point of view which turns creativity into a game of opposites, like the doctrine of temporality. One sets 'ancient' time against 'new' time, the other the 'ancient' text against the 'new' text. Thus innovation in poetry resembles waves on the surface of the water, vanishing one after another, despite the fact that a brief glance at the poetry of Abū Nuwās or al-Niffārī,⁴ for example, reveals it as more modern than much of the 'counter-poetry' of poets who are alive today.

The third illusion is identification. The West is supposedly the source of modernity. There is no modernity outside Western poetry and its standards: to be modern it is necessary to identify with Western poetry. From this there arises an illusion about norms where standards of modernity in the West, springing from a specific language and experience, become the standards for a language and experience of a different nature. This amounts to looting at a personal, linguistic and poetic level, and is the way to complete alienation.

The fourth illusion is a technical one concerning prose as a poetic form. There are those who believe that simply to write in prose, because it is different from the old metric writing and conforms to models of poetic prose in the West, is a way in to modernity. Some go so far as to say that all metric writing is derivative and old-fashioned and all free verse is innovatory and modernist. This is the reverse of the traditionalist concept that metre in itself is poetry, and prose of whatever kind is the antithesis of poetry. The emphasis is placed not on the substance of poetry but on its external form. Neither metre nor free verse is enough in itself to ensure that the final product will be poetry. We all know verse which has metre and rhyme but is nothing to do with poetry, and supposedly poetic contemporary free verse which is similarly devoid of poetry.

4. An Iraqi mystic (d. ca. 965), whose ecstatic writings concerning the transcendent state are praised by Adūnīs.

The fifth illusion concerns content. Those who subscribe to this illusion believe that every poetic text which treats contemporary issues is necessarily modern, a claim which does not stand up to examination for a poet can treat these themes according to his intellectual understanding of them, while his artistic approach and manner of expression remain traditional. This is a fault which is all too evident in modern Arabic poetry; from the Iraqis, al-Ruṣāfī (1875–1945) and al-Zahāwī (1863–1936),⁵ and the Egyptians, Ḥāfiz Ibrāhīm⁶ (1872–1932) and Aḥmad Shawqī, up to the present, there are numerous examples, as there are in the work of all those poets who express their 'modern' ideological beliefs in their poetry.

The poetics of modernity in Arabic was born within a three-stranded movement: there was the urban-sedentary dimension with its own values and symbols (as opposed to the desert and bedouin life), given unique expression and anchored firmly in the literary consciousness by the poetry of Abū Nuwās; the linguistic-metaphoric dimension or the rhetoric of metaphor (as opposed to what may be called 'the rhetoric of reality' of pre-Islamic poetry), expressed for posterity in the poetry of Abū Tammām and the mystic poets;⁷ and finally the dimension of interaction and assimilation with non-Arab cultures.

This modernity thus progressed beyond the normative and instead of referring to past authorities began to assert its uniqueness and individuality. It started to innovate, continually renewing the image of things and man's relationship to them, as well as ways of using language and styles of poetic writing. I would stress again that we must place some of the mystics, especially al-Niffarī and Abū Hayyān al-Tawḥīdī⁸ (d. 1010), firmly at the heart of this modernist movement, and help rescue them from neglect or oblivion and restore to them the consideration they deserve.

This modernist poetry aroused a storm of criticism amounting in some cases to outright rejection, which was instigated by members of the traditionalist establishment culture and other patrons of the old. The reasons for this criticism can be summarized as follows: the poetry was seen as an attack on the values of the ancient and authentic, and it was this which led to Abū Nuwās being accused of belonging to the Persian-inspired, anti-Arab *Shu'ūbīyya* movement;⁹ it was also seen as an attack on the authentic in poetic expression, held to exist in its exemplary form in ancient poetry, which was why Abū Tammām was said to have 'corrupted Arabic poetry'.¹

Thus modernity in Arabic poetry had its origins in a climate which brought together two independent elements: awareness of the new urban culture which developed in Baghdad in the eighth century, and a new use of the language to embrace this awareness and express it in poetry. It developed in

5. Both neoclassical poets who portrayed social changes and symptoms of modernization in traditionally structured poems.

6. Neoclassical nationalist poet, who wrote odes denouncing the British occupation of Egypt and thus was known as the "poet of the Nile."

7. As mystical movements (Sufism) began to emerge in the Muslim community in the 8th century, a number of devotees expressed their quest for the transcendent by using the conventions and forms of Arabic poetry (particularly those of love and wine poetry).

8. Writer of belletristic philosophical works and

compiler of several well-known collections of anecdotes.

9. A movement that began in the 8th century; with the spread of Islam beyond the Arabian Peninsula, scholars and authors associated with it claimed that within Islam the non-Arabs were equal to the Arabs (and some argued for the superiority of Persian culture). In Arabic, *shu'ūbīyya* denotes non-Arab Muslims.

1. What needs to be investigated is the fact that the same two "charges" are being leveled at modernity in Arabic poetry today, but with far greater ferocity [Adūnīs's note].

a spirit of opposition to the ancient, at the same time interacting with non-Arab currents. The whole thrust of Arab civilization testifies to this, for it is a synthesis of the pre-Islamic period and Islam, from whence it derives its origins and heritage, and of other cultures—Persian, Greek and Indian—through adoption and interaction, permeated by the most ancient elements deposited in the historical memory: Sumerian, Babylonian, Aramaean and Syriac.

The effectiveness of Arab creativity at this time demonstrates that no culture exists in isolation from other cultures—they give and take from each other; they influence and are influenced. It also shows that the first condition for this process of interaction is that it should be characterized by creativity and particularity at the same time. This combination carried Arab-Islamic civilization at its most mature to the West by way of Andalusia.²

The historical context outlined above demands a re-examination of the course of modernity and the problems it has encountered in its present stage. Such a re-examination must start from an awareness of past events with all their religious, social, political and cultural complexities. This is the only proper way of opening up horizons for understanding the self and the other, allowing us to have a new vision of ourselves and the world, and showing the path we should take in order to build the future. Without this, modernity in Arab society will always be a commodity imported in some underhand way. The society itself will remain a carriage rumbling and swaying along in the wake of the train of Western hegemony, lost between a blind acceptance which robs it of its identity, and an equally blind adherence to the traditionalist past, which robs it of its inventive spirit and prevents it from being a presence in the living reality.

Consciousness of the self forces us to acknowledge that our ancestors' many and varied achievements are not enough in themselves to answer our present problems or lead us to discover a new epistemology. This does not imply a denial of their achievements or their role in the historical process of the production of knowledge. Rather, we should acknowledge that we are confronting issues of which they were unaware; we are therefore bound to approach them in different ways, especially in an age which has witnessed such a tremendous explosion of knowledge. To continue to operate using the old forms of knowledge and within the old boundaries, using the old methods of approach, is to abandon knowledge in its present state, and therefore to abandon knowledge itself.

Continuing in the old ways does not necessarily mean preserving our heritage or holding on to our authenticity. Authenticity is not a fixed point in the past to which we must return in order to establish our identity. It is rather a constant capacity for movement and for going beyond existing limits towards a world which, while assimilating the past and its knowledge, looks ahead to a better future.

What we should take hold of and imitate is the flame of questioning which animated our ancestors, so that we can complement their work with a new vision and new approaches to knowledge. This requires us to dissect their

2. That is, al-Andalus, the Arabic name of the southern portion of the Iberian Peninsula (most of modern Spain and Portugal), ruled by Arab and North African Muslims from 711 to 1492.

views and intellectual achievements and assimilate them critically so that the new develops out of the old but at the same time is something completely different. This is the only way of ensuring a profound and constructive continuity between the old and the new.

Consciousness of the other assumes a realization on our part that the opposition between the Arab-Islamic East and the European-American West is not of an intellectual or poetic nature, but is political and ideological, originally a result of Western imperialism. This is why when we reject the West we should not reject it as a whole, but only this ideological aspect of it. Similarly when we reject the automated nature of its technology, this does not mean that we reject technology absolutely or the intellectual principles which led to its invention, but only the way the West uses it and imposes it upon us, in an attempt to buy us and turn us into mere consumers and our countries into market-places. We can learn from the creative energy of the West and its intellectual inventions and construct a dialogue with them, as the West itself did in the past with the products of our civilization. In this way our awareness of the other implies that its achievement is not all devoid of value. There is much in it which we can benefit from, not only in understanding our particular problems, but also in the production of knowledge.

Without such an awareness our political and ideological opposition to the West risks becoming an opposition to its culture and civilization. The desire to consolidate this latter form of opposition, whether it comes from the West or the Arabs, and is deliberate or involuntary, reveals another desire—that of asserting the notion of ‘Western superiority’, thereby perpetuating the false dualism of the civilized West and the backward East. I say false dualism because it is conceived on the basis of superficial criteria—the criteria of the mechanical and the technical—whereas there no longer exists a ‘West’ and an ‘East’, each forming a self-contained conceptual unity. The West contains many ‘Wests’ more decadent than any Arab decadence, and the Arab East has many ‘Easts’ more advanced than the most advanced of these Wests.

Seen from this perspective, the world today lives in the climate of a single universal civilization, but one which has its own specificities, obvious or hidden, that depend on the level of creative presence in the various peoples. This suggests that modernity is also a climate of universal forms and ideas and not a state specific to one people. If there is a disparity between the West and the Arab world in the practice of modernity, it is a quantitative disparity of the first order, generated by science in the narrow sense of the word. The level of scientific development is the main characteristic of modernity in the West and the factor which distinguishes it from the East. Modern Western science constitutes a complete epistemological break with the old world, especially with its religious and metaphysical dimensions. It is the area where thought advances unimpeded, more advanced today than yesterday, tomorrow than today. The truths it offers are not like those of philosophy or the arts. They are truths which everyone must of necessity accept, because they are proven in theory and practice.

Science, as a system of knowledge, is constantly self-critical. It moves beyond existing frontiers, does not know words like stasis or retreat, and represents continuous progress because it never ceases to question and search.

The need to transcend the past, or erase it, is therefore self-evident in scientific procedure. The past is error, and authority is sought not from what is past but from what is to come. Western science, with its intuitions and practical results, is the most revolutionary development in the history of mankind.

What does this scientific revolution contain, from a theoretical point of view, of particular relevance for us Arabs? I will try to summarize this in the following four points.

First, science changes human consciousness, engendering in it a new acceptance of astonishing facts which cannot be refuted because of the influence of scientific methodology and the idea that progress is natural and inevitable.

Second, scientific inquiry knows no restrictions or obstacles and refuses to accept any area as inaccessible to it. Scientific research is carried on regardless of the implications for ideas, morals, traditions or other aspects of life.

Third, science completely changes the way in which the past is viewed. In its eyes the past is not only error but also ignorance. Whatever parts of it will not stand up to scientific investigation are rejected as worthless.

Fourth, science makes people open to the idea of a future radically different from anything they have known before, and therefore ready to accept the ending of the past. However hard a person tries to reject science, on either a rhetorical or a technical level, he is doomed to failure. Today scientific invention and discovery are the most important signs of power and superiority. Mechanized industry is spreading to take its place alongside the most deeply rooted traditions and in the most backward societies. Scientific and technical progress are universal realities which cannot be ignored or avoided. They have gradually come to occupy a place in our ideas and awareness, to invade our lives and announce the collapse of the ancient world.

The Arabs have been much influenced by the scientific perspective and the cultural changes brought about by it. To be more precise, I should say that we have been affected in our intellectual awareness and our conscious minds, while our unconscious continues to teem with other things which have escaped the boundaries of scientific rationalism. We continue to come up against this paradox, to which I have already referred: why does Arab society rush to avail itself of the technical achievements of science, and reject its intellectual principles?

Scientific awareness created anxiety and insecurity in us, whereas our unconscious gave us certainty and reassurance. We considered science as a gain at the level of external progress, but a loss in terms of progress in the internal world of intimate human affairs; our consciousness of science therefore thrust us forcefully towards the future, while in our hearts we followed an ill-defined path back to some notion of the past where human warmth was more in evidence.

In this climate (and I will confine myself now to talking only about what happened in modernist poetry) we began to pose our artistic questions in relation to science. For example, what does progress mean in poetry? Nothing. The idea of progress is fundamental to science but quite separate from artistic creativity. Thus we found something which was incompatible with science as progress but was not an irrelevance. We began to deduce that scientific progress was not synonymous with progress as a whole and was therefore

not to be used as a norm. Another sort of progress exists on a different level nearer to man and more expressive of the inwardness of his being.

We began to see that the aesthetics of the age we were living in was founded upon and motivated by an idea of resistance to the merely mechanical and technical side of science. This resistance saw a modernity of greater humanity and stature in certain elements of the past. Because the applications of technology were relatively homogeneous, they led to a uniformity and sameness which gave life itself a mechanical dimension. Poetry, on the other hand, affirmed difference, giving movement, ebullience and variation to life.

Thus we were split in two, our rational consciousness on the side of science and the future, and our hearts on the side of art and the past. It was as if we were reviving what science had neglected, disregarded or tried to kill off, and this split in us reflected the conflict between freedom and necessity, in this case represented by art and science.

From the perspective of this conflict, I started to see (I speak here only of my own experience and what I say does not necessarily apply to other writers) something inimical to the spirit of poetry in every move to make poetic creation subject to a rationalist scientific precept: one that seemed to say, the future before all else. I began to search for alternative forms which, while not rejecting the notion of the future, did not put an absolute ban on the past. They were forms which, on the contrary, embraced the past in some way: legend, mysticism, magical and non-rational elements of the literary tradition, the mysterious regions of the human soul. I used them to move away from the cold rationalism of science, in my efforts to reveal truths which are more sublime and concern humanity in a more profound way than scientific truths. This return to older sources was not *passé*, as some commentators described it. It was an attempt to reflect upon and comprehend human existence as a whole, beginning deep down where the reality of this existence was least cluttered by extraneous factors and man lived directly with the land and talked to it in a language which operated at the level of sensation and physical contact, inarticulate cries, instinct and sex. Such a way of proceeding is obviously the opposite of the rational, direct, clear approach, plunging deep into the obscure and terrifying areas which escape the grip of science and rationalism, but where great creation has its beginnings, suspended over the abyss of the undefined and the limitless.

It was therefore a rediscovery, or an attempt to create a starting-point from which to investigate the possibilities for a new direction in human affairs. I saw in legend especially something which afforded me this timeless perspective from which to view the human condition and strengthened my feeling of being one with mankind—a constant present. Through using legends, I was able to witness and journey among the earliest visions conjured up by the human imagination, the earliest motivating forces of behaviour, the first questions and the first inventions.

Thus I began to follow a path which was the opposite both of the scientific path, in the purely technical sense, and of the rationalism on which science is based, or which it gives rise to. Progress began to take on a different meaning in my mind. I gradually became aware that the essence of progress is human, that it is qualitative not quantitative, and that the Westerner who lives surrounded by computers and exposed to the latest in space travel is

not necessarily more advanced in any profound sense than the Arab peasant living among trees and cattle.

As a result I came to believe that the progress of a society is not represented merely by economic and social renewal, but more fundamentally by the liberation of man himself, and the liberation of the suppressed elements beneath and beyond the socio-economic structure, in such a way that human beings at their freest and most responsive become both the pivot and the goal.

Technology and rationalism, and, let us say, modernism, have placed human beings within a closed 'mechanical' system. This leads them to focus on their immediate material existence, where all their powers are directed towards dominance in the external world, involving the control and exploitation of the other. It disregards their intimate natures, their passions, needs and desires, and betrays them while declaring that it alone is faithful to them.

The human being is a sublime creature, and there is nothing for him in this modernist technology except the materialism of an attachment to manufactured things, and to quantity. Technology does not cover the whole of existence; it only responds to the needs of an insignificant part of it. Moreover, man is not defined by quantity.

I saw poetry increasingly as the most important means available to humanity of breaking the hold of modern technology and its instrumental rationalism. If technology is the relationship which human beings have established with nature, through scientific rationality, then poetry is the relationship which one human being establishes with the individual essence of another, through nature. When there is no poetry in a period of history, there is no true human dimension. Poetry, according to this definition, is more than a means or a tool, like technology: it is rather, like language itself, an innate quality. It is not a stage in the history of human consciousness but a constituent of this consciousness.

I came to believe that modern technology, with its mechanical, repetitive reliability, had deprived nature of its significance for us and was now robbing the future itself of meaning. The future was no longer that unknown quantity, anticipated with hope and joy, but had begun to appear like a past which we mechanically relived. As a result some forms of the ancient appeared strange and fascinating, compared to the monotonously recurrent forms of modern technology, and the past, especially aspects of it which were officially suppressed or not widely known about, seemed magical and unfamiliar. I felt that we were in deep need of something that went beyond the technological in the direction of those areas which have been more or less obliterated from human memory, and towards the invisible which, however doggedly we try to unveil it and however deeply we penetrate it, remains invisible. Poetry keeps human beings open to the invisible, the hidden, the infinite unknown, always on the threshold of what is to come; at this point, which is both in time and outside time, poetry becomes a bridge joining what a man was, what he is here and now, and what he will be tomorrow in an all-inclusive movement which goes beyond the mechanical, blind indifference of technical progress and embraces the changing unknown.

HAROLD BLOOM

b. 1930

Cantankerous rebel and staunch traditionalist, Harold Bloom embodies the tensions he depicts between tradition and innovation. The tradition of great writers is both a blessing and a curse, Bloom tells us. But most of all, it is an inescapable fact. Bloom thus finds himself fighting on two major fronts, seeking to deny tame visions of what the tradition offers *and* to shore up the primacy of the “strong” poets against those who wish to dismantle or stand aside from the tradition. This double fight has made Bloom that oddity more common in England than North America: a conservative rebel, addicted to sweeping condemnations of those who challenge the canon while carrying on his own revisionary battle with the received order.

The burden of Bloom’s argument is that we are belated sons who will never be as great as our fathers, but it is death for us to admit that we are inferior. Bloom’s basic model is SIGMUND FREUD’s oedipal conflict between sons and fathers—a masculinist paradigm that requires the use of the male pronoun throughout this headnote. There is no denying Bloom’s originality or his learning. His vision of our necessarily ambivalent relation to literary ancestors—“the anxiety of influence”—has itself been very influential, while his broad historical generalizations and strong judgments can be counted on to stimulate debate.

Educated at Cornell and Yale Universities, Bloom has taught at Yale and New York University since receiving his Ph.D. in 1955. He grew up in a Yiddish-speaking family in the Bronx and learned to read English (at the age of six) before he spoke it. Bloom received a MacArthur Foundation “genius” award in 1985. Like earlier critics such as SAMUEL TAYLOR COLERIDGE, Bloom quotes from memory the various poets he cites in his work, disdaining footnotes. In the 1970s, Bloom was sometimes associated with the so-called Yale School, which included PAUL DE MAN, J. Hillis Miller, Geoffrey Hartman, and Barbara Johnson, and was instrumental in bringing French literary theory to North American literature departments. But Bloom’s hostility toward theory’s skeptical relation to the Western literary and philosophical traditions was already evident by the late 1970s, when he seceded from Yale’s English department by having himself named a University Professor. Of de Man, Bloom has said, “We were great friends, but we disagreed about everything.”

After the productive decade of 1972 to 1982, in which Bloom developed his distinctive theory of poetic influence and deployed it in works on various English and American poets, he devoted the next ten years to massive editing projects (with more than 200 volumes of literary criticism edited for Chelsea House alone). Starting in the mid-1990s (even as his editing work continued), Bloom began writing for more general audiences, with works on how to read poetry, on Christianity, and on Shakespeare among other topics. His allegiance to the cult of genius and to the transcendently great masterpiece, along with his antipathy to ideological criticism, made him a prominent critic of “cultural studies” and of critics interested in literature by women and people of color. In *The Western Canon* (1994), for example, he attacks the revisionist work on the literary canon performed by members of what he calls “the school of resentment” (all those who question the assumed greatness of received masterpieces).

For Bloom as for the Romantic poet William Blake, one of his heroes, energy is the only life; and both poetry and criticism for him are matters of life and death. In our selection from *The Anxiety of Influence* (1973), Bloom describes the “strong” poet as engaged in a “fight to the end” against both nature and previous poets. “Every poet begins . . . by rebelling more strongly against the consciousness of death’s necessity than all other men and women do.” In his impossible quest to achieve immortality,

the strong poet strives to replace nature with art and previous poems with his own work, thereby declaring himself self-created and the master of his own fate.

But a basic oedipal ambivalence complicates the "ephebe's" (newcomer's) relation to his forebears. Even as a poet's world and aims are shaped by the words of the precursors he most admires, the project of self-creation requires the denial of all influence, a "misprision" (misunderstanding) of his actual sources. So too each child enters a world he did not create, is named by others (usually his parents), and is initiated into his culture's traditions. We are all "belated," arriving late into a cultural landscape already created by others, and given a preexisting language to express our selves. Most people fit themselves into typical roles, using common idioms; many try to make the world better fit their needs. But the "strong poet" attains a heightened individuality through a radical re-vision of tradition.

The striving for originality necessarily involves aggression, but this struggle with the past is disguised in what Bloom labeled "six revisionary ratios." Each represents a strategy enabling the latecomer to revise the previous poet while either denying influence or professing reverence. If the newcomer only faithfully repeated the words of the past, he would never attain selfhood or originality. Thus, "to imagine [a poem and a self] is to misinterpret, which makes all poems antithetical to their precursors." Every poem rewrites earlier poems; every poem is an interpretation. Only misinterpretation of precursors affords the poet his own voice, his own distinctive existence.

In *The Anxiety of Influence's* "Manifesto for Antithetical Criticism," Bloom denies any categorical distinction between what poets do and what critics of poetry do: "Poets' misinterpretations or poems are more drastic than critics' misinterpretations or criticism, but there is only a difference in degree and not at all in kind." In other words, Bloom asserts that every critical act alters the text it interprets even when insisting on its faithfulness or accuracy. It is primarily this connection of criticism to misreading that prompted the association of Bloom with deconstructive theory. But while poststructuralists reject the humanist self, Bloom's version of "intertextuality" is placed in service of the psychological struggle to achieve selfhood. Bloom obviously admires those "strong" writers who most fully gain individuality, and he clearly aspires to write a strong, creative criticism that will overcome and outdo his own precursors, especially RALPH WALDO EMERSON, Kenneth Burke, and NORTHROP FRYE.

Bloom's psychoanalytic model, like Freud's, stresses competition, aggression, and self-assertion in ways that seem stereotypically male. From a feminist perspective, SANDRA M. GILBERT and SUSAN GUBAR stress more collaborative, nurturing, and cooperative relationships between writers and their precursors, between individuals and the tradition. Other critics have denied the unity that Bloom claims for the tradition (he makes Shakespeare and Milton the origin of all subsequent English poetry, Emerson and Whitman of American), pointing instead to the hybridity and pluralism of cultural life and arguing that poets are in dialogue with a wide variety of materials, both verbal and nonverbal. Finally, Bloom's work suffers from the ahistoricism of Freud's Oedipus complex, which is presented as (but not proved to be) true for all families at all times and in all places.

In response, Bloom insists that the tradition is so fully written into us that we delude ourselves if we think we can evade it. We must "consciously know" and accept that we are "latecomers." To gain access to images and ideas that we do not immediately recognize as our own, we need "antithetical texts"—which, paradoxically, are precisely the great works that constitute the Western tradition and us (*Paradise Lost* is Bloom's favorite example). That tradition is both endlessly conflicted and remarkably unitary. It continually produces a "we" that is mostly stable and similar, with the occasional genius possessing distinctive strength and individuality—recognized only in contrast to other voices in the tradition.

Bloom sees all poets as seeking “divination,” or to be counted among the immortals. His view of readers (and their reasons for reading) is similarly narrow: they are all would-be poets, locked in the revisionary struggle with previous writers and striving for greatness.

This reverence for greatness shapes Bloom’s style of argumentation. Greatness is conferred and confirmed by Time, transcending the nattering of literary critics. (In our selection, Bloom casually asserts the futility of all the existing types of criticism in one quick sentence.) But because it can be obscured in a particular era, it needs a spokesman (to tell us, for example, that T. S. ELIOT and Robert Lowell are negligible poets). Greatness for Bloom is both nowhere, off in misty Platonic regions of the transcendent, or embodied in Bloom, the one critic faithful to the long view amid “dying generations at their song” who perversely insist on wasting their time with lesser talents. Either way, the authority of greatness is beyond the reach of mere argument and brooks no disagreement.

The Anxiety of Influence Keywords: Authorship, The Canon/Tradition, Interpretation Theory, Literary History, Modernity, Poetry, Psychoanalysis

From The Anxiety of Influence

Introduction. A Meditation upon Priority, and a Synopsis

This short book offers a theory of poetry by way of a description of poetic influence, or the story of intra-poetic relationships. One aim of this theory is corrective: to de-idealize our accepted accounts of how one poet helps to form another. Another aim, also corrective, is to try to provide a poetics that will foster a more adequate practical criticism.

Poetic history, in this book’s argument, is held to be indistinguishable from poetic influence, since strong poets make that history by misreading one another, so as to clear imaginative space for themselves.

My concern is only with strong poets, major figures with the persistence to wrestle with their strong precursors, even to the death. Weaker talents idealize; figures of capable imagination¹ appropriate for themselves. But nothing is got for nothing, and self-appropriation involves the immense anxieties of indebtedness, for what strong maker desires the realization that he has failed to create himself? Oscar Wilde,² who knew he had failed as a poet because he lacked strength to overcome his anxiety of influence, knew also the darker truths concerning influence. *The Ballad of Reading Gaol* becomes an embarrassment to read, directly one recognizes that every lustre it exhibits is reflected from *The Rime of the Ancient Mariner*;³ and Wilde’s lyrics anthologize the whole of English High Romanticism. Knowing this, and armed with his customary intelligence, Wilde bitterly remarks in *The Portrait of Mr. W. H.* that: “Influence is simply a transference of personality, a mode of giving away what is most precious to one’s self, and its exercise produces a sense, and, it may be, a reality of loss. Every disciple takes away something from his master.” This is the

1. A phrase from the poem “Mrs. Alfred Uruguay” (1940) by Wallace Stevens (1879–1955), whom Bloom considers the greatest American poet of the twentieth century.

2. Irish-born playwright and critic (1854–1900; see above). His works mentioned by Bloom are

The Ballad of Reading Gaol (1898), a poem on his experiences in prison; *The Portrait of Mr. W. H.* (1889), an essay on Shakespeare’s sonnets; and *The Picture of Dorian Gray* (1890), a novel.

3. A 1798 poem by SAMUEL TAYLOR COLERIDGE (1772–1834), English Romantic poet and critic.

anxiety of influencing, yet no reversal in this area is a true reversal. Two years later, Wilde refined this bitterness in one of Lord Henry Wotton's elegant observations in *The Picture of Dorian Gray*, where he tells Dorian that all influence is immoral:

Because to influence a person is to give him one's own soul. He does not think his natural thoughts, or burn with his natural passions. His virtues are not real to him. His sins, if there are such things as sins, are borrowed. He becomes an echo of someone else's music, an actor of a part that has not been written for him.

To apply Lord Henry's insight to Wilde, we need only read Wilde's review of Pater's⁴ *Appreciations*, with its splendidly self-deceptive closing observation that Pater "has escaped disciples." Every major aesthetic consciousness seems peculiarly more gifted at denying obligation as the hungry generations go on treading one another down. Stevens, a stronger heir of Pater than even Wilde was, is revealingly vehement in his letters:

While, of course, I come down from the past, the past is my own and not something marked Coleridge, Wordsworth,⁵ etc. I know of no one who has been particularly important to me. My reality-imagination complex is entirely my own even though I see it in others.

He might have said: "particularly because I see it in others," but poetic influence was hardly a subject where Stevens' insights could center. Towards the end, his denials became rather violent, and oddly humored. Writing to the poet Richard Eberhart,⁶ he extends a sympathy all the stronger for being self-sympathy:

I sympathize with your denial of any influence on my part. This sort of thing always jars me because, in my own case, I am not conscious of having been influenced by anybody and have purposely held off from reading highly mannered people like Eliot and Pound⁷ so that I should not absorb anything, even unconsciously. But there is a kind of critic who spends his time dissecting what he reads for echoes, imitations, influences, as if no one was ever simply himself but is always compounded of a lot of other people. As for W. Blake,⁸ I think that this means Wilhelm Blake.

This view, that poetic influence scarcely exists, except in furiously active pedants, is itself an illustration of one way in which poetic influence is a variety of melancholy or an anxiety-principle. Stevens was, as he insisted, a highly individual poet, as much an American original as Whitman or Dickinson, or his own contemporaries: Pound, Williams, Moore.⁹ But poetic influence need not make poets less original; as often it makes them more original, though not therefore necessarily better. The profundities of poetic influence cannot be reduced to source-study, to the history of ideas, to the

4. WALTER PATER (1839–1894), English critic who was one of Wilde's teachers at Oxford University; *Appreciations* (1889) is a collection of critical essays.

5. WILLIAM WORDSWORTH (1770–1850), English Romantic poet.

6. American poet and critic (1904–2005).

7. Ezra Pound (1885–1972), American poet and critic. T. S. ELIOT (1888–1965), American-born

English poet and critic.

8. William Blake (1757–1827), Romantic poet, mystic, and artist.

9. Bloom names first 19th- and then 20th-century American poets: Walt Whitman (1819–1892), Emily Dickinson (1830–1886), William Carlos Williams (1883–1963), and Marianne Moore (1887–1972).

patterning of images. Poetic influence, or as I shall more frequently term it, poetic misprision,¹ is necessarily the study of the life-cycle of the poet-as-poet. When such study considers the context in which that life-cycle is enacted, it will be compelled to examine simultaneously the relations between poets as cases akin to what Freud called the family romance,² and as chapters in the history of modern revisionism, "modern" meaning here post-Enlightenment. The modern poet, as W. J. Bate³ shows in *The Burden of the Past and the English Poet*, is the inheritor of a melancholy engendered in the mind of the Enlightenment by its skepticism of its own double heritage of imaginative wealth, from the ancients and from the Renaissance masters. In this book I largely neglect the area Bate has explored with great skill, in order to center upon intra-poetic relationships as parallels of family romance. Though I employ these parallels, I do so as a deliberate revisionist of some of the Freudian emphases.

Nietzsche⁴ and Freud are, so far as I can tell, the prime influences upon the theory of influence presented in this book. Nietzsche is the prophet of the antithetical, and his *Genealogy of Morals* is the profoundest study available to me of the revisionary and ascetic strains in the aesthetic temperament. Freud's investigations of the mechanisms of defense and their ambivalent functionings provide the clearest analogues I have found for the revisionary ratios⁵ that govern intra-poetic relations. Yet, the theory of influence expounded here is un-Nietzschean in its deliberate literalism, and in its Viconian⁶ insistence that priority in divination is crucial for every strong poet, lest he dwindle merely into a latecomer. My theory rejects also the qualified Freudian optimism that happy substitution is possible, that a second chance can save us from the repetitive quest for our earliest attachments. Poets as poets cannot accept substitutions, and fight to the end to have their initial chance alone. Both Nietzsche and Freud underestimated poets and poetry, yet each yielded more power to phantasmagoria⁷ than it truly possesses. They too, despite their moral realism, over-idealized the imagination. Nietzsche's disciple, Yeats, and Freud's disciple, Otto Rank,⁸ show a greater awareness of the artist's fight against art, and of the relation of this struggle to the artist's antithetical battle against nature.

Freud recognized sublimation as the highest human achievement, a recognition that allies him to Plato⁹ and to the entire moral traditions of both Judaism and Christianity. Freudian sublimation involves the yielding-up of more primordial for more refined modes of pleasure, which is to exalt the second chance above the first. Freud's poem, in the view of this book, is not severe enough, unlike the severe poems written by the creative lives of the strong poets. To equate emotional maturation with the discovery of acceptable sub-

1. Error, misinterpretation.

2. The son's sexual desire for his mother and aggression toward his father, according to SIGMUND FREUD (1856–1939), the Austrian founder of psychoanalysis; a term also applied to the child's fantasy that these are not his true parents.

3. Walter Jackson Bate (1918–1999), American literary critic whose 1970 book traces the role of influence in English poetry.

4. FRIEDRICH NIETZSCHE (1844–1900), German philosopher; *On the Genealogy of Morals* was published in 1887.

5. Relationships.

6. Like GIAMBATTISTA VICO (1668–1744), the Italian historian and philosopher who claimed that the first language was poetry and was of divine origin.

7. The fantasies and illusions produced by the mind.

8. Austrian psychoanalyst (1884–1939). William Butler Yeats (1865–1939), Irish poet.

9. Greek philosopher (ca. 427–ca. 347 B.C.E.; see above).

stitutes may be pragmatic wisdom, particularly in the realm of Eros, but this is not the wisdom of the strong poets. The surrendered dream is not merely a phantasmagoria of endless gratification, but is the greatest of all human illusions, the vision of immortality. If Wordsworth's *Ode: Intimations of Immortality from Recollections of Early Childhood* possessed only the wisdom found also in Freud, then we could cease calling it "the Great Ode."¹ Wordsworth too saw repetition or second chance as essential for development, and his ode admits that we can redirect our needs by substitution or sublimation. But the ode plangently also awakens into failure, and into the creative mind's protest against time's tyranny. A Wordsworthian critic, even one as loyal to Wordsworth as Geoffrey Hartman,² can insist upon clearly distinguishing between *priority*, as a concept from the natural order, and *authority*, from the spiritual order, but Wordsworth's ode declines to make this distinction. "By seeking to overcome priority," Hartman wisely says, "art fights nature on nature's own ground, and is bound to lose." The argument of this book is that strong poets are condemned to just this unwisdom; Wordsworth's Great Ode fights nature on nature's own ground, and suffers a great defeat, even as it retains its greater dream. That dream, in Wordsworth's ode, is shadowed by the anxiety of influence, due to the greatness of the precursor-poem, Milton's³ *Lycidas*, where the human refusal wholly to sublimate is even more rugged, despite the ostensible yielding to Christian teachings of sublimation.

For every poet begins (however "unconsciously") by rebelling more strongly against the consciousness of death's necessity than all other men and women do. The young citizen of poetry, or ephebe⁴ as Athens would have called him, is already the anti-natural or antithetical man, and from his start as a poet he quests for an impossible object, as his precursor quested before him. That this quest encompasses necessarily the diminishment of poetry seems to me an inevitable realization, one that accurate literary history must sustain. The great poets of the English Renaissance are not matched by their Enlightened descendants, and the whole tradition of the post-Enlightenment, which is Romanticism, shows a further decline in its Modernist and post-Modernist heirs. The death of poetry will not be hastened by any reader's broodings, yet it seems just to assume that poetry in our tradition, when it dies, will be self-slain, murdered by its own past strength. An implied anguish throughout this book is that Romanticism, for all its glories, may have been a vast visionary tragedy, the self-baffled enterprise not of Prometheus but of blinded Oedipus, who did not know that the Sphinx was his Muse.⁵

Oedipus, blind, was on the path to oracular godhood, and the strong poets have followed him by transforming their blindness towards their precursors into the revisionary insights of their own work. The six revisionary move-

1. Wordsworth's so-called "Intimations Ode" (1807) traces the decline of human creativity from childhood (when we still have "intimations" of our divine origin) to adulthood.

2. American literary critic (1929–2016), a colleague of Bloom's at Yale University; his books include *Wordsworth's Poetry, 1787–1814* (1964).

3. John Milton (1608–1674), English poet; *Lycidas* (1637) is an elegy for a college classmate.

4. A young man (from *ephebos*, Greek); here, more particularly, an initiate or trainee. Wallace Stevens uses the term in "Notes toward a Supreme Fiction" (1947).

5. That is, source of inspiration. Prometheus: the Titan punished for stealing fire from the gods and giving it to humans (by some accounts, he was their creator); he was a favorite figure of Romantic poets. Oedipus: in Greek mythology, the tragic hero whose correct answer to the riddle of the Sphinx—a monster with a woman's face and lion's body—led to his becoming king of Thebes and to his self-blinding after he realized he had unknowingly married his own mother and earlier killed his father, King Laius, in a fight at a crossroads.

ments that I will trace in the strong poet's life-cycle could as well be more, and could take quite different names than those I have employed. I have kept them to six, because these seem to be minimal and essential to my understanding of how one poet deviates from another. The names, though arbitrary, carry on from various traditions that have been central in Western imaginative life, and I hope can be useful.

The greatest poet in our language is excluded from the argument of this book for several reasons. One is necessarily historical; Shakespeare⁶ belongs to the giant age before the flood, before the anxiety of influence became central to poetic consciousness. Another has to do with the contrast between dramatic and lyric form. As poetry has become more subjective, the shadow cast by the precursors has become more dominant. The main cause, though, is that Shakespeare's prime precursor was Marlowe,⁷ a poet very much smaller than his inheritor. Milton, with all his strength, yet had to struggle, subtly and crucially, with a major precursor in Spenser,⁸ and this struggle both formed and malformed Milton. Coleridge, ephebe of Milton and later of Wordsworth, would have been glad to find his Marlowe in Cowper (or in the much weaker Bowles),⁹ but influence cannot be willed. Shakespeare is the largest instance in the language of a phenomenon that stands outside the concern of this book: the absolute absorption of the precursor. Battle between strong equals, father and son as mighty opposites, Laius and Oedipus at the crossroads; only this is my subject here, though some of the fathers, as will be seen, are composite figures. That even the strongest poets are subject to influences not poetical is obvious even to me, but again my concern is only with *the poet in a poet*, or the aboriginal poetic self.

A change like the one I propose in our ideas of influence should help us read more accurately any group of past poets who were contemporary with one another. To give one example, as misinterpreters of Keats,¹ in *their poems*, the Victorian disciples of Keats most notably include Tennyson, Arnold, Hopkins, and Rossetti.² That Tennyson triumphed in his long, hidden contest with Keats, no one can assert absolutely, but his clear superiority over Arnold, Hopkins, and Rossetti is due to his relative victory or at least holding of his own in contrast to their partial defeats. Arnold's elegiac poetry uneasily blends Keatsian style with anti-Romantic sentiment, while Hopkins' strained intensities and convolutions of diction and Rossetti's densely inlaid art are also at variance with the burdens they seek to alleviate in their own poetic selves. Similarly, in our time we need to look again at Pound's unending match with Browning;³ as at Stevens' long and largely hidden civil war with the major poets of English and American Romanticism—Wordsworth, Keats, Shelley, Emerson,⁴ and Whitman. As with the Victorian Keatsians, these are instances among many, if a more accurate story is to be told about poetic history.

6. William Shakespeare (1564–1616), English poet and playwright, wrote before the Enlightenment.

7. Christopher Marlowe (1564–1593), English poet and playwright.

8. Edmund Spenser (1552–1599), English poet.

9. William Lisle Bowles (1762–1850), English poet, critic, and priest. William Cowper (1731–1800), English poet.

1. John Keats (1795–1821), English Romantic

poet.

2. All English poets: Alfred, Lord Tennyson (1809–1892); MATTHEW ARNOLD (1822–1888); Gerard Manley Hopkins (1844–1889); and Dante Gabriel Rossetti (1828–1882).

3. Robert Browning (1812–1889), English Victorian poet.

4. RALPH WALDO EMERSON (1803–1882), American essayist and poet. PERCY BYSSHE SHELLEY (1792–1822), English Romantic poet.

This book's main purpose is necessarily to present one reader's critical vision, in the context both of the criticism and poetry of his own generation, where their current crises most touch him, and in the context of his own anxieties of influence. In the contemporary poems that most move me, like the *Corsons Inlet* and *Salience*s of A. R. Ammons and the *Fragment* and *Soonest Mended* of John Ashbery,⁵ I can recognize a strength that battles against the death of poetry, yet also the exhaustions of being a latecomer. Similarly, in the contemporary criticism that clarifies for me my own evasions, in books like *Allegory* by Angus Fletcher, *Beyond Formalism* by Geoffrey Hartman, and *Blindness and Insight* by Paul de Man,⁶ I am made aware of the mind's effort to overcome the impasse of Formalist criticism, the barren moralizing that Archetypal criticism has come to be, and the anti-humanistic plain dreariness of all those developments in European criticism⁷ that have yet to demonstrate that they can aid in reading any one poem by any poet whatsoever. My Interchapter,⁸ proposing a more antithetical practical criticism than any we now have, is my response in this area of the contemporary.

A theory of poetry that presents itself as a severe poem, reliant upon apothegm, and a quite personal (though thoroughly traditional) mythic pattern, still may be judged, and may ask to be judged, as argument. Everything that makes up this book—parables, definitions, the working-through of the revisionary ratios as mechanisms of defense—intends to be part of a unified meditation on the melancholy of the creative mind's desperate insistence upon priority. Vico, who read all creation as a severe poem, understood that priority in the natural order and authority in the spiritual order had been one and had to remain one, *for poets*, because only this harshness constituted Poetic Wisdom. Vico reduced both natural priority and spiritual authority to property, a Hermetic reduction that I recognize as the *Ananke*,⁹ the dreadful necessity still governing the Western imagination.

Valentinus,¹ second-century Gnostic speculator, came out of Alexandria to teach the Pleroma, the Fullness of thirty Aeons, manifold of Divinity: "It was a great marvel that they were in the Father without knowing Him." To search for where you already are is the most benighted of quests, and the most fated. Each strong poet's Muse, his Sophia,² leaps as far out and down as can be, in a solipsistic passion of quest. Valentinus posited a Limit, at which quest ends, but no quest ends, if its context is Unconditioned Mind, the cosmos of the greatest post-Miltonic poets. The Sophia of Valentinus recovered, wed again within the Pleroma, and only her Passion or Dark Intention was separated

5. Ammons (1926–2001) and Ashbery (1927–2017) are American poets.

6. Belgian-born American literary theorist and critic (1919–1983; see above), author of *Blindness and Insight: Essays into the Rhetoric of Contemporary Criticism* (1971). Fletcher (1930–2016), American literary critic, author of *Allegory: The Theory of a Symbolic Mode* (1964). *Beyond Formalism: Literary Essays, 1958–1970* was published in 1970.

7. Structuralist and poststructuralist criticism, which began to influence North American critics in the 1960s and 1970s; it is "anti-humanist" in ignoring the individual. "Formalist criticism": criticism focusing on the literary work itself, primarily practiced by New Critics, who stressed "close reading" (e.g., Bloom's Yale colleagues CLEANTH BROOKS and WILLIAM K. WIMSATT JR.). "Archetypal criticism": criticism focusing on myth-

ological patterns in texts (most prominently, the work of NORTHROP FRYE).

8. "A Manifesto for Antithetical Criticism" (see below), which appears between chapters 3 and 4 of Bloom's 6-chapter book.

9. Necessity (Greek). "Hermetic": occult; specifically, of or relating to the Gnostic writings or teachings attributed to Hermes Trismegistus. Gnosticism, an early Christian heresy, radically rejected the visible world and especially the body as evil; Gnostic rituals emphasized ways to access the hidden knowledge of the spirit.

1. Best known of the Gnostic teachers (d. ca. 160 C.E.).

2. Wisdom (Greek); this personification (usually as the supreme female principle) played an important role in most Gnostic systems.

out into our world, beyond the Limit. Into this Passion, the Dark Intention that Valentinus called "strengthless and female fruit," the epebe must fall. If he emerges from it, however crippled and blinded, he will be among the strong poets.

SYNOPSIS: SIX REVISIONARY RATIOS

1. *Clinamen*, which is poetic misreading or misprision proper; I take the word from Lucretius,³ where it means a "swerve" of the atoms so as to make change possible in the universe. A poet swerves away from his precursor, by so reading his precursor's poem as to execute a *clinamen* in relation to it. This appears as a corrective movement in his own poem, which implies that the precursor poem went accurately up to a certain point, but then should have swerved, precisely in the direction that the new poem moves.

2. *Tessera*, which is completion and antithesis; I take the word not from mosaic-making, where it is still used, but from the ancient mystery cults, where it meant a token of recognition, the fragment say of a small pot which with the other fragments would re-constitute the vessel. A poet antithetically "completes" his precursor, by so reading the parent-poem as to retain its terms but to mean them in another sense, as though the precursor had failed to go far enough.

3. *Kenosis*, which is a breaking-device similar to the defense mechanisms our psyches employ against repetition compulsions; *kenosis* then is a movement towards discontinuity with the precursor. I take the word from St. Paul,⁴ where it means the humbling or emptying-out of Jesus by himself, when he accepts reduction from divine to human status. The later poet, apparently emptying himself of his own afflatus, his imaginative godhood, seems to humble himself as though he were ceasing to be a poet, but this ebbing is so performed in relation to a precursor's poem-of-ebbing that the precursor is emptied out also, and so the later poem of deflation is not as absolute as it seems.

4. *Daemonization*, or a movement towards a personalized Counter-Sublime, in reaction to the precursor's Sublime; I take the term from general Neo-Platonic usage,⁵ where an intermediary being, neither divine nor human, enters into the adept to aid him. The later poet opens himself to what he believes to be a power in the parent-poem that does not belong to the parent proper, but to a range of being just beyond that precursor. He does this, in his poem, by so stationing its relation to the parent-poem as to generalize away the uniqueness of the earlier work.

5. *Askesis*, or a movement of self-purgation which intends the attainment of a state of solitude; I take the term, general as it is, particularly from the practice of pre-Socratic shamans like Empedocles.⁶ The later poet does not, as in *kenosis*, undergo a revisionary movement of emptying, but of curtail-ing; he yields up part of his own human and imaginative endowment, so as to separate himself from others, including the precursor, and he does this in his poem by so stationing it in regard to the parent-poem as to make that poem undergo an *askesis* too; the precursor's endowment is also truncated.

3. Roman poet and Epicurean philosopher (ca. 94–55 B.C.E.); see *On the Nature of Things* 2.292.

4. Early Christian leader and writer (d. ca. 67 C.E.); see Philippians 2.6–7.

5. On Neoplatonic thought, see Plotinus (ca.

204/5–270 C.E.), who sought ways to move through matter toward an apprehension of spirit.

6. Greek philosopher and poet (ca. 493–ca. 433 B.C.E.).

6. *Apophrades*, or the return of the dead; I take the word from the Athenian dismal or unlucky days upon which the dead returned to reinhabit the houses in which they had lived. The later poet, in his own final phase, already burdened by an imaginative solitude that is almost a solipsism, holds his own poem so open again to the precursor's work that at first we might believe the wheel has come full circle, and that we are back in the later poet's flooded apprenticeship, before his strength began to assert itself in the revisionary ratios. But the poem is now *held* open to the precursor, where once it *was* open, and the uncanny effect is that the new poem's achievement makes it seem to us, not as though the precursor were writing it, but as though the later poet himself had written the precursor's characteristic work.

Interchapter. A Manifesto for Antithetical Criticism

If to imagine is to misinterpret, which makes all poems antithetical to their precursors, then to imagine after a poet is to learn his own metaphors for his acts of reading. Criticism then necessarily becomes antithetical also, a series of swerves after unique acts of creative misunderstanding.

The first swerve is to learn to read a great precursor poet as his greater descendants compelled themselves to read him.

The second is to read the descendants as if we were their disciples, and so compel ourselves to learn where we must revise them if we are to be found by our own work, and claimed by the living of our own lives.

Neither of these quests is yet Antithetical Criticism.

That begins when we measure the first *clinamen* against the second. Finding just what the accent of deviation is, we proceed to apply it as corrective to the reading of the first but not the second poet or group of poets. To practice Antithetical Criticism on the more recent poet or poets becomes possible only when they have found disciples not ourselves. But these can be critics, and not poets.

It can be objected against this theory that we never read a poet as poet, but only read one poet in another poet, or even into another poet. Our answer is manifold: we deny that there is, was or ever can be a poet as poet—to a reader. Just as we can never embrace (sexually or otherwise) a single person, but embrace the whole of her or his family romance, so we can never read a poet without reading the whole of his or her family romance as poet. The issue is reduction and how best to avoid it. Rhetorical, Aristotelian, phenomenological, and structuralist criticisms⁷ all reduce, whether to images, ideas, given things, or phonemes. Moral and other blatant philosophical or psychological criticisms all reduce to rival conceptualizations. We reduce—if at all—to another poem. The meaning of a poem can only be another poem. This is not a tautology, not even a deep tautology, since the two poems are not the same poem, any more than two lives can be the same life. The issue is true history or rather the true use of it, rather than the abuse of it, both in Nietzsche's sense. True poetic history is the story of how poets as poets have suffered

7. Again, Bloom lists the types of criticism prevalent in 1973. Rhetorical criticism considers the relation of text to audience (e.g., see Kenneth Burke). Aristotelian criticism combines interest in genre with a focus on rhetoric (associated with the University of Chicago). Phenomenologi-

cal criticism highlights the experience of the reader (e.g., see WOLFGANG ISE). Structuralist criticism identifies the general patterns underlying the surface words of the text; it derives from the structuralist linguistics of FERDINAND DE SAUSSURE (1857–1913).

other poets, just as any true biography is the story of how anyone suffered his own family—or his own displacement of family into lovers and friends.

Summary—Every poem is a misinterpretation of a parent poem. A poem is not an overcoming of anxiety, but is that anxiety. Poets' misinterpretations or poems are more drastic than critics' misinterpretations or criticism, but this is only a difference in degree and not at all in kind. There are no interpretations but only misinterpretations, and so all criticism is prose poetry.

Critics are more or less valuable than other critics only (precisely) as poets are more or less valuable than other poets. For just as a poet must be found by the opening in a precursor poet, so must the critic. The difference is that a critic has more parents. His precursors are poets and critics. But—in truth—so are a poet's precursors, often and more often as history lengthens.

Poetry is the anxiety of influence, is misprision, is a disciplined perverseness. Poetry is misunderstanding, misinterpretation, misalliance.

Poetry (Romance) is Family Romance. Poetry is the enchantment of incest, disciplined by resistance to that enchantment.

Influence is *Influenza*—an astral disease.⁸

If influence were health, who could write a poem? Health is stasis.

Schizophrenia is bad poetry, for the schizophrenic has lost the strength of perverse, wilful, misprision.

Poetry is thus both contraction and expansion; for all the ratios of revision are contracting movements, yet making is an expansive one. Good poetry is a dialectic of revisionary movement (contraction) and freshening outward-going-ness.

The best critics of our time remain Empson and Wilson Knight,⁹ for they have misinterpreted more antithetically than all others.

When we say that the meaning of a poem can only be another poem, we may mean a range of poems:

The precursor poem or poems.

The poem we write as our reading.

A rival poem, son or grandson of the same precursor.

A poem that never got written—that is—the poem that should have been written by the poet in question.

A composite poem, made up of these in some combination.

A poem is a poet's melancholy at his lack of priority. The failure to have begotten oneself is not the cause of the poem, for poems arise out of the illusion of freedom, out of a sense of priority being possible. But the poem—unlike the mind in creation—is a made thing, and as such is an achieved anxiety.

How do we understand an anxiety? By ourselves being anxious. Every deep reader is an Idiot Questioner. He asks, "Who wrote my poem?" Hence Emerson's insistence that: "In every work of genius we recognize our own rejected thoughts—they come back to us with a certain alienated majesty."¹

Criticism is the discourse of the deep tautology—of the solipsist who knows that what he means is right, and yet that what he says is wrong. Criticism is the art of knowing the hidden roads that go from poem to poem.

1973

8. Epidemics (such as those associated with influenza) were once thought to be influenced by the stars.

9. William Empson (1906–1984) and George Wilson Knight (1897–1985), English literary critics.

1. Emerson, "Self-Reliance" (1841).

PIERRE BOURDIEU
1930–2002

The French sociologist Pierre Bourdieu demonstrates that the aesthetic is a historically produced category. The qualities of artworks, the aims of creative artists, and the taste exhibited by various audiences derive from a social “field” in which agents maneuver for status and power. His influential book *Distinction: A Social Critique of the Judgement of Taste* (1979) is nothing less than an attempt to rewrite IMMANUEL KANT’s landmark *Critique of Judgment* (1790). Bourdieu challenges Kant’s claim that our judgments about art are disinterested, arguing instead that cultivated sensibilities both derive from and produce a “cultural capital” that is tied to economic and social advantages. In *The Rules of Art: Genesis and Structure of the Literary Field* (1992), which focuses mainly on the producers, in contrast to the consumers, of art, Bourdieu traces the historical rise of the modern notion of aesthetic autonomy. Literary theorists have found Bourdieu’s work congenial to their own questioning of aesthetic theories that make art a realm entirely separate from worldly ambitions and consumer culture.

Bourdieu comes from the provincial *petit bourgeoisie* (lower middle class); he was born in the village of Denguin, in the Pyrénées district of southwestern France, where his father was the village postmaster. At home his family spoke Gascon, an ancient peasant language, rather than French. A star rugby player in school, he was also a scholarship student, eventually receiving his degree in philosophy from the École Normale Supérieure, perhaps the most elite university in France. (JACQUES DERRIDA was a classmate.) After a year teaching high school, Bourdieu was drafted into the army and served for two years in Algeria during the bloody and controversial war between the Algerians seeking their independence and the French colonizers. Bourdieu stayed in Algeria after his army stint, eventually writing two books during the 1950s that he hoped would “highlight the plight of the Algerian people and, also, that of the French settlers. . . . I was appalled by the gap between the views of French intellectuals about this war and how it should be brought to an end, and my own experiences.” Returning to France in 1960, Bourdieu began to study anthropology and sociology, and in 1964 he joined the faculty of the École Pratique des Hautes Études (School for Advanced Studies). In 1981 Bourdieu was appointed to the prestigious chair of sociology at the Collège de France, a position he held until his death. In his later works, Bourdieu became a prominent public intellectual in fierce opposition to the advances of neoliberalism.

Our first selection captures Bourdieu’s antagonistic response to Kant’s *Critique of Judgment*, the founding text of modern aestheticism. For Bourdieu, aesthetic judgment (the ability to distinguish between good and bad art, to appreciate the truly fine as opposed to the vulgar) is a sorting process through which modern societies both produce and legitimate economic and status inequalities. The concepts central to Kant’s work—disinterestedness, taste, and autonomy—point toward an effort to shelter art and its reception from worldly concerns. Many theories of art since Kant have repeated this attempt to secure art’s purity, to insist that the essence of the artwork’s value lies in qualities completely separable from any popular or commercial success the artist might achieve by producing the work, or from any pleasure or social prestige the audience might gain by consuming the work. “Disinterestedness”—especially prominent in Kant and MATTHEW ARNOLD, but found throughout the modern tradition—insists that art is adulterated if mundane purposes influence either artist or audience. Only aesthetic concerns (defined circularly as concerns having to do only with art) are legitimate; otherwise, the artist is corrupted by material considerations and the audience’s judgments of artistic value are clouded by nonaesthetic aims. Art is to exist in its own autonomous realm.

Bourdieu argues that aesthetic disinterestedness and autonomy are historically formed class-based notions impossible to achieve. All acts of aesthetic production and consumption, like all other human actions, take place within social fields. Most importantly, their performance has consequences for the agents' social standing. Modern societies, Bourdieu claims, contain two distinct systems of social hierarchization that operate side by side. One is economic; in it, position and power are determined by financial capital (money, property, and other such resources). Another, whose logic he seeks to describe, is cultural; in it, status is determined by how much "cultural capital" one possesses. We might think of certain newly rich working- or middle-class business moguls who, for all their economic power, will always be deemed "vulgar." No amount of money can buy them respect from the cultural elites.

Bourdieu argues that cultural capital is central to the cultural elite's self-understanding and to the general willingness of society to grant it authority and prestige. Although this elite is produced, the process of its production is obscured so that its existence is accepted without question. Particularly mystified is the marker of the cultural elite: "taste" is regarded as a "natural" endowment. That taste (as displayed through the judgment of artworks) is notoriously difficult to define and to impart to others had already been made clear in the earlier works of EDMUND BURKE and DAVID HUME. But we do speak of "acquired tastes," and Bourdieu is determined to show quite specifically how taste is acquired, how it is socially produced in connection with very concrete material goals, and how spectators and readers respond in coded, habitual ways.

Setting aside those who inherit significant economic capital, we can make a rough distinction between those who do physical labor and those who do some kind of mental work to command a salary. Bourdieu favors calling the latter "intellectuals," and he memorably designates this group "the dominated faction of the dominant class" because they remain dependent on economic capital for their salaries. However, intellectuals possess (and fiercely defend) a semiautonomous source of social prestige and power: "cultural capital," which stems from their family backgrounds, their educational training, their postgraduate degrees, and their displayed taste for "high culture." In *Distinction* Bourdieu further divides the cultural elite into subspecies marked by linguistic, literary, musical, artistic, and scientific expertise. He provides a series of elaborate tables and graphs, based on extensive survey research, that correlate class standing with taste in music, literature, furniture, food, sports, TV shows, movies, and beauty products. People both demonstrate and create their social position through the tastes revealed by what they consume.

The vast differences in wages and employment opportunities in modern societies are justified as meritocratic, the rise to the top of the best and the brightest. Bourdieu aims to explode the myth of merit. The two great predictors of success in contemporary society are the socioeconomic status of one's parents and one's success in school. There is not a level playing field, Bourdieu insists. But taste, an acquired "cultural competence," is used to disguise this fact. "Taste classifies, and it classifies the classifier," Bourdieu writes, by which he means that merit and status accrue to those who have the right tastes—and that their having those tastes circularly proves the legitimacy of their claim to various economic and social privileges.

Aestheticism thus both mystifies taste and makes its possession prestigious. Bourdieu's argument is complex because aestheticism paradoxically turns the economic and material worlds upside down. "The progress of the literary field toward autonomy is marked by the fact that . . . the hierarchy among genres (and authors) . . . is almost exactly the inverse of the hierarchy according to commercial success." Taste is revealed through an (acquired) appreciation for everything that is nonmaterial: mind over body, intellectual over sensual, muted over gaudy, austere over pleasurable, nonpopular over commercial, and, crucially, form over content, "the mode of representation over the object of representation." Prestigious taste's pursuit of nonutilitarian disinterestedness and purity leads it to shun everything that

might appeal to “lower,” popular appetites. The role of taste in securing concrete economic advantages is thus masked by taste’s attachment to artworks and genres esteemed precisely for their apparent unconcern for commercial success. The rarity of taste is ensured because it works against nature; it depends on “sublimating primary needs and impulses.”

Since taste functions to make social “distinctions” (hence the title of Bourdieu’s most famous book), intellectuals are driven by the desire to stay ahead of the crowd by displaying their appreciation for works often unknown or distasteful to the many. The shifts in reputation of various artists and various artworks can be traced back to the efforts of different groups or individuals to gain a leg up in the continual jockeying for position, prestige, and status. Modern culture’s preference for the immaterial and the pure is encoded in the aesthetic ideology, and it helps explain why mental labor is so much more highly paid than the physical labor that is often more difficult, more dangerous, and arguably more necessary. Cultural capital—acquired through schooling and family upbringing, and maintained through a hierarchization of tastes and pleasures—plays an important role in securing the privileges of the upper classes in modern societies.

In our second selection (from *Rules of Art*), Bourdieu indicates how bringing the concept of a “social field” to bear on the question of artistic production changes our understanding of art. Crucially, a field—like the aesthetic—emerges historically and is dynamic over time. Various forces contend within the field of modern art: artists, critics, patrons, gallery owners, and audiences among them. Artists, critics, and experts strive to establish their authority over the field, demonstrating their ability to define what counts as a work of art or not, and what counts as a superb work instead of a mundane or bad one. They try to shape an audience who will appreciate and value art. That effort involves such cultural institutions as schools, museums, galleries, and the press, each of which acquires some power to label and consecrate certain works as masterpieces, to declare some works inferior, to dismiss some as obsolete. For Bourdieu, the whole process is relentlessly hierarchical; the social field is a site of endless struggle for prestige and success.

Crucially, these dynamic struggles are played out against the backdrop of *habitus*, a term that Bourdieu appropriates from medieval readers of ARISTOTLE by way of the French anthropologist Marcel Mauss (1872–1950). Acquired through early socialization, *habitus* designates dispositions to act, think, perceive, and feel in certain ways and not others. *Habitus* is nondiscursive knowledge about how to act within a certain field, neither wholly unconscious nor involuntary. The routinized behaviors that *habitus* generates are “second nature” and difficult (although not impossible) to change. Different groups and classes are marked by their distinctive *habitus*—and a whole society may contain several competing or conflicting sets of dispositions.

The Rules of Art provides a historical account of how the *habitus* of modern aestheticism and its hierarchy of genres were created. The pure gaze of the modern art lover derives from the Renaissance cult of the artist-god, the Romantic sacralization of art, and the Victorian era’s celebration of charismatic aesthetic critics such as WALTER PATER and OSCAR WILDE. The dispositions (coded as “talents” and “taste”) required to produce and appreciate fine art are available only to a privileged few. A network of institutions reinforces the instruction in aesthetic distinctions that begins in the family and in school. Salons, academies, museums, institutes for arts and humanities, and galleries display works of art and elicit the proper stances toward them, as they are revered, acclaimed, or rejected. A host of experts—curators, reviewers, art historians, literary critics and the like—police the boundaries of the field, determining both what genres and what people are deemed worthy of admittance. Rooted in the minutiae of everyday life, in the taken-for-granted understandings of what art is and how it should be experienced, the aesthetic *habitus* clearly distinguishes the leisured and educated classes from a working class made to feel its inferiority.

A major objection to Bourdieu's work—as to much materialist work—is that he is “reductionist,” oversimplifying a complex phenomenon by taking part of the picture to be the whole. Few would deny that issues of social prestige and status influence judgments of artworks, but we might argue that a variety of desires and motives enter into our responses to art. We regularly distinguish the art snob from someone who values a work apart from the social standing that such appreciation affords. In addition, many people cling to frowned-on pleasures and tastes in defiance of the social costs. A different objection is that while Bourdieu's picture of idealist aestheticism and artistic autonomy applies to high modernism, it has much less relevance now that clear markers between high and low have dissolved. In the more mixed forms characteristic of postmodernist art, bodily pleasures are not outlawed and outright commercial ambitions on the part of artists do not lead to immediate condemnation by the elites. Surprisingly, in the last decade of his life, Bourdieu began to defend the autonomy of aesthetic, educational, literary, and scientific fields against what he deemed the threatening encroachments of the economic and political. Like THEODOR W. ADORNO, Bourdieu came to believe that such autonomy offered a crucial resource for independent thinking and critique in a world where globalized capital and mass media were swallowing up everything. As a champion of freedom, he wrote passionately against the growth of censorship in the name of religious or nationalist values and against increased demands that artistic and scientific work yield demonstrable profits.

*From Distinction: A Social Critique of the Judgement of Taste*¹

Introduction

You said it, my good knight! There ought to be laws to protect the body of acquired knowledge.

Take one of our good pupils, for example: modest and diligent, from his earliest grammar classes he's kept a little notebook full of phrases.

After hanging on the lips of his teachers for twenty years, he's managed to build up an intellectual stock in trade; doesn't it belong to him as if it were a house, or money?

—Paul Claudel,² *Le soulier de satin*, Day III, Scene ii

There is an economy of cultural goods, but it has a specific logic. Sociology endeavors to establish the conditions in which the consumers of cultural goods, and their taste for them, are produced, and at the same time to describe the different ways of appropriating such of these objects as are regarded at a particular moment as works of art, and the social conditions of the constitution of the mode of appropriation that is considered legitimate. But one cannot fully understand cultural practices unless ‘culture’, in the restricted,

1. Translated by Richard Nice, who occasionally retains the original French in parentheses.

2. French poet (1868–1955); the final version of

his play *The Satin Slipper* was published in 1928–29.

normative sense of ordinary usage, is brought back into 'culture' in the anthropological sense, and the elaborated taste for the most refined objects is reconnected with the elementary taste for the flavors of food.

Whereas the ideology of charisma regards taste in legitimate culture as a gift of nature, scientific observation shows that cultural needs are the product of upbringing and education: surveys establish that all cultural practices (museum visits, concert-going, reading etc.), and preferences in literature, painting or music, are closely linked to educational level (measured by qualifications or length of schooling) and secondarily to social origin.³ The relative weight of home background and of formal education (the effectiveness and duration of which are closely dependent on social origin) varies according to the extent to which the different cultural practices are recognized and taught by the educational system, and the influence of social origin is strongest—other things being equal—in 'extra-curricular' and avant-garde culture. To the socially recognized hierarchy of the arts, and within each of them, of genres, schools or periods, corresponds a social hierarchy of the consumers. This predisposes tastes to function as markers of 'class'. The manner in which culture has been acquired lives on in the manner of using it: the importance attached to manners can be understood once it is seen that it is these imponderables of practice which distinguish the different—and ranked—modes of culture acquisition, early or late, domestic or scholastic, and the classes of individuals which they characterize (such as 'pedants' and *mondains*⁴). Culture also has its titles of nobility—awarded by the educational system—and its pedigrees, measured by seniority in admission to the nobility.

The definition of cultural nobility is the stake in a struggle which has gone on unceasingly, from the seventeenth century to the present day, between groups differing in their ideas of culture and of the legitimate relation to culture and to works of art, and therefore differing in the conditions of acquisition of which these dispositions are the product.⁵ Even in the classroom, the dominant definition of the legitimate way of appropriating culture and works of art favours those who have had early access to legitimate culture, in a cultured household, outside of scholastic disciplines, since even within the educational system it devalues scholarly knowledge and interpretation as 'scholastic' or even 'pedantic' in favour of direct experience and simple delight.

The logic of what is sometimes called, in typically 'pedantic' language, the 'reading' of a work of art, offers an objective basis for this opposition. Consumption is, in this case, a stage in a process of communication, that is, an act of deciphering, decoding, which presupposes practical or explicit mastery of a cipher or code. In a sense, one can say that the capacity to see (*voir*) is a function of the knowledge (*savoir*), or concepts, that is, the words, that are available to name visible things, and which are, as it were, programmes for perception. A work of art has meaning and interest only for someone who

4. Sophisticated, fashionable people (French).

5. The word *disposition* seems particularly suited to express what is covered by the concept of habitus (defined as a system of dispositions)—used

later in this chapter. It expresses first the *result of an organizing action*, with a meaning close to that of words such as *structure*; it also designates a way of being, a habitual state (especially of the body) and, in particular, a *predisposition, tendency, propensity* or *inclination*. P. Bourdieu, *Outline of a Theory of Practice* (1977), p. 214, n. 1 [Bourdieu's note].

possesses the cultural competence, that is, the code, into which it is encoded. The conscious or unconscious implementation of explicit or implicit schemes of perception and appreciation which constitutes pictorial or musical culture is the hidden condition for recognizing the styles characteristic of a period, a school or an author, and, more generally, for the familiarity with the internal logic of works that aesthetic enjoyment presupposes. A beholder who lacks the specific code feels lost in a chaos of sounds and rhythms, colours and lines, without rhyme or reason. Not having learnt to adopt the adequate disposition, he stops short at what Erwin Panofsky⁶ calls the 'sensible properties', perceiving a skin as downy or lace-work as delicate, or at the emotional resonances aroused by these properties, referring to 'austere' colours or a 'joyful' melody. He cannot move from the 'primary stratum of the meaning we can grasp on the basis of our ordinary experience' to the 'stratum of secondary meanings', i.e., the 'level of the meaning of what is signified', unless he possesses the concepts which go beyond the sensible properties and which identify the specifically stylistic properties of the work.⁷ Thus the encounter with a work of art is not 'love at first sight' as is generally supposed, and the act of empathy, *Einfühlung*,⁸ which is the art-lover's pleasure, presupposes an act of cognition, a decoding operation, which implies the implementation of a cognitive acquirement, a cultural code.⁹

This typically intellectualist theory of artistic perception directly contradicts the experience of the art-lovers closest to the legitimate definition; acquisition of legitimate culture by insensible familiarization within the family circle tends to favour an enchanted experience of culture which implies forgetting the acquisition.¹ The 'eye' is a product of history reproduced by education. This is true of the mode of artistic perception now accepted as legitimate, that is, the aesthetic disposition, the capacity to consider in and for themselves, as form rather than function, not only the works designated for such apprehension, i.e., legitimate works of art, but everything in the world, including cultural objects which are not yet consecrated—such as, at one time, primitive arts, or, nowadays, popular photography or kitsch—and natural objects. The 'pure' gaze is a historical invention linked to the emergence of an autonomous field of artistic production, that is, a field capable of imposing its own norms on both the production and the consumption of its products.² An art which, like all Post-Impressionist painting,³ is the product

6. German-born American art historian and theorist (1892–1968).

7. E. Panofsky, "Iconography and Iconology: An Introduction to the Study of Renaissance Art," *Meaning in the Visual Arts* (1955), p. 28 [Bourdieu's note].

8. Empathy (German).

9. It will be seen that this internalized code called culture functions as cultural capital owing to the fact that, being unequally distributed, it secures profits of distinction [Bourdieu's note].

1. The sense of familiarity in no way excludes the ethnocentric misunderstanding which results from applying the wrong code. Thus, Michael Baxandall's work in historical ethnology enables us to measure all that separates the perceptual schemes that now tend to be applied to Quattrocento [15th-c. Italian] paintings and those which their immediate addressees applied. The

"moral and spiritual eye" of Quattrocento man, that is, the set of cognitive and evaluative dispositions which were the basis of his perception of the world and his perception of pictorial representation of the world, differs radically from the "pure" gaze (purified, first of all, from all reference to economic value) with which the modern cultivated spectator looks at works of art.* * * M. Baxandall, *Painting and Experience in Fifteenth-Century Italy: A Primer in the Social History of Pictorial Style* (1972) [Bourdieu's note].

2. See P. Bourdieu, "The Market of Symbolic Goods" and "Outline of a Sociological Theory of Art Perception" in *The Field of Cultural Production* (1993) [Bourdieu's note].

3. Styles developed in the last two decades of the 19th century, especially by Paul Cézanne (1839–1906), Paul Gauguin (1848–1903), and Vincent van Gogh (1853–1890).

of an artistic intention which asserts the primacy of the mode of representation over the object of representation demands categorically an attention to form which previous art only demanded conditionally.

The pure intention of the artist is that of a producer who aims to be autonomous, that is, entirely the master of his product, who tends to reject not only the 'programmes' imposed a priori by scholars and scribes, but also—following the old hierarchy of doing and saying—the interpretations superimposed a posteriori on his work. The production of an 'open work', intrinsically and deliberately polysemic,⁴ can thus be understood as the final stage in the conquest of artistic autonomy by poets and, following in their footsteps, by painters, who had long been reliant on writers and their work of 'showing' and 'illustrating'. To assert the autonomy of production is to give primacy to that of which the artist is master, i.e., form, manner, style, rather than the 'subject', the external referent, which involves subordination to functions—even if only the most elementary one, that of representing, signifying, saying something. It also means a refusal to recognize any necessity other than that inscribed in the specific tradition of the artistic discipline in question: the shift from an art which imitates nature to an art which imitates art, deriving from its own history the exclusive source of its experiments and even of its breaks with tradition. An art which ever increasingly contains reference to its own history demands to be perceived historically; it asks to be referred not to an external referent, the represented or designated 'reality', but to the universe of past and present works of art. Like artistic production, in that it is generated in a field, aesthetic perception is necessarily historical, inasmuch as it is differential, relational, attentive to the deviations (*écarts*) which make styles. Like the so-called naive painter who, operating outside the field and its specific traditions, remains external to the history of the art, the 'naive' spectator cannot attain a specific grasp of works of art which only have meaning—or value—in relation to the specific history of an artistic tradition. The aesthetic disposition demanded by the products of a highly autonomous field of production is inseparable from a specific cultural competence. This historical culture functions as a principle of pertinence which enables one to identify, among the elements offered to the gaze, all the distinctive features and only these, by referring them, consciously or unconsciously, to the universe of possible alternatives. This mastery is, for the most part, acquired simply by contact with works of art—that is, through an implicit learning analogous to that which makes it possible to recognize familiar faces without explicit rules or criteria—and it generally remains at a practical level; it is what makes it possible to identify styles, i.e., modes of expression characteristic of a period, a civilization or a school, without having to distinguish clearly, or state explicitly, the features which constitute their originality. Everything seems to suggest that even among professional valuers, the criteria which define the stylistic properties of the 'typical works' on which all their judgments are based usually remain implicit.

The pure gaze implies a break with the ordinary attitude towards the world, which, given the conditions in which it is performed, is also a social separation. Ortega y Gasset⁵ can be believed when he attributes to modern art a

4. Having many meanings.

5. José Ortega y Gasset (1883–1955), Spanish philosopher and social critic.

systematic refusal of all that is 'human', i.e., generic, common—as opposed to distinctive, or distinguished—namely, the passions, emotions and feelings which 'ordinary' people invest in their 'ordinary' lives. It is as if the 'popular aesthetic' (the quotation marks are there to indicate that this is an aesthetic 'in itself' not 'for itself'⁶) were based on the affirmation of the continuity between art and life, which implies the subordination of form to function. This is seen clearly in the case of the novel and especially the theatre, where the working-class audience refuses any sort of formal experimentation and all the effects which, by introducing a distance from the accepted conventions (as regards scenery, plot etc.), tend to distance the spectator, preventing him from getting involved and fully identifying with the characters (I am thinking of Brechtian 'alienation' or the disruption of plot in the *nouveau roman*⁷). In contrast to the detachment and disinterestedness which aesthetic theory regards as the only way of recognizing the work of art for what it is, i.e., autonomous, *selbständig*,⁸ the 'popular aesthetic' ignores or refuses the refusal of 'facile' involvement and 'vulgar' enjoyment, a refusal which is the basis of the taste for formal experiment. And popular judgments of paintings or photographs spring from an 'aesthetic' (in fact it is an ethos) which is the exact opposite of the Kantian aesthetic.⁹ Whereas, in order to grasp the specificity of the aesthetic judgment, Kant strove to distinguish that which pleases from that which gratifies and, more generally, to distinguish disinterestedness, the sole guarantor of the specifically aesthetic quality of contemplation, from the interest of reason which defines the Good, working-class people expect every image to explicitly perform a function, if only that of a sign, and their judgments make reference, often explicitly, to the norms of morality or agreeableness. Whether rejecting or praising, their appreciation always has an ethical basis.

Popular taste applies the schemes of the ethos, which pertain in the ordinary circumstances of life, to legitimate works of art, and so performs a systematic reduction of the things of art to the things of life. The very seriousness (or naivety) which this taste invests in fictions and representations demonstrates a *contrario*¹ that pure taste performs a suspension of 'naive' involvement which is one dimension of a 'quasi-ludic' relationship with the necessities of the world. Intellectuals could be said to believe in the representation—literature, theatre, painting—more than in the things represented, whereas the people chiefly expect representations and the conventions which govern them to allow them to believe 'naively' in the things represented. The pure aesthetic is rooted in an ethic, or rather, an ethos of elective distance from the necessities of the natural and social world, which may take the form of moral agnosticism (visible when ethical transgression becomes an artistic

6. Terms derived from GEORG WILHELM FRIEDRICH HEGEL's "Master-Slave dialectic" in *Phenomenology of Spirit* (1807; see above). The "in itself" exists passively as a material embodiment of an entity, while the "for itself" self-consciously shapes its identity as a particular kind of entity.

7. New novel (French). The "new novel" of Alain Robbe-Grillet (1922–2008) and other French novelists of the 1950s and 1960s disoriented readers by using narrative techniques that made time, place, and narrative point of view difficult to discern. "Brechtian 'alienation'": the German play-

wright Bertolt Brecht (1898–1956) advocated a political theater that prevented audiences from "identifying" with the characters or taking the events on stage as real, favoring instead a method that "alienated" or distanced spectators from what they were viewing.

8. Self-standing, self-sufficient (German).

9. The highly influential view of art and its appreciation put forward by the German philosopher IMMANUEL KANT (1724–1804) in his *Critique of Judgment* (1790; see above).

1. By way of contrast (Italian).

*parti pris*²) or of an aestheticism which presents the aesthetic disposition as a universally valid principle and takes the bourgeois denial of the social world to its limit. The detachment of the pure gaze cannot be dissociated from a general disposition towards the world which is the paradoxical product of conditioning by negative economic necessities—a life of ease—that tends to induce an active distance from necessity.

Although art obviously offers the greatest scope to the aesthetic disposition, there is no area of practice in which the aim of purifying, refining and sublimating primary needs and impulses cannot assert itself, no area in which the stylization of life, that is, the primacy of forms over function, of manner over matter, does not produce the same effects. And nothing is more distinctive, more distinguished, than the capacity to confer aesthetic status on objects that are banal or even 'common' (because the 'common' people make them their own, especially for aesthetic purposes), or the ability to apply the principles of a 'pure' aesthetic to the most everyday choices of everyday life, e.g., in cooking, clothing or decoration, completely reversing the popular disposition which annexes aesthetics to ethics.

In fact, through the economic and social conditions which they presuppose, the different ways of relating to realities and fictions, of believing in fictions and the realities they simulate, with more or less distance and detachment, are very closely linked to the different possible positions in social space and, consequently, bound up with the systems of dispositions (*habitus*)³ characteristic of the different classes and class fractions. Taste classifies, and it classifies the classifier. Social subjects, classified by their classifications, distinguish themselves by the distinctions they make, between the beautiful and the ugly, the distinguished and the vulgar, in which their position in the objective classifications is expressed or betrayed. And statistical analysis does indeed show that oppositions similar in structure to those found in cultural practices also appear in eating habits. The antithesis between quantity and quality, substance and form, corresponds to the opposition—linked to different distances from necessity—between the taste of necessity, which favours the most 'filling' and most economical foods, and the taste of liberty—or luxury—which shifts the emphasis to the manner (of presenting, serving, eating, etc.) and tends to use stylized forms to deny function.

The science of taste and of cultural consumption begins with a transgression that is in no way aesthetic: it has to abolish the sacred frontier which makes legitimate culture a separate universe, in order to discover the intelligible relations which unite apparently incommensurable 'choices', such as preferences in music and food, painting and sport, literature and hairstyle. This barbarous reintegration of aesthetic consumption into the world of ordinary consumption abolishes the opposition, which has been the basis of high aesthetic since Kant, between the 'taste of sense' and the 'taste of reflection', and between facile pleasure, pleasure reduced to a pleasure of the senses,

2. A preconceived opinion, or bias; a position (French).

3. A key term in Bourdieu's work, defined elsewhere by him as "a system of acquired dispositions functioning on the practical level as categories of perception and assessment . . . as well as being

the organizing principles of action." In other words, *habitus* names the cultural categories through which individuals process the world along with the bodily habits that characterize their interactions with things external to the body.

and pure pleasure, pleasure purified of pleasure, which is predisposed to become a symbol of moral excellence and a measure of the capacity for sublimation which defines the truly human man. The culture which results from this magical division is sacred. Cultural consecration does indeed confer on the objects, persons and situations it touches, a sort of ontological promotion akin to a transubstantiation. Proof enough of this is found in the two following quotations, which might almost have been written for the delight of the sociologist:

'What struck me most is this: nothing could be obscene on the stage of our premier theatre, and the ballerinas of the Opera, even as naked dancers, sylphs, sprites or Bacchae, retain an inviolable purity.'⁴

'There are obscene postures: the simulated intercourse which offends the eye. Clearly, it is impossible to approve, although the interpolation of such gestures in dance routines does give them a symbolic and aesthetic quality which is absent from the intimate scenes the cinema daily flaunts before its spectators' eyes . . . As for the nude scene, what can one say, except that it is brief and theatrically not very effective? I will not say it is chaste or innocent, for nothing commercial can be so described. Let us say it is not shocking, and that the chief objection is that it serves as a box-office gimmick. . . . In *Hair*, the nakedness fails to be symbolic.'⁵

The denial of lower, coarse, vulgar, venal, servile—in a word, natural—enjoyment, which constitutes the sacred sphere of culture, implies an affirmation of the superiority of those who can be satisfied with the sublimated, refined, disinterested, gratuitous, distinguished pleasures forever closed to the profane. That is why art and cultural consumption are predisposed, consciously and deliberately or not, to fulfil a social function of legitimating social differences.

From The Rules of Art: Genesis and Structure of the Literary Field¹

From Part I. Three States of the Field

CHAPTER 2. THE EMERGENCE OF A DUALIST STRUCTURE

The Particularities of Genres

The progress of the literary field towards autonomy is marked by the fact that, at the end of the nineteenth century, the hierarchy among genres (and authors) according to specific criteria of peer judgement is almost exactly the inverse of the hierarchy according to commercial success. This is different from what was to be observed in the seventeenth century, when the

1. Translated by Susan Emanuel.

two hierarchies were almost merged, with those most consecrated among people of letters, especially poets and scientists, being the best provided with pensions and profits.²

From the economic point of view, the hierarchy is simple, and relatively constant, despite conjunctural fluctuations. At the summit stands the theatre, providing large and immediate profits for a very small number of authors in return for a relatively small cultural investment. At the bottom of the hierarchy, there is poetry which, with very few exceptions (such as some successes in verse theatre), procures extremely small profits for a small number of producers. Situated in an intermediate position, the novel can assure large profits to a relatively large number of authors, but only so long as it extends its public well beyond the literary world itself (to which poetry is confined) and beyond the bourgeois world (as is the case for theatre), that is, to the *petite-bourgeoisie* or even, especially by the intermediary of municipal libraries, as far as to the 'labour aristocracy'.

From the point of view of the criteria of appreciation that dominate inside the field, things are less simple. Nevertheless, we see by a number of indices that, under the Second Empire,³ the summit of the hierarchy is occupied by poetry. Consecrated as the art *par excellence* by the romantic tradition, it retains all its prestige; despite fluctuations—with the decline of Romanticism, never totally equalled by Théophile Gautier or Parnassus, and with the rise of the enigmatic and sulphurous figure of Baudelaire⁴—it continues to attract a large number of writers, even if it is almost totally devoid of a market: most poetic works reach at most a few hundred readers. At the opposite end, the theatre—with its direct exposure to the immediate sanction of the bourgeois public, its values and orthodoxies—procures, besides money, the institutionalized consecration of the academies and official honours. As for the novel, situated in a central position between the two poles of the literary space, it presents the largest dispersion from the viewpoint of symbolic status: even though it has acquired its marks of nobility, at least within the field, and even beyond it, with Stendhal and Balzac and especially Flaubert,⁵ it remains associated with the image of mercantile literature, tied to journalism by the *feuilleton* (serial).⁶ It acquires considerable weight in the literary field when with Zola⁷ it achieves the success of exceptional sales (hence very substantial earnings that allow it to break free from the press and the serial), reaching a much wider public than any other mode of expression, but without letting go of specific requirements regarding form (it will even manage to

2. Cf. A. Viala, *Naissance de l'écrivain* (Paris: Minuit, 1984). One must be careful of reading clues of a sort of absolute beginning into the first signs of the institutionalization of the personage of the writer, such as the appearance of specific apparatuses of consecration. In effect, for a long time this process remains ambiguous, even contradictory, to the extent that artists must pay with a statutory dependence on the state for the recognition and official status that it accords them. And it is only at the end of the 19th century that the system of characteristics constitutive of an autonomous field is found assembled together (without ever excluding completely the possibility of regressions to heteronomy, such as the one starting today, thanks to new forms of

patronage, public or private, and because of the encroachment of journalism) [Bourdieu's note].

3. The period when France was ruled by Napoléon III (1852–70).

4. Charles Baudelaire (1821–1867), French poet. Gautier (1811–1872), French writer and aesthete. Parnassus: a short-lived (1866–76) movement in French poetry, influenced by Gautier's call for an "art for art's sake."

5. The three most celebrated French novelists of the 19th century: Stendhal (pen name of Henri-Marie Beyle, 1783–1842), Honoré de Balzac (1799–1850), and Gustave Flaubert (1821–1880).

6. That is, a story published in installments.

7. Émile Zola (1840–1902), French naturalist novelist and critic.

obtain through the society novel a bourgeois consecration until then reserved to the theatre).

One can assess the chiasmatic⁸ structure of this space, in which the hierarchy according to commercial profit (theatre, novel, poetry) coexists with an inverted hierarchy according to prestige (poetry, novel, theatre), by a *simple model* taking account of two principles of differentiation. On the one hand, the different genres, considered as economic enterprises, are distinguished in three respects: firstly, as a function of the price of the product or the act of symbolic consumption, relatively high in the case of theatre or the concert, low in the case of the book, the musical score or the museum or gallery visit (with the unit cost of a painting putting pictorial production in a completely separate situation); secondly, as a function of the numbers and the social qualities of the consumers, hence of the size of the economic but also symbolic profits (linked to the social standing of the public) assured by these enterprises; thirdly, as a function of the length of the production cycle, and in particular how quickly profits, material as much as symbolic, are obtained and for how long they are guaranteed.

On the other hand, to the extent that the field progressively gains in autonomy and imposes its own logic, these genres also grow more distinct from each other, and more clearly so, according to the degree of intrinsically symbolic credit they possess and confer, this tending to vary in inverse relation to economic profit. In effect, the credit attached to any cultural practice tends to decrease with the numbers and especially the social spread of the audience, because the value of the credit of recognition ensured by consumption decreases when the specific competence recognized in the consumer decreases (and even tends to change sign when it descends below a certain threshold).

This model takes account of the major oppositions among genres, but also the more subtle differences observed inside the same genre, as it does of the diverse forms that the consecration accorded to genres or authors may assume. It is in effect the social quality of the audience (measured principally by its volume) and the symbolic profit it assures which determine the specific hierarchy established among works and authors within each genre, with the hierarchized categories detected there corresponding rather closely to the social hierarchy of the respective audiences. This can be clearly seen in the case of theatre, with the opposition between classical theatre, boulevard theatre,⁹ vaudeville and cabaret, or more sharply still in the case of the novel, where the hierarchy of specialties—the society novel that will become the psychological novel, the naturalist novel, the novel of manners, the regionalist novel, the popular novel—corresponds quite directly with the social hierarchy of the readerships concerned, and also, rather closely, with the hierarchy of the social universes represented in them, and even with the hierarchy of authors according to social origin and sex.

It also allows us to understand similarities and differences between the novel and the theatre. Boulevard theatre, able to provide established authors with considerable economic profits thanks to repeated performances of the same work before a limited and bourgeois public, brings to authors, almost

8. That is, inverted (inversion is the main feature of the rhetorical figure called chiasmus).

9. That is, the melodramas and murder stories

that appealed to a bourgeois audience and dominated the Paris stage during the Second Empire.

all of them from the bourgeoisie, one form of social respectability, that consecrated by the Académie.¹ The very particular social characteristics of playwrights result from the fact that they are the product of a two-stage selection: the theatres being very few and their directors having an interest in keeping plays on the bill for as long as possible, the authors must first face a terrible competition for their work to be staged, and there the major trump is the social capital of relationships within the theatrical milieu; they must then face the competition for an audience, and there there is the factor (besides mastery of the tricks of the trade, itself also linked to familiarity with the world of the theatre) of closeness to the values of the audience, largely bourgeois and Parisian, and hence more 'distinguished' socially than culturally.

In contrast, the novelists cannot realize profits equal to those of playwrights unless they reach a 'broad audience' [*le grand public*], which means, as the pejorative connotations of the expression indicate, exposing oneself to the discredit attached to commercial success. Thus it is that Zola, whose novels met the most compromising success, no doubt owes his escape from the social destiny marked out for him by his large print runs and his vulgar subjects in part to the conversion of the 'commercial', negative and 'vulgar' into the 'popular', charged with all the positive prestiges of political progressivism—a conversion made possible by the role of social prophet that was vested in him at the heart of the field and which was acknowledged well beyond it with the help of militant devotion (and also, but much later, of professional progressivism).²

From Part III. To Understand Understanding

CHAPTER I. THE HISTORICAL GENESIS OF THE PURE AESTHETIC

Analysis of Essence and Illusion of the Absolute

* * *

Although it appears to itself like a gift of nature, the eye of the nineteenth-century art-lover is the product of history. From the angle of phylogenesis,³ the pure gaze capable of apprehending the work of art as it demands to be apprehended (in itself and for itself, as form and not as function) is inseparable from the appearance of producers motivated by a pure artistic intention, itself indissociable from the emergence of an autonomous artistic field capable of posing and imposing its own goals in the face of external demands; and it is also inseparable from the corresponding appearance of a population of 'amateurs' or 'connoisseurs' capable of applying to the works thus produced the 'pure' gaze which they call for. And from the angle of ontogenesis,⁴ it is

1. The Académie française (French Academy), a learned society established in 1635 that serves as the authority on the French language and on literary matters.

2. If, Courbet apart, painters have rarely invoked populist justification, it is perhaps because they are not confronted by the problem of mass diffusion since their products are unique and of a relatively high unit price, and since the only success

they can know is worldly success, close in its social effects to success in the theatre [Bourdieu's note]. Gustave Courbet (1819–1877), French realist painter.

3. The history or course of development of a kind of organism.

4. The course of development of an individual organism.

associated with very particular conditions of training, such as the precocious frequenting of museums and the prolonged exposure to school teaching and especially to the *skholè*⁵ as a form of leisure, and the distance with respect to the constraints and urgencies of necessity which such training presupposes. This means, it must be said in passing, that an analysis of essence which passes these conditions over in silence tacitly elevates into a universal norm of all practice claiming to be aesthetic these particular properties of an experience which is in fact the product of privilege.

What the ahistorical analysis of the work of art and of aesthetic experience really describes is an *institution* which, as such, enjoys a kind of twofold existence, in things and in minds. In things, it exists in the form of an artistic field, a relatively autonomous social universe which is the result of a slow process of emergence. In minds, it exists in the form of dispositions which invent themselves through the very movement of self-invention of the field to which they are adjusted. When things and dispositions are directly in accord with each other, meaning when the eye is the product of the field to which it relates, then everything appears to be immediately endowed with meaning and value. This is so clearly the case that in order for a totally extraordinary question to be posed about the foundation of the meaning and value of the work of art, something usually taken for granted by all those who swim like fish in the water of the cultural world, an experience has to arise which a cultivated person finds totally exceptional—even though it is, on the contrary, totally ordinary, as empirical observation shows,⁶ for those who have not had the occasion or the chance to acquire the dispositions objectively required by the work of art. An example is Arthur Danto's visit to the exhibition of Warhol's Brillo boxes at the Stable Gallery,⁷ when he discovered the arbitrary (*ex instituto*, as Leibniz⁸ would have said) character of the imposition of value carried out by the field through exhibition in a place both consecrated and capable of consecrating.⁹

The experience of the work of art as immediately endowed with meaning and value is an effect of the harmony between the two aspects of the same historical institution, the cultivated *habitus*¹ and the artistic field, which mutually ground each other. Given that the work of art does not exist as such, meaning as an object symbolically endowed with meaning and value,

5. Leisure; discussion, lecture; school (Greek).

6. On the confusion besetting the most culturally deprived museum visitors for lack of a minimal mastery of the instruments of perception and appreciation, and in particular of reference points such as names of genres, schools, epochs, artists, etc., see P. Bourdieu and A. Darbel, with D. Schnapper, *Love of Art: European Art Museums and Their Public*, trans. D. Caroline Beattie and Nick Merriman (Stanford: Stanford University Press, 1990), and P. Bourdieu, "Outline of a Sociological Theory of Art Perception," in *The Field of Cultural Production*, ed. Randal Johnson (Cambridge: Polity, 1992) [Bourdieu's note].

7. Site in New York City of the first solo exhibition by the American pop artist Andy Warhol (1928–1987), including his large-scale reproductions of such commercial products as Brillo boxes and Campbell Soup cans. Danto (1924–2013), American philosopher and art critic.

8. Gottfried Wilhelm Leibniz (1646–1716), German rationalist philosopher; he described the meaning of words as *ex instituto* (literally, "according to custom"; Latin).

9. And if one wants to exhaust the analysis of the social conditions of the possibility of this extraordinary experience, one must add further the prophetic intervention of the artist (in these circumstances, Marcel Duchamp) who was the first to expose the effect of the aesthetic institution of the museum and the artists, in his case by exhibiting a urinal or a bottle rack [Bourdieu's note]. Duchamp (1887–1968), French avant-garde artist, famous for his "ready-mades"—found objects, such as the urinal that he displayed unchanged and titled *Fountain*.

1. The system of durable dispositions and beliefs that underlies a given culture, acquired by individual members through socialization (a key term throughout Bourdieu's writings).

unless it is apprehended by spectators possessing the aesthetic disposition and competence which it tacitly requires, one could say that it is the eye of the aesthete which constitutes the work of art—but only if one immediately remembers that it can only do so to the extent that it is itself the product of a long collective history, that is, of the progressive invention of the ‘connoisseur’, and of a long individual history, that is, of prolonged exposure to the work of art. This relation of circular causality, that of belief and the sacred, characterizes any institution which can only function if it is established simultaneously within the objectivity of a social game and within dispositions ready to enter into the game and participate in it. Museums could say at their gates—but they do not need to, since it so goes without saying—‘Let no one enter here unless they are lovers of art.’ The game makes up the *illusio*,² the investment in the game by the informed player who, possessing a sense of the game because made by the game, plays the game, and thereby makes it exist.

It is clear that one does not need to choose between, on the one hand, the subjectivism of theories of the ‘aesthetic consciousness’ which reduce the aesthetic quality of a natural thing or a human work to a simple correlate of a purely contemplative attitude of consciousness, neither theoretical nor practical, and on the other hand an ontology of the work of art such as that proposed by Gadamer in *Truth and Method*.³ Questions of the meaning and value of the work of art, like the question of the specificity of aesthetic judgement, can only find solutions in a social history of the field, linked to a sociology of the conditions of the constitution of the particular disposition which the field calls for in each of its states.

Historical Anamnesis⁴ and the Return of the Repressed

What makes a work of art a work of art and not a mundane thing or a simple utensil? What makes an artist an artist, as opposed to a craftsman or a Sunday painter? What makes a urinal or a bottle rack that is exhibited in a museum into a work of art? Is it the fact that it is signed by Duchamp, a recognized artist (and recognized first and foremost *as* an artist) and not by a wine merchant or a plumber? But is that not simply replacing the work-of-art-as-fetish with the ‘fetish of the name of the master’ of which Benjamin⁵ spoke? Who, in other words, has created the ‘creator’ as a recognized producer of fetishes? And what confers its magic efficacy on his name, whose celebrity is the measure of his pretension to exist as an artist? What makes the affixing of his name, like the label of a famous designer, multiply the value of the object (which helps to raise the stakes in attribution disputes and to establish the power of experts)? Where does the ultimate principle reside of the effect of nomination or of theory (a particularly appropriate word since it is a matter of seeing, *theorein*,⁶ and of giving to be seen)—that ultimate

2. Illusion (Latin).

3. The major work on hermeneutics (1960) by the German philosopher Hans-Georg Gadamer (1900–2002).

4. Recollection—according to the Greek philosopher PLATO, the process by which the soul recalls ideas present in it before birth.

5. WALTER BENJAMIN (1892–1940), German liter-

ary and cultural theorist; the reference is to his “Eduard Fuchs: Collector and Historian” (1937). “Fetish”: an inanimate object to which special powers are attributed; in the psychoanalytic theory of SIGMUND FREUD, an object or body part to which special sexual significance becomes attached.

6. To look at, to contemplate or consider (Greek); the root of the English word *theory*.

principle which, by introducing difference, division and separation, produces the sacred?

Such questions are analogous in type to those raised by Mauss⁷ in his *Theory of Magic*, when he pondered on the principle of magic's effectiveness and found himself moving back from the instruments employed by the sorcerer to the sorcerer himself, and from there to the belief of his clients, and little by little back to the whole social universe amidst which magic is evolved and practised. But in the infinite regress towards the primary cause and the ultimate foundation of the work of art's value, one must stop somewhere. And in order to explain this sort of miracle of transubstantiation⁸ which is the source of the work of art's existence—and which, though commonly forgotten, is brutally recalled through moves à la Duchamp—one must replace the ontological question⁹ with the historical question of the genesis of the universe in which the value of the work of art is ceaselessly produced and reproduced in a veritable continuous creation—that is, the artistic field.

The analysis of essence merely records the outcome of the analysis which history itself has performed objectively through the process of autonomization of the field and through the progressive invention by agents (artists, critics, historians, curators, experts, etc.) of techniques and concepts (genres, mannerisms, periods, styles, etc.) which are characteristic of this universe. The science of works will not free itself completely from an 'essentialist' vision unless it successfully carries out a historical analysis of the genesis of those central figures in the artistic game, the artist and the expert, and of the dispositions they put to work in the production and reception of works of art. Notions which have become obvious and banal such as those of the artist or 'creator', like the very words which designate and constitute them, are the products of a long historical process.

This is often forgotten by art historians themselves when they ponder the emergence of the artist in the modern sense of the term, still without avoiding completely the trap of 'essentialist thought' inscribed in the use (always haunted by anachronism) of historically invented, and therefore dated, words. Unable to question everything implicitly involved in the modern notion of the artist, and in particular the professional ideology of the uncreated 'creator' which evolved throughout the nineteenth century, they stop at the apparent object, meaning the artist (or, elsewhere, the writer, the philosopher, the scholar), instead of constructing and analysing the field of production of which the artist, socially instituted as a 'creator', is the product. They do not see that the ritual inquiry concerning the place and time of the appearance of the figure of the artist (as opposed to the craftsman) in fact leads back to the question of the economic and social conditions of the gradual constitution of an artistic field capable of grounding belief in the quasi-magical powers attributed to the artist.

It is not merely a matter of exorcizing the 'fetish of the name of the master' by a simple sacrilegious and slightly childish inversion—whether one wishes it or not, the name of the master is indeed a fetish. Rather, it is a matter of

7. Marcel Mauss (1872–1950), French anthropologist; author of *The Gift* (1925) and *A General Theory of Magic* (1904).

8. Transformation into another substance; in Roman Catholic and Eastern Orthodox rites, the

change of the eucharistic bread and wine into the body and blood of Christ.

9. A question related to the nature of being or the unchanging essence of a thing.

describing the gradual emergence of the entire set of social mechanisms which make possible the figure of the artist as producer of that fetish which is the work of art—in other words, the constitution of the artistic field (in which analysts and art historians themselves are included) as the locus where belief in the value of art—and in that power to create value which belongs to the artist—is constantly produced and reproduced. This leads to surveying not only the indices of the artist's autonomy (such as those revealed through the analysis of contracts, like the appearance of the signature, affirmations of the artist's specific competence, recourse in cases of dispute to arbitration by peers, etc.), but also the indices of the field's autonomy, such as the emergence of a set of specific institutions which are required for the functioning of the economy of cultural goods—places of exhibition (galleries, museums, etc.), institutions of consecration (academies, salons, etc.), institutions for the reproduction of producers (art schools, etc.), and specialized agents (dealers, critics, art historians, collectors, etc.), endowed with the *dispositions* objectively required by the field and with *specific categories of perception and appreciation* which are irreducible to those in common use and which are capable of imposing a specific measure on the value of artists and their products.

As long as painting is measured by surface covered or by length of labour, or by the quantity and price of the raw materials used (gold or ultramarine paints), the artist-painter is not radically different from a house painter. This is why, among all the inventions which accompany the emergence of the field of production, one of the most important is undoubtedly the elaboration of a properly artistic language: first a way of naming painters and of speaking about them and about the nature and the mode of remunerating their work, and through this elaborating an autonomous definition of properly artistic value, irreducible as such to strictly economic value; and also, in the same way, a way of speaking about painting itself, using appropriate words, often pairs of adjectives, which enable one to talk about the specificity of pictorial technique, the *manifattura*,¹ even the particular manner of a painter, which it helps to make exist socially by naming it. By the same logic, the discourse of celebration, especially the biography, plays a determining role, probably less by what it says about painters and their work than by the fact of establishing the painter as a memorable figure, one worthy of a historical account, like a statesman or poet (we know that the ennobling comparison—*ut pictura poesis*²—contributes (at least for a while, until it becomes a hindrance) to the affirmation of the irreducibility of pictorial art).

A genetic sociology³ should also include in its model the action of producers themselves, their claim to the right to be the sole judges of pictorial production, to make their own criteria for the perception and appreciation of their products. It should take into account the effect exercised on them and on the image they have of themselves and their production (and thereby, the effect exercised on their actual production) by the images of painters and their production which comes back to them from other agents engaged in the field—other artists but also critics, clients, patrons, collectors, etc.

1. The process of making or manufacturing (Italian).

2. Poetry is like painting (Latin); HORACE, *Ars Poetica* (ca. 10 B.C.E.; see above), line 361.

3. A systematic study that explains objects, agents, and behavior in terms of their origin and development within a social field.

(One may assume, for example, that the interest which certain collectors started to take in sketches and cartoons from the quattrocento⁴ on could only have helped to exalt the impression the artist had of his own dignity.)

The history of the specific institutions which are indispensable to artistic production should be backed up with a history of the institutions which are indispensable to consumption; and hence to the production of consumers and in particular, of *taste*,⁵ as disposition and as competence. The inclination of the 'expert' to consecrate a part of his or her time to the contemplation of works of art for the sole purpose of the pleasure to be enjoyed from them cannot become an essential dimension of the lifestyle of the gentleman or the aristocrat (increasingly identified, at least in England and France, with the person of taste) without the whole collective labour necessary to produce the instruments of the cult of the work of art: one thinks of notions such as 'good taste', undergoing constant elaboration, or of designations like *virtuoso*, borrowed from the Italian, or *connoisseur*, taken from the French, characterizing and producing figures in seventeenth- and eighteenth-century England who are able to boast an art of living freed from the utilitarian and basely material ends to which 'vulgar' people sacrifice themselves. But one must also take into account practices as highly ritualized as the 'Grand Tour', a cultural pilgrimage lasting several years and culminating in a visit to Italy and Rome, which constitutes the almost obligatory crowning achievement of their studies for the children of the great aristocracy of England and elsewhere; we must consider as well the institutions offering, usually for payment, cultural products to a broader and broader public, the specialized periodical publications, magazines and works of criticism, literary and artistic newspapers and weeklies, private galleries (gradually converted into museums), annual exhibitions, guidebooks aimed at visitors to the painting and sculpture collections of aristocratic palaces or museums, public concerts and so forth.

Besides the fact they foster the growth of a *public* for cultural works, which is thereby given the means (and required) to acquire a cultivated disposition, *public* institutions like museums, which have no other purpose than to offer for contemplation works often produced with quite other destinations in mind (such as religious paintings, dance or ceremonial music, etc.), have the effect of bringing about a social rupture which, by tearing works out of their original context, strips them of their diverse religious or political functions and thus reduces them, by a sort of active *épochè*,⁶ to their properly artistic function. The museum, as it isolates and separates (*frames apart*), is undoubtedly the site *par excellence* of that act of *constitution*, continually repeated with the untiring constancy of things, through which both the status of the sacred conferred on works of art and the sacralizing disposition they call for are affirmed and continually reproduced.⁷ The experience of the pictorial work as

4. The 15th century, as a period of Italian literature and art. "Cartoons": drawings made in preparation for a painting

5. A key term—especially for DAVID HUME and IMMANUEL KANT—in the establishment of aesthetics and literary theory as distinct fields of inquiry during the 18th century.

6. Suspension (Greek); a term used by the German philosopher Edmund Husserl (1859–1938) and other phenomenologists to refer to the "bracketing" of historical and natural assumptions and

knowledge undertaken before the analysis of an object or phenomenon itself.

7. This rapid and at best schematic sketch of what might make up a social history of the aesthetic disposition with respect to painting relies in part on the observations of M. H. Abrams, *Doing Things with Texts* (New York: Norton, 1989), esp. pp. 135–38, and also on those of W. E. Houghton Jr., "The English *Virtuoso* in the Seventeenth Century," *Journal of the History of Ideas* 3 (1942): 51–73 and 190–219 [Bourdieu's note].

it has been asserted by this site in its exclusive devotion to pure contemplation tends to become the norm for the experience of all objects belonging to the very category which has been constituted by the fact of their being exhibited.

Everything inclines us to think that the history of aesthetic theory and of the philosophy of art is closely linked (without being its direct reflection, since it, too, develops in a field) to the history of the institutions suited to fostering access to pure delectation and disinterested contemplation, such as museums or those practical manuals of visual gymnastics called tourist guides or writings on art (among which must be included innumerable travel writings). In fact, it is clear that the theoretical writings which the history of traditional philosophy treats as contributions to the knowledge of the object are also (and more especially) contributions to the *social construction of the very reality* of this object, and hence of the theoretical and practical conditions of its existence (the same thing may be said about treatises on political theory by Machiavelli, Bodin or Montesquieu⁸).

It would be necessary to rewrite the history of pure aesthetics *from this perspective*, showing, for example, how professional philosophers have imported into the domain of art certain concepts originally developed in the *theological* tradition, especially a conception of the artist as a 'creator' endowed with an almost divine faculty called 'imagination' and capable of producing a 'second nature', a 'second world', *sui generis* and autonomous; how Alexandre Baumgarten,⁹ in his *Philosophical Reflections on Poetry* of 1735, transposed into the aesthetic order a Leibnizian cosmogony¹ according to which God, in the creation of the best of all possible worlds, chose ours among an infinity of worlds, all formed of compossible² elements and governed by specific internal laws, making of the poet a creator and of the poem a world subject to its own laws, whose truth does not reside in its correspondence with the real, but in its internal coherence; how Karl Philipp Moritz³ tried to prove that the work of art is a microcosm whose beauty 'has no need of being useful' because it has 'within itself the purpose of its existence'; how, following another theoretical line (which must also be considered in its social dimension, by situating each thinker in his field), the idea that supreme good consists of the contemplation of the Beautiful (with its different theoretical foundations, Platonic and Plotinian,⁴ but also Leibnizian) was developed by different writers, and in particular Shaftesbury,⁵ Karl Philipp Moritz and Kant (who adopts⁶ the viewpoint of the receiver rather than the producer of the work of art, meaning the stance of contemplation), and then Schiller, Schlegel, Schopenhauer⁷ and many others; and how this predominantly German philosophical tradition was connected through the intermediary of

8. French political philosopher (1689–1755). Niccolò Machiavelli (1469–1527), Italian political philosopher. Jean Bodin (1530–1596), French jurist and political philosopher.

9. German philosopher (1714–1762), founder of aesthetics as a distinct field within European philosophy.

1. Theory of the origin of the universe.

2. Possible in coexistence with something else.

3. German author and critic (1756–1793).

4. Derived from the theories of the Greek Neoplatonic philosopher Plotinus (ca. 204/5–270); like Plato, he located the Beautiful (together with reality and truth) in a transcendental spiritual

realm.

5. Anthony Ashley Cooper, 3d earl of Shaftesbury (1671–1713), English philosopher. He viewed the sympathy that beauty awakens in us as central to ethics.

6. In *Critique of Judgment* (1790; see above), the most important text in modern aesthetics.

7. Arthur Schopenhauer (1788–1860), German philosopher who saw art as expressing mysteries and paradoxes that eluded philosophy. FRIEDRICH SCHILLER (1759–1805), German poet and philosopher. Friedrich Schlegel (1772–1829), German Romantic essayist and critic.

Victor Cousin⁸ with French writers of art for art's sake, especially Baudelaire or Flaubert, who reinvented in their own fashion the theory of the 'creator', of the 'other world' and of pure contemplation.⁹

It would be necessary also to reveal in each case, as I have tried to do with respect to Kant, the indices of a social relation which is always implicated in the relationship to the work of art (for example in pairs of adjectives such as pure and impure, intelligible and sensory, refined and vulgar, etc.), and to put this hidden but fundamental relationship in turn into relation with the position and trajectory of the author in the field (philosophical, artistic, etc.) and in social space. This genealogy, which would probably rather irksomely record returns and repetitions which are linked, often in an indiscernible manner, to conscious or unconscious borrowings or to reinventions, would constitute the surest and most radical exploration of that unconscious which all cultivated people, because they have it in common, are ready to uphold as a universal (a priori) form of knowledge.

1992

8. French philosopher (1792–1867).

9. A deeper view of this history of aesthetic theory is to be found in M. H. Abrams, *Doing Things*

with Texts, especially in the chapter entitled "From Addison to Kant: Modern Aesthetics and the Exemplary Art," pp. 159–87 [Bourdieu's note].

JACQUES DERRIDA

1930–2004

The name of the French philosopher Jacques Derrida has become synonymous with deconstruction, a French word (*déconstruction*) he revived but did not invent. Often described as a "method" of "analysis," a "type" of "critique," an "act" of "reading," or a "way" of "writing," deconstruction as a broad phenomenon has become all of those things. But in the writings of Derrida, the words here set in quotation marks are themselves the starting points of a deconstructive reading, not simply its description. Derridean deconstruction thus makes use of—and *at the same time* puts in question (at once uses, puts "under erasure," and does not erase)—the toolbox of classical Western philosophy. Those words that make up that toolbox have all functioned as philosophical terms, and Derrida, as a historian of philosophy, reads them as such. All the gestures of certainty that allow philosophers to say *what something is*, especially when that something is itself an intellectual operation ("concept," "method," "structure," "system," "deconstruction"), become objects of particular critical attention for Derridean deconstruction.

What has been seen—both positively and negatively—as revolutionary about Derrida's work for both philosophy and literary studies is the particular way he attends to language. Not only do the key terms as *terms* belong to a linguistic, and not some purely mental, domain, but that domain or object of inquiry *from the beginning* contains multiple languages. It cannot be traced back to one original language, "full presence," or "living present" that would function as the origin or the end of the multiplicity of languages. The biblical story of the tower of Babel, which recounts humanity's

loss of an original universal language, is a powerful myth, but the need for such a myth is not evidence for its validity. Existing languages constantly try, and constantly fail, to present the “truth” or “Being” that is assumed to be behind or beyond language. Derrida thus investigates questions of *translation* that are at the very heart of what other philosophers have called “truth.” As he wrote to Toshiko Izutsu, his Japanese translator, “the question of deconstruction is also through and through *the* question of translation.” Since we have been conditioned to think of translation as a secondary activity that presupposes a primary text, this reversal—as what we have conceived of as primary simply disappears—changes everything. Language is not merely a vehicle for something that preexists it.

Born in Algeria to French-speaking Jewish parents, Derrida began life in an environment that was both multilingual and culturally complex. Like other Algerian Jews, he experienced firsthand the shifting borderlines of Frenchness: he was excluded from school as non-French during the Vichy government's collaboration with the Nazis in World War II, but in the following decade he was considered *too* French by the Arab and Berber population during the war for Algerian independence from France. He was the third of five children (four boys, one girl); the second and fourth sons died in infancy, the former just before his birth. In his autobiographical meditation called *Circumfessions* (1991)—which is, among other things, a sustained engagement with the *Confessions* of AUGUSTINE, another North African by birth—Derrida writes about the ghosts of his two dead brothers and about the unremembered circumcision that marks his Jewishness, knowing perfectly well that some readers will draw connections between his life and his work. But he leaves it to them to speculate whether certain preoccupations (with ghosts, substitutes, bodily inscriptions, the mobile border between the inside and the outside) are causes or effects of his writing. In any event, he explores precisely the relationship between “life” and “writing.”

The pull between literature and philosophy that characterizes Derrida's work was there from the beginning: in high school in Algiers, he imagined writing and teaching literature and, after passing the *baccalauréat* in 1948, he enrolled in the two-year program preparatory to entering one of the prestigious French *Grandes Écoles*. While reading, he began to be “awed” by philosophers (especially by Søren Kierkegaard and MARTIN HEIDEGGER); he took his first trip to Paris and there enrolled at the famous Lycée Louis-le-Grand. After a difficult period in which he suffered health problems, writer's block, examination failures, and depression, in 1952 he was admitted to the prestigious École Normale Supérieure. In 1956 he passed the *agrégation* (a highly competitive nationwide exam that guarantees successful candidates a teaching job for life). A grant from Harvard University enabled him to work in Cambridge on what in 1962 became his first book: a translation from German of, and a long introduction to, “Questions as to the Origin of Geometry” by the phenomenologist Edmund Husserl (1859–1938). While at Harvard, he also read the works of James Joyce and, in June 1957, married Marguerite Aucouturier (with whom he would have two sons).

During the Algerian War, Derrida was expected to perform his obligatory military service, a requirement he satisfied by spending more than two years in Algeria as a civilian teacher of French and English. Although he condemned French colonialism, he hoped his parents would be able to remain in an independent Algeria; when that proved to be impossible, his whole family moved to Nice, in the south of France.

After several teaching jobs in *lycées* and at the Sorbonne, Derrida was invited in 1965 to become a *maître-assistant* at the École Normale Supérieure, where he taught the history of philosophy for twenty years, and where his seminars became legendary. In 1966, along with a number of other French intellectuals—notably ROLAND BARTHES, JACQUES LACAN, Georges Poulet, and Lucien Goldmann—he spoke at a

landmark conference, "The Languages of Criticism and the Sciences of Man," at Johns Hopkins University. That conference helped shape how structuralism and poststructuralism began to influence literary studies in the United States. Derrida's own talk, an extension but also a critique of structuralism titled "Structure, Sign, and Play in the Discourse of the Human Sciences," was fundamental in articulating what was later seen as the "break" between the two schools.

In 1967 Derrida published his first three books: *La Voix et le phénomène* (*Speech and Phenomena*), a critique of Husserl's concept of the sign; *De la grammatologie* (*Of Grammatology*), an introduction to the necessity and impossibility of a science of writing; and *L'Écriture et la différence* (*Writing and Difference*), a collection of essays on authors that include MICHEL FOUCAULT (1926–1984), SIGMUND FREUD (1856–1939), G. W. F. HEGEL (1770–1831), and Emmanuel Lévinas (1906–1995). He was involved in yet ambivalent about the forces mobilized in the French strikes of May 1968, but his philosophy was crucial to the intellectual upheavals that took place at that time. Derrida published three more books in 1972: *La Dissémination* (*Dissemination*), a collection of four long essays, from which our selection titled "Plato's Pharmacy" is taken; *Marges de la philosophie* (*Margins of Philosophy*), another collection of essays; and *Positions*, the texts of three interviews (the first of many he granted over the years). These early books are touchstones for deconstructive literary criticism; many others followed.

In 1975 Derrida was invited to teach a few weeks a year at Yale University, where he was soon considered a member of the so-called Yale School (along with PAUL DE MAN, J. Hillis Miller, Geoffrey Hartman, and HAROLD BLOOM). From then on, his career was split between two countries, as his role became embattled and marginalized in France and increasingly active and important in the United States. In 1980 he submitted his published works as a *thèse d'état* (advanced doctoral thesis). In 1983 he was elected to the École des Hautes Études en Sciences Sociales (the School for Advanced Study in the Social Sciences). In addition, he regularly offered seminars at several universities in the United States—most notably, at the University of California at Irvine. Derrida died of cancer in Paris at the age of seventy-four.

Derrida is first and foremost an extraordinary critical reader. Whether he reads writings by philosophers or poets, autobiographers or anthropologists, linguists or psychoanalysts, he pulls out the threads that give the texts coherence and, at the same time, unravel them. His use of the figure of the *web* (well before the existence of but anticipating the World Wide Web) unpacks the appearance of unity presented by a book to reveal an articulation of conflicting messages woven together within it. Yet both forces—the unifying and unraveling—operate in what Derrida calls a "text." If PLATO's written "dialogues" mark the beginning of the "age of writing," the writings of Derrida, perhaps, signal its end.

Philosophy, like literature, is the study of things that can matter only to creatures that possess language, even—or especially—when they are attempting to get "beyond" it. That "beyond" is what philosophy calls "metaphysics." Instead of simply getting rid of metaphysics, as American neopragmatists like Richard Rorty try to do, Derrida analyzes the metaphysical residues that cling to the very gesture of going beyond metaphysics, whether it is made in philosophical language, literary language, or the language of everyday life. In a much-misunderstood sentence from *Of Grammatology* ("The Exorbitant. Question of Method"), Derrida makes the claim that "il n'y a pas de hors-texte," a phrase sometimes translated, not incorrectly, as "there is nothing outside the text." But this translation maintains the inside/outside opposition that the statement in fact aims to overturn. The text is *already* an attempt to include its own outside. There is no outside of *that*.

Though Derrida is known for his neologisms, the terms most closely associated with him are almost never his invention. He instead finds them already in the works he is reading, where they draw his attention by articulating the text in some way that

has generally been overlooked. Take, for example, the word *supplément*, which in French means both “substitute” and “addition”: in the late eighteenth-century *Confessions* of Jean-Jacques Rousseau, it is used consciously in only one of its senses at a time, but it necessarily always carries in it the other, thereby drawing together some threads in the text in ways that Rousseau seems not to have intended. As Derrida explains, “the reading must always aim at a certain relationship, unperceived by the writer, between what he commands and what he does not command of the patterns of the language that he uses. The relationship is not a certain quantitative distribution of shadow and light, of weakness or of force, but a signifying structure that critical reading should *produce*.”

Derrida is famous for producing such critical readings, which have come to be called “deconstructions.” His readings go beyond the mere accuracy of “doubling commentary” (“this indispensable guardrail has always only *protected*, it has never *opened*, a reading”), but they nevertheless remain “intrinsic” to the text. Instead of rushing to expound the text’s presumed content, meaning, or referent, they try to remain at the point and within the logic that renders the leap to an outside so tempting. Instead of choosing *between* incompatible or contradictory readings, Derrida attempts to understand the double binds and tensions that are articulated in the text. Rousseau, standing between the Enlightenment and Romanticism, is a figure whose writings are symptomatic of the fissures in the logocentric system that he both reproduces and resists.

In order to see a relationship in a particular language between patterns one commands and patterns one does not command, Derrida works within the space between the *signified* (what is meant) and the *signifier* (the vehicle for conveying that meaning). The noncoincidence of the two sides of the sign can never be overcome: indeed, we detect a signified when a signifier doesn’t quite coincide with it. The signifier, for Derrida, thus functions as a “trace” that gives the impression that a signified was prior to it, even though the only evidence for that signified is the trace itself.

The Swiss linguist FERDINAND DE SAUSSURE, who split the sign into signifier and signified, revolutionized the understanding of language by seeing it as a system (internally as well as externally articulated) and not as a nomenclature (a simple aggregation of names). According to Saussure, language does not arise cumulatively from either things or ideas but instead produces things or ideas out of a structure of differences. “Language is a system of differences,” he says in *Course in General Linguistics* (1916), “*without positive terms*.” Derrida takes this concept of difference from Saussure and adds to it the dimension of temporality that Saussure’s static (or synchronic) structure does not allow. In doing so, Derrida uncovers a significant contradiction in Saussure: although Saussure *thinks* he can eliminate writing as secondary and keep speech as essential, he treats language as fixed in time and thus as if it were a dead language—a language that we can only know *in writing*.

To mark the combination of such synchronic and diachronic differences, Derrida juxtaposes two grammatical extensions of the verb *différer* (translated into English by two different verbs, “to differ” and “to defer”): *différence*, a noun that implies synchronic comparison, and *différance*, a noun of identical pronunciation that invokes a *process*—the temporal process of deferring or postponing. The structure of language in real time—always changing, and always changing in more than one way—involves both of these senses. But, ironically, a difference (between “e” and “a”) meant to be perceived only in writing has become, in English, recognizable in speech: “Derridean *différance*” (pronounced with the French nasal found in “*Vive la différence!*”) does not escape the privileging of voice that it was designed to counteract.

Derrida makes the counterintuitive claim that writing is more fundamental than speech. This has often been misunderstood or taken literally. It is as though Derrida is not aware of the fact that babies learn to speak before they learn to write, or that

some societies have oral cultures on which writing (Western and imperialistic) has been imposed. Indeed, critics say, hasn't the existence of a written tradition been used to demonstrate Western culture's superiority, and hasn't orality been dismissed as primitive? Why does Derrida say that "Western metaphysics" privileges speech—Logos—and represses writing? Isn't the case just the opposite?

Yes and no. Western culture has always been able to have it both ways, starting with Plato, who condemned writing *in writing* in his *Phaedrus* (ca. 370 B.C.E.; see above). Our selection from *Dissemination*—excerpts from "Plato's Pharmacy"—offers an analysis of that phenomenon. In his writing, Plato idealized speech as the living emanation of the word, as if it erased the gap between signifier and signified. This idealization of the *logos* (speech, presence, truth, reason) requires that it belong not to any actual language but only to God. And, paradoxically, such an idea of speech is *claimed only in writing*—a writing that pretends it doesn't exist, or is simply a tool that effaces itself in the final moment of truth. This pretence is what Derrida calls "the repression of writing."

In *Phaedrus*, Plato repeats an ancient story of the origin and judgment of writing. The inventor of writing, Theuth, presents it to King Thamus of Egypt as a remedy for forgetfulness. The king rejects his invention on the grounds that it will *induce* forgetfulness, not remedy the condition. The word that they use for writing, *pharmakon* (drug), means "remedy" as well as "poison." Though translators of Plato have chosen one rendering or the other, according to the context, the word contains both meanings; its translations thus dismember it into a *subsequent* either/or structure. Derrida here analyzes the crucial role of translation in the reception of the dialogues of Plato, in the nature of "Platonism," and indeed in the history of philosophy itself.

Derrida shows how the effort to fit everything into binary oppositions (speech and writing, good and bad, true and false, philosophy and literature, etc.) depends on a distinguishability that does not exist within the word *pharmakon*. The translations suggest that it names one side or the other of an existing polarity, but the word is the *medium* and not a result of the split into either/or. A logic prior to that split, however, is almost impossible to think. It risks seeming like sophistry—and after Plato, the distinction between philosophy and sophistry becomes the either/or split on which all the others (and philosophy itself) depend. The distinction Plato makes between sophistry and philosophy *is* philosophy, argues Derrida; philosophy is not merely one counterbalancing term (as Plato, but perhaps not Plato's *text*, seems to believe). Derrida reads Plato's *Phaedrus* as outlining the paradoxical logic of that claim.

In focusing on words—*supplément* in Rousseau, *pharmakon* in Plato (even the word *déconstruction* was originally chosen to translate Heidegger's *Destruktion*, bringing out the sense of "taking apart" rather than "blowing up")—Derrida does not fashion a theoretical metalanguage of concepts designed to support discriminations and generalizations. Each word is found in a text, not made to account for it or for other texts. Such terms are useful because they enable a rereading of the text in which they occur. Derrida is at pains not to separate out a set of terms and define them as "theory," aiming instead to read each new text and find its "exorbitant" terms. What these "undecidables" (as Derrida sometimes calls them) have in common is their displacement of what is normally taken for granted as the ground rules for a reading. In that sense, the logics they make visible and functional are generalizable—but they are not logics, if logic is understood as something separable from the text and generalizable apart from it. They are threads *in* it.

It came as a surprise when, late in his career, Derrida published *Specters of Marx: The State of Debt, the Work of Mourning, and the New International* (1993; trans. 1994). Here was Derrida addressing at length and at last political philosophy—and KARL MARX at that. Why the 1990s? Why Marx? The occasion was an American colloquium held in 1993 titled "Whither Marxism?" Derrida was the main invited speaker. With the collapse of the Union of Soviet Socialist Republics in the early

1990s, communism appeared to be dead and Marxism finished. The United States was the sole remaining superpower: capitalism was triumphant. In 1990 President George H. W. Bush foresaw the emergence of a new world order. The American political philosopher Francis Fukuyama captured the jubilant mood of the times in his best-selling book, *The End of History and the Last Man* (1992). In a well-known passage from the third chapter of *Specters of Marx*, excerpted here, Derrida outlines ten plagues of the new global disorder set against the blinkered celebratory claims of Bush and Fukuyama. Significantly, he quotes Marx's own statement, "I am not a Marxist." He thereby makes the point that although "Marxism" has hardened into a philosophy, a dogma, a program, a theory, Marx's heterogeneous works are filled with many other spirits, especially those of critique, historical change, and revolution. Prompted by the famous opening line of Marx and ENGELS's *The Communist Manifesto* (1848), "A specter is haunting Europe—the specter of communism," Derrida isolates many spirits (alternately ghosts or specters) in the texts of Marx. He wittily invokes Shakespeare's *Hamlet* to illustrate the dynamics of haunting as revealed by the play's father-ghost. Derrida's main point is that the world is not done with Marx's critiques of global capitalism. He recalls a similar attempt at exorcism of Marx during the 1950s. For Derrida, hegemonic political orders are always haunted by past and future specters such as suffering multitudes, militant organized workers, and revolutionaries seeking economic, political, or racial justice. The *specter* is another Derridean undecidable. "Injunctions of Marx" is Derrida's explicit call for a return to Marx in theory and in practice, and "Wears and Tears" enumerates the reasons why such a return is urgent.

In another of his late works, *The Animal That Therefore I Am* (2006; trans. 2008), Derrida memorably interrogates the binary opposition characteristic of the Western tradition from Plato to Lacan that not only separates man and animal, simply and firmly, but also denies human animality. Furthermore, it improbably casts animals as incapable of responding and of suffering. During the past two centuries, notes Derrida, the exploitation of animals has increased exponentially, engendering violence and torture on a mass industrial scale. Meanwhile we humans refuse to acknowledge the subjection of animals and wage a war on compassion and pity. We repress our links and commonalities with animals such as our shared finitude and mortality. The term "animal" itself, argues Derrida, reduces all animals from protozoa to dolphins to one category, obliterating innumerable and abyssal differences among critters (to use DONNA HARAWAY's alternative term). What Derrida's late works, including *Specters of Marx* and *The Animal That Therefore I Am*, have in common is a new turn to pressing contemporary social, political, and ethical issues, framed characteristically in terms of questionable philosophical concerns and values that lead back to the foundations of Western culture.

From Plato's Pharmacy

A text is not a text unless it hides from the first comer, from the first glance, the law of its composition and the rules of its game. A text remains, moreover, forever imperceptible. Its law and its rules are not, however, harbored in the inaccessibility of a secret; it is simply that they can never be booked, in the *present*, into anything that could rigorously be called a perception.

And hence, perpetually and essentially, they run the risk of being definitively lost. Who will ever know of such disappearances?

The dissimulation of the woven texture can in any case take centuries to undo its web: a web that envelops a web, undoing the web for centuries; reconstituting it too as an organism, indefinitely regenerating its own tissue behind the cutting trace, the decision of each reading. There is always a surprise in store for the anatomy or physiology of any criticism² that might think it has mastered the game, surveyed all the threads at once, deluding itself, too, in wanting to look at the text without touching it, without laying a hand on the "object," without risking—which is the only chance of entering into the game, by getting a few fingers caught—the addition of some new thread. Adding, here, is nothing other than giving to read. One must manage to think this out: that it is not a question of embroidering upon a text, unless one considers that to know how to embroider still means to have the ability to follow the given thread. That is, if you follow me, the hidden thread. If reading and writing are one, as is easily thought these days, if reading is writing, this oneness designates neither undifferentiated (con)fusion nor identity at perfect rest; the *is* that couples reading with writing must rip apart.

One must then, in a single gesture, but doubled, read and write. And that person would have understood nothing of the game who, at this [*du coup*]³ would feel himself authorized merely to add on; that is, to add any old thing. He would add nothing: the seam wouldn't hold. Reciprocally, he who through "methodological prudence," "norms of objectivity," or "safeguards of knowledge" would refrain from committing anything of himself, would not read at all. The same foolishness, the same sterility, obtains in the "not serious" as in the "serious." The reading or writing supplement must be rigorously prescribed, but by the necessities of a *game*, by the logic of *play*, signs to which the system of all textual powers must be accorded and attuned.

I

To a considerable degree, we have already said all we *meant to say*. Our lexicon at any rate is not far from being exhausted. With the exception of this or that supplement, our questions will have nothing more to name but the texture of the text, reading and writing, mastery and play, the paradoxes of supplementarity, and the graphic relations between the living and the dead: within the textual, the textile, and the histological. We will keep within the

3. At this blow (French).

limits of this *tissue*; between the metaphor of the *histos*⁴ and the question of the *histos* of metaphor.

Since we have already said everything, the reader must bear with us if we continue on awhile. If we extend ourselves by force of play. If we then *write* a bit: on Plato,⁵ who already said in the *Phaedrus* that writing can only repeat (itself), that it “always signifies (*sēmainei*) the same” and that it is a “game” (*paidia*).

1. PHARMACIA

* * *

This brief evocation of Pharmacia at the beginning of the *Phaedrus*—is it an accident? An hors d'œuvre? A fountain, “perhaps with curative powers,” notes Robin,⁶ was dedicated to Pharmacia near the Ilissus. Let us in any case retain this: that a little spot, a little stitch or mesh (*macula*⁷) woven into the back of the canvas, marks out for the entire dialogue the scene where that *virgin* was cast into the abyss, surprised by death *while playing with Pharmacia*. Pharmacia (*Pharmakeia*) is also a common noun signifying the administration of the *pharmakon*, the drug: the medicine and/or poison. “Poisoning” was not the least usual meaning of “pharmacia.” Antiphon⁸ has left us the logogram of an “accusation of poisoning against a mother-in-law” (*Pharmak-eias kata tēs mētryias*). Through her games, Pharmacia has dragged down to death a virginal purity and an unpenetrated interior.

Only a little further on, Socrates compares the written texts *Phaedrus* has brought along to a drug (*pharmakon*). This *pharmakon*, this “medicine,” this philter, which acts as both remedy and poison, already introduces itself into the body of the discourse with all its ambivalence. This charm, this spellbinding virtue, this power of fascination, can be—alternately or simultaneously—beneficent or maleficent. The *pharmakon* would be a *substance*—with all that that word can connote in terms of matter with occult virtues, cryptic depths refusing to submit their ambivalence to analysis, already paving the way for alchemy—if we didn't have eventually to come to recognize it as antistubstance itself: that which resists any philosopheme,⁹ indefinitely exceeding its bounds as nonidentity, nonessence, nonsubstance; granting philosophy by that very fact the inexhaustible adversity of what funds it and the infinite absence of what founds it.

Operating through seduction, the *pharmakon* makes one stray from one's general, natural, habitual paths and laws. Here, it takes Socrates out of his proper place and off his customary track. The latter had always kept him inside the city. The leaves of writing act as a *pharmakon* to push or attract out of the city the one who never wanted to get out, even at the end, to escape the

4. “*Histos*: anything set upright, hence: I. *mast*. II. *beam* of a loom, which stood upright, instead of lying horizontal as in our looms (except in the weaving methods used by the Gobelins and in India), to which the threads of the warp are attached, hence: 1. *loom*; 2. *the warp fixed to the loom*, hence, *the woof*; 3. *woven cloth, piece of canvas*; 4. by anal. *spider web*; or *honeycomb of bees*. III. *rod, wand, stick*. IV. by anal. *shinbone, leg*” [Derrida's note]. Derrida defines the word as used in classical Greek; in modern medicine, it refers to tissues (e.g., “histology”). Some of the

author's notes are omitted.

5. Greek philosopher (ca. 427–ca. 347 B.C.E.; see above), many of whose dialogues are referred to by Derrida. He here quotes *Phaedrus* 275d, 276d (see above). The main speaker, as in most of the dialogues, is the Greek philosopher Socrates (469–399 B.C.E.), Plato's teacher.

6. Léon Robin (1866–1947), French translator of the *Phaedrus*.

7. Spot, stain (Latin).

8. Greek orator (ca. 480–411 B.C.E.).

9. Constituent element of philosophy.

hemlock.¹ They take him out of himself and draw him onto a path that is properly an *exodus*:²

Phaedrus: Anyone would take you, as you say, for a foreigner being shown the country by a guide, and not a native—you never leave town to cross the frontier nor even, I believe, so much as set foot outside the walls.

Socrates: You must forgive me, dear friend; I'm a lover of learning, and trees and open country won't teach me anything, whereas men in the town do. Yet you seem to have discovered a drug³ for getting me out (*dokeis moi tēs emēs exodou to pharmakon hēurēkenai*). A hungry animal can be driven by dangling a carrot or a bit of greenstuff in front of it; similarly if you proffer me speeches bound in books (*en bibliois*) I don't doubt you can cart me all round Attica, and anywhere else you please. Anyhow, now that we've got here I propose for the time being to lie down, and you can choose whatever posture you think most convenient for reading, and proceed. (230d–e)⁴

It is at this point, when Socrates has finally stretched out on the ground and Phaedrus has taken the most comfortable position for handling the text or, if you will, the *pharmakon*, that the discussion actually gets off the ground. A spoken speech—whether by Lysias⁵ or by Phaedrus in person—a speech proffered *in the present, in the presence* of Socrates, would not have had the same effect. Only the *logoi en bibliois*, only words that are deferred, reserved, enveloped, rolled up, words that force one to wait for them in the form and under cover of a solid object, letting themselves be desired for the space of a walk, only hidden letters can thus get Socrates moving. If a speech could be purely present, unveiled, naked, offered up in person in its truth, without the detours of a signifier foreign to it, if at the limit an undeferred *logos*⁶ were possible, it would not seduce anyone. It would not draw Socrates, as if under the effects of a *pharmakon*, out of his way. Let us get ahead of ourselves. Already: writing, the *pharmakon*, the going or leading astray.

In our discussion of this text we have been using an authoritative French translation of Plato, the one published by Guillaume Budé. In the case of the *Phaedrus*, the translation is by Léon Robin. We will continue to refer to it, inserting the Greek text in parentheses, however, whenever it seems opportune or pertinent to our point. Hence, for example, the word *pharmakon*. In this way we hope to display in the most striking manner the regular, ordered polysemy⁷ that has, through skewing, indetermination, or overdetermination, but without mistranslation, permitted the rendering of the same word by “remedy,” “recipe,” “poison,” “drug,” “philter,” etc. It will also be seen to

1. The poison drunk by Socrates after an Athenian court condemned him to death for impiety and corrupting the youth.

2. A way out (Greek).

3. Translated by others as “recipe” and “remedy” [translator's note, edited].

4. As a rule, translations of Plato are taken from *The Collected Dialogues of Plato*, ed. Edith Hamilton and Huntington Cairns, Bollingen Series 71 (Princeton: Princeton University Press, 1961), supplemented by other renderings. In addition, I have occasionally modified the wording or word

order of the Platonic texts in order to bring them into line with the parenthetical Greek inserts. Some minor adjustments have also been made when it seemed necessary to achieve a closer parallel to the French version with which Derrida is working [translator's note, edited].

5. Greek speechwriter (ca. 459–ca. 380 B.C.E.), who taught rhetoric and was one of the masters of classical oratory.

6. Word, speech, story, reason (Greek).

7. Possession of multiple meanings.

what extent the malleable unity of this concept, or rather its rules and the strange logic that links it with its signifier,⁸ has been dispersed, masked, obliterated, and rendered almost unreadable not only by the imprudence or empiricism of the translators, but first and foremost by the redoubtable, irreducible difficulty of translation. It is a difficulty inherent in its very principle, situated less in the passage from one language to another, from one philosophical language to another, than already, as we shall see, in the tradition between Greek and Greek; a violent difficulty in the transference of a nonphilosopheme into a philosopheme. With this problem of translation we will thus be dealing with nothing less than the problem of the very passage into philosophy.

The *biblia* that will draw Socrates out of his reserve and out of the space in which he is wont to learn, to teach, to speak, to dialogue—the sheltered enclosure of the city—these *biblia* contain a text written by “the ablest writer of our day” (*deinotatos ōn nun graphein*). His name is Lysias. Phaëdrus is keeping the text or, if you will, the *pharmakon*, hidden under his cloak. He needs it because he has not learned the speech by heart. This point is important for what follows, the problem of writing being closely linked to the problem of “knowing by heart.” Before Socrates had stretched out on the ground and invited Phaëdrus to take the most comfortable position, the latter had offered to reconstitute, without the help of the text, the reasoning, argument, and design of Lysias’ speech, its *dianoia*. Socrates stops him short: “Very well, my dear fellow, but you must first show me what it is that you have in your left hand under your cloak, for I surmise that it is the actual discourse (*ton logon auton*)” (228d). Between the invitation and the start of the reading, while the *pharmakon* is wandering about under Phaëdrus’ cloak, there occurs the evocation of Pharmacia and the send-off of myths.

Is it after all by chance or by harmonics⁹ that, even before the overt presentation of writing as a *pharmakon* arises in the middle of the myth of Theuth, the connection between *biblia* and *pharmaka* should already be mentioned in a malevolent or suspicious vein? As opposed to the true practice of medicine, founded on science, we find indeed, listed in a single stroke, empirical practice, treatments based on recipes learned by heart, mere bookish knowledge, and the blind usage of drugs. All that, we are told, springs out of *mania*: “I expect they would say, ‘the man is mad; he thinks he has made himself a doctor by picking up something out of a book (*ek bibliou*), or coming across a couple of ordinary drugs (*pharmakiois*), without any real knowledge of medicine’” (268c).

This association between writing and the *pharmakon* still seems external; it could be judged artificial or purely coincidental. But the intention and intonation are recognizably the same: one and the same suspicion envelops in a single embrace the book and the drug, writing and whatever works in an occult, ambiguous manner open to empiricism and chance, governed by the ways of magic and not the laws of necessity. Books, the dead and rigid knowledge shut up in *biblia*, piles of histories, nomenclatures, recipes and formulas learned by heart, all this is as foreign to living knowledge and dialectics as the *pharmakon* is to medical science. And myth to true knowledge. In dealing with Plato,

8. The symbol or sound that conveys meaning (the signified), a term introduced by the Swiss linguist

FERDINAND DE SAUSSURE (1857–1913).
9. Design, rhythm.

who knew so well on occasion how to treat myth in its archeo-logical or paleo-logical capacity, one can glimpse the immensity and difficulty of this last opposition. The extent of the difficulty is marked out—this is, among a hundred others, the example that retains us here—in that the truth—the original truth—about writing as a *pharmakon* will at first be left up to a myth. The myth of Theuth, to which we now turn.

Up to this point in the dialogue, one can say that the *pharmakon* and the grapheme¹ have been beckoning to each other from afar, indirectly sending back to each other, and, as if by chance, appearing and disappearing together on the same line, for yet uncertain reasons, with an effectiveness that is quite discrete and perhaps after all unintentional. But in order to lift this doubt and on the supposition that the categories of the voluntary and the involuntary still have some absolute pertinence in a reading—which we don't for a minute believe, at least not on the textual level on which we are now advancing—let us proceed to the last phase of the dialogue, to the point where Theuth appears on the scene.

This time it is without indirection, without hidden mediation, without secret argumentation, that writing is proposed, presented, and asserted as a *pharmakon* (274e).

In a certain sense, one can see how this section could have been set apart as an appendix, a superadded supplement. And despite all that calls for it in the preceding steps, it is true that Plato offers it somewhat as an amusement, an hors d'œuvre or rather a dessert. All the subjects of the dialogue, both themes and speakers, seem exhausted at the moment the supplement, writing, or the *pharmakon*, are introduced: "Then we may feel that we have said enough both about the art of speaking and about the lack of art (*to men tekhnēs te kai atekhnias logōn*)"² (274b). And yet it is at this moment of general exhaustion that the question of writing is set out.³ And, as was foreshadowed earlier by the use of the word *aiskhron* (or the adverb *aiskhrōs*⁴), the question of writing opens as a question of morality. It is truly *morality* that is at stake, both in the sense of the opposition between good and evil, or good and bad, and in the sense of mores, public morals and social conventions. It is a question of knowing what is done and what is not done. This moral disquiet is in no way to be distinguished from questions of truth, memory, and dialectics.⁵ This latter question, which will quickly be engaged as *the* question of writing, is closely associated with the morality theme, and indeed develops it by affinity of essence and not by superimposition. But within a debate rendered very real by the political development of the city, the propagation of

1. Constituent element of writing.

2. Here, when it is a question of *logos*, Robin translates *tekhnē* by "art." Later, in the course of the indictment, the same word, this time pertaining to writing, will be rendered by "technical knowledge" [*connaissance technique*] [Derrida's note].

3. While Saussure, in his *Course in General Linguistics* [1916], excludes or settles the question of writing in a sort of preliminary excursus or hors d'œuvre, the chapter Rousseau devotes to writing in the *Essay on the Origin of Languages* [written 1761; pub. 1781] is also presented, despite its actual importance, as a sort of somewhat contingent supplement, a makeup criterion, "another means of comparing languages and of judging their

relative antiquity." The same operation is found in Hegel's *Encyclopedia* [1817]; cf. "Le Puits et la pyramide" (1968), in *Hegel et la pensée moderne* (Paris: Presses Universitaires de France, 1970, coll. "Epiméthée") [Derrida's note]. Translated by Alan Bass as "The Pit and the Pyramid: Introduction to Hegel's Semiology," in Derrida's *Margins of Philosophy* (Chicago: University of Chicago Press, 1982). Jean-Jacques Rousseau (1712–1778), Swiss-born French philosopher. GEORG WILHELM FRIEDRICH HEGEL (1770–1831), German idealist philosopher.

4. Shamefully (Greek).

5. The pursuit of truth, philosophy.

writing and the activity of the sophists and speechwriters, the primary accent is naturally placed upon political and social proprieties. The type of arbitration proposed by Socrates plays within the opposition between the values of seemliness and unseemliness (*euprepeia/aprepeia*): "But there remains the question of propriety and impropriety in writing, that is to say the conditions which make it proper or improper. Isn't that so?" (274b).

Is writing seemly? Does the writer cut a respectable figure? Is it proper to write? Is it done?

Of course not. But the answer is not so simple, and Socrates does not immediately offer it on his own account in a rational discourse or *logos*. He lets it be heard by delegating it to an *akoē*,⁶ to a well-known rumor, to hearsay evidence, to a fable transmitted from ear to ear: "I can tell you what our forefathers have said about it, but the truth of it is only known by tradition. However, if we could discover that truth for ourselves, should we still be concerned with the fancies of mankind?" (274c).

The truth of writing, that is, as we shall see, (the) nontruth, cannot be discovered in ourselves by ourselves. And it is not the object of a science, only of a history that is recited, a fable that is repeated. The link between writing and myth becomes clearer, as does its opposition to knowledge, notably the knowledge one seeks in oneself, by oneself. And at the same time, through writing or through myth, the genealogical break and the estrangement from the origin are sounded. One should note most especially that what writing will later be accused of—repeating without knowing—here defines the very approach that leads to the statement and determination of its status. One thus begins by repeating without knowing—through a myth—the definition of writing, which is to repeat without knowing. This kinship of writing and myth, both of them distinguished from *logos* and dialectics, will only become more precise as the text concludes. Having just repeated without knowing that writing consists of repeating without knowing, Socrates goes on to base the demonstration of his indictment, of his *logos*, upon the premises of the *akoē*, upon structures that are readable through a fabulous genealogy of writing. As soon as the myth has struck the first blow, the *logos* of Socrates will demolish the accused.

2. THE FATHER OF LOGOS

The story begins like this:

Socrates: Very well, I heard, then, that at Naucratis in Egypt there lived one of the old gods of that country, the one whose sacred bird is called the ibis; and the name of the divinity was Theuth. It was he who first invented numbers and calculation, geometry and astronomy, not to speak of draughts and dice, and above all writing (*grammata*). Now the King of all Egypt at that time was Thamus who lived in the great city of the upper region which the Greeks call the Egyptian Thebes; the god himself they call Ammon. Theuth came to him and exhibited his arts and declared that they ought to be imparted to the other Egyptians. And Thamus questioned him about the usefulness of each one; and as Theuth enumerated, the King blamed or

6. Something heard (Greek).

praised what he thought were the good or bad points in the explanation. Now Thamus is said to have had a good deal to remark on both sides of the question about every single art (it would take too long to repeat it here); but when it came to writing, Theuth said, "This discipline (*to mathēma*), my King, will make the Egyptians wiser and will improve their memories (*sophōterous kai mnēmōnikōterous*): my invention is a recipe (*pharmakon*) for both memory and wisdom." But the King said . . . etc. (274c–e)

Let us cut the King off here. He is faced with the *pharmakon*. His reply will be incisive.

Let us freeze the scene and the characters and take a look at them. Writing (or, if you will, the *pharmakon*) is thus presented to the King. Presented: like a kind of present offered up in homage by a vassal to his lord (Theuth is a demigod speaking to the king of the gods), but above all as a finished work submitted to his appreciation. And this work is itself an art, a capacity for work, a power of operation. This artefactum is an art. But the value of this gift is still uncertain. The value of writing—or of the *pharmakon*—has of course been spelled out to the King, but it is the King who will give it its value, who will set the price of what, in the act of receiving, he constitutes or institutes. The king or god (Thamus represents⁷ Ammon, the king of the gods, the king of kings, the god of gods. Theuth says to him: *Ō basileu*⁸) is thus the other name for the origin of value. The value of writing will not be itself, writing will have no value, unless and to the extent that god-the-king approves of it. But god-the-king nonetheless experiences the *pharmakon* as a product, an *ergon*,⁹ which is not his own, which comes to him from outside but also from below, and which awaits his condescending judgment in order to be consecrated in its being and value. God the king does not know how to write, but that ignorance or incapacity only testifies to his sovereign independence. He has no need to write. He speaks, he says, he dictates, and his word suffices. Whether a scribe from his secretarial staff then adds the supplement of a transcription or not, that consignment is always in essence secondary.

From this position, without rejecting the homage, the god-king will depreciate it, pointing out not only its uselessness but its menace and its mischief. Another way of not receiving the offering of writing. In so doing, god-the-king-that-speaks is acting like a father. The *pharmakon* is here presented to the father and is by him rejected, belittled, abandoned, disparaged. The father is always suspicious and watchful toward writing.

Even if we did not want to give in here to the easy passage uniting the figures of the king, the god, and the father, it would suffice to pay systematic attention—which to our knowledge has never been done—to the permanence of a Platonic schema that assigns the origin and power of speech, precisely of

7. For Plato, Thamus is doubtless another name for Ammon, whose figure (that of the sun king and of the father of the gods) we shall sketch out later for its own sake. On this question and the debate to which it has given rise, see P. Frutiger, *Les Mythes de Platon* [*The Myths of Plato*] (Paris: Alcan, 1930), p. 233 n. 2, and notably R. Eisler, "Platon und das ägyptische Alphabet" ["Plato and

the Egyptian Alphabet"], *Archiv für Geschichte der Philosophie* (1922); Pauly-Wissowa, *Real-Encyclopädie der classischen Altertumswissenschaft* (s.v. "Ammon"); Roscher, *Lexikon der griechischen und römischen Mythologie* (s.v. "Thamus") [Derrida's note].

8. O king (Greek).

9. Work (Greek).

logos, to the paternal position. Not that this happens especially and exclusively in Plato. Everyone knows this or can easily imagine it. But the fact that "Platonism," which sets up the whole of Western metaphysics in its conceptuality, should not escape the generality of this structural constraint, and even illustrates it with incomparable subtlety and force, stands out as all the more significant.

Not that *logos* is the father, either. But the origin of *logos* is *its father*. One could say anachronously that the "speaking subject" is the *father* of his speech. And one would quickly realize that this is no metaphor, at least not in the sense of any common, conventional effect of rhetoric. *Logos* is a son, then, a son that would be destroyed in his very *presence* without the present *attendance* of his father. His father who answers. His father who speaks for him and answers for him. Without his father, he would be nothing but, in fact, writing. At least that is what is said by the one who says: it is the father's thesis. The specificity of writing would thus be intimately bound to the absence of the father. Such an absence can of course exist along very diverse modalities, distinctly or confusedly, successively or simultaneously: to have lost one's father, through natural or violent death, through random violence or patricide; and then to solicit the aid and attendance, possible or impossible, of the paternal presence, to solicit it directly or to claim to be getting along without it, etc. The reader will have noted Socrates' insistence on the misery, whether pitiful or arrogant, of a *logos* committed to writing: ". . . It always needs its father to attend to it, being quite unable to defend itself or attend to its own needs" (275e).

This misery is ambiguous: it is the distress of the orphan, of course, who needs not only an attending presence but also a presence that will attend to its needs; but in pitying the orphan, one also makes an accusation against him, along with writing, for claiming to do away with the father, for achieving emancipation with complacent self-sufficiency. From the position of the holder of the scepter, the desire of writing is indicated, designated, and denounced as a desire for orphanhood and patricidal subversion. Isn't this *pharmakon* then a criminal thing, a poisoned present?¹

The status of this orphan, whose welfare cannot be assured by any attendance or assistance, coincides with that of a *graphein*² which, being nobody's son at the instant it reaches inscription, scarcely remains a son at all and no longer *recognizes* its origins, whether legally or morally. In contrast to writing, living *logos* is alive in that it has a living father (whereas the orphan is already half dead), a father that is *present*, *standing* near it, behind it, within it, sustaining it with his rectitude, attending it in person in his own name. Living *logos*, for its part, recognizes its debt, lives off that recognition, and forbids itself, thinks it can forbid itself patricide. But prohibition and patricide, like the relations between speech and writing, are structures surprising enough to require us later on to articulate Plato's text between a patricide prohibited and a patricide proclaimed. The deferred murder of the father and rector.

The *Phaedrus* would already be sufficient to prove that the responsibility for *logos*, for its meaning and effects, goes to those who attend it, to those who are present with the presence of a father. These "metaphors" must be

1. A multilingual pun: in English, *gift* means "present"; in German, *Gift* means "poison."

2. To write; writing (Greek).

tirelessly questioned. Witness Socrates, addressing Eros:³ “If in our former speech Phaedrus or I said anything harsh against you, blame Lysias, the father of the subject (*ton tou logou patera*)” (275*b*). *Logos*—“discourse”—has the meaning here of argument, line of reasoning, guiding thread animating the spoken discussion (the *Logos*). To translate it by “subject” [*sujet*], as Robin does, is not merely anachronistic. The whole intention and the organic unity of signification is destroyed. For only the “living” discourse, only a spoken word (and not a speech’s theme, object, or subject) can have a father; and, according to a necessity that will not cease to become clearer to us from now on, the *logoi* are the children. Alive enough to protest on occasion and to let themselves be questioned; capable, too, in contrast to written things, of responding when their father is there. They are their father’s responsible presence.

Some of them, for example, descend from Phaedrus, who is sometimes called upon to sustain them. Let us refer again to Robin, who translates *logos* this time not by “subject” but by “argument,” and disrupts in a space of ten lines the play on the *tekhne ton logon*.⁴ (What is in question is the *tekhne* the sophists and rhetors had or pretended to have at their disposal, which was at once an art and an instrument, a recipe, an occult but transmissible “treatise,” etc. Socrates considers the then classical problem in terms of the opposition between persuasion [*peitho*] and truth [*alētheia*] [260*a*].)

Socrates: I agree—if, that is, the arguments (*logoi*) that come forward to speak for oratory should give testimony that it is an art (*tekhne*). Now I seem, as it were, to hear some arguments advancing to give their evidence that it tells lies, that it is not an art at all, but an artless routine. “Without a grip on truth,” says the Spartan, “there can be no genuine art of speaking (*tou de legein*) either now or in the future.”

Phaedrus: Socrates, we need these arguments (*Touton dei ton logon, o Sōkrates*). Bring the witnesses here and let’s find out what they have to say and how they’ll say it (*ti kai pōs legousin*).

Socrates: Come here, then, noble brood (*gennaia*), and convince Phaedrus, father of such fine children (*kallipaida te Phaidron*), that if he doesn’t give enough attention to philosophy, he will never become a competent speaker on any subject. Now let Phaedrus answer. (260*e*–261*a*)

It is again Phaedrus, but this time in the *Symposium*, who must speak first because he is both “head of the table” and “father of our subject” (*patēr tou logou*) (177*d*).

What we are provisionally and for the sake of convenience continuing to call a metaphor thus in any event belongs to a whole system. If *logos* has a father, if it is a *logos* only when attended by its father, this is because it is always a being (*on*) and even a certain species of being (the *Sophist*, 260*a*), more precisely a *living* being. *Logos* is a *zōon*. An animal that is born, grows, belongs to the *physis*.⁵ Linguistics, logic, dialectics, and zoology are all in the same camp.

3. The personification of love.

4. The art of the arguments (Greek).

5. Nature; natural world (Greek).

In describing *logos* as a *zōon*, Plato is following certain rhetors and sophists before him who, as a contrast to the cadaverous rigidity of writing, had held up the living spoken word, which infallibly conforms to the necessities of the situation at hand, to the expectations and demands of the interlocutors present, and which sniffs out the spots where it ought to produce itself, feigning to bend and adapt at the moment it is actually achieving maximum persuasiveness and control.⁶

Logos, a living, animate creature, is thus also an organism that has been engendered. An *organism*: a differentiated body *proper*, with a center and extremities, joints, a head, and feet. In order to be “proper,” a written discourse *ought* to submit to the laws of life just as a living discourse does. Logographical necessity (*anangkē logographikē*) ought to be analogous to biological, or rather zoological, necessity. Otherwise, obviously, it would have neither head nor tail. Both *structure* and *constitution* are in question in the risk run by *logos* of losing through writing both its tail and its head:

Socrates: And what about the rest? Don’t you think the different parts of the speech (*ta tou logou*) are tossed in hit or miss? Or is there really a cogent reason for starting his second point in the second place? And is that the case with the rest of the speech? As for myself, in my ignorance, I thought that the writer boldly set down whatever happened to come into his head. Can you explain his arrangement of the topics in the order he has adopted as the result of some principle of composition, some logographic necessity?

Phaedrus: It’s very kind of you to think me capable of such an accurate insight into his methods.

Socrates: But to this you will surely agree: every discourse (*logon*), like a living creature (*ōsper zōon*), should be so put together (*sunestanai*) that it has its own body and lacks neither head nor foot, middle nor extremities, all composed in such a way that they suit both each other and the whole. (264b–c)

The organism thus engendered must be well born, of noble blood: “*gen-naia*,” we recall, is what Socrates called the *logoi*, those “noble creatures.” This implies that the organism, having been engendered, must have a beginning and an end. Here, Socrates’ standards become precise and insistent: a speech must have a beginning and an end, it must begin with the beginning and end with the end: “It certainly seems as though Lysias, at least, was far from satisfying our demands: it’s from the end, not the beginning, that he tries to swim (on his back!) upstream through the current of his discourse. He starts out with what the lover ought to say at the very end to his beloved!” (264a). The implications and consequences of such a norm are immense, but they are obvious enough for us not to have to belabor them. It follows that the spoken discourse behaves like someone attended in origin and present in

6. The association *logos-zōon* appears in the discourse of Isocrates, *Against the Sophists*, and in that of Alcidas, *On the Sophists*. Cf. also W. Stüss, who compares these two discourses line by line with the *Phaedrus*, in *Ethos: Studien zur älteren griechischen Rhetorik* (Leipzig, 1910), pp. 34ff., and A. Diès, “Philosophie et rhétorique,” in

Autour de Platon (Paris: Gabriel Beauchesne, 1927), 1:103 [Derrida’s note]. Isocrates (436–338 B.C.E.), Athenian orator; a student of both GORGAS and Socrates, he was an important teacher of rhetoric. Alcidas (4th c. B.C.E.), rhetorician and sophist; he was chief among Gorgias’s orthodox followers.

person. *Logos*: “*Sermo tanquam persona ipse loquens*,”⁷ as one Platonic Lexicon puts it.⁸ Like any person, the *logos-zōon* has a father.

But what is a father?

Should we consider this known, and with this term—the known—classify the other term within what one would hasten to classify as a metaphor? One would then say that the origin or cause of *logos* is being compared to what we know to be the cause of a living son, his father. One would understand or imagine the birth and development of *logos* from the standpoint of a domain foreign to it, the transmission of life or the generative relation. But the father is not the generator or procreator in any “real” sense prior to or outside all relation to language.⁹ In what way, indeed, is the father/son relation distinguishable from a mere cause/effect or generator/engendered relation, if not by the instance of *logos*? Only a power of speech can have a father. The father is always father to a speaking/living being. In other words, it is precisely *logos* that enables us to perceive and investigate something like paternity. If there were a simple metaphor in the expression “father of *logos*,” the first word, which seemed the more *familiar*, would nevertheless receive more meaning from the second than it would transmit to it. The first familiarity is always involved in a relation of cohabitation with *logos*. Living-beings, father and son, are announced to us and related to each other within the household of *logos*. From which one does not escape, in spite of appearances, when one is transported, by “metaphor,”¹ to a foreign territory where one meets fathers, sons, living creatures, all sorts of beings that come in handy for explaining to anyone that doesn’t know, by comparison, what *logos*, that strange thing, is all about. Even though this hearth is the heart of all metaphoricity, “father of *logos*” is not a simple metaphor. To have simple metaphoricity, one would have to make the statement that some living creature incapable of language, if anyone still wished to believe in such a thing, has a father. One must thus proceed to undertake a general reversal of all metaphorical directions, no longer asking whether *logos* can have a father but understanding that what the father claims to be the father of cannot go without the essential possibility of *logos*.

A logos indebted to a father, what does that mean? At least how can it be read within the stratum of the Platonic text that interests us here?

The figure of the father, of course, is also that of the good (*agathon*). *Logos represents* what it is indebted to: the father who is also chief, capital, and good(s). Or rather *the* chief, *the* capital, *the* good(s). *Patēr* in Greek means all that at once. Neither translators nor commentators of Plato seem to have accounted for the play of these schemes. It is extremely difficult, we must recognize, to respect this play in a translation, and the fact can at least be explained in that no one has ever raised the question. Thus, at the point in the *Republic* where Socrates backs away from speaking of the good in itself

7. Talk, just as if a person himself [were] speaking (Latin).

8. Fr. Ast, *Lexique platonicien*. Cf. also B. Parain, *Essai sur le logos platonicien* (Paris: Gallimard, 1942), p. 211; and P. Louis, *Les Métaphores de Platon* (Paris: Les Belles Lettres, 1945), pp. 43–44 [Derrida’s note].

9. Until the advent of DNA testing and surrogate mothering, only maternity was considered certain. Paternity was thus always dependent on language (the mother’s word, the father’s name).

1. *Metaphor* derives from the Greek verb that means “to bear or carry across” (i.e., “transport”).

(VI, 506e), he immediately suggests replacing it with its *ekgonos*, its son, its offspring:

... let us dismiss for the time being the nature of the good in itself, for to attain to my present surmise of that seems a pitch above the impulse that wings my flight today. But what seems to be the offspring (*ekgonos*) of the good and most nearly made in its likeness I am willing to speak if you too wish it, and otherwise to let the matter drop.

Well, speak on, he said, for you will duly pay me the tale of the parent another time.

I could wish, I said, that I were able to make and you to receive the payment, and not merely as now the interest (*tokous*). But at any rate receive this interest and the offspring of the good (*token te kai ekgonon autou tou agathou*).

Tokos, which is here associated with *ekgonos*, signifies production and the product, birth and the child, etc. This word functions with this meaning in the domains of agriculture, of kinship relations, and of fiduciary operations. None of these domains, as we shall see, lies outside the investment and possibility of a *logos*.

As product, the *tokos* is the child, the human or animal brood, as well as the fruits of the seed sown in the field, and the interest on a capital investment: it is a *return* or *revenue*. The distribution of all these meanings can be followed in Plato's text. The meaning of *patēr* is sometimes even inflected in the exclusive sense of financial capital. In the *Republic* itself, and not far from the passage we have just quoted. One of the drawbacks of democracy lies in the role that capital is often allowed to play in it: "But these money-makers with down-bent heads, pretending not even to see the poor, but inserting the sting of their money into any of the remainder who do not resist, and harvesting from them in interest as it were a manifold progeny of the parent sum (*tou patros ekgonous tokous pollaplasious*), foster the drone and pauper element in the state" (555e).

Now, about this father, this capital, this good, this origin of value and of appearing beings, it is not possible to speak simply or directly. First of all because it is no more possible to look them in the face than to stare at the sun. On the subject of this bedazzlement before the face of the sun, a rereading of the famous passage of the *Republic* (VII, 515c ff) is strongly recommended here.

Thus will Socrates evoke only the visible sun, the son that resembles the father, the *analogon*² of the intelligible sun: "It was the sun, then, that I meant when I spoke of that offspring of the Good (*ton tou agathou ekgonon*), which the Good has created in its own image (*hon tagathon egennēsen analogon heautōi*), and which stands in the visible world in the same relation to vision and visible things as that which the good itself bears in the intelligible world to intelligence and to intelligible objects" (508c).

How does *Logos* intercede in this *analogia* between the father and the son, the *nooumena* and the *horōmena*?³

The Good, in the visible-invisible figure of the father, the sun, or capital, is the origin of all *onta*,⁴ responsible for their appearing and their coming

2. Analogue (Greek).

3. The intelligible and the visible (Plato's terms

in *Republic* 508c).

4. Beings (Greek).

into *logos*, which both assembles and distinguishes them: “We predicate ‘to be’ of many beautiful things and many good things, saying of them severally that they *are*, and so define them in our speech (*einai phamen te kai diorizomen tōi logōi*)” (507b).

The good (father, sun, capital) is thus the hidden illuminating, blinding source of *logos*. And since one cannot speak of that which enables one to speak (being forbidden to speak of it or to speak to it face to face), one will speak only of that which speaks and of things that, with a single exception, one is constantly speaking of. And since an account or reason cannot be given of what *logos* (account or reason: *ratio*) is accountable or owing *to*, since the capital cannot be counted nor the chief looked in the eye, it will be necessary, by means of a discriminative, diacritical⁵ operation, to count up the plurality of interests, returns, products, and offspring: “Well, speak on (*lege*), he said, for you will duly pay me the tale of the parent another time—I could wish, I said, that I were able to make and you to receive the payment, and not merely as now the interest. But at any rate receive this interest and the offspring of the good. Have a care, however, lest I deceive you unintentionally with a false reckoning (*ton logon*) of the interest (*tou tokou*)” (507a).

From the foregoing passage we should also retain the fact that, along with the account (*logos*) of the supplements (to the father-good-capital-origin, etc.), along with what comes above and beyond the One in the very movement through which it absents itself and becomes invisible, thus requiring that its place be supplied, along with difference⁶ and diacriticity, Socrates introduces or discovers the ever open possibility of the *kibdēlon*, that which is falsified, adulterated, mendacious, deceptive, equivocal. Have a care, he says, lest I deceive you with a false reckoning of the interest (*kibdēlon apodidous ton logon tou tokou*). *Kibdēleuma* is fraudulent merchandise. The corresponding verb (*kibdēleuō*) signifies “to tamper with money or merchandise, and, by extension, to be of bad faith.”

This recourse to *logos*, from fear of being blinded by any direct intuition of the face of the father, of good, of capital, of the origin of being in itself, of the form of forms, etc., this recourse to *logos* as that which *protects us from the sun*, protects us under it and from it, is proposed by Socrates elsewhere, in the *analogous* order of the sensible or the visible. We shall quote at length from that text. In addition to its intrinsic interest, the text, in its official Robin translation, manifests a series of slidings, as it were, that are highly significant.⁷ The passage in question is the critique, in the *Phaedo*, of “physicalists”:

Socrates proceeded:—I thought that as I had failed in the contemplation of true existence (*ta onta*), I ought to be careful that I did not lose the eye of my soul; as people may injure their bodily eye by observing and gazing on the sun during an eclipse, unless they take the precaution of only looking at the image (*eikona*) reflected in the water, or in

5. Differentiating, separating.

6. Temporal and spatial differentiating or deferral. *Différance* is Derrida's grammatical invention; like *différence*, which sounds the same and refers to synchronic comparison, it derives from *différer*, which means both “to differ” and “to

defer, postpone.”

7. I am indebted to the friendship and alertness of Francine Markovits for having brought this to my attention. This text should of course be placed alongside those of books 6 and 7 of the *Republic* [Derrida's note].

some analogous medium. So in my own case, I was afraid that my soul might be blinded altogether if I looked at things with my eyes or tried to apprehend them with the help of the senses. And I thought that I had better have recourse to the world of theory (*en logois*) and seek there the truth of things. . . . So, basing myself in each case on the idea (*logon*) that I judged to be the strongest . . . (99d–100a)

Logos is a thus a *resource*. One must *turn* to it, and not merely when the solar source is *present* and risks burning the eyes if stared at; one has also to turn away toward *logos* when the sun seems to withdraw during its eclipse. Dead, extinguished, or hidden, that star is more dangerous than ever.

We will let these yarns of suns and sons spin on for a while. Up to now we have only followed this line so as to move from *logos* to the father, so as to tie speech to the *kurios*, the master, the lord, another name given in the *Republic* to the good-sun-capital-father (508a). Later, within the same tissue, within the same texts, we will draw on other filial filaments, pull the same strings once more, and witness the weaving or unraveling of other designs.

* * *

4. THE PHARMAKON

Let us return to the text of Plato, assuming we have ever really left it.⁸ The word *pharmakon* is caught in a chain of significations. The play of that chain seems systematic. But the system here is not, simply, that of the intentions of an author who goes by the name of Plato. The system is not primarily that of what someone *meant-to-say* [*un vouloir-dire*]. Finely regulated communications are established, through the play of language, among diverse functions of the word and, within it, among diverse strata or regions of culture.

* * *

We have just sketched out the correspondence between the figure of Theuth in Egyptian mythology and a certain organization of concepts, philosophemes, metaphors, and mythemes picked up from what is called the Platonic text. The word *pharmakon* has seemed to us extremely apt for the task of tying all the threads of this correspondence together. Let us now reread, in a rendering derived from Robin, this sentence from the *Phaedrus*: “Here, O King, says Theuth, is a discipline (*mathēma*) that will make the Egyptians wiser (*sophōterous*) and will improve their memories (*mnēmōnikōterous*): both memory (*mnēmē*) and instruction (*sophia*) have found their remedy (*pharmakon*).”

The common translation of *pharmakon* by *remedy* [*remède*]*—a* beneficent drug*—*is not, of course, inaccurate. Not only can *pharmakon* really mean *remedy* and thus erase, on a certain surface of its functioning, the ambiguity of its meaning. But it is even quite obvious here, the stated intention of Theuth being precisely to stress the worth of his product, that he *turns* the word on its strange and invisible pivot, presenting it from a single one, the

8. In section 3 (omitted here), Derrida has outlined the genealogy of the myth of Theuth.

most reassuring, of its *poles*.⁹ This medicine is beneficial; it repairs and produces, accumulates and remedies, increases knowledge and reduces forgetfulness. Its translation by “remedy” nonetheless erases, in going outside the Greek language, the other pole reserved in the word *pharmakon*. It cancels out the resources of ambiguity and makes more difficult, if not impossible, an understanding of the context. As opposed to “drug” or even “medicine,” *remedy* says the transparent rationality of science, technique, and therapeutic causality, thus excluding from the text any leaning toward the magic virtues of a force whose effects are hard to master, a dynamics that constantly surprises the one who tries to manipulate it as master and as subject.

Now, *on the one hand*, Plato is bent on presenting writing as an occult, and therefore suspect, power. Just like painting, to which he will later compare it, and like optical illusions and the techniques of *mimēsis*¹ in general. His mistrust of the mantic and magic, of sorcerers and casters of spells, is well attested.² In the *Laws*, in particular, he reserves them terrible punishments. According to an operation we will have cause to remember later, he recommends that they be excluded—expelled or cut off—from the social arena. Expulsion and ostracism can even be accomplished at the same time, by keeping them in prison, where they would no longer be visited by free men but only by the slave that would bring them their food; then by depriving them of burial: “At death he shall be cast out beyond the borders without burial, and if any free citizen has a hand in his burial, he shall be liable to a prosecution for impiety at the suit of any who cares to take proceedings” (X, 909b–c).

On the other hand, the King’s reply presupposes that the effectiveness of the *pharmakon* can be reversed: it can worsen the ill instead of remedy it. Or rather, the royal answer suggests that Theuth, by ruse and/or naïveté, has exhibited the reverse of the true effects of writing. In order to vaunt the worth of his invention, Theuth would thus have denatured the *pharmakon*, said the opposite (*tounantion*) of what writing is capable of. He has passed a poison off as a remedy. So that in translating *pharmakon* by *remedy*, what one respects is not what Theuth intended, nor even what Plato intended, but rather what the King says Theuth has said, effectively deluding either the King or himself. If Plato’s text then goes on to give the King’s pronouncement as the truth of Theuth’s production and his speech as the truth of writing, then the translation *remedy* makes Theuth into a simpleton or a flimflam artist, *from the sun’s point of view*. From that viewpoint, Theuth has no doubt played on the word, interrupting, for his own purposes, the communication between the two opposing values. But the King restores that communication, and the translation takes no account of this. And all the while the two interlocutors, whatever they do and whether or not they choose, remain within the unity of the same signifier. Their discourse plays within it, which is no longer the case in translation. *Remedy* is the rendition that, more than “medicine” or “drug” would have done, obliterates the virtual, dynamic references to the other uses of the same word in Greek. The effect of such a translation

9. Derrida is making a link between the tipping of the earth (on one of its poles) and the privileging of one side of a polarity.

1. Imitation, representation (Greek).

2. Cf. in particular *Republic* 2.364ff.; Letter 7,

333e. The problem is raised with copious and useful references in E. Moutsopoulos, *La Musique dans l'œuvre de Platon* [*Music in the Work of Plato*] (Paris: Presses Universitaires de France, 1959), pp. 13ff. [Derrida’s note].

is most importantly to destroy what we will later call Plato's anagrammatic writing,³ to destroy it by interrupting the relations interwoven among different functions of the same word in different places, relations that are virtually but necessarily "citational." When a word inscribes itself as the citation of another sense of the same word, when the textual center-stage of the word *pharmakon*, even while it means *remedy*, cites, re-cites, and makes legible that which *in the same word* signifies, in another spot and on a different level of the stage, *poison* (for example, since that is not the only other thing *pharmakon* means), the choice of only one of these renditions by the translator has as its first effect the neutralization of the citational play, of the "anagram," and, in the end, quite simply of the very textuality of the translated text. It could no doubt be shown, and we will try to do so when the time comes, that this blockage of the passage among opposing values is itself already an effect of "Platonism," the consequence of something already at work in the translated text, in the relation between "Plato" and his "language." There is no contradiction between this proposition and the preceding one. Textuality being constituted by differences and by differences from differences, it is by nature absolutely heterogeneous and is constantly composing with the forces that tend to annihilate it.

One must therefore accept, follow, and analyze the composition of these two forces or of these two gestures. That composition is even, in a certain sense, the single theme of this essay. On the one hand Plato decides in favor of a logic that does not tolerate such passages between opposing senses of the same word, all the more so since such a passage would reveal itself to be something quite different from simple confusion, alternation, or the dialectic of opposites. And yet, on the other hand, the *pharmakon*, if our reading confirms itself, constitutes the original medium of that decision, the element that precedes it, comprehends it, goes beyond it, can never be reduced to it, and is not separated from it by a single word (or signifying apparatus), operating within the Greek and Platonic text. All translations into languages that are the heirs and depositaries of Western metaphysics thus produce on the *pharmakon* an *effect of analysis* that violently destroys it, reduces it to one of its simple elements by interpreting it, paradoxically enough, in the light of the ulterior developments it itself has made possible. Such an interpretative translation is thus as violent as it is impotent: it destroys the *pharmakon* but at the same time forbids itself access to it, leaving it untouched in its reserve.

The translation by "remedy" can thus be neither accepted nor simply rejected. Even if one intended thereby to save the "rational" pole and the laudatory intention, the idea of the *correct* use of the *science* or *art* of medicine, one would still run every risk of being deceived by language. Writing is no more valuable, says Plato, as a remedy than as a poison. Even before Thamus has let fall his pejorative sentence, the remedy is disturbing in itself. One must indeed be aware of the fact that Plato is suspicious of the *pharmakon* in general, even in the case of drugs used exclusively for therapeutic ends, even when they are wielded with good intentions, and even when they are as such

3. Patterns formed by rearranging letters or words. Generalizing from writings (not published until in the 1960s) of Ferdinand de Saussure, who thought he found proper names "anagrammatically" encoded in Latin poetry, many schol-

ars, Derrida included, saw all texts as potentially tissues of anagrams—relations that, regardless of the author's conscious intentions, might reveal something fundamental to writing.

effective. There is no such thing as a harmless remedy. The *pharmakon* can never be simply beneficial.

For two different reasons, and at two different depths. First of all because the beneficial essence or virtue of a *pharmakon* does not prevent it from hurting. The *Protagoras* classes the *pharmaka* among the things that can be both good (*agatha*) and painful (*aniara*) (354a). The *pharmakon* is always caught in the mixture (*summeikton*) mentioned in the *Philebus* (46a), examples of which are *hubris*, that violent, unbounded excess of pleasure that makes the profligate cry out like a madman (45e), and “relieving an itch by rubbing, and anything that can be treated by such a remedy (*ouk allēs deomena pharmaxeōs*).” This type of painful pleasure, linked as much to the malady as to its treatment, is a *pharmakon* in itself. It partakes of both good and ill, of the agreeable and the disagreeable. Or rather, it is within its mass that these oppositions are able to sketch themselves out.

Then again, more profoundly, even beyond the question of pain, the pharmaceutical remedy is essentially harmful because it is artificial. In this, Plato is following Greek tradition and, more precisely, the doctors of Cos.⁴ The *pharmakon* goes against natural life: not only life unaffected by any illness, but even sick life, or rather the life of the sickness. For Plato believes in the natural life and normal development, so to speak, of disease. In the *Timaeus*, natural disease, like *logos* in the *Phaedrus*, is compared to a living organism which must be allowed to develop according to its own norms and forms, its specific rhythms and articulations. In disturbing the normal and natural progress of the illness, the *pharmakon* is thus the enemy of the living in general, whether healthy or sick. One must bear this in mind, and Plato invites us to do so, when writing is proposed as a *pharmakon*. Contrary to life, writing—or, if you will, the *pharmakon*—can only *displace* or even *aggravate* the ill. Such will be, in its logical outlines, the objection the king raises to writing: under pretext of supplementing memory, writing makes one even more forgetful; far from increasing knowledge, it diminishes it. Writing does not answer the needs of memory, it aims to the side, does not reinforce the *mnēmē*, but only *hypomnēsis*.⁵

* * *

Sophistics—the deployment of hypomnesia—as well as dialectics—the deployment of anamnesia⁶—both presuppose the possibility of repetition. But sophistics this time keeps to the other side, to the other face, as it were, of repetition. And of signification. What is repeated is the repeater, the imitator, the signifier, the representative, in the absence, as it happens, of *the thing itself*, which these appear to reedit, and without psychic or mnesic animation, without the living tension of dialectics. Writing would indeed be the signifier’s capacity to repeat itself by itself, mechanically, without a living soul to sustain or attend it in its repetition, that is to say, without truth’s *presenting itself* anywhere. Sophistics, hypomnesia, and writing would thus only be separated from philosophy, dialectics, anamnesis, and living speech by the

4. That is, the followers of Hippocrates (ca. 460–ca. 377 B.C.E.), the most celebrated physician in antiquity, who was born on the island of Cos.

5. A reminding (Greek).

6. Recollection. “Hypomnesia”: remembrance via a reminder.

invisible, almost nonexistent, thickness of that *leaf* between the signifier and the signified.⁷ The “leaf”: a significant metaphor, we should note, or rather one taken from the signifier face of things, since the leaf with its recto and verso first appears as a surface and support for writing. But by the same token, doesn't the unity of this leaf, of the system of this difference between signified and signifier, also point to the inseparability of sophistics and philosophy? The difference between signifier and signified is no doubt the governing pattern within which Platonism institutes itself and determines its opposition to sophistics. In being inaugurated in this manner, philosophy and dialectics are determined in the act of determining their other.

This profound complicity in the break has a first consequence: the argumentation against writing in the *Phaedrus* is able to borrow all its resources from Isocrates or Alcidas at the moment it turns their own weapons, “transposing” them,⁸ against the sophists. Plato imitates the imitators in order to restore the truth of what they imitate: namely, truth itself. Indeed, only truth as the presence (*ousia*) of the present (*on*) is here discriminative. And its power to discriminate, which commands or, as you will, is commanded by the difference between signified and signifier, in any case remains systematically inseparable from that difference. And this discrimination itself becomes so subtle that eventually it separates nothing, in the final analysis, but the same from itself, from its perfect, almost indistinguishable double. This is a movement that produces itself entirely within the structure of ambiguity and reversibility of the *pharmakon*.

How indeed does the dialectician simulate him whom he denounces as a simulator, as the simulacrum-man? On the one hand, the sophists advised, as does Plato, the exercise of memory. But, as we have seen, it was in order to enable themselves to speak without knowing, to recite without judgment, without regard for truth, in order to give signs. Or rather in order to sell them. Through this economy of signs, the sophists are indisputably men of writing at the moment they are protesting they are not. But isn't Plato one, too, through a symmetrical effect of reversal? Not only because he is actually a writer (a banal argument we will specify later on) and cannot, whether *de facto* or *de jure*, explain what dialectics is without recourse to writing; not only because he judges that the repetition of the same is necessary in anamnesis; but also because he judges it indispensable as an inscription in the type. (It is notable that *tupos* applies with equal pertinence to the graphic impression and to the *eidos*⁹ as model. Among many other examples, cf. *Republic*, 402d.) This necessity belongs to the order of the law and is posited by the *Laws*. In this instance, the immutable, petrified identity of writing is not simply added to the signified law or prescribed rule like a mute, stupid simulacrum: it assures the law's permanence and identity with the vigilance of a guardian.¹ As another sort of guardian of the laws, writing guarantees

7. In his *Course in General Linguistics* (see above), Saussure uses the image of a *leaf* to describe the relation between the signifier and the signified; sophistry and philosophy are as closely connected—and as far apart—as the signifier and the signified.

8. We are here using Auguste Diès's word, referring to his study of *La Transposition platonicienne*, more precisely to his first chapter, “La Transposi-

tion de la rhétorique,” in *Autour de Platon*, 2:400 [Derrida's note].

9. Form, shape (Greek); in Plato, one of the perfect and immutable transcendent Forms that, imperfectly recollected, are the source of all knowledge (see, e.g., *Meno* 81d; *Phaedo* 75b–e).

1. “Guardian” (*phylax*) is what Plato calls the rulers of his ideal city in the *Republic*.

the means of returning at will, as often as necessary, to that ideal object called the law. We can thus scrutinize it, question it, consult it, make it talk, without altering its identity. All this, even in the same words (notably *boētheia*²), is the other side, exactly opposite, of Socrates' speech in the *Phaedrus*.

Clinias: And, mark you, such argument will be a most valuable aid to intelligent legislation (*nomothesia*), because legal prescriptions (*protagmata*), once put into writing (*en grammasi tethenta*), remain always on record, as though to challenge the question of all time to come. Hence we need feel no dismay if they should be difficult on a first hearing, since even the dull student may return to them for reiterated scrutiny. Nor does their length, provided they are beneficial, make it less irrational than it is impious, in my opinion at least, for any man to refuse such discourse his heartiest support (*to mē ou boēthein toutois tois logois*). (X, 891a. I am still quoting from an authorized translation,³ including the Greek where pertinent, and leaving the reader to appreciate the usual effects of translation. On the relation between written and unwritten laws, see notably VII, 793b–c.)

The italicized Greek words amply demonstrate it: the *protagmata* of the law can be *posited* only in writing (*en grammasi tethenta*). *Nomothesia* is engrammatical. The legislator is a writer. And the judge a reader. Let us skip to book XII: "He that would show himself a righteously equal judge must keep these matters before his eyes; he must procure books (*grammata*) on the subject, and must make them his study. There is, in truth, no study whatsoever so potent as this of law, if the law be what it should be, to make a better man of its student" (975c).

Inversely, symmetrically, the rhetors had not waited around for Plato in order to *translate writing into judgment*. For Isocrates, for Alcidas, *logos* was also a living thing (*zōon*) whose vigor, richness, agility, and flexibility were limited and constrained by the cadaverous rigidity of the written sign. The type does not adapt to the changing givens of the present situation, to what is unique and irreplaceable about it each time, with all the subtlety required. While *presence* is the general form of what is, the *present*, for its part, is always different. But writing, in that it repeats itself and remains identical in the type, cannot flex itself in all senses, cannot bend with all the differences among presents, with all the variable, fluid, furtive necessities of psychagogy. He who speaks, in contrast, is not controlled by any preestablished pattern; he is better able to conduct his signs; he is there to accentuate them, inflect them, retain them, or set them loose according to the demands of the moment, the nature of the desired effect, the hold he has on the listener. In attending his signs in their operation, he who acts by vocal means penetrates more easily into the soul of his disciple, producing effects that are always unique, leading the disciple, as though lodged within him, to the intended goal. It is thus not its pernicious violence but its

2. Help, aid (Greek).

3. Derrida is quoting from Diēs; I am quoting from A. E. Taylor. Interestingly, another of these

"effects of translation" is precisely the difficulty involved in translating a discussion of effects of translation [translator's note].

breathless impotence that the sophists held against writing. In contrast to this blind servant with its haphazard, clumsy movements, the Attic school (Gorgias, Isocrates, Alcidas) extolled the force of living *logos*, the great master, the great power: *logos dunastēs megas estin*,⁴ says Gorgias in his *Encomium of Helen*. The dynasty of speech may be just as violent as that of writing, but its infiltration is more profound, more penetrating, more diverse, more assured. The only ones who take refuge in writing are those who are no better speakers than the man in the street. Alcidas recalls this in his treatise “on those who write speeches” and “on the Sophists.” Writing is considered a consolation, a compensation, a remedy for sickly speech.

Despite these similarities, the condemnation of writing is not engaged in the same way by the rhetors as it is in the *Phaedrus*. If the written word is scorned, it is not as a *pharmakon* coming to corrupt memory and truth. It is because *logos* is a more effective *pharmakon*. This is what Gorgias calls it. As a *pharmakon*, *logos* is at once good and bad; it is not at the outset governed exclusively by goodness or truth. It is only within this ambivalence and this mysterious indeterminateness of *logos*, and after these have been recognized, that Gorgias determines truth as a *world*, a structure or order, the counterpart (*kosmos*) of *logos*. In so doing he no doubt prefigures the Platonic gesture. But before such a determination, we are in the ambivalent, indeterminate space of the *pharmakon*, of that which in *logos* remains potency, potentiality, and is not yet the transparent language of knowledge. If one were justified in trying to capture it in categories that are subsequent to and dependent upon the history thus opened up, categories arising precisely *in the aftermath of decision*, one would have to speak of the “irrationality” of living *logos*, of its spellbinding powers of enchantment, mesmerizing fascination, and alchemical transformation, which make it kin to witchcraft and magic. Sorcery (*goēteia*), psychagogy, such are the “facts and acts” of speech, the most fearsome of *pharmaka*. In his *Encomium of Helen*, Gorgias used these very words to qualify the power of speech.

Sacred incantations sung with words (*hai gar entheoi dia logōn epōidai*) are bearers of pleasure and banishers of pain, for, merging with opinion in the soul, the power of incantation is wont to beguile it (*ethelxe*) and persuade it and alter it by witchcraft (*goēteiai*). There have been discovered two arts of witchcraft and magic: one consists of errors of soul and the other of deceptions of opinion. . . . What cause then prevents the conclusion that Helen similarly, against her will, might have come under the influence (*humnos*) of speech, just as if ravished by the force of the mighty? . . . For speech constrained the soul, persuading it which it persuaded, both to believe the things said and to approve the things done. The persuader, like a constrainer, does the wrong and the persuaded, like the constrained, in speech is wrongly charged.⁵

4. *Logos* is a great lord (Greek). For the *Encomium* (ca. 400 B.C.E.), a defense of Helen of Troy (whose abduction from Greece by a Trojan prince led to the Trojan War), see above.

5. On this passage of the *Encomium*, on the relations of *thelgō* and *peithō*, of charm and persua-

sion, on their use in Homer, Aeschylus, and Plato, see Diēs, pp. 116–17 [Derrida’s note]. English translation by George Kennedy, in *The Older Sophists*, ed. R. K. Sprague (Columbia: University of South Carolina Press, 1972), pp. 50–54 [translator’s note].

Persuasive eloquence (*peithō*) is the power to break in, to carry off, to seduce internally, to ravish invisibly. It is furtive force per se. But in showing that Helen gave in to the violence of speech (would she have yielded to a letter?), in disculpating⁶ this victim, Gorgias indicts *logos* in its capacity to lie. "By introducing some reasoning (*logismos*) into speech (*tōi logōi*)," he wishes "to free the accused of blame and, having reproved her detractors as prevaricators and proved the truth, to free her from their ignorance."

But before being reined in and tamed by the *kosmos* and order of truth, *logos* is a wild creature, an ambiguous animality. Its magical "pharmaceutical" force derives from this ambivalence, which explains the disproportion between the strength of that force and the inconsiderable thing speech seems to be:

But if it was speech which persuaded her and deceived her heart, not even to this is it difficult to make an answer and to banish blame as follows. Speech is a powerful lord, which by means of the finest and most invisible body effects the divinest words: it can stop fear and banish grief and create joy and nurture pity.

Such persuasion entering the soul through speech is indeed a *pharmakon*, and that is precisely what Gorgias calls it:

The effect of speech (*tou logou dunamis*) upon the condition of the soul (*pros tēn tēs psuchēs taxin*) is comparable (*ton auton de logon*) to the power of drugs (*tōn pharmakōn taxis*) over the nature of bodies (*tēn tōn somatōn phusin*). For just as different drugs dispel different secretions from the body, and some bring an end to disease and others to life, so also in the case of speeches, some distress, others delight, some cause fear, others make the hearers bold, and some drug and bewitch the soul with a kind of evil persuasion (*tēn psuchēn epharmakeusan kai exegotheusan*).

The reader will have paused to reflect that the relation (the analogy) between the *logos*/soul relation and the *pharmakon*/body relation is itself designated by the term *logos*. The name of the relation is the same as that of one of its terms. The *pharmakon* is *comprehended* in the structure of *logos*. This comprehension is an act of both *domination* and *decision*.

5. THE PHARMAKEUS

For if there were nothing any more to hurt us, we should have no need whatever of any assistance. And thus you see it would then be made apparent that it was only on account of evil that we felt regard and affection for good (*tagathon*), as we considered good to be a medicine (*pharmakon*) for evil, and evil to be a disease. But where there is no disease, there is, we are aware, no need of medicine (*ouden dei pharmakou*). This, then, it appears, is the nature of good. . . .

—Yes, he said, that would seem to be true.

—*Lysis*, 220c–d

But if this is the case, and if *logos* is already a penetrating supplement, then isn't Socrates, "he who does not write," also a master of the *pharmakon*?

6. Clearing from blame.

And in that way isn't he the spitting image of a sophist? a *pharmakeus*? a magician? a sorcerer? even a poisoner? and even one of those impostors denounced by Gorgias? The threads of these complicities are almost impossible to disentangle.

Socrates in the dialogues of Plato often has the face of a *pharmakeus*. That is the name given by Diotima⁷ to Eros. But behind the portrait of Eros, one cannot fail to recognize the features of Socrates, as though Diotima, in looking at him, were proposing to Socrates the portrait of Socrates (*Symposium*, 203c, d, e). Eros, who is neither rich, nor beautiful, nor delicate, spends his life philosophizing (*philosophōn dia pantos tou biou*); he is a fearsome sorcerer (*deimos goēs*), magician (*pharmakeus*), and sophist (*sophistēs*). A being that no "logic" can confine within a noncontradictory definition, an individual of the demonic species, neither god nor man, neither immortal nor mortal, neither living nor dead, he forms "the medium of the prophetic arts, of the priestly rites of sacrifice, initiation, and incantation, of divination and of sorcery (*thusias-teletas-epōidas-manteian*)" (202e).

In that same dialogue, Agathon accuses Socrates of trying to bewitch him, to cast a spell over him (*Pharmattein boulei me, ō Sōkrates*, 194a). The portrait of Eros by Diotima is placed between this exclamation and the portrait of Socrates by Alcibiades.⁸

Who reminds us that Socrates' brand of magic is worked through *logos* without the aid of any instrument, through the effects of a voice without accessories, without the flute of the satyr⁹ Marsyas:

And aren't you a piper as well? I should think you were—and a far more wonderful piper than Marsyas, who had only to put his flute to his lips to bewitch mankind. . . . His tunes will still have a magic power, and by virtue of their own divinity they will show which of us are fit subjects for divine initiation. Now the only difference, Socrates, between you and Marsyas is that you can get just the same effect without any instrument at all (*aneu organōn*)—with nothing but a few simple words (*psilois logos*¹). . . ." (215c–d)

When confronted with this simple, organless voice, one cannot escape its penetration by stopping up one's ears, like Ulysses² trying to block out the Sirens (216a).

The Socratic *pharmakon* also acts like venom, like the bite of a poisonous snake (217–18). And Socrates' bite is worse than a snake's since its traces invade the soul. What Socrates' words and the viper's venom have in common, in any case, is their ability to penetrate and make off with the most

7. The woman who, in Plato's *Symposium*, gives Socrates instruction about love.

8. Athenian general and statesman (ca. 450–404 B.C.E.), who praises Socrates at the end of the *Symposium*. Agathon (d. ca. 401 B.C.E.), Greek tragic poet; the *Symposium* represents a feast in honor of his victory (tragedies were presented in a competition, as part of a religious festival).

9. In Greek mythology, an attendant (often represented as part goat) of Dionysus, god of wine; Marsyas had such confidence in his flute playing that he challenged Apollo, god of music, to a musical contest (and was flayed alive when he lost).

1. "Bare, ungarnished voice, etc.;" *psilos logos* also has the sense of abstract argument or simple affirmation without proof (cf. *Theaetetus* 165e) [Derrida's note].

2. Odysseus, Greek king of Ithaca, whose efforts to return home after the Trojan War are recounted in Homer's *Odyssey* (ca. 8th c. B.C.E.); he ordered his crew to fill their ears with wax and tie him to the mast of his ship so that he might safely hear the Sirens—mythical monsters, half woman and half bird, whose singing so entranced passing sailors that the listeners forgot to eat, and died (*Odyssey* 12.173–200).

concealed interiority of the body or soul. The demonic speech of this thaumaturge (en)trains the listener in dionysian frenzy³ and philosophic *mania* (218b). And when they don't act like the venom of a snake, Socrates' pharmaceutical charms provoke a kind of *narcosis*, benumbing and paralyzing into *aporia*,⁴ like the touch of a sting ray (*narkē*):

Meno: Socrates, even before I met you they told me that in plain truth you are a perplexed man yourself and reduce others to perplexity. At this moment I feel you are exercising magic and witchcraft upon me and positively laying me under your spell until I am just a mass of helplessness (*goēteueis me kai pharmatteis kai atekhnōs ketepaideis, hōste meston aporias gegonenai*). If I may be flippant, I think that not only in outward appearance (*eidos*) but in other respects as well you are exactly like the flat stringray (*narkē*) that one meets in the sea. Whenever anyone comes into contact with it, it numbs him, and that is the sort of thing that you seem to be doing to me now. My mind and my lips are literally numb, and I have nothing to reply to you. . . . In my opinion you are well advised not to leave Athens and live abroad. If you behaved like this as a foreigner in another country, you would most likely be arrested as a wizard (*goēs*). (*Meno*, 80a–b)

Socrates arrested as a wizard (*goēs* or *pharmakeus*): that will have to wait.

What can be said about this *analogy* that ceaselessly refers the Socratic *pharmakon* to the sophistic *pharmakon* and, proportioning them to each other, makes us go back indefinitely from one to the other? How can they be distinguished?

Irony does not consist in the dissolution of a sophistic charm or in the dismantling of an occult substance or power through analysis and questioning. It does not consist in undoing the charlatanesque confidence of a *pharmakeus* from the vantage point of some obstinate instance of transparent reason or innocent *logos*. Socratic irony precipitates out one *pharmakon* by bringing it in contact with another *pharmakon*. Or rather, it reverses the *pharmakon's* powers and turns *its* surface over⁵—thus taking effect, being recorded and dated, in the act of *classing* the *pharmakon*, through the fact that the *pharmakon* properly consists in a certain inconsistency, a certain impropriety, this nonidentity-with-itself always allowing it to be turned against itself.

What is at stake in this overturning is no less than science and death. Which are consigned to a single type in the structure of the *pharmakon*, the one and only name for that portion that must be awaited. And even, in Socrates' case, deserved.

3. The ecstatic enthusiasm of the worshippers of Dionysus; on the creative force of this frenzy (connected with music), see FRIEDRICH NIETZSCHE, *The Birth of Tragedy* (1872; above).

4. Difficulty, logical impasse (a term often used in deconstructive criticism to indicate the point in a text where inherent contradictions render interpretation undecidable).

5. Alternately and/or all at once, the Socratic *pharmakon* petrifies and vivifies, anesthetizes and sensitizes, appeases and anguishes. Socrates is a

benumbing stingray but also an animal that needles: we recall the bee in the *Phaedo* (91c); later we will open the *Apology* at the point where Socrates compares himself precisely to a gadfly. This whole Socratic configuration thus composes a bestiary. Is it surprising that the demonic inscribes itself in a bestiary? It is on the basis of this zoopharmaceutical ambivalence and of that other Socratic *analogy* that the contours of the *anthrōpos* [human] are determined [Derrida's note].

II

* * *

9. PLAY: FROM THE PHARMAKON TO THE LETTER
AND FROM BLINDNESS TO THE SUPPLEMENT

It has been thought that Plato simply condemned play. And by the same token the art of *mimēsis* which is only a type of play.⁶ But in all questions involving play and its “opposite,” the “logic” will necessarily be baffling. Play and art are lost by Plato as he saves them, and his logos is then subject to that untold constraint that can no longer even be called “logic.” Plato does very well speak of play. He speaks in praise of it. But he praises play “in the best sense of the word,” if this can be said without eliminating play beneath the reassuring silliness of such a precaution. The best sense of play is play that is supervised and contained within the safeguards of ethics and politics. This is play comprehended under the innocent, innocuous category of “fun.” Amusement: however far off it may be, the common translation of *paidia* by *pastime* [*divertissement*] no doubt only helps consolidate the Platonic repression of play.

The opposition *spoudē/paidia*⁷ will never be one of simple symmetry. *Either* play is *nothing* (and that is its only *chance*); either it can give place to no activity, to no discourse worthy of the name—that is, one charged with truth or at least with meaning—and then it is *alogos* or *atopos*.⁸ Or *else* play begins to be something and its very presence lays it open to some sort of dialectical confiscation. It takes on meaning and works in the service of seriousness, truth and ontology. Only *logoi peri ontōn*⁹ can be taken seriously. As soon as it comes into being and into language, play *erases itself as such*. Just as writing must erase itself as such before truth, etc. The point is that there is no *as such* where writing or play are concerned. Having no essence, introducing difference as the condition for the presence of essence, opening up the possibility of the double, the copy, the imitation, the simulacrum—the game and the *graphē*¹ are constantly disappearing as they go along. They cannot, in classical affirmation, be affirmed without being negated.

Plato thus plays at taking play seriously. That is what we earlier called the stunning hand Plato has dealt himself. Not only are his writings defined as games,² but human affairs in general do not in his eyes need to be taken seriously. One thinks of the famous passage in the *Laws*. Let us reread it despite its familiarity, so as to follow the theological assumption of play into games, the progressive neutralization of the *singularity* of play:

To be sure, man's life is a business which does not deserve to be taken too seriously (*megalēs men spoudēs ouk axia*); yet we cannot help being in earnest with it, and there's the pity. Still, as we are here in this world, no doubt, for us the becoming thing is to show this earnestness in a suitable way (*hēmin summetron*). . . . I mean we should keep our seriousness

6. Cf. *Republic* 10.602a–b; *Statesman* 288c–d; *Sophist* 234b–c; *Laws* 2.667e–668a; *Epinomis* 975d, etc. [Derrida's note].

7. Seriousness/play (Greek).

8. Not *logos* or not *topos* (place).

9. Words about real things (Greek).

1. Writing; indictment (Greek).

2. Cf. *Parmenides* 137b; *Statesman* 268d; *Timaeus* 59c–d. On the context and historical background of this problematic of play, cf. notably P. M. Schuhl, *Platon et l'art de son temps* [Plato and the Art of His Time, 2d ed.] (Paris: Presses Universitaires de France, 1952), pp. 61–63 [Derrida's note].

for serious things, and not waste it on trifles, and that, while God is the real goal of all beneficent serious endeavor (*makariou spoudēs*), man, as we said before,³ has been constructed as a toy (*paignion*) for God, and this is, in fact, the finest thing about him. All of us, then, men and women alike, must fall in with our role and spend life in making our *play* as perfect as possible—to the complete inversion of current theory. . . . It is the current fancy that our serious work should be done for the sake of our play; thus it is held that war is serious work which ought to be well discharged for the sake of peace. But the truth is that in war we do not find, and we never shall find, either any real play or any real education worth the name, and *these* are the things I count supremely serious for such creatures as ourselves. Hence it is peace in which each of us should spend most of his life and spend it best. What, then, is our right course? We should pass our lives in the playing of games—*certain* games, that is, sacrifice, song, and dance—with the result of ability to gain heaven's grace, and to repel and vanquish an enemy when we have to fight him. . . . (803b–e)

Play is always lost when it seeks salvation in games. We have examined elsewhere, in "Rousseau's era,"⁴ this disappearance of play into games. This (non)logic of play and of writing enables us to understand what has always been considered so baffling:⁵ why Plato, while subordinating or condemning writing and play, should have written so much, presenting his writings, *from out of Socrates' death*, as games, *indicting* writing in writing, lodging against it that complaint (*graphē*) whose reverberations even today have not ceased to resound.

What law governs this "contradiction," this opposition to itself of what is said against writing, of a dictum that pronounces itself against itself as soon as it finds its way into writing, as soon as it writes down its self-identity and carries away what is proper to it *against* this ground of writing? This "contradiction," which is nothing other than the relation-to-self of diction as it opposes itself to scription, as it *chases* itself (away) in hunting down what is properly its *trap*—this contradiction is not contingent. In order to convince ourselves of this, it would already suffice to note that what seems to inaugurate itself in Western literature with Plato will not fail to re-edit itself at least in Rousseau, and then in Saussure. In these three cases, in these three "eras" of the repetition of Platonism, which give us a new thread to follow and other knots to recognize in the history of *philosophia* or the *epistēmē*,⁶ the exclusion and the devaluation of writing must somehow, in their very affirmation, come to terms with:

3. Cf. *Laws* 1.644d–e: "Let us look at the whole matter in some such light as this. We may imagine that each of us living creatures is a puppet made by gods, possibly as a plaything (*hōs paignion*) or possibly with some more serious purpose (*hōs spoudēi timi*). That, indeed, is more than we can tell, but one thing is certain. These interior states are, so to say, the cords, or strings, by which we are worked; they are opposed to one another, and pull us with opposite tensions in the direction of opposite actions, and therein lies the division of virtue from vice. In fact, so says our argument (*logos*), a man must always yield to one of these tensions without resistance, but pull against all the other strings—must yield, that is, to that

golden and hallowed drawing of judgments (*tēn tou logismou agōgēn khrysēn kai hieran*) which goes by the name of the public law of the city. The others are hard and ironlike, it soft, as befits gold, whereas they resemble very various substances." Let us henceforth keep hold of this rein called *khrysos* [gold] or *chrysology* [Derrida's note].

4. Cf. *Of Grammatology* [Derrida's note].

5. The principal references are collected in L. Robin's *La Théorie platonicienne de l'amour* [*The Platonic Theory of Love*], 2d ed. (Paris: Presses Universitaires de France, 1964), pp. 54–59 [Derrida's note].

6. Knowledge, professional skill, profession (Greek).

1. a generalized sort of writing and, along with it,
2. a "contradiction": the written proposal of logocentrism; the simultaneous affirmation of the being-outside of the outside and of its injurious intrusion into the inside;
3. the construction of a "literary" work. Before Saussure's *Anagrams*, there were Rousseau's; and Plato's work, outside and independent of its logocentric "content," which is then only one of its inscribed "functions," can be read in its anagrammatical texture.

Thus it is that the "linguistics" elaborated by Plato, Rousseau, and Saussure must both put writing out of the question and yet nevertheless borrow from it, for fundamental reasons, all its demonstrative and theoretical resources. As far as the Genevans⁷ are concerned, we have tried to show this elsewhere. The case is at least equally clear for Plato.

* * *

Grammatical science is doubtless not in itself dialectics. Plato indeed explicitly subordinates the former to the latter (253b–c). And, to him, this distinction can be taken for granted; but what, in the final analysis, justifies it? Both are in a sense sciences of language. For dialectics is also the science that guides us "*dia tōn logōn*,"⁸ on the voyage through discourses or arguments (253b). At this point, what distinguishes dialectics from grammar appears twofold: on the one hand, the linguistic units it is concerned with are larger than the word (*Cratylus*, 385a–393d); on the other, dialectics is always guided by an intention of *truth*. It can only be satisfied by the presence of the *eidos*, which is here both the signified and the referent: the thing itself. The distinction between grammar and dialectics can thus only in all rigor be established at the point where truth is fully present and fills the *logos*. * * * If truth is the presence of the *eidos*, it must always, on pain of mortal blinding by the sun's fires, come to terms with relation, nonpresence, and thus non-truth. It then follows that the absolute precondition for a rigorous difference between grammar and dialectics (or ontology) cannot in principle be fulfilled. Or at least, it can perhaps be fulfilled *at the root of the principle*, at the point of arche-being or arche-truth.⁹ * * * Which means, by the very necessity of *logos*. And that is the difference that prevents there being *in fact* any difference between grammar and ontology.

But now, what is the impossibility of any truth or of any full presence of being, of any fully-being? Or inversely, since such truth would be death as the absolute form of blindness, what is death as truth? Not *what is?* since the form of that question is produced by the very thing it questions, but how is the impossible plenitude of any absolute presence of the *ontōs on*¹ written? How is it inscribed? How is the necessity of the multiplicity of genres and ideas, of relation and difference, prescribed? How is dialectics traced?

The absolute invisibility of the origin of the visible, of the good-sun-father-capital, the unattainment of presence or beingness in any form, the whole surplus Plato calls *epekeina tēs ousias* (beyond beingness or presence), gives

7. Rousseau and Saussure.

8. Through the words (Greek).

9. "Arche-" derives from the Greek *archē*, meaning

"beginning, origin."

1. The really real (literally, the "beingly being"; Greek), a term applied by Plato to the Forms.

rise to a structure of replacements such that all presences will be supplements substituted for the absent origin, and all differences, within the system of presence, will be the irreducible effect of what remains *epekeina tēs ousias*.

Just as Socrates supplements and replaces the father, as we have seen, dialectics supplements and replaces the impossible *noēsis*,² the forbidden intuition of the face of the father (good-sun-capital). The withdrawal of that face both opens and limits the exercise of dialectics. It welds it irremediably to its “inferiors,” the mimetic arts, play, grammar, writing, etc. The disappearance of that face is the movement of difference which violently opens writing or, if one prefers, which opens itself to writing and which writing opens for itself. All these “movements,” in all these “senses,” belong to the same “system.” * * * This philosophical, dialectical mastery of the *pharmaka* that should be handed down from legitimate father to well-born son is constantly put in question by a family scene that constitutes and undermines at once the passage between the pharmacy and the house. “Platonism” is both the general *rehearsal* of this family scene and the most powerful effort to master it, to prevent anyone’s ever hearing of it, to conceal it by drawing the curtains over the dawning of the West. How can we set off in search of a different guard, if the pharmaceutical “system” contains not only, in a single stranglehold, the scene in the *Phaedrus*, * * * and the dialectics, logic, and mythology of Plato, but also, it seems, certain non-Greek structures of mythology? And if it is not certain that there are such things as non-Greek “mythologies”—the opposition *mythos/logos* being only authorized *following* Plato—into what general, unnamable necessity are we thrown? In other words, what does Platonism signify as repetition?

To repeat: the disappearance of the good-father-capital-sun is thus the precondition of discourse, taken this time as a moment and not as a principle of *generalized* writing. That writing (is) *epekeina tēs ousias*. The disappearance of truth as presence, the withdrawal of the present origin of presence, is the condition of all (manifestation of) truth. Nontruth is the truth. Nonpresence is presence. Difference, the disappearance of any originary presence, is *at once* the condition of possibility *and* the condition of impossibility of truth. At once. “At once” means that the being-present (*on*) in its truth, in the presence of its identity and in the identity of its presence, is *doubled* as soon as it appears, as soon as it presents itself. *It appears, in its essence, as* the possibility of its own most proper non-truth, of its pseudo-truth reflected in the icon, the phantasm, or the simulacrum. What is is not what it is, identical and identical to itself, unique, unless it *adds to itself* the possibility of being *repeated* as such. And its identity is hollowed out by that addition, withdraws itself in the supplement that presents it.

The disappearance of the Face or the structure of repetition can thus no longer be dominated by the value of truth. On the contrary, the opposition between the true and the untrue is entirely comprehended, *inscribed*, within this structure or this generalized writing. The true and the untrue are both species of repetition. And there is no repetition possible without the *graphics of supplementarity*, which supplies, for the lack of a full unity, another unit that comes to relieve it, being enough the same and enough other so that it can replace by addition. Thus, on the one hand, repetition is that without

2. Intelligence, understanding (Greek).

which there would be no truth: the truth of being in the intelligible form of ideality discovers in the *eidos* that which can be repeated, being the same, the clear, the stable, the identifiable in its equality with itself. And only the *eidos* can give rise to repetition as anamnesis or maieutics,³ dialectics or didactics. Here repetition gives itself out to be a repetition of life. Tautology is life only going out of itself to come home to itself. Keeping close to itself through *mnēmē*, *logos*, and *phōnē*.⁴ But on the other hand, repetition is the very movement of non-truth: the presence of what is gets lost, disperses itself, multiplies itself through mimemes,⁵ icons, phantasms, simulacra, etc. Through phenomena, already. And this type of repetition is the possibility of becoming-perceptible-to-the-senses: nonideality. This is on the side of non-philosophy, bad memory, hypomnesia, writing. Here, tautology is life going out of itself beyond return. Death rehearsal. Unreserved spending. The irreducible excess, through the play of the supplement, of any self-intimacy of the living, the good, the true.

These two types of repetition relate to each other according to the graphics of supplementarity. Which means that one can no more "separate" them from each other, think of either one apart from the other, "label" them, than one can in the *pharmacy* distinguish the medicine from the poison, the good from the evil, the true from the false, the inside from the outside, the vital from the mortal, the first from the second, etc. Conceived within this original reversibility, the *pharmakon* is the *same* precisely because it has no identity. And the same (is) as supplement. Or in difference. In writing.⁶ If he had *meant* to say something, such would have been the speech of Theuth making of writing as a *pharmakon* a singular present to the King.

But Theuth, it should be noted, spoke not another word.

The great god's sentence went unanswered.

After closing the pharmacy, Plato went to retire, to get out of the sun. He took a few steps in the darkness toward the back of his reserves, found himself leaning over the *pharmakon*, decided to analyze.

Within the thick, cloudy liquid, trembling deep inside the drug, the whole pharmacy stood reflected, repeating the abyss of the Platonic phantasm.

The analyst cocks his ears, tries to distinguish between two repetitions.

He would like to isolate the good from the bad, the true from the false.

He leans over further: they repeat each other.

Holding the *pharmakon* in one hand, the calamus⁷ in the other, Plato mutters as he transcribes the play of formulas. In the enclosed space of the pharmacy, the reverberations of the monologue are immeasurably amplified. The walled-in voice strikes against the rafters, the words come apart, bits and pieces of sentences are separated, disarticulated parts begin to circulate through the corridors, become fixed for a round or two, translate each other,

3. The Socratic midwifery by means of which the student gives birth to the truth.

4. Sound of the voice (Greek).

5. Constituent elements of mimesis.

6. Derrida has here analyzed the inexorable logic (or rather, graphic)—and not just the contingent metaphoricity—that leads Socrates to call *logos* "writing in the soul." In Section 8 of Part II of "Plato's Pharmacy" ("The Heritage of the Phar-

makon: Family Scene" [omitted here]), he quotes from *Phaedrus* Socrates' definition of the discourse of truth: "The sort that goes together with knowledge, and is *written in the soul of the learner*, that can defend itself, and knows to whom it should speak and to whom it should say nothing" (276a; emphasis added).

7. Reed, pen.

become rejoined, bounce off each other, contradict each other, make trouble, tell on each other, come back like answers, organize their exchanges, protect each other, institute an internal commerce, take themselves for a dialogue. Full of meaning. A whole story. An entire history. All of philosophy.

* * *

1972

From Specters of Marx¹

From Chapter 1. *Injunctions of Marx*

* * *

The specters of Marx. Why this plural? Would there be more than one of them? *Plus d'un* [More than one/No more one]: this can mean a crowd, if not masses, the horde, or society, or else some population of ghosts with or without a people, some community with or without a leader—but also the *less than one* of pure and simple dispersion. Without any possible gathering together. Then, if the specter is always animated by a spirit, one wonders who would dare to speak of a spirit of Marx, or more serious still, of a spirit of Marxism. Not only in order to predict a future for them today, but to appeal even to their multiplicity, or more serious still, to their heterogeneity.

More than a year ago, I had chosen to name the “specters” by their name starting with the title of this opening lecture. “Specters of Marx,” the common noun and the proper name had thus been printed, they were already on the poster when, very recently, I reread *The Manifesto of the Communist Party*.² I confess it to my shame: I had not done so for decades—and that must tell one something. I knew very well there was a ghost waiting there, and from the opening, from the raising of the curtain. Now, of course, I have just discovered, in truth I have just remembered what must have been haunting my memory: the *first noun* of the *Manifesto*, and this time in the singular, is “specter”: “A specter is haunting Europe—the specter of communism.”

* * *

It was thus a fault on my part to have put so far out of memory what was the most manifest thing about the *Manifesto*. What manifests itself in the first place is a specter, this first paternal character, as powerful as it is unreal, a hallucination or simulacrum that is virtually more actual than what is so blithely called a living presence. Upon rereading the *Manifesto* and a few other great works of Marx, I said to myself that I know of few texts in the philosophical tradition, perhaps none, whose lesson seemed more urgent *today*, provided that one take into account what Marx and Engels themselves say (for example, in Engels’ “Preface” to the 1888 re-edition³) about their own possible “aging” and their intrinsically irreducible historicity.

1. Translated by Peggy Kamuf, who sometimes gives French words and alternative translations in brackets. *Specters of Marx* began as two lectures given by Derrida in 1993 at a colloquium, “Whither Marxism?” When he revised the lectures

for publication, he added passages in brackets.

2. Published in 1848 by KARL MARX (1818–1883) and FRIEDRICH ENGELS (1820–1895). Derrida quotes the first sentence.

3. The first English translation.

What other thinker has ever issued a similar warning in such an explicit fashion? Who has ever called for the *transformation* to come of his own theses? Not only in view of some progressive enrichment of knowledge, which would change nothing in the order of a system, but so as to take into account there, another account, the effects of rupture and restructuration? And so as to incorporate in advance, beyond any possible programming, the unpredictability of new knowledge, new techniques, and new political givens? No text in the tradition seems as lucid concerning the way in which the political is becoming worldwide, concerning the irreducibility of the technical and the media in the current of the most thinking thought—and this goes beyond the railroad and the newspapers of the time whose powers were analyzed in such an incomparable way in the *Manifesto*. And few texts have shed so much light on law, international law, and nationalism.

It will always be a fault not to read and reread and discuss Marx—which is to say also a few others—and to go beyond scholarly “reading” or “discussion.” It will be more and more a fault, a failing of theoretical, philosophical, political responsibility. When the dogma machine and the “Marxist” ideological apparatuses (States, parties, cells, unions, and other places of doctrinal production) are in the process of disappearing,⁴ we no longer have any excuse, only alibis, for turning away from this responsibility. There will be no future without this. Not without Marx, no future without Marx, without the memory and the inheritance of Marx: in any case of a certain Marx, of his genius, of at least one of his spirits. For this will be our hypothesis or rather our bias: *there is more than one of them, there must be more than one of them.*

Nevertheless, among all the temptations I will have to resist today, there would be the temptation of memory: to recount what was for me, and for those of my *generation* who shared it during a whole lifetime, the experience of Marxism, the quasi-paternal figure of Marx, the way it fought in us with other filiations, the reading of texts and the interpretation of a world in which the Marxist inheritance was—and still remains, and so it will remain—absolutely and thoroughly determinate. One need not be a Marxist or a communist in order to accept this obvious fact. We all live in a world, some would say a culture, that still bears, at an incalculable depth, the mark of this inheritance, whether in a directly visible fashion or not.

* * *

Many young people today (of the type “readers-consumers of Fukuyama”⁵ or of the type “Fukuyama” himself) probably no longer sufficiently realize it: the eschatological themes of the “end of history,” of the “end of Marxism,” of the “end of philosophy,” of the “ends of man,” of the “last man” and so forth were, in the ‘50s, that is, forty years ago, our daily bread. We had this bread of apocalypse in our mouths naturally, already, just as naturally as that which I nicknamed after the fact, in 1980, the “apocalyptic tone in philosophy.”⁶

4. A reference to the dissolution of the Soviet Union, which began in 1989.

5. Francis Fukuyama (b. 1952), American philosopher and neoconservative political economist; his tract *The End of History and the Last Man* (1992) celebrated the triumph of capitalism

over communism.

6. At a 1980 conference, Derrida delivered the paper “On a Newly Arisen Apocalyptic Tone in Philosophy”; its title alludes to an essay by IMMANUEL KANT, “On a Newly Arisen Superior Tone in Philosophy” (1796).

What was its consistency? What did it taste like? It was, *on the one hand*, the reading or analysis of those whom we could nickname the *classics of the end*. They formed the canon of the modern apocalypse (end of History, end of Man, end of Philosophy, Hegel, Marx, Nietzsche, Heidegger, with their Kojévian codicil and the codicils of Kojève⁷ himself). It was, *on the other hand and indissociably*, what we had known or what some of us for quite some time no longer hid from concerning totalitarian terror in all the Eastern countries, all the socio-economic disasters of Soviet bureaucracy, the Stalinism of the past and the neo-Stalinism in process (roughly speaking, from the Moscow trials to the repression in Hungary,⁸ to take only these minimal indices). Such was no doubt the element in which what is called deconstruction developed—and one can understand nothing of this period of deconstruction, notably in France, unless one takes this historical entanglement into account.

* * *

(* * *) In order to try to remove what we are going to say from what risks happening, if we judge by the many signs, to Marx's work today, which is to say also to his injunction. What risks happening is that one will try to play Marx off against Marxism so as to neutralize, or at any rate muffle the political imperative in the untroubled exegesis of a classified work. One can sense a coming fashion or stylishness in this regard in the culture and more precisely in the university. And what is there to worry about here? Why fear what may also become a cushioning operation? This recent stereotype would be destined, whether one wishes it or not, to depoliticize profoundly the *Marxist reference*, to do its best, by putting on a tolerant face, to neutralize a potential force, first of all by enervating a *corpus*, by silencing in it the revolt [the *return* is acceptable provided that the *revolt*, which initially inspired uprising, indignation, insurrection, revolutionary momentum, does not come back]. People would be ready to accept the return of Marx or the return to Marx, on the condition that a silence is maintained about Marx's injunction not just to decipher but to act and to make the deciphering [the interpretation] into a transformation that "changes the world." In the name of an old concept of reading, such an ongoing neutralization would attempt to conjure away a danger: now that Marx is dead, and especially now that Marxism seems to be in rapid decomposition, some people seem to say, we are going to be able to concern ourselves with Marx without being bothered—by the Marxists and, why not, by Marx himself, that is, by a ghost that goes on speaking. We'll treat him calmly, objectively, without bias: according to the academic rules, in the University, in the library, in colloquia! We'll do it systematically, by respecting the norms of hermeneutical, philological, philosophical exegesis. If one listens closely, one already hears whispered: "Marx, you see, was despite everything a philosopher like any other; what is more [and one can say this now that so many Marxists have fallen silent], he was a *great-philosopher* who deserves to figure on the list of those works we assign for study and from

7. Alexandre Kojève (1902–1968), Russian-French philosopher famous for his influential 1930s lectures in Paris on the German philosopher G. W. F. Hegel (1770–1831) and the end of history. FRIEDRICH NIETZSCHE (1844–1900) and MARTIN HEIDEGGER (1889–1976), German philosophers who addressed the end of man and end of philosophy.

8. The invasion of Hungary in 1956 by Soviet troops to suppress a short-lived anti-Communist revolution. "The Moscow trials": political purges (1936–38) that helped Joseph Stalin (1879–1953) consolidate his power in the Soviet Union; a score of potential rivals were accused of engaging in a treasonous plot, and many were executed.

which he has been banned for too long.⁹ He doesn't belong to the communists, to the Marxists, to the parties, he ought to figure within our great canon of Western political philosophy. Return to Marx, let's finally read him as a great philosopher." We have heard this and we will hear it again.

It is something altogether other that I wish to attempt here as I turn or return to Marx. It is "something other" to the point that I will have occasion instead, and this will not be only for lack of time and space, to insist even more on what commands us today, without delay, to do everything we can so as to avoid the neutralizing anesthesia of a new theoreticism, and to prevent a philosophico-philological return to Marx from prevailing. Let us spell things out, let us insist: to do everything we can so that it does not *prevail*, but not to avoid its taking place, because it remains just as necessary. This will cause me, for the moment, to give priority to the political gesture I am making here, at the opening of a colloquium, and to leave more or less in the state of a program and of schematic indications the work of philosophical exegesis, and all the "scholarship" that this "position-taking," today, still requires.)

* * *

In proposing this title, *Specters of Marx*, I was initially thinking of all the forms of a certain haunting obsession that seems to me to organize the *dominant* influence on discourse today. At a time when a new world disorder¹ is attempting to install its neo-capitalism and neo-liberalism, no disavowal has managed to rid itself of all of Marx's ghosts. Hegemony still organizes the repression and thus the confirmation of a haunting. Haunting belongs to the structure of every hegemony.² But I did not have in mind first of all the exordium of the *Manifesto*. In an apparently different sense, Marx-Engels spoke there already, in 1847–48, of a specter and more precisely of the "specter of communism" (*das Gespenst des Kommunismus*). A terrifying specter for all the powers of old Europe (*alle Mächte des alten Europa*), but specter of a communism then *to come*. Of a communism, to be sure, already namable (and well before the League of the Just or the Communist League³), but still to come beyond its name. Already promised but only promised. A specter all the more terrifying, some will say. Yes, on the condition that one can never distinguish between the future-to-come and the coming-back of a specter. Let us not forget that, around 1848, the First International⁴ had to remain quasi-secret. The specter was there (but what is the *being-there* of a specter? what is the mode of presence of a specter? that is the only question we would like to pose here). But that of which it was the specter, communism (*das Gespenst des Kommunismus*), was itself not there, by definition. It was dreaded as communism to come. It had already been announced, with this

9. This is perhaps a reference specifically to the "programmes d'agrégation," that is, to the list of works drawn up annually by the French university establishment for the competitive examination that qualifies the successful candidates for advanced teaching positions in each discipline [translator's note].

1. An allusion to the "new world order" invoked by President George H. W. Bush in his September 1990 speech to Congress at the beginning of the Gulf War (1990–91).

2. For a novel elaboration, in a "deconstructive"

style, of the concept of *hegemony*, I refer to Ernesto Laclau and Chantal Mouffe, *Hegemony and Socialist Strategy: Toward a Radical Politics* (London: Verso, 1985) [Derrida's note].

3. The name taken in 1847 by the League of the Just (founded in 1836) following its reorganization; at its second congress, it commissioned Marx and Engels to write *The Manifesto*.

4. The International Workingmen's Association, founded in London in September 1864. Derrida mentions 1848 because it was a year of widespread revolutionary upheaval throughout Europe.

name, some time ago, but it was not yet *there*. It is only a specter, seemed to say these allies of old Europe so as to reassure themselves; let's hope that in the future it does not become an actual, effectively present, manifest, non-secret reality. The question old Europe was asking itself was already the question of the future, the question "whither?": "whither communism?" if not "whither Marxism?" Whether one takes it as asking about the future of communism or about communism in the future, this anguished question did not just seek to know how, in the future, communism would affect European history, but also, in a more muffled way, already whether there would still be any future and any history at all for Europe. In 1848, the Hegelian discourse on the end of history in absolute knowledge had already resounded throughout Europe and had rung a consonant note with many other knells [*glas*].⁵ And communism was essentially distinguished from other labor movements by its *international* character. No organized political movement in the history of humanity had ever yet presented itself as *geo-political*, thereby inaugurating the space that is now ours and that today is reaching its limits, the limits of the earth and the limits of the political.

The representatives of these forces or all these powers (*alle Mächte*), namely the States, wanted to *reassure* themselves. They wanted to be sure. So they were sure, for there is no difference between "being sure" and "wanting to be sure." They were sure and certain that between a specter and an actually present reality, between a spirit and a *Wirklichkeit*,⁶ the dividing line was assured. It *had* to be safely drawn. It *ought* to be assured. No, it *ought to have been* assured. The sureness of this certainty is something they shared, moreover, with *Marx himself*. (This is the whole story, and we are coming to it: Marx thought, to be sure, on his side, from the other side, that the dividing line between the ghost and actuality ought to be crossed, like utopia itself, by a realization, that is, by a revolution; but *he too* will have continued to believe, to try to believe in the existence of this dividing line as real limit and conceptual distinction. He too? No, someone in him. Who? The "Marxist" who will engender what for a long time is going to prevail under the name of "Marxism." And which was also haunted by what it attempted to foreclose.)

Today, almost a century and a half later, there are many who, throughout the world, seem just as worried by the specter of communism, just as convinced that what one is dealing with there is only a specter without body, without present reality, without actuality or effectivity, but this time it is supposed to be a past specter. It was only a specter, an illusion, a phantasm, or a ghost: that is what one hears everywhere today ("Horatio saies, 'tis but our Fantasie, / And will not let beleefe take hold of him"⁷). A still worried sigh of relief: let us make sure that in the future it does not come back! At bottom, the specter is the future, it is always to come, it presents itself only as that which could come or come back; in the future, said the powers of old Europe in the last century, it must not incarnate itself, either publicly or in secret. In the future, we hear everywhere today, it must not re-incarnate itself; it must not be allowed to come back since it is past.

* * *

5. An allusion to Derrida's book *Glas* (1974), which addresses Hegel at length.

6. Reality (German).

7. William Shakespeare, *Hamlet* (ca. 1600), 1.1.21–22; the guard is referring to a ghost that he has seen and whose existence Horatio doubts.

From Chapter 3. *Wears and Tears*

*The time is out of joint.*⁸ The world is going badly. It is worn but its wear no longer counts.

* * *

The world is going badly, the picture is bleak, one could say almost black. Let us form an hypothesis. Suppose that, for lack of time (the spectacle or the tableau is always “for lack of time”), we propose simply to paint, like the Painter in *Timon of Athens*.⁹ A black picture on a blackboard. Taxonomy or freeze-frame image. Title: “The time is out of joint” or “What is going so badly today in the world.” We would leave this banal title in its neutral form so as to avoid speaking of crisis, a very insufficient concept, and so as to avoid deciding between the bad as suffering and the bad as wrong or as crime.

We would add to this title of a possible blackboard picture merely a few subtitles. What are they?

* * *

Under the heading of international or civil-international war, is it still necessary to point out the economic wars, national wars, wars among minorities, the unleashing of racisms and xenophobias, ethnic conflicts, conflicts of culture and religion that are tearing apart so-called democratic Europe and the world today? Entire regiments of ghosts have returned, armies from every age, camouflaged by the archaic symptoms of the paramilitary and of the postmodern excess of arms (information technology, panoptical¹ surveillance via satellite, nuclear threat, and so forth). Let us accelerate things. Beyond these two types of war (civil and international) whose dividing line cannot even be distinguished any longer, let us blacken still more the picture of this wearing down beyond wear. Let us name with a single trait that which could risk making the euphoria of liberal-democrat capitalism resemble the blindest and most delirious of hallucinations, or even an increasingly glaring hypocrisy in its formal or juridicist rhetoric of human rights. It will not be a matter of merely accumulating, as Fukuyama might say, “empirical evidence,” it will not suffice to point one’s finger at the mass of undeniable facts that this picture could describe or denounce. The question posed too briefly would not even be that of the analysis with which one would then have to proceed in all these directions, but of the *double interpretation*, the concurrent readings that the picture seems to call for and to oblige us to associate. If one were permitted to name these plagues of the “new world order” in a ten-word telegram, one might perhaps choose the following ten words.

1. Unemployment, that more or less well-calculated deregulation of a new market, new technologies, new worldwide competitiveness, would no doubt, like labor or production, deserve another name today. All the more so in that tele-work inscribes there a new set of givens that perturbs both the methods of traditional calculation and the conceptual opposition between work and

8. *Hamlet*, 1.5.189.

9. Play by Shakespeare (ca. 1607–08); Painter is a minor character who will paint whatever he can sell to a patron.

1. All-seeing; an allusion to MICHEL FOUCAULT’S

invocation in *Discipline and Punish* (1975; see above) of the Panopticon, a circular prison that enabled a single guard to keep all the inmates under surveillance, as a model and summation of disciplinary power.

non-work, activity, employment, and their contrary. This regular deregulation is at once mastered, calculated, “socialized” (that is, most often disavowed), and irreducible to prediction—like suffering itself, a suffering that suffers still more, and more obscurely, for having lost its habitual models and language once it no longer recognizes itself in the old word unemployment and in the scene that word named for so long. The function of social inactivity, of non-work or of underemployment is entering into a new era. It calls for another politics. And another concept. The “new unemployment” no more resembles unemployment, in the very forms of its experience and its calculation, than what in France is called the “new poverty”² resembles poverty.

2. The massive exclusion of homeless citizens from any participation in the democratic life of States, the expulsion or deportation of so many exiles, stateless persons, and immigrants from a so-called national territory already herald a new experience of frontiers and identity—whether national or civil.

3. The ruthless economic war among the countries of the European Community themselves, between them and the Eastern European countries, between Europe and the United States, and between Europe, the United States, and Japan. This war controls everything, beginning with the other wars, because it controls the practical interpretation and an inconsistent and unequal application of international law. There have been too many examples in the last decade or more.

4. The inability to master the contradictions in the concept, norms, and reality of the free market (the barriers of a protectionism and the interventionist bidding wars of capitalist States seeking to protect their nationals, or even Westerners or Europeans in general, from cheap labor, which often has no comparable social protection). How is one to save one’s own interests in the global market while claiming to protect one’s “social advantages” and so forth?

5. The aggravation of the foreign debt and other connected mechanisms are starving or driving to despair a large portion of humanity. They tend thus to exclude it simultaneously from the very market that this logic nevertheless seeks to extend. This type of contradiction works through many geopolitical fluctuations even when they appear to be dictated by the discourse of democratization or human rights.

6. The arms industry and trade (whether it be “conventional” arms or at the cutting edge of tele-technological sophistication) are inscribed in the normal regulation of the scientific research, economy, and socialization of labor in Western democracies. Short of an unimaginable revolution, they cannot be suspended or even cut back without running major risks, beginning with the worsening of the said unemployment. As for arms trafficking, to the (limited) degree that it can still be distinguished from “normal” commerce, it remains the largest in the world, larger than the drug traffic, from which it is not always dissociated.

7. The spread (“dissemination”) of nuclear weapons, maintained by the very countries that say they want to protect themselves from it, is no longer even controllable, as was the case for a long time, by statist structures. It exceeds not only statist control but every declared market.

2. A term used in France, beginning in the early 1980s, to refer to the condition of the growing numbers of individuals who, for a variety of

social and economic reasons, are only marginally employed.

8. Inter-ethnic wars (have there ever been another kind?) are proliferating, driven by an *archaic* phantasm and concept, by a *primitive conceptual phantasm* of community, the nation-State, sovereignty, borders, native soil and blood. Archaism is not a bad thing in itself, it doubtless keeps some irreducible resource. But how can one deny that this conceptual phantasm is, so to speak, made more outdated than ever, in the very *ontopology* it supposes, by tele-technic dis-location? (By *ontopology* we mean an axiomatics linking indissociably the ontological value of present-being [*on*]³ to its *situation*, to the stable and presentable determination of a locality, the *topos* of territory, native soil, city, body in general). For having spread in an unheard-of fashion, which is more and more differentiated and more and more accelerated (it is acceleration itself, beyond the norms of speed that have until now informed human culture), the process of dislocation is no less arch-originary, that is, just as “archaic” as the archaism that it has always dislodged. This process is, moreover, the positive condition of the stabilization that it constantly relaunches. All stability in a place being but a stabilization or a sedentarization, it will have to have been necessary that the local *différance*,⁴ the spacing of a displacement gives the movement its start. And gives place and gives rise [*donne lieu*]. All national rootedness, for example, is rooted first of all in the memory or the anxiety of a displaced—or displaceable—population. It is not only time that is “out of joint,” but space, space in time, spacing.

9. How can one ignore the growing and undelimitable, that is, worldwide power of those super-efficient and properly capitalist phantom-States that are the mafia and the drug cartels on every continent, including in the former so-called socialist States of Eastern Europe? These phantom-States have infiltrated and banalized themselves everywhere, to the point that they can no longer be strictly identified. Nor even sometimes clearly dissociated from the processes of democratization (think—for example—of the schema, telegraphically simplified here, that would associate them with the history-of-a-Sicilian-mafia-harassed-by-the-fascism-of-the-Mussolinian-State-thus-intimately-and-symbiotically-allied-to-the-Allies-in-the-democratic-camp-on-both-sides-of-the-Atlantic-as-well-as-in-the-reconstruction-of-the-Italian-Christian-democratic-State-which-has-today-entered-into-a-new-configuration-of-capital,⁵ about which the least one can say is that we will understand nothing of what is happening there if we do not take account of its genealogy). All these infiltrations are going through a “critical” phase, as one says, which is no doubt what allows us to talk about them or to begin their analysis. These phantom-States invade not only the socio-economic fabric, the general circulation of capital, but also statist or inter-statist institutions.

10. For above all, above all, one would have to analyze the present state of international law and of its institutions. Despite a fortunate perfectibility, despite an undeniable progress, these international institutions suffer from at least two limits. The first and most radical of the two stems from the fact that their norms, their charter, the definition of their mission depend on a certain historical culture. They cannot be dissociated from certain European

3. Being (Greek). Derrida's coinage blends “being” and “place” (*topos* in Greek).

4. Temporal and spatial differentiating or deferral. *Différance* is Derrida's coinage; like *différence*, which sounds the same and refers to synchronic comparison, it derives from *différer*, which means

both “to differ” and “to defer, postpone.”

5. The Christian Democratic Party, founded in 1944, was the dominant force in Italian politics until it disbanded in 1994. It was preceded by the dictatorship of Benito Mussolini (1883–1945), one of the founders of Italian fascism.

philosophical concepts, and notably from a concept of State or national sovereignty whose genealogical closure is more and more evident, not only in a theoretico-juridical or speculative fashion, but concretely, practically, and practically quotidian. Another limit is strictly linked to the first: This supposedly universal international law remains, in its application, largely dominated by particular nation-States. Almost always their techno-economic and military power prepares and applies, in other words, *carries* the decision. As one says in English, it *makes the decision*. Countless examples, recent or not so recent, would amply demonstrate this, whether it is a question of deliberations and resolutions of the United Nations or of the putting into practice or the “enforcement” of these decisions: the incoherence, discontinuity, inequality of States before the law, the hegemony of certain States over military power in the service of international law, this is what, year after year, day after day, we are forced to acknowledge.⁶

These facts do not suffice to disqualify international institutions. Justice demands, on the contrary, that one pay tribute to certain of those who are working within them in the direction of the perfectibility and emancipation of institutions that must never be renounced. However insufficient, confused, or equivocal such signs may still be, we should salute what is heralded today in the reflection on the right of interference or intervention in the name of what is obscurely and sometimes hypocritically called the *humanitarian*, thereby limiting the sovereignty of the State in certain conditions. Let us salute such signs even as one remains vigilantly on guard against the manipulations or appropriations to which these novelties can be subjected.

* * *

Which Marxist spirit, then? It is easy to imagine why we will not please the Marxists, and still less all the others, by insisting in this way on the *spirit of Marxism*, especially if we let it be understood that we intend to understand *spirits* in the plural and in the sense of specters, of untimely specters that one must not chase away but sort out, critique, keep close by, and allow to come back.

* * *

And if one interprets the gesture we are risking here as a belated-rallying-to-Marxism, then one would have to have misunderstood quite badly. It is true, however, that I would be today, here, now, less insensitive than ever to the appeal of the *contretemps* or of being out-of-step, as well as to the style of an untimeliness that is more manifest and more urgent than ever. Already I hear people saying: “You picked a good time to salute Marx!” Or else: “It’s about time!” “Why so late?”⁷ I believe in the political virtue of the *contretemps*.

6. To which one would have to add the economic dependency of the U.N., whether one is talking about its major interventions (political, socio-educational, cultural, or military) or simply its administrative management. Now, one must also acknowledge that the U.N. is going through a serious financial crisis. The largest States do not all pay their dues. Solution: a campaign to attract the support of private capital, constitution of “councils” (associations of the biggest leaders in industry, commerce, and finance) meant to support, on certain conditions, either spoken or unspoken, a

politics of the U.N. that can go (often, here or there, here rather than there, precisely) in the direction of the interests of the market. One must underscore and reflect on the fact that principles that are today guiding international institutions often agree with such interests. Why, how, and within what limits do they do so? What do these limits signify? This is the only question we can pose here for the moment [Derrida’s note].

7. From the 1960s to the 1980s, Derrida was often criticized for not addressing the work of Marx and for avoiding politics.
